

125th Knowledge Seekers Workshop July 29 2016

(Douglas created light and core flew off, on the edge of flight, Explained the completion of the Unifying Fields Theory in terms of Plasma, Use of Alkaline and Acid)

(:04). New disclosure, someone has achieved light and lift. (:06). Goes over again how the fields of sun interact with fields of the earth and matter started on this planet. In the PI T we produce Gans that complete the circle back to the PI of Sun. We have missed something important in understanding. MG fields from one strength, they became the M field of the other strength, this is the natural process in the U, by using the Gans we created our own new Systems to return back to the energy which originally came from the sun, the Pens absorb pain etc. Keshe's paper on Unified Field Theory completes this circle, BUT it's not as one field but 2 M and G. In the last centuries we could not understand this, it means both M and G. We have to call it Unified Plasma rather than fields. (:09). In this structure we have understood the totality of creation of matter. If we understand and apply this we can come to major breakthroughs, separation of the matter state and the PI. This is the biggest problem, our only concern was matter. The Unified Theory is now understood, it comes from one source and goes back to the same source. No matter where you start in the circle it still goes through the same process. Going forward be aware of which state we are talking about, the source, conversion to matter, or conversion to PI state. (:11). Each one has its own work, but at the end one does not exist without the other because at the end it has to come to or go from. What was not understood was how you convert from one to another. Go back to understanding a Neutron splitting into an electron and proton. Principle, Transition, and Matter states, he draws 3 circles inside each other. Both the Proton and Electron have this structure. In physics they tell you the size proton 1:2000 electron ... what is the Principle of the Proton becomes the matter of the electron and what is Principle of electron becomes the matter of the proton. (:15). He asked the Innovation Center to build this structure with Gans balls, the inner of A goes to the outer of B and vice versa (like infinity loop). This has been the SECRET of CREATION, which man has never understood, this is why you have an electron of a proton, why you have twin stars, why 2 parts of the brain and where in the center is the Transition of the fields, we call it in P life Emotion. The E decides which will move to where and how, one is more stronger on one side or weaker on the other, if you understand this you can convert any energy in the U to any matter state in the universal condition. When you go from one to another, at the points of interaction, both points, and in the totality of the fields you get a rapid conversion. In the human body we call it Enlightenment, understanding. In the P operation of the reactor you call it the light. (:18). A few years ago the UFO over Jerusalem at Christmas time, there was a flash of light and rapid exit of craft, this is what a competent captain can do using his E to control the physicality with it show its reaction. This is why I say we finish the science of man today. You decide where this orange zone (interaction of 2 PI) is going to be. How you communicate, with the other E, how you can elevate the principle of soul of man. We need to understand this, that we can go AHEAD! Understand how the little Principle can become a major part of the matter of the other. In this process you create motion. (:20). You saw this rotation in the liquids. The first step of man understanding his own condition. When you have a Gans of two different states interacting with a Gans of

another state at the bottom, where the transition and field forces creates the rotation. In turbines we convert the interaction of fields to electricity, when you understand the PI fields you can create megawatts of energy with Gans balls. You have to understand where to tap in and how much energy you need. Then when you make a double core with 2 different fillings of the same you'll create perpetual motion on both, by distancing them you dictate the flow of fields, strength of E, and the rest. This is where you have to complete the knowledge, we need no generators or nuclear fuel, only the fields. Then you will only be dealing with fields. (:23). You can have any entity in any dimension is the world of creation. We don't need to create, but rather to be in charge of the fields in the right order. In the center you can have anything you want in that matter fields or whatever, because even in the field you have both Principle, Transition and matter state. This is the point of the Creator where it exists in all dimensions. The rest of the creation in the U works in these fields (the other 2 PI). If you can replicate fields in this manner you'll see everything we said and it has already been done. Vast amount of energy, any kind of food, material, motion etc. From now on you have to learn how to play, connect which one to what, what condition. Would you like it to be effected by the environmental field or your decision. (:25). You decide to create a given environment in a given zone that you want to be and manifest as you want. This is part of the control, as I said if you wish gold it will be in your hand, because you use the atmosphere of this planet which creates gold in respect to the condition of the sun and your thoughts become the transition line. The beginning product is the energy of your soul or the sun, and the end product the gold. This is why I called the teaching for today as I could not complete this yesterday. Armand made 3 cores, because center core for it operate needs to be in a floating condition, of its own strength. You can make it from Gans, but where will you find it in the space. (:27). You start at P (the outer core) and go toward the center with the accumulation of all the fields, then at that point the amount of energy ?? will reverse go outward and create the entity, flash of light. The prophets of past always said they have seen the fire and light. They got enlightened by bringing the P to the essence of their soul and by that received the light of the U. With that they absorbed most of the energy that they could understand to translate. And now all of you have the same capability. If you understand it you reach the stations of the prophets of the past and the messengers of U, if you don't understand you had better stop it as it shows your own short mindedness of the knowledge of U. If you go from the center out, now the center barrier moves to the outer boundary, ? the P becomes part of the center itself. This is the state of the soul of the man, and the operation of the stars, how Galaxies and U created. Fields in condition of environmental control, be it the womb of mother, be it the U atmosphere itself, (:29). the structure of Proton or Electron, once they have created the matter state condition barrier, they feed themselves back in, they create the total energy and then manifest themselves as an entity. -25

(:48). Keshe says what is interesting is the light and the way you saw the structure of the light. The center lit up and the core flew off.

(:54). You are on the verge of a flight. Now you need to control the rotation speed of PI, you can create the craft, in 24 hours you should be able to show a structure. Glue your 3 platforms on the table, locking them, put the same one as before in the center of 3 and you should see a light. The 3 reactors will break the flow and you should see a gradual

lift. You can expand the dimensions of this craft up to 200 meters. He explains how the core passed through the closed door. The energy transfer of the CH₃ and Alkaline solution, created a M shield which can pass through anything, until it comes to balance, it's the fields which carry the matter through, this is the way you travel through dense fields in the U. You can create and control it. (:57). The core in the other room may be shield was created, what we call dark matter, transition strength in which the matter strength doesn't exist for it, so it can go through walls. You probably wouldn't have found it if the conversion hadn't been so rapid, or you'd have found it on the street a 100 meters away until it becomes the balance state. Because you didn't put any CH₃ in the center core, it was totally alkaline and then the outside had a CH₃, which is acidic, it wants to transfer its energy, you brought a balance of Alkaline to it and it transferred its energy. Exactly like the rotation of material, (Renan showed how the Pen changed the alkalinity of the water). now with a twist of the fields you can change the M to the G, you call it CH but in PI T we call it M, in body we call it energy, the Cu is alkaline and it pulls especially on the condition of earth planet, of the O, because all the materials you had is CuO₂, CO₂, ZnO₂, it means G is pulling, the O is a ? condition. (:59). If you use Pb or Iodine the field strength will be much stronger.

(1:11).

(1:17).

(1:24), Renan shows work with acid and base. (1:29). Up to now you have only seen LP. He worked with Gans in gel form, it has a lot of properties, if you add salt to it becomes G, if add sugar it becomes M, it's like when you add Gans to coils or wrap in paper for capacitors, the salt in the presence of O it attracts to itself, becomes G it receives more then it gives, and it becomes a generator. You can go further and dry the Gans. (1:31). which has different properties in space T. Dry Gans when mixed with water again has different properties then the liquid Gans. The same if you mix the gel with water again different properties. In this state there is no interaction of heat or pressure. ?? If you mix the gel or dry Gans with N material, totally different properties. This is the new teaching. Field strength plays a big role. (1:34). If you work with dry Gans properly you can enter the matter state. This is where the N atomic layers in the upper layers in conjunction of the moisture leads to creation of matter state N. How you absorb energy from the Gans on the earth, is the O interaction, you convert the Gans into a matter. This is why we get H when it rains or there is a moisture, that is why the lowest moisture on this planet is 15%. The moisture itself is part of the flow of the energy to add to the material in the environment, O is the converter connection and with it converts, in this atmosphere condition, Gans state of the matter in dry into the Gans state matter into the matter state itself and we feed it tangibility. This is why we eat the food convert the energy into its Gans and then we can hold the hand of a man as a matter state, you create muscles and tissues. (1:36). In the U you convert the Gans into the energies into the powers and enter matter.

(1:50). When you drink water that is 8.6 pH constantly the rate of the cancer goes very rapidly to 0, because the energy of conversion in your stomach is not that much conversion from acidic to alkaline, it's a normal transfer, not high level of energy, ? in this area you end up with matter state, ?? if you understood the gap in between (the PI) now you know where to create your matter state, while it's going from one to the other, higher order materials are created when CH₃ is giving, lower order material when ? ...

knowledge of creation. (1:52). In coming days when you see more of SS which are part made by man and part by men of U, we send you equally shoulder to shoulder, we don't send you into the city on the back of a donkey. ??? .. it can not be stopped, the progress is rapid, in coming days we seeing flying .. in time we answer to those who came to be stealers of the souls. I know how to bring souls to speak and then we see what they have done. As we speak there is one going on the Internet on the lines of international condition. Those who tried with their thoughts to override the work of the KF. Question, I have AuO₂ (gold oxide), wouldn't that provide quicker and better M fields? It depends, always learn one thing, it depends on what the M fields are going to be. You always give from the weakest to the strong in G ?? you release as M but it becomes G to the strength of the strongest. (1:55). The Earth starts with the strong field coming out but as its strength reduces it becomes the source of the field of the G. If you have gold and Zn, gold is stronger so it becomes G to it, but if you have the vice versa, Plutonium then the game changes, it depends where you are sitting on the atomic G mass, or the MaGrav of it which is the M part of it. You are supplying the M but you have to see where it is becoming G. What is G to one state below can be M to one state above, it's the way you set up your structure. Look, in the center we put very heavy materials, in the outside we put CH₃, it receives huge amounts of fields because it's weaker, from the center, but in receiving it, it has not got the capability to hold on so it gives more to what is next to it (he draws the arrow going into the G of center). So it concentrates the field and then becomes part of the same structure. ?? if you put CO₂ and Cu in center, the connection tells it where it's going to go. (1:57). Write down the mixtures you make then see why you are connecting. He draws the connections .. you build connections, in time the stronger is giving, but you have taken a field. In PI T the strong always feeds the weak but it is the weak which is the food of the strong (he draws the arrow back to the strong, in a circle). It brings it to rise and what it doesn't need (is very weak) goes back into the strong. And that is how you build it up. So when Douglas says he sees the light, he has a CH₃, ? Alkaline, look what is in it, a heavy amount of CO₂, ZnO₂, CuO₂, but in the center he has already put all the O's, so he has created the line of contact, and the line of communication in line MG fields through the C, the line of transfer of energy that's where you see the light. If you hold the light long enough if you can freeze it, you'll have diamonds. because that line of communication is a C strength. (1:59). Confusion about M and G, no what is M of one becomes the G of the strong, it depends on your position from a MG PI fields point and not as a matter state perspective. A lot of you listening today will come up with a different state of mind, thinking. Those who want to go ahead will go quickly from now on. Mix the Gans state, Dry, Gel, Liquid, Nano states and gases and you come up with new mixtures and strengths and storage. ?? Megawatts ... (2:02). It will be very hard for matter state professors to accept your knowledge of PI. If you all don't become the professors of the space then you'll need professors in space and then they can abuse you. If you understand the totality then you can't be abused. One of the conditions of the U Community is that none of the sciences will be given to the man for him to abuse himself. He has to be taught not to become the abuser of himself. (2:04). talk about glues and drying times. The best glues take days to setup solid, especially up in 10,000 rpm. (2:07). Q: What if I put my blood in all sorts of Gans for my experiments or only in the center (core)? Would you like to be scattered all over in different states or all together in one. The soul and P of man molds to the strength of the environment it has

manifested itself in, that's why we keep everything in one position. We will come on everyday until we get correct. How to connect to my reactor, just by intention or is there more to it? You have to have the key to it which is your own soul or energy, and the rest is just a history. Because you decide how it looks, you don't need a Gans or volts, you can go within the structure of the soul of yourself and create every matter. It is your soul who decides what's going to be a cell of your lung, or blood etc. You haven't understood, if your soul is creator of manifestation of your P ?? what's the size, what is bone ... it is done according to its wish because that is the only way you can exist ... ??? (2:10).

Sandor is a priest, and they want to find a passage for their soul, he has done a test with a MaGrav. We have seen this problem when we give platform to people then they think they are God and out to destroy the KF with fire PI to destroy the houses. We don't want to damage your soul by giving you the freedom of the run, but let him come on, he is a priest and let's see what God says. Zultan. (2:14). Shows the video of spirals in Gans with coils near box. It took some hours for this formation it leads to 2 of them. He is using a non-touching capacitor, it has a lot of advantages of concentrating the energy, but he should put the capacitor upright and not at an angle. (2:17). The end product is the state of the soul of the beautiful people, 1 entity with 2 souls. (2:20). The 2 spirals. the desk where it was sitting shows a voltage. Zultran explains there is a few drops of lead Gans, the container held Gans, he took out the figure 8 infinity loop and put it under the box. (2:23).

(2:30). If some of you made coils and cores and you put sugar on the outer core and salt on the inner core during the Gans coating, you'll see a more powerful system, and now you understand why. His wife asks question for Turkey group with homemade MaGrav, he has to show it so we can see it. Asks Governments not to fire on UFO's from the UC coming to make contact with humans. My mission is complete.
