

## 124th Knowledge Seekers Workshop July 28, 2016

(:11). We know everything about the matter state but we know nothing about states of Pl, we need to learn how to work with both sides. Problems are developing with scientists who work in Plasma Matter state, they have to deny Pl of the space. (:18). Since we showed the new Pl generators there are huge shifts in governments in one way or the other. We are working on a compact S and wireless power S. (:22). We cannot operate unless we can teach and explain the T to the other scientists. (:27). Douglas shows the new MaGrav Power Generator, cover up the new S so no one sees it. It is running 4.4 kilowatts with motors running, these Units can go to 20 kilowatts. But we will sell them at 3 kilowatts. (:35). Shows the rotating Gans balls, talks about when the planets reach saturation and shifts the poles. (:38). The movement of the Gans ball like a pendulum, like a heartbeat back and forth, it's a polarity shifting. (:45). Renan shows Gans balls in water, can't see the movements at moment but it was earlier. The top ball should not touch the liquid, when it does it links up and you don't see any changes. You need a distance gap. (:49). It produces both AC and DC output. (:52). Douglas shows again the Gans balls in rotation. We need to make application for this effect, redesigning motor and power supplies. The Institute on vacation until September 21st. (:58). Alek shows his rotation of LP in the bottle. Keshe says you can use this rotating liquid in the same way we use steam to rotate blades. You can use these to remove matter from the fields. (1:03). We don't start manufacturing, you do. Nobody has paid a single cent to the KF. We are here to support you to setup, we give the T freely. (1:10). We'll explain the sign language with the fingers. The brain, the E part in center, in the center of that is the seat of soul, the energy in the containment of the body is 17 times the Hiroshima bomb, look at arms and 3 finger, P, E and soul, in your fingers and arms you carry the same structure, you're back into the structure of the 3 dimensions within the 3 dimensions. The structure of the man is based on the Pl. The stronger soul part sits with your thumb, index finger with E, little finger P. It's like your Stacker Unit, the inner core is brain and E, Soul, and the outer core the hands and arms, everything in our life is based on this, if we understand it and can use it, we will not be abused. Now you put your thumb towards yourself and feed yourself in the cycle of P. (1:14). The structure of humanity sits on the ? of the Pl. The SF within you. In the soul of man we deal with more powerful forces, that's the center core (4th core above). There is a report that the Chinese took down a UFO, if true what did they use to interact with it? Those who tried to murder me are infiltrating the Belgium groups, be careful. (1:18). Keshe has to go to meeting in Rome, Armand takes over. (1:21). Armand got the Chinese Balls from Internet, Search for clear plastic balls, (Ali Baba), look in hobby shops. He didn't N coat the center coil because he connects it to earth, it shouldn't N coat over time if connected to earth ? Q: You can do without capacitors if you get rotation in your coils. (not clear ...). By using different Gans on your coils, ?? make a permanent energy. (1:28). (1:31). With 2 triple plastic balls, fill one in an order and the other in the reverse order you get interaction and motion. (1:35). You have your Stacker at home and then you can put Gans balls around the house and play with the interaction. You don't need a lot of Gans, can use LP. (1:38). He switched from patches to coils for lady with lung cancer. You can use the balls, if you create an interaction with the balls you can make the change. You can put 2 or 3 balls inside each other, doesn't matter, depends on mixture of Gans. One drop of the AA in center core

gives you control of craft. (1:42). Neutron, proton, electron, Principle Matter, transition, matter. (1:50). (2:06). It's alive. (2:18). (2:44). Caroline reads, that we don't have enough energy. (2:46). Things are speeding up very fast in last 3 weeks, go to the Universal Chat rooms for your questions. (2:50). Simple ways to rotate balls or ways to mix Gans without motor. (2:54). (3:03). Man shows a soup of Gans for Coils. The Gans start to form different mixtures and formations. (3:07). We see a definite pattern in the Gans. (3:12). Tow spirals one M and one G. He says he had forgotten that he had a figure 8 N coated wire at the bottom, thus the Gans is flowing in the direction of the fields. He took out the wire and the fields continued to stay. He used a few drops of lead, CH<sub>3</sub>, CO<sub>2</sub>, ??, Cu O<sub>2</sub>, Al. (3:23). (3:32). Australian System showing plastic Gans balls, if you N coat a core then you can put LP inside and then remove and the fields will remain in it. You can also rotate dry Gans. (3:44). You don't need much of the Gans mostly liquid. Be aware of what you are creating and give to your reactor. Pray and have good intention for reactor and world peace.
