

115th Knowledge Seekers Workshop May 26th, 2016  
( walking barefoot, sleeping on mattresses, )

(:12). (:14). Chinese government has appointed Professor Zhu of SUPC as representative for KF. (:19). In the reactors we are developing for Space the rotation of the core and the inner coil can produce interaction btm the fields which creates motion and lift, in S we don't see motors. We create motion in space through the interaction of the field PI when the difference is large enough leads to friction, or P motion and rotation. Option, we can create MG field plates, where you place Gans's of different strengths indifferent positions on the opposing plates and they create fields. This is the next step in controlling the field PI, not liquid or vapor PI. (:22). It's important what kind of Gans's you need to produce. In Space T you always feed from the strongest to the lowest field strength, if you can create rotation through PI field radiation, you dictate a constant flow and dictating the condition of the speed of rotation of PI without P moving anything in your reactor cores, placing in different orders, like the health patches you made of different material in different position will give you a lot of motion without any P motion. You can add or withdraw fields. In trying to catch up they create a field flow. The whole purpose of F PI is to introduce and apply PI T without motors the way the U works. (:26). On the board i have drawn only the fields and not the core. In Space you can dictate the parameters where the solid state stays and is maintained. Look at the structure of the surface of this planet, it's the interaction of the fields which decides where you have the solid state matter of the continents and where the liquid state of the oceans stay, at the same time the interaction of the fields of the inner sanctum of the planet and in interaction with the fields within the PI of the Solar S decides the thickness of the atmosphere of this planet, there is no mechanism to hold the O or H or gases except by the interaction of the fields. Therefore F PI is the next step, which is containment by the fields and not by the matter condition. As man is materialistic and connected to the matter state we went through the stages from molecular structure to atomic to PI. (:28). Now we enter the field of the T the same as it is in the U. In the structure of the Galaxy you see they all have different shapes and forms and we see the boundaries of it, these are created only by the interaction of the fields of the stars and the systems within the Galaxies and the interaction with the fields and what is in the environment of the U around them, dictates their shape, color, flatness, now you see the shape of a Galaxy without the containment, and this is where the PI T goes. In Space you can't go look for Cu for a core, but you can create a condition from the interaction of the fields that gives you the confinement of the PI within the atmosphere of your System without ever having a P matter structure. In space you look for the interaction of the fields to create things, to maintain, develop, and operate and use different field forces in a given condition for the development and structure of your systems. (:30). At moment you are producing Cu and Crystal cores, what happens if you enter some place in the U where the Cu state of the matter is the field strength of the environment, you loose your reactor, life, SS, because now the PI cannot be contained. It's like having ice in the summer for the freezer and it melts, it has no shape it changes its behavior, in space in different MG fields, the matter state which you have up to now have followed becomes troublesome, because 1 second you have a core and the next not, because the matter state core happened to mix and be the same as its environment. This goes back to the understanding of the containment of

the skin, you create interaction of the field plasmas where the layers of PI gives the manifestation of P. But because you have used different strength field strengths, it's a dynamic state as the field strength changes the field rotation strength changes, but you maintain your skin. (:32). We go into the water or heat of the Summer we don't melt, because our body has accepted a field transfer of a limitation of environmental MG field variation. In the space you have to have the same condition, where your reactors stay at a minimum condition of the existence of the man, which is your AA and operate and maintain a shell of field and not matter state, to create a condition of maintaining position in respect to the core system which has created itself. You use a spectrum of PI MG fields which their interactions in the positions you have predetermined, dictates the speed of the rotation, the field strength and at the same time the positioning of its fields in respect to its environment. Field PI is the ultimate step in the Space T. (:34). You play with field strengths of different dimensions that it allows you to create a condition of rotation, positioning and even P interaction to create a P condition to maintain and contain matter state. Now that you produced the liquid plasma (LP), it should be very easy to manipulate it to produce F PI, you can direct it, target it, control the speed of it by the amount of it, because it works by the mass, M G PI mass which decides and not by the volume. Become masters of how to mix different LP to create the strength which you need and how you can withdraw and add to. (:36). Government scientists have jumped on it like crazy because they received the key into U motion and they understand it. We looked at Mercury, Pb, atomic mass of gold, silver. It's impossible to mix these materials in a P matter state, but you create Gans and then LP, and then you have the freedom to play the game of the U, through the field which is released by PI. Summarizes. (:38). This is in the writings of ?? bless his name., when man understands the mutation of Elements. Now man has achieved the maturity of his intellect. Now you can do exactly the same in reverse, you have PI field you can go down to (matter), the cycle is complete, you can create field winds and hurricanes without moving a finger. You can create waves of love and ??, oceans of winds ?? the condition of traveling across the U at the speed of the U itself, that's the point there is no time in the space. (:40). It's for you to complete. PI T in its field transfer is more or less the ultimate, there are a couple of more steps after the F PI but knowledge of man will take millions of years to understand. But this should give you enough to build S to enter the U community, that man can create whatever he needs on this planet to stop the conflicts, he doesn't become slave to his P existence. If you can understand today man can fly and be at any point in the U he wishes. Now you have billions of planetary systems where they all have this knowledge, man has been left behind because of his violence. You create motion within the fields of the PI, you can decide the speed of the interaction, even on the ?? disk of the colors you can predetermine the boundary of the fields I want to be outside of and what I want to be inside. You can make PI conditions of layering in sequences, (:43). that for example, if you make ... if you make all of this Cu strength, your reactor will have a Cu strength, because it's PI it can change itself to another according to the pressure of your environment, you never lose your containment of the fields. In the U you see solid state matters made of whatever materials, even if the materials are not available. With the use of PI fields man can dominate, develop, interaction with ... works in a safe environment. Scale this knowledge up and you travel the U in no time, scale it down you can create in the outer ring the condition of the shape of a kidney, which is failed in operation, you

dictate the parameters around which your S outside the body, then create field forces inside that allows work of the kidney, parameters and you do not need to remove the kidney. (:45). You can dictate where you want to grow tissue in the heart, if a child is born with a hole in his heart, without losing the child. You can use the field forces to do remote no touch surgeries. Scale it further up (PI) and you can produce the shape of fruits color of banana. Now the development is in the intelligence of the Man, how you apply it, bring it together in a way that does not harm you or bring the condition to harm others in the environment which you exist. By creating MG field tolerances you accept a certain condition within that tolerance with a field strength matter condition, now you can see how PI field can lead to production of whatever you wish. The field PI the Chinese manufacturer choose within the containment, energy fields of water or food is created without thinking of a need for food. (:47). ?? .. Oasis System, .. as it becomes a part of the structure of the PI of their body, and they absorb from the environment of their body what they need. You create a base on the bottom and top and in transfer of the PI creates its own field condition and as your body is set in the structure of the Gans state you can travel through, in and out of the matter state you decide what the barrier to be according to the field strength you use. Do you want it to be in a gaseous state as on the surface of the earth or in the liquid state in the ocean. You want to travel in parts of the U where there are no fields and you dictate those loose weak field points or want to go in the center of a star to see how it will be. (:49). You need to move into the LP so you can go to F PI. (:51). Questions. If you use LP you get 2 separate fields but combined? When you mix Gans's they still stay MG field position in respect to each other, because they carry different structure, (in Book #2). He draws Cu Gans in glass, they are positioned in respect to each other because the central position, MG field is different, when you go into the LP now you have the same in origin, but the gapping is constant, all you've done is to create a condition of overloading, the same PI with different strength, these radiate equal according to the mass into the environment which it is released, ?? this is homogeneous of the PI you've created. In the Gans state you have positioning but in LP state you don't, but you have the field release, this is what you are looking for. (:54). It interacts with ?? it form, it's a freedom you don't have with LP there you create a spectrum of interaction, which you don't have with F PI where you work on the same level but within the structure of ?? mass. China will produce different types of Gans and uses. the Chinese government has committed itself to peace and with it comes the new T. (:56). The US government is moving on the same path now that the Chinese have it, the same with Russia. The T has its own credibility and it's taking its own shape. China will be leading in many ways for the world. The live teaching in China will not be broadcast in the West. We expect to be there 6 months. (1:00). Chinese Health Unit presentation, 2 parts and 6 crosses, 1 side is Cu N coated and the other is Al, all are covered with CO<sub>2</sub>, they used Zn for helmet. It's better to connect the 2 parts with N coated, it's essential to target the point of the interaction of the fields. When you don't connect it the fields interact wherever they want to, N and Gans coating dictate where they go, you need to create a line (of direction), this way you target an area, this is the reason we used N coated wires, when you don't have it the fields spread open, ?? the stronger fields interact. (1:05). We chose the Zn and Cu for a specific reason for the structure of the body of man. Aluminum behavior in the field transfer is different. You can use any metal to make a coil but understand the fields that dictate its flow, what energies will be brought, take to the structure of the other PI

Gans. If you understand the field transfer you can build S which none of this is needed, but this is where we are and choose to do. AVOID using especially Al coils, I explain how it works in minute structure, how it changes the field PI. The UN made it illegal to use Al dust to be sprayed for drought. They fly high altitudes to the moisture of upper atmosphere (2 or 3 km), to avoid the governments. They dispersed Al dust particles, the moisture sticks to it. (1:07). Then out of nowhere in the heat of the day you get a massive rain, because the moisture difference make the rain. But they found out the Al particles digested by the body can create a lot of health problems. When it gets digested it becomes a Gans of Al and can react in different conditions. So please avoid using Al. Let me teach you something since you brought it up. He draws digestive tract from the mouth, it goes in mouth (it changes its matter state and becomes Gans), when you digest food in matter state as it goes down in the St it starts changing into a N material first through the acids, actually a conversion PI condition matter into a Gans state. (1:09). when it reaches a certain level of Gans state the body transfers it into the Intestine, at this point, energies PI MG fields which are needed by the body is released into the Lymph, but, but instantaneous, zero-time communication, the needs and the collaboration btn the brain fields and the body parts. When you digest food and it becomes a Gans and its F PI which transfers across the body to the Lymph, then at this point what is requested by the brain, because it knows what is going to happen, and the cells allows the withdrawal of the energy from the Lymph. This means the energy to be absorbed from the food is predetermined by the brain and the need by the cell when it crosses and converts to a F PI, it's already predestined to where it's going and already targeted to be delivered. (1:11). No matter ever crosses the wall of the intestine, it's only the energy PI M fields and it transfers energy to Lymph. This is the very first time we mentioned and Field Plasma. Only fields in the Intestine which have changed from the matter to the Nano to Gans, now release their energy according to what is already predetermined by the cell what is needed and by brain. What is needed and done is taken from the digestive S to cross the wall, otherwise all the energy from the food would cross straight away into the Lymph and it would be in a mess of everything. This is predetermined by PI MG field strength btn the brain and the cell, whether heart, bone, or liver all is predetermined what is to be taken from the food, and those which are not there are predetermined by your Parathyroid glands I take this (material) because I can convert it using Phosphorus and Sulphur. (1:13). In certain parts of body you find even minute amounts of Lead, minute amounts of similar MG fields of strength of the Lead in the Kidney, liver, and L Intestine because this is the point where the fields hold to ?? separate what is not needed and the pulling can only come through higher level material and Al plays a very tricky part when it comes to pull the energy because in balance transfer it's very similar in energy to energy which is used in certain parts of the brain. And it interferes with the strength of the intellect, and brain. Pain has a specific MG field strength, intellect and comprehension are the same, Al creates a specific field which is in the bandwidth of the intellect and depression, that's why you don't use Al. Because now that you have created new field forces in your coils you make this free into the digestive S and accordingly with the brain. Would it be better to use Silver coils, Ah, you have to understand what the body is used to. (1:16). You could use Al in MaGrav but for the body understand what it does. ?? Each section of Intestine has different strengths it's trained to develop different field strengths, you don't absorb vitamin C all along track, but only in a given section. You

have sections that only absorb red meat and its composite, or nickel or whatever. The St has exactly the 3 layers as your skin, and the difference in the strength of each layer decides what is released from the Gans PI inside the intestine going through, (1:19). into the Lymph, if you change slightly this one to this one, then in that position in St, here you absorb vitamin A, there you release vitamin B. They will see how the fields are released into the St into the Lymph. ?? most of the Parathyroid glands have to do (with E and P) with the P conversion of the fields, ?? one of them does the field conversion for the matters of the E, one for the matters of the storage, for field transfer conversion for matter from solid state to PI state, and conversion for most of the free fields conversion into Ca only that supports the bone structure because if at any point you don't have a bone structure there is no life. (1:21). The 4 Parathyroid glands have a specific function for a specific way in guaranteeing the conversion of different fields to the Gans of the state of the matter which is needed. The (Para)thyroid is the operation of the brain controlling the P operation of the totality. If you create a continuous Cu, you are feeding your Cu coil in a balanced state which is not needed but the field transfer through non-lymph connection converts and reaches and finds a conversion from the Al in the E part of the brain. That's why you don't touch Al, it's just as because of its MG field strength which causes this condition ... it's not create .. they say they found a huge water reserve from millions of years, 10 kms down in the earth. I said no rain ever flew down, the reason is because the MG field of the earth and its magma and environment created in that cavity where the MG field is equal to H2O, that's how the water was created. It's the same principle btm this and the Al and the brain. (1:23). Be very careful with Al, Pb and couple other materials which have this property, they just happen to have the same MG field, some are isotopes, they create the matter state of themselves in the Gans state solid like a bone, in a given part of the brain, they convert in field strength transfer. Better not to use Al when comes to applications for body and food, because of the field transfer strength, it's not all the Al isotopes, only 2 of them. It depends on the rate of decay in one of the electrons in the boundary of the ?? Would it be possible to use the F PI for traveling to the matter itself, of course it would be a game play, one of the first funs of PI T. (1:25). Matter is the lowest strength, we make one a little higher, enough to understand the MG field positioning of the matter state... The molecular (matter) state we say the tightness, it has its own positioning, in a tighter pack ... if you create a field strength the same as the "tightness" you can go through like nothing, because when you enter it they open up, ?? the space becomes irrelevant. Because you dictate the positioning. This is part of the filtering S you can make with N material like to filter kidneys, the work of kidneys. You create the field gap (for the filter). You don't go for the PI itself but the strength of the gap in the PI, if you create that gap when you come in, the other has to find a new position, it moves over. (1:27). We use this knowledge in the detergent T, 40 years ago we used to have to boil the cloth that it loosens the fiber's spacing in the cloth itself that the soap could clean it. Could actually interact with it and take it with itself, now they use the oil of orange it works on the same principle but the matter state, you use a smaller dimension to enter the gap. In the PI you use the strength of the fields to position yourself and ... in F PI T there is no state that man cannot travel to, through, and from one to another, you just have to add the knowledge to understand how to do it. Would it be possible to use PI to reduce the size of the matter, for example big as planet earth, to shrink or to make bigger? .. if you take the PI field energy from it, then its PI reduces in

size. (1:29). then in the size of the release, its interaction decides. If you are thinking of making the earth pocket size and go somewhere else, yes you can do it, but you have to understand how and what is the composition of the fields. This is what we discussed about viruses, it's exactly the same, how do we shrink a virus? We just received reports from Ghana, it's amazing. You have the AA (COHN), then you have a PI of the field which attaches due to the strength of one of the 4 elements (COHN), or combination of them, that becomes supplier of energy into and it takes it over. In the center you have AA but you have an energy packet which is feeding it. In present world of science we know how to destroy bacteria because we can play with the AA, but we haven't got enough knowledge to interfere with the extra energy which is much stronger than the AA, then we call it Virus. (1:31). The PI T is effective against virus is because here you have a PI in Gans or LP or F PI state, now it has the spectrum of all the energies in a PI, so they start to exchange fields (with virus) to find a balance, in exchanging fields with the PI the virus gives the energy to the PI, and the space generated in b/n the PI and the other matters, the virus gets drained, gradually, the virus is still there, but you have depleted its energy. In the Space we don't have AA and bacteria, bacteria's are AA based according to the Man's AA and the big fields G field strength. ?? the Gans can be used for E Coli, disinfectant and the rest, it's just with the Gans you create this condition. Not deplete but bring balance b/n the fields in the environment, and then it disappears, the same with the bacteria. (1:33). The bacteria's are another form of PI, with the right Gans you can change bacteria's. We were discussing with the doctors about using the Gans Water for immunization, TEPCO tested it by infecting the mouse with influenza then administering Gans with no side effect, toxicity and no influenza. That's how it works and why in the Space you need it. You can create, deplete and dictate. The Health Patches work exactly the same way. He draws an organ on board, put a patch on both sides of infected organ, don't use a single patch, Gans works on a gradient level, it forms an Infinity Loop with the other patch and drains the disease quickly. When using P Pens for inflammation use 2 one on either side then it drains very quickly. If you use only a single patch you have field losses, whereas with 2 you have entrapped the fields. (1:35). Because you transfer its energy. I spoke about traveling in Zero Time by the strength of the field, this is exactly what you do, you find yourself in the U where you put yourself in the wind b/n the 2 in the direction you want to go ... instant travel. It's like sailing on the seas. Now you create the sails of the MG fields, you get on the winds of the MG fields of the U, and if you get the strength right you travel at the speed of it, if the wind is soft you only float, if you get the high speed you travel like wise. The Fields work in respect from the strongest to the weakest, the strongest always feeds the weaker to bring it to its (? up to its own) position. In the CO2 patches, the CO2 is the weak part, the virus is more intense, higher. (1:37). the C and O are already part of your AA, now you created a weaker point and the energy flows (to it). I go back to the 129 Tesla in lab, it fed the other reactors to try and bring it to the balance .. If you want to take you place a weaker field, to add put a higher field. ... Talks about the magnet, directionalize, in my Health Cups I dictate the magnets, their strength, flat or ring, square or rectangular, each one plays a game. If I want to directionalize the fields I put it this way, etc... (1:39). Am I playing North to N or S to S, or N to S, if its bigger or smaller .. if at this point I need the energy of H to be delivered, I used a dab of Liquid Glue Gun which is high CH, it releases its energy to it, I use a spec of N CuO2 or N Zn, now you target it. If you open some of the cups I made it

will take you centuries to understand the principle by which each one has been put together. I know how to push, build, because its PI it is left to the E of man to receive or not, (1:41). because he still needs that E need to confirm his existence, that's why when you build a S you find out people don't use them, because you give, but their expectation is that if I accept I will not receive what I am looking for, (meaning the attention or confirmation), I want to take. The S works with everyone but allows priority of decision to the E. If you want to override it, load it up with Zn Gans, then you can dictate any condition, and this is NOT the purpose, we bring the freedom, then if you want you take. You can play a lot, the magnets are too weak ?? but you can target, confine, hold. The same as you use the cores to hold the Gans or LP, I have used magnets to do the same, most of the magnet somewhere in the structure have Fe, which connects to the blood through hemoglobin. When you understand the T in its totality then its very easy to manipulate for whatever you need. (1:43). You can walk a man out of cancer if he wants it within seconds. But you bring him back to the unit 10 times because his E needs a bit of feeding, talking and sorting itself out. Don't forget the brain has the power to reverse the cancer also, it doesn't need your S. It is more powerful then anything man can ever make!! But it plays games with its own existence. Rick asks about grounding by going bare foot on the earth, ground point, or the Units use Saltwater as a place to dump. (1:45). In Space we don't have the earth to ground. No you can ground easier in Space. Keshe walks barefoot a lot on ground, gives and takes with the earth, enjoy lying on the ground quite a lot. Especially when you need to concentrate, you give and take to bring balance btn the P and E. The earth works the same way as I just explained with the magnets, and the 2 Health Pads, it releases fields in the matter state of what it has and you need, and what you don't want and you give. There are different behaviors btn the people who sleep in skyscrapers and those in the fields, every now and then you need to exchange fields to bring balance to our life in the P condition. The dumping is the surplus energy you put into a S which you don't need, you can do it with your hands and head also. (1:47). At times I stick my hands and head against the wall, with concrete you don't get much, with brick or stone wall you get different energies, you tune into the environment, it's a technique used for centuries, but we don't understand it. I explained this when you hold a P Pen in your hand and you don't direct it, you take and you give at the balance of what you need, this balancing is essential, it's the filtering of E fields, not so much in the matter state. When you lie on the beach you discharge differently with different sands, white or volcanic sand, you see different behavior, because you get rid of certain strength fields, it's essential and has to be a part of the life of every man in being able to bring balance. At times when I can't solve things I lie down on the ground, you receive and give what you don't want. (1:49). In dumping you give to the higher MG fields. It has a huge application in Space, if you know how and where to dump its a very effective way for discharge of energies especially if you have meteorites ahead of you, if areas you don't want to destroy you saturate. Same as what I explained to Washington, you release so much MG fields, the strength of the cells of the structure increase so much that the gap, the positioning increases and you can go through it, and you do it by dumping surplus energy into a given area, SS are known to carry high energy packets for this purpose, its not a missile, if you use it that way you'll not see a thing, it will literally dissolve like a sugar in a hot water. It's so easy we can take radar satellites out in no time, we don't destroy them we just saturate them with energy that they are not even there to do

their job. Today I started teaching techniques and not Systems, if you understand you can do a lot with these, how to create wind, how to dump, motion, how to communicate without having a S. How to call to the earth from the other side of U, I am stuck. With dumping you can hold it, control it, or share it. You usually use high unbalanced F PI for dumping or storage of energy. (1:52). Usually isotopes of matter elements which have very low radioactive base and very high Cosmic radiation base, they compensate from one to the other and they store capacitors of the energy. (back to barefoot) That's way the human race is becoming more and more detached society because we sleep on the mattresses which is all predetermined with all sorts of rubbish in it. Humanity stayed more or less the same when you understand that you are connected to the point of your own creation. Most of the diseases we suffer is from the mattresses we sleep on, the iron and contaminated materials which are used doesn't match our body, we transfer energy continuously to our environment, and these places are ?? fakes (artificial) where we live and interact with. (1:54). Try to sleep in a room which is full of N coated Zn, and I will tell you what it does to you in 2 days time, you walk loving every creature on this U, because E you are satisfied, you choose a point which you ?? receive everything. Question, can human's control the fields without having any Gans or Water around, because we are in the PI state and it contains almost all the materials such as CO<sub>2</sub>, CuO, CH<sub>3</sub>? Of course you can do. But how to control the rotation of fields and create different fields positions and E? You got to learn it yourself first, understand your own being, then you can create anything you want and let others see it or you feel it yourself. A lot of understanding needed as to what to release, depends who you want to be the audience of what you create. (You can play all kinds of games with your hands etc. ) (1:56). Oh, you want to see a meteorite, there it is, because you create the condition for it, ?? vision of the man and ?? What the purpose of it. Hold your hands and create your own PI ball, it needs a lot of understanding of your own strength. Question, creating matter from PI ?? You can when you understand at what point the field strength reduces enough to be matter, when you have a PI it goes through its own release of energy to its environment, if you control the reduction to the point that you decide the rate of reduction, then you can create anything btn your hands. (1:58). You can put your hand out and by looking at it with your brain you can create a field that at the point of the hand the energy from your brain reduces so much that it becomes gold in your hand and everyone can see it. You put the skin, the strength of the feeling to the E of your hand, it comes from the brain itself ?? neural S at the limit of gold, now you want bread, it will be bread. You have to dictate the boundary of the strength, with your E you have already dictated it, with your hand you dictate the position. A lot of people have done this, but it is understanding how much you release and at what point. You put your hand out 20 cm you get no bread, but at 10 cm you get bread, you can actually P touch it and give it to people to eat. Christ done that 2 or 3 times, but people didn't see it. This is my body, this is my blood, and that's how it was done, intention of the thoughts ?? control the P of the ?? (2:00). A question concerning whether living in the field of Zn or Al is good for you? Keshe, with the Health Units you use the fields, when you use Al with MaGrav you are open to the space to take. In the Health unit you sandwich the body btn those (coils), they have nowhere to go nothing to interact with. When you have a single coil in the house you share with the rest of the environment ?? it's a big difference. If you understand this process of containment, in the nuclear disasters you can use this knowledge very effectively to

contain all the radiation, we have seen with TEPCO. This understanding containment with the F Pl you can do wonders. (2:02). You can contain any radioactive leakage from any source just using the fields, you don't need the containers. (2:03). Norwegian asks about patient with cancer in his health unit. he felt good but then got very tired. Keshe asks if he has a doctor to follow case? No. I will not answer you until you find yourself a doctor. It has to be done correctly. (2:08). A man with 7 MaGrav coils connected linked it through to the metal roof, and has a large energy field, he feels calmer. He has connected to ??, Keshe says to run the G side up to the roof, the M is already up there, then you will collect energy from the atmosphere. (2:14). (2:15). Release Italian info about getting the MaGrav into the market. Monthly payments at 10 euro for 10 years. (2:23). Question about Gans trial. (2:28). Asks about treating water for E. Coli with Gans Water of CO<sub>2</sub> or CuO<sub>2</sub>, tests in Ghana are coming through positively. They are working on a soap that kills all bacteria. The international standard is 0, some tests have not yet gone to 0, will do more research. (2:31). A test is running in China. They want to find a balance where the bacteria is gone but life in river safe. In Sierra Leone E Bola was totally eliminated from contaminated water. (2:33). For treatment of rivers need an energy balance btm the CuO<sub>2</sub> and allows the life, fish, of the river to continue. Looking for CO<sub>2</sub> and a small amount of CuO<sub>2</sub>, add CH<sub>3</sub> into the river to allow life. On the other hand you take energy from what is above C, which is the Pl of the virus, take this out with the CuO<sub>2</sub>. If you use only CuO<sub>2</sub> you take all the energy out, start thinking U. When working with the environment you don't just go for what you want to achieve, don't destroy the others, you support the whole of life. (2:36). If you take the energy from the virus, see what you have in your hand, AA, this is a food, you change a virus, dangerous, through the Gans exchange of energy, to a life giving thing, this is what we did in TEPCO, we created gold, you don't destroy anything with this T. You find out by creating a condition you allow normality, but what more it brings on the table. Here you have bacteria or virus you take the energy from it, inside it is a vast amount of energy, this is itself food (AA), if you use it correctly you create new life in the water. A lot of virus that are connected to the AA of the human being, can be taken away and then you are left with a vast amount of energy available to man, it's like eating beef. But this time the energy inside could be much more because. (2:38). By being connected to the virus the AA has received new levels of energy it is fully charged. Don't always look at getting rid of, see what is left, brought as a gift. If you can use it you set the path in a very peaceful way. (2:40). How do you see the U Council working? Caroline is setting up different sections on face book, one is to add veterinarians. The work of the Council is the positive peaceful application of the technology and bringing peace. It's not to fight this to get what we want, they will work in alternative ways which harms no one. (2:42). Not blaming for what has gone wrong. First rule, a U Council member should shine like the light of the Creator, to be a source of light for other souls and radiate the light and beauty of the Creator and try to reach all attributes of the soul of the Creator, in time the creatures of the U see this light and not the P, the attributes of the Creator have been stated in the many scriptures of the man in the past. The 2nd rule, you are through your soul a member of the Council, the members of council can't announce themselves as a member unless it is announced and registered under the council's panels, no members can speak themselves as a member and influencing opinion or words at this point they immediately loose their seat and a new member can stand for the open seat, those who try

to show they are better servants of humanity don't stand a chance to take a seat in the council. (2:45). The selection of a soul to the council comes from giving and not by talk or P actions. A lot of people in Dubai who announced they were on the council tried to use that influence and they lost their seat. If you are of the nature of serving humanity you can come to the Rome meeting, and stand for the mother language of which you speak. To strengthen that language. (2:48). Keshe says that Gorbachev is the only world leader of the past who put the soul of his nation ahead of his position, as head of USSR he submitted his nation to freedom of its soul. It takes a lot of freedom from P to do such a thing. Sandy asks if people can't be in Rome can they attend, Keshe says we open Zoom for them to attend. (2:51). A call to Jewish people to use the T to bring the peace. The same to other cultures. You work through your soul and not by nation. We check how you behave since you join the council. The U Council has its own website contact them. It must be positive we don't respond to negativity, we work with the P, we interact with the soul of the man , any shape or form. The work of Council is the unification of the soul of man. The 2 webmaster are Sandy and Vince. (2:59). ([universalcouncil.keshefoundatoin.org](http://universalcouncil.keshefoundatoin.org)). Some news coming from Alek about treatment with Malaria.
