

## 145th Knowledge Seekers Workshop Nov 10th 2016

( )

(:11). Alek from Nigeria introduces himself as the 6th member of the Earth Council.

(:20). KF has been given a the okay from the government to test the flight S. (:23).

Waiting on the Health trial for cancer soon. We are collaborating with 3 to 5 nations.

Keshe was warned that it may be dangerous to release the new T into the hands of the public. He says, "the public is safe." , but that our is biggest fear is that the governments will try to use the T to control their subjects. (:26). Last week we spoke about atomic H and people have tested it.

(:32).

(:50).

(1:25).

(1:34). Questions. Why don't you release the solid state power generator? It is getting produced. (1:36). You can get huge amounts of energy out of what is draws on the board. If you can get a probe in the center you can extract huge amounts Energy. But it needs a lot of understanding. The way the Pain Pen was designed to probe energy in the body, change it a different way you can use it to extract a lot of energy from the middle core, not the Caroline Core. If you fill the second core with some kind of liquid you start getting light and you can tap into that energy. (1:38).

(1:45). Now live on Facebook. (1:48). Heather asks about using blender and spitting in it to connect to AA. Keshe further clarification, releasing the H in the Gans. No 2 leaves are of the same color because they use different kind of H, so you can even use the different green of the leaves to create the Gans and that will help you a lot to produce near enough homogeneous Gans material but in different strength and layers. I was thinking to use the leaf from the top of the tree and the root from the lowest part and that would give me a range. Why not no one is wrong. (1:51). We are looking for a food that we can get all the nourishment we need from it. The body of the man rejects what it doesn't use or need, but is a balance of the material he needs to subsist. They might not be of the right material, but rather it is of the (? MG) strength needed by the body. ?? The upcoming disasters, that have gone on forever, the MG strength of the PI of the earth is getting more and more weak in respect to the sun so it is getting more and more confined, and it's getting stronger G wise and weaker M. We see rapid motions within the structure and more interaction of the solar flares MG fields with the planet earth and it injects energy into the planet. This is inevitable, we are in the process of reverse rotation, in ?? 100,000 to go through that process and what we see now is the separation of the continents. In time of disaster how do you feed yourself that you have everything. (1:53). A man carries everything within himself, if he understands the knowledge. If you got access to ash you can make caustic, boil it with any water and make a caustic. You body is a processing S .. we don't cure, we process. It means Eskimo eats only one food, but in it he receives the Ca, Mg, every other element he needs, because the ?? inside the body converts materials to what is needs, what is not needed gets rejected through the urine. How to convert the energy of a fruit into a CO2 Gans, you don't need to mix the urine because they are all in the AA strength, and you can transfer the total field strength of the urine into the caustic, and when you wash it, the water of that CO2 is food for life,

forever. Everything you need is there. This part of survival in the PI T when there is crisis with the food chain. (1:55). Papers submitted in Ghana by Benjamin, the use of CuO<sub>2</sub>, or a heavier element as a Gans, when you take fully contaminated waters from rivers, even if they contain radiation, when you mix it with a Gans you produce ?? specially with CuO<sub>2</sub> and above, you balance the energies of the viruses and bacteria's and the water is clean enough to drink. Then if you have made the Gans of AA of the components of the body of the man adding that PI Gans in a ?? pen to the water it gives you the energy you need to survive. We have to make new survival kits that are practical in what man is about to go through. ?? been through, it will not touch any of us, but in a way it will touch all of us. The pending separation of the continents is something temporary, the next 1 to 200 years will create a lot of commotions, vibrations, kill a lot of people ... ?? tornadoes, Tsunamis, (1:57). Man has done nothing but to survive its own creator which is the planet itself. When the creator is not kind to his creation he always has the fear of his own creation, and we pass that fear to our own children and our environment. If we understand we can take and use this (technology) in time of disaster. Gandhi drank his own first urine, and other world leaders do, because whatever the body has rejected they ?? want , you don't need to do that, but because it is already rejected the body won't accept it ?? When you convert it into the Gans matter state of it, the body takes what it needs from it. Now that you have created it with the Gans of CO<sub>2</sub> the material gets energized from the PI condition of the environment, when you drink that water it's fresh and energized. The body does this with B12, Cesium, it does cell division with what the body rejects, because of its weakness and strength in absorbing energy from large intestine and the environment, when it touches the body it gets energized from it. Man has been eating it for thousands of years. (1:59). The same thing happens in the Gans PI condition, when these people drink their urine they don't add much to it because it's in the state of matter. When you add it into the state of the Gans again, the strength, it absorbs the energy, when you drink it, the water ?? the PI of if you receive a new cycle of energized ?? and it becomes your food. So those of you looking for complete food in time of disaster, make a Gans of the urine (without adding anything to the urine) and the LP or water. Remember how you made the orange (above the cup) and CO<sub>2</sub>, this is your food uncontaminated and pure. ?? you can pick up water anywhere, you can use CuO<sub>2</sub> to decontaminate from germs and bacteria's, it takes 20 to 30 minutes to purify. ?? if you use the Gans water to add the energy to that, you have the food and water. It's a simple survival method. (2:01). You can use it for wounds and disinfection from any germs. ?? the survival of man has to come the inner structures of man, not from the ?? . African contamination can be cleaned up easily, but European contamination is beyond imagination of clean up. (2:03). If I would open the book on contamination in European, I would not drink the water, even the cows are contaminated through the water. You're feeding our children highly contaminated cancerous agents. Rick says the hydro dams in Canada are actually creating a Methyl-Mercury compound which is 10 times more toxic than mercury. They end up flooding the fishing grounds of the natives. (2:06). The governments are hiding it because they don't have the money to do anything about it. (2:08). He what is the problem, it's heavy metals, etc. We are running tests with governmental organizations about these things. I have the laboratory data on some of the bottled water and they are worse than what comes out of the tap. In US huge penalties are pending on DuPont for contamination in production of Teflon. Any Pharmaceutical

production has lot of waste that's kept secret. (2:11). The KF is looking into the mining industry which creates a lot of waste. In PI mining there are no wastes, we take what we need not necessarily from the structure of the planet but from the atmospheric condition. We have to look at how and where the materials are produced on the upper layers of the planet and we can understand the process and position of the planet in respect to the Solar S which leads to creation of the materials. Our planet not only receives light from the Solar S, we also receive huge amounts of materials which in terms of MG fields travel in the depth of the Solar S, come to be at the strength of a matter on earth, that when they go through the atmosphere and they come in touch with (or due to the MG field) the pull of the planet, when they land or change their Gans and energy condition to that particular surface area on the planet, they convert to the matter of whatever could be at that position. So let's say you are going through the SS on an annual trip, there is a position due to the extraction from other planets and stars in the Galaxy, where it say produces the MG fields of Cu, and then let's say in Autumn we pass an area with the MG fields of Zn, or packages of energy that are at that strength level. (2:14). If at that point the center of the earth has the MG field of gold when it reaches that point it will manifest ?? micro gold. None of the elements, minerals on this planet are temporary they have been created at the beginning. We continuously add, absorb millions of tons of Solar dust which becomes layers on this planet everyday. If it lands at the strength of the desert sand it becomes a desert sand. if it lands in Amazon and is of the strength of the AA, of the vegetation that is there it becomes that. Our planet continuously takes from the Solar S what it has the MG field strength of. If it is a big mass that too will convert. It's no different then the cup and the orange. This planet will never run out of any resources as long as it is within the orbit where the material is produced. The hypocrisy of fossil fuel is nothing but a cold fallacy. Every second of every day millions of gallons of oil is produced on this planet. (2:16). You produce it on your CO2 Box. the interaction of this AA that is created on the surface of this planet ?? of matter state or lands on the saltwater of the sea dictates the animal created there, or what part goes down and becomes what you call oil, it can never finish because everyday we produce millions of gallons of it, because the interaction of the AA with the MG field of the earth and sun produces it. Can you imagine how many billions of dinosaurs would have died for man to extract currently 85 millions barrels of oil everyday for decades and decades, because it never finishes. See how much oil you produce on the top of your CO2 container, if you extract it and put it through the right process you are the oil man. If the oil companies understood they don't have to drill to get it. (2:18). Understand the process and just give it to them, then they don't to do what they are doing now to the world. You can tailor make your oil, put different N coated metals and you can make a diesel oil, lubrication, cooking, because you understand the knowledge. There is no need for drilling. ... we didn't know, we used it to change the course of Man, now we know and can change course. We can't say they were wrong, we wouldn't be scientifically, socially, intellectually where we are now. In this life we should never blame, we can build on. ... Now we know how to produce oil, it's a natural process. (2:20). Now we can tailor make the oil we need from the atmosphere. ... take down the atomic molecular structure of the fuel you put in the car. You know a N coated Cu wire and Zn plate gives you CO2, and an oil on the top which is connected to the C. Look at the other side, Fe ?? that gave you CH3, find out what materials you need to position to create MG field of CH bond of whatever that it can be

used in your car or fry your fish, then you don't need to destroy the plants, animals, or planet. This transition of the knowledge is going to be a huge problem for Man, but he has to find out how to overcome it, because he has all the knowledge. It's a task that man has to find out how to overcome it, because you have all the knowledge. (2:22). Every knowledge is in the hand of Man. It's understanding the application of it, how to mix it, how to create a protein mixture that it gives you the effect you want in the ??? or ??. You want to have a protein that you can enjoy whatever, you don't need to kill an animal anymore, you can create it directly from the atmosphere. You are doing it already, it's just knowing how to apply. What about adding Fe to get Hemoglobin and add with the urine or is that not necessary? Why do you need that? The body takes what it needs, but you can do it if you want. Caroline asks him to explain how to make the urine as Gans, step by step. (2:25). First of all you need to find a toilet and a cup and collect urine. Then start making your CO<sub>2</sub> with N Cu and Zn plate, then put the urine on top of the container, not in the water. Make sure there is no air contamination, because it's a different process. In the production of CO<sub>2</sub>, because there are AA in the Urine (comes from the body), you'll transfer the elements that are connected to the AA of the body to the Gans of CO<sub>2</sub> in the PI condition. You don't transfer the urine, you transfer the PI MG field strength of what ever is (in), or connected to the body that is in the urine, which is Fe, Cu, Zn, whatever K, Ca, etc. You need to make a mixture, do this (process) 2 or 3 times, because the body doesn't reject the same materials all the time, so to be correct you need to repeat this with the same Gans structure, with different times or weeks or days (of collecting the urine), that you collect the totality of what the body has ?? or has ?? time gone. Then you wash the Gans and transfer the PI MG field strength of the material in the CO<sub>2</sub> structure. (2:28). We use CO<sub>2</sub> because the connection of the CO<sub>2</sub> transfer comes through C in the AA of the body. You can't use the Zn(O<sub>2</sub>), it HAS to e CO<sub>2</sub>. ?? That's why you use the ?? Zn and Cu plate. You wash the Gans, and it carries all the energy spectrums which the body has rejected, it means it needed it to be part of it ... make sure you don't do it when you have been taking medication or whatever. Because part of those chemicals will be transferred into as well. When you have a clean body ... ?? a lot of women don't take ?? because they don't want to ?? their bodies. A lot of people don't take medicine because they don't want to contaminate their bodies. Do this when the body is in a perfect shape. How to prevent the contamination of the Gans by the environment? I guess to store it in a proper container that it doesn't get contaminated by the environment. (2:31). You can not stop the pollution, you have the interaction of it. What would be a good way to store it, plastic versus glass?

(2:40). If we achieve what we are trying in the next few days we'll announce it and have another workshop. Should we call it a day. We explained how to make a Gans of kidney or whatever (urine), we transfer the information to the one which needs to be adjusted, understanding this knowledge how can we change the E of the Man, that the killing instincts of the structure of the man change. Can we find a true man of peace and make a Gans of his E that we can feed the rest (of the people)? (2:42). We have watched and learned. In the last few hours one of the leading nations have chosen a leader and instantaneously part of the nation has not accepted what the others chose to achieve their dream, as it is not their dream. How can we make peace the dream of every man? How can we make unity the dream of every man that it can become a reality. It can be done in

a Gans but the man has to be ready to accept it, because if it is not within the brain of the soul of the man, it will not fly with the man. We will wait and see. Man has to learn how to mix the ethos of the U with his that he can enter the UC. End.
