

## 11<sup>th</sup> Knowledge Seekers Workshop – May 22<sup>nd</sup> 2014

- **Main topics of this Workshop**

- **Start to talk about the use of the Technology in Agriculture.**
- **Keshe explains the conversion of Plasma to Matter, “Plasma Fusion”.**
- **Keshe explains about food and how they put people fat.**

(:02) Marek share their experiences in the Foundation with Gans materials, and they started to work with Agriculture now in the garden of the Foundation. About the reactors they are trying to understand the behavior of each reactor. (:36) Ivan talk that they could measure fields but they are not able to explain further about this. (:56) **Keshe comes in.** We soak in Gans the seeds 3 days before putting them in the soil, and 30 days later a second amount of Gans was added to the soil, and you will see the changes. Changes can be scientifically explained, as we go more into agriculture I will explain what scientifically happens. One of the reasons is, when you put your seed into the Gans, Gans is a MaGrav field condition, so this sticks as Nano layer in the seed, these layers, the way you see the blackness in your nano coated materials (that absorbs the spectrums, the MaGrav fields), the layers create like a sucking machine, sucking the MaGrav fields of the outer moisture in the air and the N, so some advanced increased in the growth is due to the fact that they are absorbing N from the environment by the Layers in the skin of the seed. In Africa with this technology there is no need for fertilizer because 60% of the air contains N and now with this layering the seed captures N as the seed needs to grow. (1:00) In regions of flood and in desert this is the solution for the growth of the seeds. You will see six or more stem growing from the same seed. This is the solution for the hunger in Africa. A man says that he put a seed in the SF and grew much faster. Keshe: don't get too excited because of this, my advice is please do not eat the fruits of the plant, the problem is that we do not know yet if there is a DNA change. (1:03) Ivan assume. He said that he prepared the soil and will plant the seeds today. Then Ivan talk about what he is observing in the reactors. (1:14) Question about the motors on the reactors and why they did not stopped. Ivan explains that this has nothing to do with the motor but with the Plasmatic pressure that forces the motor to stop. (1:15) **Keshe comes in.** This is a MaGrav pression. Yesterday we observed that the inner core restarted lowest speed and higher speed without connection. This has nothing to do with the motor, this is a Plasmatic MaGrav pressure which they balance each other out, and that is the reason for it. 3 reactors are in a very high level of Plasma because we measured it. I will explain this in the future, this is the interface btw Plasma and matter. Question: Both Plasmas get stick together? Keshe: Yes they interlock; I will explain something, this week made the first baby reactor, is rotating of his own. (1:19) Armen explains about his new reactor. (1:27) Question: Do we recycle the Nano materials after using them, do you know? **Keshe:** Yes we know, but first of all we must learn more exactly how they behave in different environments, in time we will teach this, for the time being use gloves when touching the Nano Materials. They are not harmful but they release a great amount of energy, its like you are not hungry and eat a Big Mac. Is a Plasmatic condition, and you deliver a great amount of energy and the body need time to absorb it. (1:29) **Keshe starts.** Keshe talks about the situation with Belgium politicians. Keshe asked for full

investigation of the King of Belgium. **(1:32)** If you noticed some days ago we were talking about Coke bottles, and then we built some reactors, and now we have complete the cycle of Life in this planet, this is how life is created in the Universe. We started creating the Gans, now we are using the Gans in the reactors for lifting, and fertilizer for food in the future. Now is in the position of any man to create anything that he need.

**(1:35)** We will show you that you do not need wires to absorb energies to run your systems. The delivery of the Energy from the Plasma not from wires anymore. We could see in the reactors here, but the KS here are still in the Schizophrenic state. The Russian air force used the technology to pull the planes from US military in a base in Romania.

**(1:39)** The same thing that happened with Ivan reactors where it could pull other reactor, happened with the planes from US army. Keshe explains about each reactor in the lab.

**(1:42)** One of the reactors started to release a pulse, they could measure. **(1:44)** In the Universe there is no matter fusion, in the Universe as you increase and bring the Plasma together, they all content principal matter in different strength and variation, when you create a Plasma condition in the center of the reactor and allow the Plasmas to come together, then the total collective amount of the Plasma, when you reverse allow to create the condition to become matter, then that Plasma will manifest itself as the matter of that Energy level. This means that if you put 12 Plasmas of H what you get is something very similar to Carbon, and when the material changes from Plasma to matter, then the material get atomic structure of Carbon! This is how fusion in the Universe is done! The Plasma package convert into matter accordingly to what material they have and this spreading and the division of the Plasma package depends of the conditions of the MaGrav field of the environment. There is no need of fire, or high speed. **(1:48)** A Japanese company wants to develop this technology working with energy. **(1:53)** Keshe explains about flying with the reactors, the KS are learning the low level control. **(1:55)** The combination of the MaGrav of the food put together that makes people fat. The whole play in getting fat is in fact the C, if you look you have a protein, that have a C link, then you add sugar to the food (C related), then you add CO<sub>2</sub> (Coke, Sprite, etc), when you add CO<sub>2</sub>, the C match together, and the job of the C in any structure is keeping connection, so when you have the C locked what do you have, you have the H (sugar), and the O of CO<sub>2</sub>, so what you are left inside is the Plasmatic condition of water, now with the new structure of the food, everything is salt added, you have the Na and you add the water to it, what happens, it uses the protein and at the same time becomes a sack to hold the water. So in fact the obesity is created due to E disconnection, you have to feed to keep the connection, (with the C) so it continuously demand more of you to eat. If you take not just the sugar but the CO<sub>2</sub> out of the circulation you solve part of the problem.

**(1:59)** Mr. Keshe asked to Marek and John to unconditionally give to their reactors, and we saw a different reaction, then I said try to get whatever you need from the reactor, then we saw another reaction. I explained to them that Marek was more stable, with John you see more hesitation. We do not need to be in touch Physically to interact! **(2:02)** Keshe started to teach John about the Brain and the interaction with E, this is how you must teach in the future the captains of the Space Ship. You have interaction trough E, and now we are converting that to the controls. **(2:05)** Start to collect Coke bottles, because the way they produce these bottles, the shape of the neck, can release atomic H. **(2:12)** Today the Fukushima report will be on the website. **(2:14)** Question: How to do the H Gans? Keshe: The KS have to understand what they are doing, they say that I am

going to fast for them to understand, lets learn to walk first. **(2:20)** Question about the 2-2-1 pattern that Mr. Keshe told in a previous workshop (7<sup>th</sup> workshop). Keshe: This has to do with the load of gases in the reactor, not to do with the liquid. Remember that you create the condition; if you change one material or even move closer the material the Gans will change colors. The conditions lead to what you see! **(2:26)** Bones in a nano structure with a C connection ( $\text{CaCO}_2$ ) creates a balance of MaGrav in matter state. So in fact there is more matter then Gans, and the matter in the environment of the Earth stays. When we die the Muscles (Gans) disappear and the bones stay behind, because of its MaGrav fields of Ca and  $\text{CO}_2$ . **(2:34)** Question about why his material in container became black. John answer: Probably he produced Zinc Gans and there are probably Gans of Iron, since the man used chicken wire that is Iron coated with Zinc. Keshe do not agree. Keshe: If there is a mixture of colors there is a mix of materials. We are going to add vitamins and tablets in these containers to find out about the creation of life. **(2:49)** As a being you do not need to eat, as long as you receive the fields as a MaGrav. The fields that are being created in the containers are stronger then the Hiroshima bomb, if people do wrong it is because the humanity was not ready yet for these teachings. And there are still people who want to hold on to their kingship, so we need to be careful. **(1:52)** If you understand these systems you can eradicated 90% of cancers, a lot of people do not understand this. The only good thing is we can not cause problems and create more damages, we can only go in one way, because Plasmas by their natures will only take what they need, and they only give what is need to be given without them loosing their structure, so the balance is part of the Universe.
