

133rd Knowledge Seekers Workshop
(stars at 2:57)

(2:57). The breaking of the Generator was a blessing in disguise. It allowed us to speak frankly with the Americans. 27 minutes after the close of the meeting we received an offer we couldn't refuse, you know who you are, and we respect your leadership. The offer was beyond the understanding of some nations, but we accept it. If it works you will hear of expansion of the KF worldwide. This is a decision the leadership makes and it will change the subject of the T as a whole. (2:59). The new solid state triggering of the PI will make it available in Africa. We accomplished more with leaders last night than in the whole year. We received confirmation from leaders that they have heard us. (3:01). I would like to thank Douglas for his sincerity and reaching the Army. Last night it was not about the numbers but about the quality of the listeners, and they gave their instructions last night. My Foundation has accepted the offer. (3:03). There are 2 ways to setup the S. If you use a fish tank pump as a trigger point, you have to understand what is the outlet of the pump. ?? It's for countries with 110, other have to change the S which brings a M flow current of 220 volts. Signal generators and small power units do NOT give such opportunity, the reason 6 or 12 volt batteries work, you have to understand the structure of the current flow in these S, they have both AC and DC, and conversion of AC to DC creates a M flow within the pump as they start which matches the condition of inciting the PI to the heartbeat. In signal generators this M field flow is missing. The current flow from the battery to the windings of the pump in interaction with both AC and DC from the battery, creates a specific kind of PL M field flow which matches the PI flow within the coils that you have. This is extremely important to understand why certain S work and others don't. When you use a generator you create the same conditions as a battery, the structure is not the same but it can reach a certain speed to create an interaction. Douglas's S responds in that order. (3:06). Because it's a combination S, not a single S. You need a Capacitor/Compressor/motor combination that the compressor starts with a delay, that is what generates a pulse, the compressor (red in blueprint) charges and discharges this creates a delay, the delay means that the 2 motors can't synchronize and that is what creates the heartbeat. It allows the fields from the Stacker coil to be released. They told me the setting of the Capacitor is wrong, it's negative to negative of the MaGrav. I checked it and it's not wrong, because they are set as parallel, so the 2 negatives and 2 positives are the same. Against the Physics you receive 2 positives at the load. It seems like a strange setup but you are dealing with PI, you have to close the loop of the PI. As we said with the structure of the planet, it's the same field going from the South (Pole) and coming to the North. (3:08). In that flow of the fields from the MaGrav to the Capacitor S, you can drain them or whatever you like, all the load becomes as part of the circuit. There is a very clear structure in this setup, it's PI and not electron vibration current flow. Those of you who are making these please be careful, this is a PI current, you can use this current at the point of the plug (outlet), for anything you need. If you can develop a plug S which is totally N based rather than current based matter state, you will achieve huge works. Now you are going from totally PI to totally matter circuit, therefore there is a step down and loss of energy. If you can build and setup new ways of connection in the PI load section you can directly convert the PI energy into anything you like. You have to keep the circuitry in the same process. You can't connect your PI into a

matter state Load connection and then try to go back to the PI. Maybe you have to develop 2 S in parallel, One Matter state and the other pure PI state load connections. (3:10). This allows you to operate both the matter state for use with household appliances etc. and the other PI devices that we will develop for food, creation of materials, etc. He draws the connections. The PI Outlet should run parallel to the matter outlet, you tap right into the lines (N wires). (3:12). You connect directly into the PI for say production of food, or materials. We use matter state to create a controllable Plasma, you have a lot of flexibility with PI. These 2 Units can run parallel with each other. It gives you a freer hand, stronger fields, and a U condition. Producing materials from fresh air. If you connect your motors to the PI side you will see a different response then from the matter side. On the matter side it's just rotation, but on the PI side it includes the energy supply of the MaGrav PI, they link up at the same power. Instead of waiting a day for a kilo of gold it will do it in 10 minutes, because you don't go through conversion. (3:14). Those who want to develop this T have to understand it, our Chinese friends will have an easier time to understand PI because they know Yin and Yang. You can use these connections for cancer with immediate results. The possibilities are beyond your imagination. If you develop uses (appliances) that are parallel to what we have in the current technology you will see big differences. If your cooking time is 1 hour in PI microwave only 2 minutes, with better results, the meat is in a PI condition so it receives the energy directly. I have been waiting for years to release this PI T and now it's on the table. N coat your SF and connect it to the PI side of the new MaGrav, I will see you in Washington in no time. When your S is totally PI like here it will respond to the earth's MG fields which are PI immediately. This circuit was the missing piece in KF structure for a long time. I told you I have kept a golden key, this is one of the notches on that key, without you can not move (3:17). We will see 2 kinds of scientists, those who are matter and those who are MG PI. None are wrong but each one has to find what they feel comfortable with, for the matter ones PI is beyond their education, they accepted their limitations. I have 7 billion to enlighten, try not to criticize. We started with the wood, then to the atoms of wood, then to nucleus, now to the energy of nucleus, the packages of energy what we call proton, electron, neutron how the interact and work internally and in respect to each other ?? (3:21). This is the new knowledge. If we have gone from burning wood to a few atoms that can run power stations and give the same energy we have increased in knowledge. They will resist and criticize you. We have to commit ourselves to peace no matter if we burn wood. With PI you cannot do any damage because it finds its balance, best choice in any application. If you choose the PI side you still have to bring it into matter state that you can understand it and use it. This is a PI generator it can always become lower, itself has a huge power. The PI has to reduce in strength enough to become what you call the neutron, or electron or star. It has to reduce that much to become ?? now we are going to the mother. We will see new appliances and facilities applications to make life easier for man. (3:25). ... (3:29). Questions. **CAPACITORS** (3:38). The new Capacitor with the non-nano coated Al, it's plain Al foil. If you can use something besides paper because the high power can burn the paper. Be Careful how you organize the Capacitor because the paper has burned out in our S, and that creates a short-circuit because the Al will touch the ?? You can use Al and a copper sheet, or Al and Titanium and N coat it and Gans coat it, and in that coating you can use the particles of N materials, ?? the matter state itself plus the Gans. The problem is to understand how liquid is created in the N

material that allows you to keep the separation of your Gans's and N materials and matter state. In the matter state we call it water which creates that separation, it happens in our body we can't ?? carry different Gans's and the molecule of O creates a separation. (3:40). The next step in making Capacitors, now that you start using gel or liquid Gans, is to understand what the gel means, what does it do in the body, it creates a separation that different Gans can find their position in respect to the others, that's why we are made of 80% water, the only thing water does in our body is to create the MG field gap that the other elements can move freely in respect to each other. If you understand this you can make coatings that behave exactly like the body. We use gel to create that separation and when the gel dries you have lost it and the Capacitor burns out. Add materials with high G that a intermediary btm the elements you use as a coating or as a matter, because even in a matter state you are dealing with a PI. If you choose the right combination of the materials you don't need lubrication, the material will create their own separation and they will never burn out. This is what you have to extend the knowledge to, (3:42). you don't need liquid, as in the body the only thing it does is to make a gap that other PI like Ca or whatever, can operate on them. So you can create the same condition btm your Capacitors and you'll have total insulation from each other, and none of you have gone that way, instead you use gel and all sorts of things for separation. It should be very easy to make Capacitors without any paper or lubricant and you can keep the separation, this is how the skin slides over your muscles, look at the way and the structure of the skin of the muscle, its job is to allow the separation of (tissues). The bone and muscles both have a skin, which allows for the free movement and at the same time allows the transfer of energy across. Understand (that this is a kind of) MaGrav positioning in mass, in contained mass, which is like the liquid in your body. Then you don't have a worry what material you use, paper, Al, or whether it is N coated or not. It would be very nice to use a N coated Al as a foil, because then there is a guarantee of a transfer of energy, while at same time non-conductivity in the layer of Al and copper. Noe of you have explored this. (3:44). When you put the Ohm meter on the N plate you see it's a superb resistor, this means it's insulated completely from the Cu. If you can do the same with another and break down the gap with the energy from one to another, all you need to do is to N coat the sheets of the Capacitor, then put Gans on it, then create a separation with it that you can slow down by adding N materials, ?? of the matter state, and roll is like a cigarette. The separation is the insulation and the N layers are already proven to be insulators. Develop it so that you have a fully PI condition. Choose your pin, G, separate different materials, N coat them and sheet that they 100% insulators, add the material you want to separate, at the speed of the increase or decrease of the power. You will create total PI Capacitors. Yes you can use anything you want, go back to your basic knowledge. (3:46). N coated materials are best insulators. Why do you put paper btm the Al rolls, why paper around the M ?? pins, or windings, and then you put the paper and Al that it doesn't touch the Cu N coated. N coated Capacitors if you get it right, it's a very difficult process, if not then you say it doesn't work. If you can understand the gradient and the turn of the enforcement of the field, you can easily work in total PI field in the whole process. None of you have gone to use the leaves, in Africa you don't have the factories. Understand how the leaves operate, they have a N coated paper on both sides of the leaf, you have the transfer of energy if you can tap into both sides, you have huge amounts of energy and it never dries up, because the 2 layers the 2 sides of the leaf have learned how to create

moisture in between, and that is what you have to do. And then you get a huge current flow, then by a change of the liquidity you can change the Capacitor to only absorb the energy of the orange, apple, or Fe or Cu. (3:48). Look into the nature and you will see a lot of work done. We already said both sides of the leaf are N coated "plates", the field difference creates a MG field of the C which attracts with it the AA for the N layer to absorb energy from the environment. Repeat the same thing in your Capacitors. You already have done it in the CO2 box but you never transferred the knowledge, instead of putting the plates 10 cm apart from each other, one N coated the other not and created the gap of the CO2 in between and you absorb the moisture and the energy, that is the most natural way you should have gone and nobody has, it's the most easy, and if you get it right you have one of the most powerful capacitors and you can adjust it to what you need, because that's how the plants create moisture, it's between the N and non-nano coated plate, but a different strength, then you understand the leaf, because of its combination of fields has a SOUL, and if your intention ... the same as you put your AA in between the Capacitor you control the change from gold to water, you want the capacitance to be in the circuit of Al or whatever you might need. These Capacitors are the miniature version of the Galaxies, but none of you have understood. You are so busy with the windings on top, that shows how much you want to take from where, from the center. Plates rolling between the capacitors creates a condition of control of absorption, the 2 pins decide how much at which level you want to take. You are all concerned if it's a right or left turn, do I use paper or Al, if you go further into the Space understanding the 2 balls which you put against each other is the SAME as the 2 leaves, now you create a specific position for the change of fields and you can produce any material you like. I hope some of you have understood otherwise we come back to it in the future. (3:51). Coffee break. Question about how Tesla is related to this T? Interrupted. (3:55). Chinese ask how to trigger the PI from the electricity from the wall, which aspects should be paid attention to. You have to go from the point at the wall that you create the G PI field forces, which can trigger the PI, because you use Cu matter state it is 50 to 60 Hz, because it's a position where the energy of the PI can penetrate matter PI, it's a gap between the structure that allows it, and on the other hand you have a flow that is strong enough with a difference in potential in the negativity that allows the pull of the fields of the PI, to flow trying to feed that it generates the rotation of the PI. What is the potential difference, it is the minimum and maximum between the field flow, the height, this is your voltage. If you understood this, you could **create coils which have different materials**. One of the problems in the way the S is set up is you have mono-atomic structure (like all Cu) and you have to work within that framework and it is harder to trigger, if you create Capacitors of Al and Cu, (3:57). you'll find out the lower limit triggers it first and pushes the other one to it. You'll have a much faster S and you need less power but you still have 60 Hz but the PI triggers itself, then the flow of the current of the PI, when it's a superconductor it just drains itself so much that it feeds the lower to the higher, and the higher to the lower and the S gets going. Try composite coils and you'll get a lot more success, or composite Gans layering when you make your coils, Al with N coated copper, with Gans's of matters (PI strength between Al and Cu) in between the two. You'll create that potential difference and then you can work much easier, this is what you need to do. If you understand and pay attention to PI and separate it from the matter, when building MaGrav keep in mind what each state gives you gives you, meaning PI, Gans, or matter, then become artisans of PI,

then you can make all sorts of things. If you understand this you can make a coil S less than 2 inch by 2 inch S. ?? The whole thing the pump included that you get a function of supply, and you can even miniaturize it to 2 or 3 mm. It's the understanding that gives you the strength and it depends how deep you want to go. It's understanding what the structure is and what you can do with it, and how you can play with it. The story about in the 1950's when the Americans sent a matchbox to the Russians, then they sent it back, and they thought the Russians couldn't find the tiny wire in the box. But in fact they drilled a hole in the center of the wire, but the Americans never checked if it indeed was the same wire. The Russians were far ahead with laser technology. It's your understanding but not getting carried away with the piece of knowledge that you have understood, that way you can learn more. (4:03). Bernard in Canada who froze the 2 Pl balls, one alkaline and one Acidic, the water btn did not freeze, you can see the Pl fields, there is rotation. The interaction of the fields is shown in the ice. He says if you put an Acidic ball in one coil and an Alkaline in the other, wouldn't the interaction create a heartbeat? Yes, that is what we do, that is part of it, maybe the medium of the water will create the resistance gap which we need for it. If I submerged the whole setup in Gans water with the 2 coils. Keshe says it's the first time we see the flow of the fields. (4:06). I am sure if you put only the Gans water in the balls without actual Gans you should see the same structure. He makes Maple Syrup and is making Gans of M Syrup. He has 200 trees and boils down the sap to a certain consistency, I take it off at about 216 degrees F, the boiling point is dependent on elevation, and then he filters it twice, and again at 216 degree. To make a Gans he added some caustic and hot water to start, let it sit for a day and added vinegar, after a day some dry caustic and heated it again, and it began to separate. (4:09). Repeats process. The Gans starts at the top and add more water shake and it will slowly start to descend, the start rinsing. I will try to use it to bring the Acidity up. If you keep it in the liquid state it may stay in the Acidity and G ?? He poured it from the bottle to jar and caustic on top and then hot water on top, it foamed up quickly, next day quite a bit of vinegar, and caustic again, it turns black. Keshe says check the rinse water for black particles and don't throw away. (4:15). I have some iodine Gans. He used 5% Iodine from Pharmacy, and made it same way as other Gans, Caustic, hot water, it really foams up, after a day add vinegar, it separated to the bottom and you can see the field formation. he made also salt Gans. (4:17). Keshe says the iodine from plate or other sources is different then Iodine from animal flesh. The Iodine from mineral or matter state will never match with the body in health S. It's not the same as Iodine from plants or animals. This is very important. If you are using Iodine for the elevation of the soul in conjunction of Cesium, background x-ray, gamma and cosmic rays which comes from it, when you use plant or animal Iodine extract you are already working at the level of the AA, so you are directly in it. When you use Iodine from matter state it has not gone through the stage which isotopes of Iodine will match to the human or the AA of Man. As we get more educated in these things we have to consider them very closely. (4:19). We have to know our purpose for using it, are we going to create matter with it, or health or food applications, in which during the process it is already purified, a specific strength of the Iodine which matches the AA of man has been selected in the process in the creation of the leaf or the muscle, so you are directly in it. Matter state iodine is absolutely different. I would not use this type of Iodine on the health applications or coils. This is for Klaus and the doctors. Q: How do we extract iodine from other sources? This is easy

... there are different ways. One is to use the same process for making gold (in between 2 rotating Gans balls). In this process you use a combination. (4:21). He draws Peter's 2 cores rotating and a Gans in the middle, setting up a field. You can find an organ with high concentration of Iodine, say brain, make a Gans of it and place it btm the cores. ?? Now you are fractionalizing it, creating the fields, the result will be something that fits with the human body, at the point btm the 3 you collect the Gans for body and for the elevation of the soul or E. We have a lot of Iodine in the brain but also in other places, because every cell carries a soul, so you have it in every part in the body. (4:23). The collective soul strength creates the soul of the man in totality, so you have the same thing, you run 2 reactors which you have brought the condition of Iodine (?? matter state, is composition), then by introducing AA and Iodine from vegetables or whatever, now you dictate or narrow it to totally what you need. And you can literally collect it. If you place pure water in the middle position, the Iodine you collect will be pure for elevating the soul. It's filtering, filtering, filtering, but now you are learning PI filter, but you can do everything in one position (process). Otherwise you have to create the Gans of Iodine, and then load up the cores with pure iodine, then you place the Gans of Iodine in middle and collect, it takes longer but it is more purified. Then it comes in the exact bandwidth. Then you can create the scent of the Iodine of the soul of a cow, and the scent of the soul of a man. One day you will understand what I just said. (4:25). These are the methods when working with LP you have to learn. The soul of the cow has a different frequency, strength. Understand that the strength of the soul dictates the P of the entity. Q: Will we find the Creator inside the PI? If you reach the level of the strength of the soul of the Creator, yes. Not many have. You have to elevate to the strength of the Universal Condition and then elevating the passing of what we call the understanding of total knowledge of the Unicos, which is beyond the understanding of the man. The knowledge we have is so little that we ask to understand the Totality now you try to understand the strength of the soul of the Creator. He is pure, kind and a giver. You can make any kind of capacitors you like, even field capacitors which are like the atmosphere of the planet, understanding that you can produce anything. (4:28). The field capacitance of the earth in respect to the atmosphere of the solar S, in respect to the strength of the Galaxy, creates the field strength which earth can absorb from the Unicos and U, and beyond it. You don't need matter state, in the strength of the AA of the man is very, very limited, if you understand the structure in the U condition, it is beyond imagination. As man evolves in his understanding of the U you'll start seeing more and more. You get enlightened and you understand the work of the fields and you bring the extension (of knowledge). I explained this to the U Council, it's you who puts the limitation on the enlightenment. When you do not share what you learn (you stop it up), when I put a plate of food in front of you, it's you who decide to eat. ... when you share the knowledge you receive more, because you have emptied the bottle, so more room to fill. You will see more of this when you enter the U community, people will strive to share because by it they receive more to give more, it becomes an addiction. (4:30). It becomes a path of life. Very few men have ever achieved understanding of this, only one nearly touched on it, BUDDHA was one and the only one, and he understood just about the edge of it, but couldn't understand any further. By giving you receive more, when you get enlightened ... it's like a father, when you receive you don't put the money in your pocket, you share it with your children, the joy of them gives you more energy to give more .. the souls gives

more that it receives more then you get enlightened, the wiser you become in the art of giving. The man is too P. (4:32). Q: When will the solid state be shared? When it is done. these miniature S becomes the containment for the FP fields. It's the next step in use of PI fields and its cooperation with the other matter states. If we put a little hole in the N coat and empty the matter state from it, becomes total PI state tubes, you'll see energy beyond imagination. You can create conditions to drain the Cu from the center of the N wire and create N tubes, then when you add pulsation to it, works automatically. (4:34). The problem at the moment is because you have a matter state that creates a traffic jam, which needs a pulse. then you go to a N pulse which is a game that if man understands will open new doors of T, then to go even further instead of using hollow N tubes which is from matter state, to work in the liquid state of the Gans of the PI, which is like the blood, where do you think 18 Hiroshima Bombs get stored in the soul of the man. It's a huge amount of manipulation of energy, but at the moment we have the problem if the winding is right or left hand. if you start learning to delete the matter state from your coils, you N and Gans coated it but you need the wire to give it shape, now if you manage to master a technique you can do it 2 ways, drill a hole in the structure and pass a huge current through it to deplete all the Cu out of the coil, now you are left with a pure PI field of a huge strength, or create a condition to transfer the matter state from the center to out without melting it in a PI condition, now you have hollow tubes, it's the way you make casting. (4:36). You use the matter state to create the shape you like and then empty the matter state from the structure. Heating it to melt the Cu creates lot problems, you deform part of the N layer, or you can use a high voltage to melt it. Or you put the S in the middle of the microwave, like our medical units, one side higher and other lower and you empty only the matter state from the structure. Doctors in South America did the process of removing a tumor without cutting open body. (4:39). He draws, you make 2 walls one side higher strength then other, you deplete your N coating matter state completely out and dump it into the salt water, you get a n tube. Now you play with fields, don't need 50 Hz, and if you submerge this into the liquid Gans you enter the world of Galaxies and Universes. If you create a hole in the N coat to drain it then you have created a hole also in the N structure. You can decide which parts of the matter state you want to deplete. draws a N tube. You can play with layer to layer, the capacitates and strengths are different. You can put materials btn the gaps. (4:42). The present transistors, microchips, the most advanced memory chips in computers, terabytes, will fit in tip of a pin, and much more. The Japanese got lost in this development because they are stuck only to matter state, it's known as a "cube", for years they have been developing but they don't see it. If you take the "cube" and use N material you can the amount of information (Memory) you can get in 3 dimensions is unlimited. N technology and zero time communications in the next few years you'll laugh why we ever used microchips or the present electronic gadgets. You carry everything within the sphere of a N layer. You have 50,000 layers on top of each other with each one having its own strength and capacity. How do we make the microchips, by connecting lines and lines, ... in the magnitude of millions, the size of a pin. Our glands work this way. (4:44) ??? there is no control S in the body, this what the glands and brain do, (? create this layers?). We still have a lot to learn then step by step to develop. "Plasma Chips" are so powerful, they are beyond the imagination of the man. What you do is place a power source in the center of your N coat (?cube), the fields are positioned the same, you don't need to connect a

power supply, but because it's the strength of what you want to receive, you will run the S ... exactly there you are. ... A lot of people come and say their S doesn't work, maybe today I tell you why. Understand that you are building MaGrav S that work on N, Gans, and Pl layers, you are putting (ping pong) balls in the middle of the Stacker units and now you are creating Gans LP Units. (4:46). My friends!! You have entered into the **world of intention**. What you intention is to do and achieve with your generators decides if they gives you what you expect from it. Because it is aware of your needs and whether it is good for you. We saw a S well designed and working for weeks, it was brought to WH to be shown, from the time it left the house it met problems, because the soul of the S (MaGrav) knew the man in the WH is not ready for it, but that they can learn from it. We brought it Washington and tired to get it going. The intention of the man (Douglas) is peace but in soul, because he is Army, knows that the man who controls the Army in WH has a different intention of the use, once they see the power. It's like a child holding itself to the tree saying I am not going out, I want ot stay home. You all looked at the P of the failure of the S, I looked at the soul of the S. They saw the video of it working, but then when we got there it did not work, so they couldn't "see" it working, this then allowed us to openly discuss the Peace Plan (Treaty) on the table. (4:48). We could explain to the man of power and we saw how immediately the Military man on the table responded. The Major said I am an acting on duty officer and representative the American Military and we want to talk. They invited us to teach them. That was the purpose of the Generator ever making its way to Washington and then not working. Because the soul of the man is aware of the work of the S. You look for the dust and I look for the interaction of the dust and what it can give you. Persians say what you see in the pot, I see in the dust of the clay that the pot is made of. Try to understand your S and why they are not working. Was the intention to show superiority, or to bring comfort to you and your family and the soul of the structure of your life. Your System doesn't even need a power supply, it kicks in because it sees your need, and it needs to satisfy your need. You are too P. The past 2 days we had a rampage of P asking why the S didn't work. i stood back and I guided because I could see the soul of action. (4:50). I said to Caroline, when they left forgot the power supply at Douglas's house, the intention, that seeing the power in Washington would drive them to kill more. But by what happened gave us a chance to open the path of peace, listen, understand the world of politics and ??, "I am acting military officer". We see the soul and its the same with the S. When you build the S from now on understand that it can interact with you. You are dealing with Gans, your own essence of creation. The sooner you realize this the sooner you'll understand that you don't need generators, as the U is the source of energy for our needs. If you listen to last nights presentation, to talk to world leaders requires the mastery of the art of politic, diplomacy and science, and last night we conveyed all the messages to all three and they fully understood. And I mastered it because I started it and I know it and that created it. (4:52). We played very open and that creates a lot of problems for a lot of people who see the openness. (4:53). Austrian showing gold Gans with particles on the bottom of glass and wants to show photos. A message from Klaus. (4:55). I have a small bottle where I collect my gold Gans, I noticed a lot of particles on the bottom looks like gold, I think it was produced from something else. They hve to be gold because you used a lot of heat, even the fields close to the gold will cause the gold to come out. Part of the fields will create this condition and position. Yes you have made gold but you also started from it,

and the fields from that respect can be. When you make Gans you separate molecules at the weakest point at the strength with the matter state and you get flakes of it, and now you see the ones which separated before the atomic separation comes. If you test this it is most probably from the gold in which you started. Wash it that there is no residue at the bottom, then leave it in the cup, and if you start to see these particles created, then this is the production of gold the fields, from the environment. It's a big difference. Start in a different bottle, when you wash it don't pour off all the water so that none of the particles get washed out with the rinsing. (4:58). And you have no possibility of matter state left behind in bottle, then leave it and we will see if you start collecting gold particles. Then this is the true gold made out of the environment. We see this in the production of N Cu also. .. that gold is the conversion of energy into matter. This is the dream of the scientists for centuries. Because now you work in the PI condition the Gans even being in the water, is absorbing energy from the environment, which is mainly cosmic rays, we absorb huge amounts of cosmic rays across our bodies, if we create the right filter then we can create the matter state. Everybody who is producing Gans of different metals can try this process and see what you get. Make sure there is no matter state in the Gans and leave it in the fields for days or weeks, and you should start seeing matter state. This is the conversion of energy to matter state. (5:00). This has been the dream of the man. The first Gans usually carries this original matter (the plate you used), but some are created. You can take some of the rinsed Gans water of gold and place them around the reactor and you might see some gold outside the bottles also. Another question, I put some LP of gold without any particles in it, near a MaGrav and I found gold particles in it. You created a filter for producing the gold, whatever comes in that strength converts back into the matter state, because you the water (LP) and the jar which is the boundary of the matter state, so in that state it becomes gold when it touches the energy of the matter, it reduces and gives enough energy that it becomes that matter in that state, so that is the pure gold you created out of the matter state of the PI itself. (5:03). When you use the LP of gold you still have some particles that you can't see in there, and that sets the scene for the totality and then you see the conversion back into matter state. If you become master in it I can show you a trick that you can collect a lot of gold. He draws a 20 cm tube, make compartments in the tube, fill them with different liquid Gans's leaving an empty compartment between them, then tell me what you have collected in the empty ones. If you put different LP on either side of empty one then you produce a composite material, like brass for instance. (5:05). This is a field of composite materials and then if you convert it you get the matter you need, this is how you make composite structures in the U, you don't use furnace and make different alloys out of matter state, you bring different field strengths of the original compounds and it gives you the composite you need. It's at the atomic level so the composition is perfect, better than making alloys. You put a Gans of gold in respect to a (N) Cu winding coil, what you have is the field flow between the two, you most likely will also collect Gans materials (I think he meant matter) on the bottom but you won't recognize it, but here you have preset the gold level so you collect in gold. If you bring is closer to the MaGrav you'll see the interaction and the speed of production. If you put another S inside (the MaGrav) very fast you can produce kilos of gold. You can mint it, nobody will know. (5:07). Two people on this planet learned how to make gold, Rothschild was one of them, they disappeared and reappeared with their gold. Their family was given the secret of making gold, and in the process (time) they

lost it, and the rest of it is the illusion of delusion ?? from central banks. Fro the first time I am teaching you and you are making it. Everyday our planet (through the MG fields in relation to the sun) makes a mixture of elements and deposits it through the rain on us. The beauty and kindness of the Creator showers on man but he doesn't have the intelligence to understand. (5:11). To send videos to Rick send to webmaster@spaceshipinstitute.org, it takes a lot of bandwidth and time, use "wetransfer.com", allows 2 GB of transfer and fast. (5:13). In china the voltage is 220 so you have to use compressor and pump (it's 110) at same voltage, so the problem is you will never get an Infinity Loop started with capacitor and compressor matching up, it's too weak, change to 220. Use a normal generator and not signal generator. (5:15). These compressors carry M field wiring and that is the secret to their working. Your S is N coated and creates its own M field and holds its own, that's why this T works so easily with these things, but you have the problem of the matter state to kick in, 220 has to have a power supply of 220. When you go above 140 ?? you need more then 4 Capacitors to carry the huge energy that comes as an impulse, you need to increase the number to 8 to 12. Renan says that for 220 volt System there are more power spikes, at least 8. You have to check the compressors because even if it is 220 volt the starter may be at 110. (5:18). It creates an IL with the pump and extract more power from the environment. It's just to start the system. Check your S at the load output to see how much voltage comes out, 1 to 2000 volts, and see the peaks. We think the rate could be 1 Capacitor per 1 kilowatt for 220 and .75 to 1 Capacitor for 110. Keep that in mind and understand the power peaks of your generator. (5:21). Then you look around 12 to 16 Capacitors. It depends how you make and arrange your Capacitors, if they are in line with other things. Try to use only N coated materials all the way along, don't mix wires and N coated wires, make sure your loop from the point of interaction with your power supply that triggered the Pl, everything has to be N coated, especially when we go into solid state condition. We'll show soon. (5:27). Chinese shows new generator setup. Lot of translation. The 2 compressors have to be powered. (5:32). Connections to create an IL btn compressor and grid (??) power supply, it feeds to the plug and then consumes the energy that is how the loop is created. This is the trick, in normal matter state this connection will not work, but because you are in a Pl state it works. (it's not worded clearly). It's a MaGrav feedback, another way of a kind of Capacitor. If you remember the (split) Capacitor you have the G pin in center and the left side fed back to the G pin and the other side went to (load), it's the same process. (5:35). Now he draws the connections more clearly, you connect from the positive of the yellow power strip (?? is this the Grid), to the positive of compressor #1, and the negative of the yellow P strip to the negative of compressor #1, then connect the negative of compressor #2 to the positive of Yellow P S, then the positive of Compressor #2 to the negative of Yellow PS. Your Yellow PS becomes a generator and feeds back in. Renan please put this in the Blueprint. The Magrav is setup according to polarity. They are creating an IL on the Yellow PS. ... Interanlly what you are doing is connecting the positive of Compressor #2 to negative of C #1, and the negative of #1 to #2, and off of the first line you are taking a power supply. In the flow of Pl the M becomes the G and visa versa. (5:40), The top layers are stronger in M and inner layers in G. ... you start with strong M and by the time you get the G you become strong in it. You are tapping into a self-made potential difference. You feed from the strongest to the weakest, it's unlimited, megawatts. It all depends on how much you can carry from the

center and how much flow you can allow. If you understand what is happening here you don't need the compressor setup. The coil is the controller of the fields, how much, converting the PI to matter state. The Capacitors are a converter and the 2 compressors are the balances. If in your design you place this right you can dictate a lot of things. You look at the wires, but instead look at the PI, they are not creating AC or DC, but a PI condition. (5:43). Where you put your coil and how you position the compressors matter. Understand the fields. That's why we created the stacker, 3 on top of each other, each one is N and Gans coated to create the flow (of PI). You create an IL. With the Compressors the stronger feeds the weaker, I watched this with Douglas yesterday, but he doesn't understand it so I didn't interfere. Why the S works and then sometimes doesn't, because you haven't understood what you're working with, the flow of the fields. You call it M and G, here I want to give my M is more powerful, and here taek (G), here I have to give because my M is stronger, I create capacitance and have to step down or up, that's why you have the capacitor on one of them because they never match, and one tries to feed the other (this is the point here). ... now the pump (? capacitor) itself is part of the PI circuit. (5:46). He created another design, by replacing the 2 rotating LP balls instead of using the Compressors. Keshe says you are very correct, this is part of what we are doing in the Innovation Center. He shows a drawing of the 2 sets of LP balls, CO₂, CH₃, CuO around a Pb, 2 sets of this configuration. This was first shown by Bernie in Dubai Conference, but people didn't understand. (5:48). This is a combination of N material and Gans coating. Because it carries liquid it will be a problem for commercial units, therefore we have gone a step down to create the same thing in a coil structure. Bernie added a different structure to it and it works like a heartbeat. It becomes a self-sustain S. Bernie explains. (5:50). What you see are the 3 MaGravs positioned btm and around the balls, they are connected to each other. Keshe says that these are not MaGravs in the matter state, you don't see them, but the fields are there and you need to take them into account. You organize your S to tap into fields and absorb different energies. So you use the LP to create the fields and then connect them together. Just see the S as field interactions. (5:54). He draws the M field coming out half way and then changing to a G fields. Then for example the fields of the CO₂ extend to the fields on the opposite side, do the same for all of them. (5:56). ... we have taken this into the factory production. (5:59). Bernie shows the mini-coils 3 sets of SF coils. (He talks about new device) ... (6:06). it works wirelessly!! the moment you connect the wires. ... in a group of bare stranded Cu wires, the N coating started in the middle wires and went outward. (6:08). Back to the Chinese man to continue explaining the LP balls. Keshe interrupts and says the way it is drawn is wrong, the field flow is opposite, if you change the position of CO₂ and CuO on the left side then you are correct. The flow always comes from CH₃ to CO₂ to CuO and back to CH₃. (6:11). When working with PI you look at the N coated state, then at the field flow, it's the difference btm 1 kilowatt and 10, (so he means that the way it was drawn reduces the flow to only 1 kilowatt because it has to overcome the flow barriers). A lot of energy is used to overcome the barrier. If the fields are flowing freely they will keep on expanding. Pay attention to detail, by changing position of one Gans bottles Bernie's fields went from 3 meters to 30. By changing the Pb to something you can increase your field to 30 km, I have done this for year. A little positioning will give your field distance beyond your imagination. How the bottle sits, where you put it in respect to the others. (6:14). The Pb is like your center core, the 3 LP are like outer core, and your environment

is the third core. It absorbs so much it has to feed back out and you get explosion of fields. It's like throwing a stone with rocket propulsion S, hundreds of km. It's not how much it gives here, it is how much it adds to the center and how powerful the center becomes that it pushes this, overcoming the field which fed it, and this dictates the distance. This is how you paralyzes military forces with a little bottle. Yesterday I gave a very clear but subtle indication, a little Chinese fishing boat amongst the naval ships, he carries a little ball with no motors or nothing, as a drinking bottle, the American's can't believe it can create such a mayhem. You only need a fish which inside it carries a bottle, the power of this T is so much, but you have to understand how you organize it, dictate it. And if the man who built the S puts a drop of his blood inside it, the fish will flow among the ships as he decides and looks. The naval ships are paralyzed because they don't see the fish, one by one the boats sinking. I said, you choose the boat and give me 10 minutes I don't even need to be in China, I can do it from here and control the fish. This is what you have to do in the Space, electronic S are too slow. (6:17). If you add a drop of iodine to the drop of blood, which connects to the E of your soul, which means you can't do anything wrong, you shall not harm anybody, but matter state finds its position. My intention is Peace, the total S in stomach of a fish. If your intention is planet Zeus, if it is good for you, you shall be there. If the intention when you build the S is that you don't have to pay the electric bill and that allows you more time to serve, your S will work in no time. If your intention is I get the free energy, it doesn't matter what they gave me I screw KF, my nation I don't pay any more taxes so i can have more myself, the S will not work. And then you call me a crook, when the crookedness sits in your own soul, not understanding the work of what you are doing. These S are getting more and more connected to your school of thoughts, you build it, touch it, and it carries the essence of your E and thoughts. (6:19). From day 1 I told you to pray for your S when you make them, praying is giving and correct thoughts you shall receive. We are coming to it very fast, many of you will cry, my S doesn't work. This is especially when you go into the bottle S with Gans and fields, you have touched it and carried your E to it, don't forget about mother and child, it doesn't matter where the child is the mother feels the E, your child is your AA, you deposited on a ... There is no choice but correct conduct, because you don't get what you want unless you understand why you are wanting it and it is correct for you to have it. .. do I want gold that I am at ease or do I want gold that my soul is at ease. If your intention is only to get rich, you'll never create gold, and then you'll say I am talking rubbish. And the guy who can make gold to prove that the T is correct delivers, because with it he will change a lot of things in people so they forget about the gold. (6:21). That is why we see so much success with certain individuals across the Foundation work. The soul is clear and you lot have not understood, you're too busy not paying the electric bill and hoping the government will give you everything, who is going to keep the Police force and hospital going. When you work with these S start changing your ethos. The only person who can elevate your soul is you and nobody else, and in elevating your soul you elevate your P, in being able to share more and give more with the hope that you receive the strongest fields from those who have given, and all the weakest fields are spread on the ones who are weaker in intention. When I give my wish, it is the same as I explained with the North and South Poles, the energy on the top is the giver, the ones who are petty and want to take from the (?? weak) the strongest of the fields of receiving, but the man who has the full intention receives the most powerful

energy in G, that's how the S works, how the sun created its own fields, that's how you go in as a weaker and you come out as a stronger. There is no difference b/n the operation of the fields of the stars, the soul and the P, as a manifestation of his thoughts. **If you understand this you don't need to build Systems.** You can achieve everything which is your dream, that is the attribute of the Creator. Detachment from P means I know I have what I want and I give as much as I have, as I know I will receive stronger than I give strongest. (6:23). There is no way you can separate theology and the ethos of the Creation from the Physics. People from Cornell, MIT, Yale, have said we accept Keshe T, I can show it to you in black and white (documents), but the problem with him is he brings theology into it. These lot in these Universities are nothing but materialistic scientists, they don't see the bigger picture. In the Space we work in the PI, but you are still stuck in the matter state. In the matter state you still need to go to church and get robbed with your soul, because you are still stuck with it. In the PI T when you understand the Totality of it you become the prophet of your own correct conduct. So we will leave the scientists we can't accept the ethos, you lot have not even understood what is on the table. You are too P worrying about the degrees, Porsches and the mistresses in the back street. SHAME ON YOU. When you work in the PI you have to understand the ethos of the PI, and then it gives you what you want if the intention is correct. You can't separate it, it's no more I do what I want behind the locked doors. Locked doors are the open scene for the soul of the man. (6:25). If you understand this, theology which is the conduct of the soul exists within the structure of the matter state and without it can't exist. Those who want to see only half of it, let them be, we call them professors at Yale University, because that is the limit of their understanding. In this T you take as much as you can understand and no more. We don't preach, we teach, it's the student's lack of understanding and inability to see the Totality. Back to Chinese S, understand what you want, do you want leakage on one side, how do you want to give. If your S wants to be a taker you'll find you get nowhere because it reaches balance, a full cup can't take anymore. Q; So could we say we are trying to evolve our confidence in our intention? Good Morning! (it means you have understood what we are talking about). (6:27). It is that you have understood, but can you translate that into the work of life. Like a cook has a recipe, I want to examine how much of it was due to intention by examining what I have created? In a way yes but if you want to see what you have created, it depends on what you wanted out of what you created, that's the main part. That's why I wanted to ask you about N coated Al, it's never really fully black. It can't be. N coated Al can never fully be black. I tested it with a meter and it has infinite resistance (like N coat). I want to understand the process so my intention is more of an active ingredient. It depends what you want to do with the Al at the end which counts (as intention). In writings of Bahá'í, "Man has a soul, so does the animal, tree, and stone". It's a field which itself has created its own fields, and is aware of the fields you want to have intention for, this is what a lot of us miss in the whole teaching, we become too powerful, I saw the other side of the man in the past week which put shame in me, how the greed for energy brings the man to misconduct. We don't need to prove anything, all we need to do is show the power of our will which is correct, we want a peaceful action. It will come because the intention is there to come, but others are maybe not ready for it. In sharing knowledge don't put it on the paper, but write it with the pen of soul and those who are at the level of you will read. This is why we changed the U Council to be for the Language and not the nation, nations

don't exist, but the language is the line of communication and understanding of the E of man. This is what will count. If you discover something write it with pen of soul, those who want will understand. (6:30). will reverse what they have understood and send it back to you and you'll receive more. In the Space there are no tree or computers the only communication is through the soul. Then why such a struggle with the P? It's the choice of the man. Don't forget Man was created out of P. It's a cycle, conversion of energy to matter and matter back to energy, this time the energy is the soul. When you die your body releases energy equal to the 18 Hiroshima Bombs. Where do you think that energy comes from ?? carried from P to add to the soul. This is what the ?? lama's don't understand, what we have missed in the whole structure, and now more and more we come into liquid and field Pl, we understand more and it's for us to be the intermediary bwn our soul and P, which we means we control our E to be a giver by P, that with the hope that we will receive at the soul level what is needed to be elevated with us. (6:32). God is a giver because He knows that when He gives He has more to receive. Last question was about N coating Al, he boiled it for 6 hours in baking soda in a steel pot with Cu bottom it turned black, is that N coat? You created multilayer, it's a composite of different coats. Al turns grey when N coated because it is loosely packed and doesn't absorb all the light. The structure is loosely packed so its grey, in Cu it is tightly packed. end.
