

106th Knowledge Seekers Workshop March 24th 2016 (Messiah and Israel, TEPCO tested and used Gans in Fukushima whistleblower, Gans Supplement, Cleanup of contaminated waters)

(:09). He talks about journey to Space, a number of people have already achieved lift, etc. But before we go we have to solve the problem of uniting humanity. continues on this line.

(:21). Chief Rabbi of Israel your time has come. The year 2016 we warned and they were aware of it. When he declared he was Messiah, he was asked if he would declare also for the Jews, yes. The Vatican the same, the Pope is finished. The religion now is the path of God, we all walk towards peace. We don't abolish, we elevate the soul. We invite the Jews to participate with the Christians and Muslims. Two choices either kill him or join him. In fact we all have become Messiah, to bring peace to humanity. (:26). We don't ask race in KF. The people of this planet have become mature enough for One Race One Planet. We add to the knowledge so no need to fight. By one O'clock you will know that change has come. We are faceless but powerful in spreading the knowledge. The Rabbi's have served for thousands of years, thank you very much, but now your term is finished. The State of Israel will become part of One Planet, same with the rest. The World leaders did not deliver but lined their pockets. A lot of Jews were afraid of this day, now you can join the rest of nations in peace. (:30). The unity of God and serving humanity for peace. You can survive as man of U, now that we have opened the doors. Someone says it is not the Jews but the Zionists, Pope but Jesuits and Black Pope, etc. Keshe says we have blamed enough, you have enough to change your heart. To bring equal those who used inequality to their own advantage. (:34). All the lands of the religions should be given back to the people. (:37). Ali says that he discussed the same thing in the class today. People need to understand their relation with the Creator and connection. (:41). How to elevate the religious peoples soul? You don't need to elevate but give to the ones who need it. These people can only exist when they feed out of the weaknesses of others in their soul. When we elevate all the religions so they know that they are all equal then they won't contribute to (negativity). The religions up to now have preyed on the weakness of Man. We are working to elevate the totality and then it happens by itself. Soldiers are coming forward that they question what is going on. When you give to the soul you receive when you need. When you pray give to the soul of humanity, and every creature on this planet. (:45). Are you going to worship a being in the Space because he knows a little bit more than you. This is the blueprint of religion that you are all equal without punishment. If there is judgment then all have failed miserably but generous father allows you to start fresh again. Those who have done wrong know it. The Ethos of Space is of life. (:51). Benjamin presents on contaminated water cleanup. Tests not in yet. (:55). Birim is one of the most polluted rivers because of gold and diamonds. (1:03). WQI Determinants (test) factors. (1:18). Some mistakes in the printout. (1:22). Huge change on its way, West Coast US, Japan, Ukraine. Goes to Renan on environmental cleanup. Working on decontaminating air. (1:18). Drawings of a device to clean the air. The exhaust passes through Gans materials, one of the uses can be for the car exhaust. This is the same system as with Water cleanup. We use CuO₂ and CO₂ to cleanup the mess. (1:36). Pictures of using it with car exhaust pipe. (1:44). Renan has run his car with a

single coil Magrav, emissions test is cleaner, no base to compare. He put a little dry CO₂ in the oil. Normally he should not have passed the test with an 8 year old car. (1:50). Shows some experiments with Nano Scrubbers on the air intake of car. Video of car tests, not sure what he's doing. The engine produces its own H fuel. (1:57). New system MaGrav on the battery, now adding a tiny double core coil (same as for the pens) put on spark plugs, to make it more efficient. He added magnet to fuel line. (2:00). Problem for Auto manufacturers is the older or second hand Hybrid cars can't be exported to Africa as used, too much support needed, so KF technology can support them. He gets 25% increase with the MaGrav for the past few months. (2:03). Keshe talks about Ebola from a few years ago in Sierra Leone, someone from MIT was there and took the technology from himself and then they confiscated all the materials. So it totally cured the problem. Then they took it back and made a second system to treat E-coli, and they cultured it and there was no E-coli. Yukko took the technology to Fukushima. Then TEPCO got involved. Keshe asked for the resignation of Japanese Prime Minister. (2:13). Man talks about Fukushima worked for TEPCO, was a supplier, and ion exchange resins, used in Fukushima. Because of the high Ca content in Fukushima waste water the ion exchangers don't work good. (2:17). He got Gans samples from KF in 2013, was told to keep secret. TEPCO did tests and asked for more samples, Keshe gave them a special device to use with the CO₂ Gans. Daily 200 tons of water pumped out of the reactors that couldn't be dumped into sea. (2:22). Keshe as all the DHL shipping receipts to TEPCO in Japan. They canceled meeting with Keshe. Somebody has to pay for breaking the rules with the International Nuclear controllers. From 2015 they started to pump water into the sea, they did not give the credit to Keshe though it was his technology that they used. (2:28). He presents the accident with slide. Reactor 3 was completely melted down. In 2013 the director died from cancer, Reactor 4 was full of nuclear rods and could explode, that would have contaminated Tokyo, they didn't tell the public. The new person came and opened to outside, so he tried Keshe's technology in 2014. They made the Gans themselves once they proved his technology. (2:38). Photos and videos with this man testing at Fukushima. They had a problem with Tritium and Keshe solved it. They cut off Keshe, and used the Gans to cleanup contamination. (2:49). Kurion was a company setup to control the Japanese nuclear industry. Since WWII both Japan and Germany have their Nuclear industry controlled by USA. (2:53). Showing the process they used with the Gans to cleanup. (2:56). Medical Uses of CO₂ Gans. (3:05). Treatment of Radioactive contaminated water, you can add CO₂ directly into contaminated water and that water you drink from the Gans can decontaminate the radiation from your body. We have it now from TEPCO that the CO₂ Gans is not toxic at all. It's good for viruses, in Space no microbes but only viruses. (3:10). Keshe adds to the knowledge, why they tested for influenza, because the workers get sick with in winter time, so if the workers came in contact with the CO₂ and had Flu would it make them worse, but they found that it even cured the Flu. They dissected the mice and checked the liver. The CO₂ was not found in the liver so it is not toxic. They collected the urine of mice to see how it is discarded from the body. The CO₂ was found in the urine and feces. They got puzzled by Group 2, CO₂ plus contaminated water, the urine was contaminated but the mice survived. (3:18). He is producing CO₂ Gans as a supplement in Japan. Gans is a natural product it's a new version of free atom. I am proud to see the KF logo on your product, I give you the rights to use it and signature rights. We are the owners of the technology. From today it will be

available on website, you take your own responsibility to use it. You can get it certified in your own country. (3:21). In time of disaster (earthquakes in USA), people have the right to save their own lives by using the CO₂ Gans. In Asia were they have to slaughter animals because of disease, this CO₂ to save them without damaging the farmer, you can just add it to the water. We ask TEPCO to release the data, Japanese ask your government how they kept this technology away from its people, where the farmers are getting cancer as they cleanup the power station. You are wondering how IEA is allowing them to operate the power station, because they have the Gans. It's a natural material and no one has the rights to it, nor copyright it because we have taken it. It's illegal to use this name without our permission. (3:24). The trials have been done on the workers of TEPCO we ask them to release the data. It's not the credibility but they tried to discredit us. (3:26). Some results of using Gans from TEPCO. We need it for Space travel against viruses and unknowns. How many could have saved their children from radiation sickness. It just washes out of your body, it doesn't stay in. Or does it go higher to IEA. It's a game played with all of our lives to show they have power over our lives. When you feed your plants and animals CO₂ any contamination is washed off from Chem-trails. For "Chemtrails" start taking CO₂ in a correct manner, it will be washed out of your body. Not magic, from total knowledge of MG fields, understanding of Spectrum of C in respect to O, they attract anything which is in the bandwidth of the total spectrum, C and 2 O plus combined. This is the biggest discovery of the century, understanding the PI as a Gans. (3:30). It will change the lives of a lot of people. The flu shots are becoming less and less effective, Gans works. (3:33). Benjamin's test results back, E-Coli in water from contaminated river in Ghana, treated it with CuO₂ Gans, the number dropped significantly, documents will come later. Africa is second example. It was silenced by World Health Organization and IEA. As of today the cleanup has started. No license is needed to sell it as a supplement in Japan. (3:40). Keshe will try to get it in use in Iran for Nuclear Industry. It helps in side effects of Chemotherapy, can take it with Chemo. The Chinese research shows that CO₂ helps in treatment of cancer, reduces size of tumors. (3:43). (for cancer treatment), it takes very little, but we are not consuming the Gans, the water of the Gans can do the same. At the moment just to use the water of the Gans. Reaction from Pharmaceuticals. Do we need to do the vaccinations which is damaging our children. What about our Nuclear Engineers when they get contaminated, can we just wash them with water of CO₂. Can we create enough Gans water, allow the fish that we eat to swim in it before consuming so they get decontaminated. Strontium 90 and tritium were biggest problem and we taught them how to make gold out of it. (3:47). Just received word the Japanese whistleblower's computer shutdown and can't be restarted same happened to Benjamin. The man from the lab in Ghana discusses research tests. The CuO₂ minimizes the E-Coli in Petri dish, shows pictures. (3:50). The dark dish is untreated and full of E-Coli, the treated water is clear and very few E-Coli. The result is that treated water with CuO₂ it minimizes microbes. We have yet to check the International Levels. The scientist feels it probably is within the limits. It comes from human excrement, vomit, and washing animals in the river. (3:55). Keshe asks with CO₂ do we take the good and bad out of the water. They shook the dish before testing this is why still microbes in water. (4:00). The German group fully supports CO₂ production as Supplements. (4:02). Keshe discusses about the cleanup of the messes we have created on the planet. Calls on Japanese Nuclear workers to get the info out, how many other

organizations are using KF technology in the background (secretly). (4:04). People on West coast of US you say you are receiving Nuke waste from Fukosima, make yourself a CuO_2 Gans put it in the water stir it and let it settle let your fish swim in it and rest in it, and all the radiation will go out. This is not for abusing, but using the correct way. If you live in a radioactive or chemically contaminated areas, this is a solution. DO NOT CONSUME it, let organizations around the world officially test it etc. You can drink the water of it but not the Gans itself. We know one thing that over 1 mg is far too much. (4:06). How much do we want to do this? Can we change the course without fighting, it's easier to work, but we needed to release this knowledge today, because all of us are going to be effected by the radiation, we have been effected by radioactive material. We have no choice but to look for the avenues where we can support ourselves, we can make the change, we decide. (4:08). Man from Brazil about the pests in 3 countries, we are being sprayed continually with pesticides from Monsanto, children born with small brains. If they could start spraying with CO_2 . Keshe says to water them with the Gans of CO_2 . The man used it, he had fever, etc. now he is fine, he's spraying all over the house. ?? Super ionized water. (4:12). (4:18). Gans making share, he uses N C coils instead of plates hooked up to a cell phone recharge, it will make a tub in an hour. We do that in the factory. Keshe says this is not CO_2 , you have to produce it in the normal ways, it's CuO_2 or ZnO_2 . We have seen a lot today. ... even though the others get benefited it brings benefit for the totality. Before we were afraid to share because something might happen to them, now we are afraid not to share that we might not be able to save a human life. ... have I given enough today.
