

135th Knowledge Seekers Workshop Sept 1 2016

(Discusses uses of the Gans Water, rinse mouth to stop tooth decay, use for viruses, Armand gave secret to Arizona they show 70% with 2 MaGrav, Asthma, Plasmatic and Gans First Aid Kits,)

(:06). Rome Conference is full, walk-in people have to register in a couple of days. The meeting in Rome is not KF Meeting, it is the Universal Council Meeting it covers what we presently know as the work of the United Nations. The pitfalls of the UN is grouping against each other and grouping together, the biggest pitfall is that the US and UK have always carried through what they wanted to do, because of Common Wealth Countries which are ruled by the Queen of England and they always vote in line with UK and carry 35 to 40 % of the votes anyway. We have seen a lot of injustices in the work of the UN. The work of UC is not to solve or get involved in, it is based on language, but to promote peace to make life comfortable for Man to create the environment (:09). that there can be peaceful co-existence on this planet. The UC will start meeting on regular basis 4 to 5 times per year. It started in Dubai, this is the second and in next few weeks we announce the next meeting. We are looking for a nation where we can establish a permanent KF for that nation. There are 2 possible islands, which allows them to meet whenever they need. I have no position in the UC so I don't need to attend. We are not going there to see something or carry a vote, we go to discuss and come up with peaceful solution. We serve with our soul, not to carry votes etc. The people can come and say what they wish and their wish becomes their command. All Members support the wish of the UC then they are more effective. (:12). You are not used to this but it works much better then putting rules and votes down, because it is acceptance of the soul of the Man. When Man enters space it will be much easier to understand and work with it. ... (:15). New trials with doctors and terminal Cancer patients without hope of recovery. (:20). The German government has asked its citizens to stockpile food and water, and this week Finland has announced the same. The governments in Europe expect that there can be a crisis. There is a high possibility. We think that most of Western Europe rely on the gas pipeline from Russia and if the situation in Ukraine gets worse the supply might get cut off. Produce as much Gans as you can CO₂, CH₃, CuO₂, and ZnO₂. CuO₂ can purify the water from rivers, etc. ZnO₂ for E concern. We see some new developments in the power generators, the Solid State is still under development, but at this time we will only release it to the Chinese government, to 4 groups and they have 24 hours to replicate it. (:24). Then is will be released to 6 places around the world. The reason we release to Chinese is because of our respect and the terms of our agreement. After the 6 places achieve a working unit then we will release on the Teachings. We asked people not to release information, but Armand released to Arizona, they replicated part of it and released part of it. This should not have taken place. They used a looping with MaGav's as solid state and have reduced energy consumption by 70%. They videoed it, you can apply it, but this is not a generator, only a reducer. (:26). John Devern has copied the loop system. They used positive of one MaGrav to negative of the other and visa versa. (:30). Shows the VIDEO of it. The total load was 1160 watts plugged direct to the grid. plugged into the 2 MaGrav power reduces to 318 watts which is about 800 watt reduction. (:34). ... you will see the flight S coming from the same setup. (:36). In coming time we will introduce S where you don't need MaGrav's. 36

(:44). Vivek talks about Zicker Virus in Indonesia, Singapore.

(:52). Using CO₂ instead of antivirus injections.

(:57). Rinse your mouth with CO₂ Gans water instead of toothpaste and you can swallow it. In space we can't come back for root canal, but we can stop tooth decay, broken teeth we can't fix. I became the biggest enemy of Dentists because I told about putting a block of cheese in your mouth before bed, they know it works. For dogs with teeth problems add cheese to diet or LP CO₂, and the tooth decay will disappear. (:59). Toothpaste is a big cause of disease and cancer in the body, you deplete the body by giving it the signal of lots of sugar and chemicals coming then spit out, it produces storage and that becomes the center for cancer to develop. Understand the process, we are not fighting but balancing the field forces of the body. If you get an infection within the first 3 hours take 3 spoon of LP CO₂, maybe a drop of CuO₂ LP, repeat 2 to 3 times per day for 2 to 3 days. You will feel the fever drop immediately, the virus may still be there but you will discharge everything through by drinking the Gans water, according to TEPCO research. You wash the energy more and more out of your body. You see how you use the Gans water to clean, if your child has a fever wash their body from the knees down with Gans water of CO₂ just rub it on it, you will see the energy balance in the circulation will bring a sudden temperature drop, it's rapid better then alcohol or water, but it is balanced so there is no shock to it. (1:01). These are a force in the world of science that has to be recognized, accepted and followed. We are not here to go against anyone but to offer an alternative. If this alternative is more effective, then we have another solution on the table. This T has no side effect because it brings balance. If you understand the process that is used there is no danger. Start giving people with AIDS and HIV the water of CO₂. We have seen huge damages with trials on the back of UN or UNICEF, it's not that they wanted to do bad but it happened. (1:05). A lot of their work is positive but where there is a gap in the science we can cover it. The reason I raised this is because we see Multinationals patenting viruses and huge sudden incomes for their systems and this has to stop. Now in Indonesia they are doing this with Zikar Virus, use the CO₂ and wash their body with CO₂ Gans. (1:07). The question on whether man has been to Space, because these viruses would wipe us out worse then any other viruses. Once we travel in deep Space and land on other planets in the U, it is inevitable that the energies are not in balance with us, interact with energies that are in balance with us and create what we call viruses. they might have only a few second survival time, but the energy transfer is so rapid, aggressive, and so heavy, that can lead to loss of life or transformation of a cell into another entity bigger and stronger, in these conditions you have maybe a few seconds, minutes or hours on the planetary conditions of earth (to react). In future we will not use Gans of CO₂ but incubators that only carry the fields of CO₂, called CO₂ Boxes. All you need to do is create the same conditions and put the man in side it. (1:09). This is to force the new knowledge by its application. We don't fight anybody, we just introduce the new parameters, there is no match with the current S. The "Silent Change" is the biggest tool we have. Caroline picked up a bad virus 48 hours ago, had high fever for 3 hours, Keshe said she should take some CO₂ water, instantly she cooled down, and the temperature went from ?44 down in 5 minutes, but she still had to go through the change of the virus or the depletion of it in the body. (1:11) You repeat the dose until the virus

depletes. For example if you have 100,000 virus cells in the body, and you take 1 does of Gans that depletes 20,000 then you have to continue taking until they all deplete, and you balance the body, there is no fighting, it's balancing the energies. Start treating AIDS with CO₂. For some illnesses you need to inject the CO₂ for rapid transfer as the digestive S is too slow. We would like to test CO₂ for snake bites, washing the bite with ZnO₂ or small amount of CuO₂, or injecting into the snake bite CO₂. (1:15). Those bites that effect the neural S using 50/50 CO₂ and ZnO₂ to support neural S, take this inside body and rub CuO₂ outside body. Combining the old and new, we can take the antibiotic with a small amount of CO₂. We could achieve the same effect with 1 mg instead of 500 mg antibiotic by mixing it with CO₂. They say not to take alcohol with antibiotic because the CH bond adds sugar and unbalances it. (1:19). If you take CH₃ Gans and use a mixer to potentate it to the level of potatoes, then to carrot, then meat depending on how you mix. You have to test these, are you going to wait for the German government to say we have no more food. Better to test it now then wait for crisis. You can take CH₃ and beat it using 1000 rpm and see what smell you get, see if it goes from carrot to meat. If you taste it in your mouth that means you have received the energy of it. People in Germany will have to rely on this. You can create the taste of water without actually drinking a single ml of water. (1:22). If you mixed water at a very high revolution, would you create a Pl of the water that your body being in touch with it receives what it needs, see if the hunger comes back. In the developing world stirring is the key to the freedom of the food. A lot of you have tested the cores but you never understood it. If with the fields you taste it, it is within the structure of it. In coming time when you use the core reactors a lot will change. Even your P control has no control. In Philippines we are testing a S that can effect the control of your body, which means the fields can interact and bring your E and connection. Renan says the E he felt when running this new S for 24 hours, in the morning he felt a G pull his left hand towards the reactor and right hand pulled to the left hand. He thinks the S interacted with his whole body and creating a loop. (1:25). He created the first Pl "handcuffs". Keshe says this is the development we see, the interaction with the body of the man. In case of infection do we need to drink CO₂ or do we create a field of CO₂ over a nation, village that no viruses work. My knowledge is so deep that I can change the mind of the whole humanity and we are getting to that point where we might have to do so. I have not taught you everything, but it is very easy to change within the structure every man's line of thinking. I have warned about this before and very recently I have said that I will apply it. (1:27). There is a knowledge within our capability that can reach the soul of every creature on this planet, fish dog or man. The change has to come in, because then you can change it again if you get the opportunity in space. It has to get accepted by the man that he gets judged by his own soul. The process of viruses has to be developed very rapidly. In the fall we train Mojhans, that we can neutralize the place we land that we can't pick up a virus. Vivek asks how we can use the CO₂ as a mosquito repellent because it is spreading the virus. (1:29). Caroline mixes CuO₂, ZnO₂ and CO₂ and sprays it around the garden and seating areas, this changes the environment that they don't want to go there. You have to see how it is. We don't use pesticides anymore the time for killing is over, we just change the environment that they don't want to go there. If you get a burn, bruise or bite just wash it with CO₂ and see how it works, instantly the pain and inflammation goes away. If you are Asthmatic make a pipe that I have shown. The background to Asthma is E which supplies the fields to the

lungs which feeds the blood which is the E circulation. Coil a plastic tube filled with Gans Water 50/50 CO₂ and ZnO₂, around a breathing pipe and breath through it very slowly. Has to be heavy doses of Gans (depends on situation if you need stronger fields use the Gans straight). (1:33). and take 2 teaspoons of Gans water same mixture daily. The sanatorium is the planet itself but man has chosen to ignore it. You can do it simply, make patches of mixture and put on lungs. For people with water in lung use 2 huge patches of Mixture on front and back of lungs. (1:38). Man used CO₂ water on hornets, after week they left. (1:41). Man with Bone Cancer cured with Health Coil walls. (1:43). People around world are using. We have a T that can influence soul of the Man, this allows us to disarm and make changes on the totality of the change. We can make the changes with external applications, but can make them from within the structure using the knowledge. Man will not remember why he is fighting. **We will find out in a very short time that Militaries will back away from war, understanding the advantages of peace.** And doctors will change their practice because they will become peaceful. Those of you who are afraid of loosing food or water with the warning from the German government and the other governments. There should be no fear if you understand the T. (1:46). Maybe our governments are allowing us to look at viable alternatives, and it is for us to make the T viable. .. **A lot of people will not receive because the expectation is not what they see.** The problem is how fast we can apply the T. We had a trial run with floods in China and Italian earthquake disaster. Start creating sufficient amount of materials (Gans, N coils etc.), that when these things come up we can move very fast. And if the disaster isn't in your time the Gans will last millions of years. (1:49). Paul of Togo has been applying Gans water in every level of his life, and on his family. They drink, wash bodies, clothes, and house and very quickly diseases go. His family is only drinking LP with mixture, they stop to feel hungry and became more and more E in contact with each other. (1:51). They decide to create a home where they are in contact with each other, they don't need to use cell phone to contact each other and they tested that they instantly receive message. And if the child thinks to do something bad she gets the message and stops. (1:55). He still hasn't got the results of the AIDS patient. Preliminary results the doctor wanted to know what she is using to treat herself, but Paul told her to say nothing, the doctor said it's impossible because he knows the advanced stage of AIDS that she is in. The AIDS was almost gone. (1:58). Keshe asks him to give formula of what she is taking so they can replicate. He gave her CO₂ LP, and she drinks only water of LP CO₂, cooking and drinking, and bathing and washing of house. The first week she felt very tired and her urination became dark yellow and specks of blood (fever and tired). (2:02). Keshe explains the reason is the worse you feel in the beginning the more effective the treatment (healing reaction). (2:08). Paul continues ... Keshe signed the paper for Paul to be in Rome as member of UC. (2:12). After the disease changes and E stabilize he uses, ... uses ZnO₂, CuO₂, CH₃, CO₂ mixed together as LP in equal amounts that's 25% each. (2:16). For the very first 2 weeks he used only CO₂ LP. Go over the healing reactions. (2:20). He made a Gans of egg to get Ca, with NaOH for 7 days. yes it is most natural ways to get Calcium Gans. If you have your own tooth then the Ca matches your body, carries your fingerprint. (2:22).

(2:35).

(2:45).

(2:51). He offered to Italian government his factory output, they responded by saying, what do we do with this, we don't understand it. Rick shows a document called "Plasmatic First Aid" for emergency treatment. Those of you who have neural damage from war zones promoting your ideology, like American soldiers, try to use the Gans of CO2 LP on your body spray it on your body on a regular basis, the pain will disappear and the deformities also. Even if you have been in an accident and have all sorts of pain, if it's too strong add some ZnO2 and it will alleviate your pain very rapidly. (2:54). because the pain is not there you might find the growth of an organ or what you have been looking for. Klaus made the chart and will put on the Blueprint page. It's a preliminary. (2:58). For people with amputations you can make ZnO2, CO2, CaO2, and CH3, and keep a Patch there and we would like to know if we can start regeneration of a limb. We did it with a N plate but I think the Gans state of matter, a LP of it should be much more effective. The question is whether or not there is a certain time limit on it that it can still be re-grown, but in reality this can be done. These things take months, put at the end of it a bag with these LP's. I have done it (with N plates) but I think it will grow faster with Gans LP. (3:00). Rick shows the blue box Gans First Aid Kit, it's very inexpensive and educates people rather than just giving them Gans. (3:06). Gans Capsules on Website for trials of Gans. Keshe is using the drops and his vision improved then he stopped using it and the vision deteriorated and now he is using it again and the vision is improving, it works. (3:08). Teaches about neural damage, and problems on face, and amputations. He draws an amputation, you have to extend the Patch beyond the cut line, because the bodies information stops there. The muscle tissues grow there and you get a lump of meat there. Extend the Patches about 10 cm above cut into where the bone is in perfect shape. If there is any metal from the operation then you can't use this, but report any changes in feeling at the point where the lump of flesh is.

(3:15). Lady wants clarification, she says LP is a few drops of Gans water in distilled water and stirred with a N coated stirrer, and is more powerful, and when to use Gans water. Keshe says it will carry the same info, or PI condition. Rick asks if that is the correct definition? It depends what you stir it into, by changing the field strength you change matter to matter. Test it then you'll understand how much the stirring effects the potency. You can test it with a Chili and stir it, the odor will be so strong, then take a drop of that and put it in another water, stir and see if you get the same taste and odor back again, then you'll understand. You homogenize the strength of the PI at a given strength. This is what i am trying to achieve with our flight people and they don't get it. (3:17). The stirring is bringing what level of MG field strength you want to manifest. We have come to an agreement with the Chinese that 4 Systems will be tested by them to deliver the Energy Units. (3:19). Last October we made an agreement with the governments of "Energy for peace" and now we are coming to fulfillment. We give it to the Chinese government so their Army will become part of the Peace Process as a whole. We negotiate the same with the Americans and the rest. (3:21). The Chinese Fan Zhi shows their generators. (3:31). He is replicating Douglas S but it doesn't start. The problem is the Compressors as we explained last week, they have generator windings in them and they block the PI. (3:34). Bernie explains the 3 wires of the Compressors ... (3:38). The problem is that the Compressors drop to 110 volts and so it doesn't come in. (3:44). (3:48). In the new S we don't use Compressors. John in Arizona showed without

Compressors, but where does that 70% come from, it is the MaGrav Units that produce the 70%, you over look it. And where is the 30%, you have to look at what is behind the wall where the outlet is, it is going into the Grid, check the meters. In Germany they get billed once a year, and when it came in 18 kwh was reduced to 4. kwh. You don't see it on your meters but the reduction is seen on the Grid, nearly 75% reduction plus. I don't agree what is shown by John, the energy reduction is at the Grid or Power Company. The MaGrav takes energy from its environment, and one becomes the generator to the other. It doesn't matter how perfect we make the MaGrav in production there is always one weaker than the other, so one becomes a generator to the other, and in that process you are tapping into the energy from it (?), while one goes to supply the other you tap the out coming energy. Nothing is without a source, it's understanding why we loop them to get 70%, . (3:52). It's because one of the Compressors act as a capacitor, for the time to create the capacitance to be charged, it means one is lower than the other and by the time the other side tries to feed it, it takes over, so it's a continuous tic tack between the two, flow you drain from it. the term free energy is meaningless, the energy comes from somewhere. One of the Compressors acts as a capacitor and lacks (energy) and needs to be charged by the other, it tries to feed it, it's like a feed trough btn A and B and at every stop you take one pallet off the truck, it comes back to B and gets filled up and on the way back it takes some more pallets out of it, so that is where the energy comes from. It's the availability of the energy from the Gans that comes into operation, when you plug it in it goes from 1200 to 360 watts, where is it coming from, not from fresh air, it comes from the MaGrav S in the way they are structured trying to feed each other and you collect the energy from it, and the load sits at that point, they are taking load at the junction of the 2 transformation. (3:54). .. in this S as you go from positive to negative, in the flow btn the Compressors you tap into the energy of one feeding the other, this tapping is what is power the output load, then when Compressor B tries to feed A you take some more energy to power the load. It doesn't come as a reduction, the reduction is the (energy) flowing out of the MaGrav to feed the weaker. Here the Compressors become generators on switch time, (Douglas's) Compressor A actually has a generator inside the winding, so in fact it is exactly like what you see in the MaGrav Units, that's why we changed it to MaGrav. But this is not our problem, the problem is the starter motor (upper left corner of blueprint) (3:56). The problem is once you connect it, or start it, that it feedbacks onto itself and becomes self-sufficient. Now we don't use that starter motor anymore, no more dynamic Systems, (motor and compressors), these are all gone. we have replaced them with static S (MaGrav's) so the possibility of motor failure doesn't exist. Compressor A had a generator winding in it and B became its capacitor, one generates and with the delay feeds the other and you tap into (that feeding). (3:58). Now we replaced it with the MaGrav units. However, now in the Innovation Center we don't even use 2 Stacker Units, we brought the whole work into only one. In Washington is collapsed because the compressor could match with the capacitor ?? and build it up. This is the same problem in China. In the next few days we will have a S which is solid state. (4:00). Man from Brazil asks about using a little lower pump, is it enough to start the S? You need 110 volts coming out of S, it's the winding in the motor that dictates your output, and speed of rotation. The fish tank pump needs to be 110 volt output. (4:03). ... (4:06). (4:08). Chinese show Oasis System, he has to go to 10,000 rpm. (4:11). When the S comes close to lift the camera doesn't record because it's a dimension that it can't

pick it up. (4:14). you can't have any wobbling of the reactor of the fields drain off. When you switch to PI to run motors you get totally different results. (4:16). You can't kill with this T, no heal, yes but you have to get it right. (4:18). You need to reach btm 5 to 10,000 rpm with motor. Question about starting the Hybrid with the Grid and then unplug it? You are very correct, after you get it running you can take the fuse out so it disconnects from the Grid, this is our philosophy. Soon we will show you that we run the first house with the generator. (4:21). He replicated Bernie's 3 core pl reactor, but how to make it function. You build the reverse of the reactor and connect it to the appliance, you create a loop with a receiver. The receiver should be the size of a peanut and you receive what you need, and because you are always weaker you continuously get a supply from the center. This is the backbone of wireless energy transfer. We let the hybrid come in, but this is where we are headed. The philosophy behind it is that the MG field is always in balance, so you are always on the weaker end (the receiver), if M is higher then G is lower, and visa versa. In that process you are always standing weaker to take from both. In PI we go by mass, not in weight mass. (4:23). So you are always a receiver. Tesla did this and nobody understood, but he used ONLY M fields, here you have both M and G so your power source is constantly the same. This is zero point of reference (point btm Unit and receiver), you literally need only ONE MAGRAV to supply the whole country. One satellite and you can supply everything that is needed. This is a wireless energy transfer. If we release this now nobody has it. When Bernie says 34 meters (radius of field) the energy is constant at any point where one M is higher then the G, but in the interaction with the fields the energy transfer decides, as it gets weaker and weaker it provides more and more. This is the beginning of the wireless transfer, all you need is to get it connected and as it gets weaker the source provides more to create the balance. Then you need the S for balance. It's like with the telephone company you have a satellite dish on your roof to receive the information, now we have one to receive the energy and you don't need the MaGrav unit in the house. (4:25). This is how stars receive energy from the center of their U. I said I explain when the intelligence is there to understand. It's like I said this morning we can put one S to stop viruses in one village, or country, or one planet it's all the same. Caroline asks about the cold winter, CO2 Gans doesn't freeze, it depends on how pure the material is, but yes. Can people prevent frostbite by drinking or having Gans? It depends, yes. If they can't make Gans, can we offer orange or lemon (peel) oil does that have the same effect? No, it doesn't work that way, partially it does, but it's still in matter state. If they can't make perfect Gans. The only thing they need is Gans, if you wear socks with CO2 Gans in it, it should not get frostbite because it balances the energy. The powder should more or less do. Next week is the U Council in Rome. end.
