

(:03). In the last 2 workshops we talked that as soon as we see a breakthrough then we will call a short workshop, it needs to be shared. We show the new MaGrav Generator in its raw state across the world so the governments can't block. Last year in July, 2015, we released the MaGrav power reduction Units. Some of you could not see huge result. Now what you need to do is disconnect the live wire to the Grid and Ground, and plug the S into the main Power supply. You don't need to feed it or add energy to it. (:07). These units are fixed to 3 to 4 kilowatts. With the new unit you add a second MaGrav that becomes the supplier and triggers the first unit. You plug the 2 units together and then plug into the Main of house. The 2 Units become the Power Generators. Those who made there own at home can buy the 2nd Unit to plug into their homemade Unit. In the coming time we will release this new Blueprint. (:10). First it goes to manufacturers and then to public. We have now released humanity from oil and gas. (:14). Video of new Units. He has got over 3 kilowatts connected and NO POWER only the MaGrav. We have reached a total power supply. (:20). The power unit is only extra the goal is a SS. A Blueprint will be released for everybody to build a SS. (:27). Remember I talked about building an arch, afterward you take the scaffolding away. You build your S in a container with Gans material, and Gans balls, and a MaGrav S inside ... after you get your SF working you empty the container. If you can create the Gans motion at the bottom of container you can show dynamism without action, motors or batteries. (:29). A video of creating motion without motors. For man of science this is so important creating motion without motors, with Gans. Rotation of liquid starts with the only the double core Gans ball. It can rotate at very high rpm. If you fill the balls in the right way, then you all can build a SS. In health units you can reduce cancer in minutes. You control this with your mind. We don't need fuel to make rotation. This video is one of the greatest BREAKTHROUGH!! (:36). It will be controlled by thoughts. Dr. Batya explains how he did it, from the 121 workshop he filled the Gans, in bottom, and he felt it to start rotating. (:40). He shows his current work, inside bucket is all his Gans's and he has 4 cores within cores, double core balls. (:42). He is using the CO2 Gans on his grey hair and almost all of them turned black. In inner core (ping pong balls) he filled with LP of all Gans's and AA, and he scratched his skin and put some oil in it for control. Keshe says you do this so that you can control the S. In these cores, because you are of the human race you have to add these AA for control. In all containers put a mixture of AA in them. Then in the inner cores you want AA from the fat of your skin or blood if you have a Gans of it, then you have a control of the reactors from the center. DO NOT put your own AA in the outer core, because for the time being you do most of the control from the center. You dictate the speed of rotation and amount of the flow, this way you start to understand you control the shape of SS, the distance of the gap, the G and everything else. I will teach you a lot today. (:45). I put CO2 Gans in 2 outer cores, and CH3 in others. and mixture of all Gans's in the bottom of bucket and LP on top. Immediately as I put the balls in they start to arrange themselves in SF. I see it building forces up. -48 (:50). (:55). Douglas tells what he did, same as other man, water started to rotate. (:59). Composite Gans rotating at 10,000 rpm. He rotates it above the Gans balls and they start rotating. (1:02). The rotating Gans has such power to move matter state, liquid. This is how stars are created in the U. The bubbles Douglas saw in the ball are PI bubbles and

are all in motion and create their own field zones. When you see them they are free MG fields and are PI, if you can gather them together by high speed rotation then your S changes. The bubbles lock the 4 reactors together and it's the beginning of a SF. At this point the SF is locked, you can't do anything about it, and can drain the water. It's just a matter of moving the 4th ball up and down until the vortex is created, created by field PI, it will adjust with the earth's MG fields and create lift and motion. There is a slight NOTE you have to take, they put a drop of their blood or AA in center of each inner core. Remember the teaching on the soul being in the center of the brain. (1:06). When you achieve this point, because your AA had a say in its creation, you have full control through your E. By your thoughts you position yourself, think lift and you achieve lift. Renan discusses S with control over M and G. I work with Bernie on S control through the soul and E because he has this capability to interact. (1:10). He uses Lead Gans in center bottle (not rotation, because only working on control), only for controlling fields, 3 bottles around CO₂, CH₃, and CuO₂ on top. He gets 3 meter radius of M fields. (1:18). He has achieved up to 34 meters, hit the wall. For G he reaches 13.6 meters. He measures it by performance of car engine, M makes engine run better and G makes it run worse.. (1:21). (1:24). (1:36). When we got the choking feeling, the other man got dizzy, but when we let it in, then the flow into the body was very strong into the neck and head. The flow was Anti-Clockwise. All the 3 points in the head connected, he managed to control it, (1:41). The dog got really excited and jumping around them, he thinks when the M switched it released a lot of energy. (1:43) Douglas says that his whole garden, yard is attracting lots of wildlife, and they can get really close to the wild animals. Keshe says the environment of the PI changes the environment of living. (1:46). We can try to add a 3rd core and use the same Gans as the center, the interaction of the middle core, it's a 3 layer core, a transition section, and a matter section, when they all start rotating you'll see a new dimension in the world of PI. It works like the layer of the skin, you start creating materials. (1:47). Armand is developing one of these 3 core reactors. Inside core he put mixed Gans and his blood, middle core CH₃, CO₂, outside core mixed Gans without blood, the 4th core a little heavier and on a motor, he rotates, all 3 cores are rotating, and some little bubbles in the center. Yes at high speeds a bubble in middle, Good! No air gaps. You can see the empty hollow center. You should make one CH₃ on its own. (1:54). Armand made a MaGrav with a different way of coiling, and in the middle he has a double core. (1:57). We show you the first lines of the development and it's up to you to take it further. (1:58). Dr. Klaus shows work on the glasses, tubes filled with ZnO₂ and Iodine Gans for seeing the soul. A friend had pain and he tried to focus on him with the glasses and he reported an immediate change. (2:01). We will bring this workshop to a close, we have broken the power of energy control. The control of Multi-national corporations coming to end of slavery. The people across these world are sharing and developing the T. The KF manufacturing will make for sale SS Unit to fit to your car for about 20,000 Euros. Warning to governments people will start crossing borders and they need to resolve it. (2:04). In a few weeks time you will see people flying around. (2:08). A promise to Fabio's family, about the criminals by killing by intention. (2:11). Keshe focuses for the next 6 weeks on making a SS. Douglas's video of rotating balls. The machine rotates clockwise and the balls anti. (2:17). The Chinese said he is welcome to China without a visa if he can come with his SS. I will be there soon. (2:20). Professor Zhu speaks but lost. Ali asks if he show his bucket and MaGrav. (2:24). Lady asks if 2

people can mix the AA in the inner core? Yes, but when you do this you'll find out the one who is best for the craft will lead, and the ones who plan can never take control because they loose more then they receive. You can even put 10 people's AA, but the one who truly wants to serve will end up the leaders. (2:27). Paul from Togo, made silver Gans, share on Thursday.
