

148th Knowledge Seekers Workshop December 1, 2016

(Going mainstream science with the Ghana Conference, Animal trials have confirmed no toxicity in Gans, Wikipedia of Plasma Technology rules, new teachings on using different salts other than NaCl leads to Gans with specific properties, which makes this a game changer, How to melt the copper in the center of nano coat, this changes the world of electronics, computers and communications, You make the alloys in the Gans process, We don't eat a million different materials to create cells in body it creates the different cells through billions of different field strengths, Repair spinal cord cut, How to create water, How to make Nuclear reactors safe stop the slight production of salt in the rods)

(:09). We don't teach now we share the knowledge, we have already done all the teachings, now we apply. The Ghana conference was a big push that we needed, it has opened the door for more scientists around the world to understand the T, We need the scientists to understand and bring it forward. The collaborations are now beginning to expand, because scientists can watch the tapes done at Ghana and begin to understand the new T. (:15). Talks about agricultural development in Ghana for students. (:23). (:30). Renan speaks, they have started collaboration with the 5th oldest University, San Carlos, in the Philippines and they will invite Keshe to give lecture next year. (:37). The first phase of the trials at Tokyo University completed, 70 mice were given doses of Gans. According to animal trial protocol, within the first hour of administration of substance the animal is sacrificed and their organs tested for toxicity, if found the trial stops. So we passed the first part and no toxicity was found. It then goes to 24 hours and sacrifice the batch, then 6 days and sacrifice, the final phase is 16 days, if no toxicity is found it means the product is safe for further human trials. (:40). The results as of yesterday there were no toxicity in the mice that were sacrificed. First of all we bless the souls of the animals used in this trial, this should NOT be done, but this is what the present condition forces (us) to do to show the T is correct and there is no toxicity and this takes fear out of a lot of organizations. We make it only available to those organizations that want to have a look. The text is in Japanese. We go to the next phase. Most of you have been using the Gans and we are taking your testimonials as a human trial on the Internet, this has already been done in 3 cases with 3 projects, because what has been done even though it has not been strictly measured under clinical conditions, this allows us to see what results people are getting and allows us a stepping stone into the clinical trials. (:42). The live clinical trials with cells and animals test starts on 12-12-16. We will report the trials. The first time this was done was when TEPCO did the trial, (which in fact they are now using as a treatment), then we confirmed it last January. Now we are doing it again with leading pharmaceutical chemist and they are doing according to international rules of evaluation for medicine. The Gans is injected directly into the blood, not eaten. This makes it very safe. (:45). We should be receiving shortly a license so that you can buy Gans products directly off the shelf. Please post your testimonials on the site, it's very important, you may be contacted by organizations to give your testimonials to them. Our T is being reviewed as a health application and not as an alternative, this is very important. This is where we are taking the medical application of the T. We will not allow it to become as an alternative, now that we have proven that we are scientifically bringing the T into its right position. Following the trials of the Pain Pen as medical instrument with

certification of 1 and 2 and C certification in Europe. This has allowed us to become part of the mainstream medical application. (:47). This is where we are going towards. We are taking advice from senior scientists, medical doctors, and research laboratories worldwide. If you take homeopathy that's all you got, or with herbs, you can't do much with it. This T has now proven it can be digestive, or intravenous, and S that work outside the body and interact with its fields, it a totally new technology. In the coming time we'll tell you which hospitals are allowing it as a new medicine in addition to the current one. It took me a long time to set it up this way. The way you go to chemotherapy you will be able to go to PI therapy section. It took a long time to bring this and I risked my life with it, but it has paid off. Because now it's not a alternative done on the back street, it'll be done on the mainstream. (:49). We are taking it to a place that it has become a new science in the world of medicine. Because now we can solve the problem within the structure of Western Medicine. They see a benefit in collaborating and not something just in the background. We have shown with chemotherapy that Gans therapy can be effective. I have sponsored new PhD's for this which we'll announce in the coming weeks. We'll use the Gans to take the harmful part of chemotherapy away so it doesn't have any harmful side-effects. I am one of the supporters of chemo because I see what it does, but I also see the dangerous side-effects. The collaboration of PI T in ways that we have done research on it for years can make a perfect condition (for the chemo). But the other side of the coin is you can use PI T on its own, but to train scientists takes time, you already have chemotherapists and added with PI to take care of the side-effects. the doctors don't need to know much and it still helps. The trials on this side (? chemo side) will be starting in the next few days. We have become part of the mainstream medicine and not an alternative. (:51). We don't practice in the back rooms and hotels, we work directly with the scientists that they can test it and see the results. Understand something important, as One Nation we are changing the course. Don't look at what rubbish has been written or obstructions have been put on (web), instead concentrate your time on development and breaking through with the new T using the Gans of PI and share it. Klaus has set up a Wikipedia for PI T and you can build on it. (:53). At the moment it is password protected. It will all be the same as Wiki but it will be PI related. It will include all teachings of Motion, Agriculture, Health, etc.. They have not yet chosen a name for it. (:58). Keshe says we are not here for peer review or will take you off, you are there for checking the spelling and grammar. We are not creating what Wikipedia has done and controlling, who pays the bribe. The structure of the KF has to be without bribery. We have seen this with others who started a Wiki site. It has to be what the person wants to put up according to the scientific knowledge and that is the only thing the monitors in the background have to do. (1:00). We have to allow the scientist, it could be a housewife, a professor or a man on the street, it's the knowledge that counts. This is what the KF worldwide is. In a family we have everything and everyone's opinion is respected. One you sit down at a tabel to eat and you have a brother who is a professor and one who cleans the street, you value them the same, they are all brothers. And this is what we have to carry in all the work of our sections. This is what we have seen as a weakness in Wikipedia that has been set up, the moderator enforces his narrow mindedness. Our moderators are only to watch that no foul language is used, and not to edit in a way that you decide what is to be shared. Everything has to be shared. Obviously people who are putting non-sense we have to take out. We need this to go on line within the next 48

hours because we have a lot of research and data coming in worldwide to be added. My recommendation is to call it Wiki-plasma and link it with Gans that it comes to the same. (1:02). The doctors are already using the Wiki. (1:04). A number of KF supporters are have bought up the .com addresses and are holding them so they can't be abused. We thank you for it. Contact the webmaster and we can see which we want to put in the vault. This is how a family operates. Keeping the domains and holding them in the vault so they can't be abused is costing the KF a lot of money but it's needed. (1:07). Shows a preliminary KFSSI WIKI page. (1:10). Our work on N Technology can be brought in with the work of the Iranian scientists, to become part of the N T editors or adding the knowledge. Iran is one of the leading N T and they're doing the same work as we are doing. We will try to bring them in to our work so they can add their scientific data to ours. We have the same with the Chinese. We need to work as One Nation, the Chinese have access to a lot of data at the moment. We need to bring them in. We have to search the internet of papers of those who have done work and ask them to join us.

TEACHINGS Start here:

(1:12). Let us expand the knowledge on the Steam-Coating with NaOH. Let's go back to the Coke bottle some years ago. A lot of you tried to guess what the liquid in the bottle was and called it Keshe liquid, then we found out that it was NaOH, then they ran wild with it when they saw what we did. Let's expand on this, because by accident you put it on the screen and nothing is accidental. This goes back a tape we used to play before starting, "the beauty of it is that we can use the Matter state, the N state of PI together because they are made of the same ?? .. Let's expand on this. (1:14). Because now that we are heading towards the space operation this will make a lot of sense to especially scientists who work in the background. he draws a box, you used a N coated Cu and Zn plate, you used salt in the water, ?? NaCl or NaOH depending on the phase of which process you learned. You made the N Cu plate with NaOH and then put in salt water, the environmental connection was Na, it has created a new environment. He draws a second box, we take the same N coated and Zn plates, use the same water. What if we used Mg or K, or different salt, what would it do? What if we used a combination of these in N coating and production (Gans making). That Na releases a MG field of a given strength of an isotope of the Cu. (1:18). When you hold a piece of Cu in your hand, for it to be solid in your hand ... if it were made of the same atomic molecular structure strength it would have been already N material. When you hold a piece of Cu in your hand it is made of different isotopes in respect to MG field strength. When you use Na, let's say you release level 20 strength (from N plate), When you use Mg salt (in Gans production) or use it in the N coating process, then say you release strength level 24, if you use K let's say you release 60 level strength. (1:20) we don't know these are just guesses. Now you have to start learning to play with the environment and the conditions you make for it. It's the same Cu and N coat, but you make the same CO₂ but of different strength or a composition of it, this gives you huge facilities, and strength in research and Development of new T. You used Cu now let's use brass, we predetermine which layers we want to be. So you used Na or K to release a specific strength of the nickel in brass, and then you used Na with Mg with another salt to release a specific strength from the brass. Now, after you created those 3 layers, you changed the salt composition to release the Cu (inside the brass) at a given strength. Now you'll see a new world of transistors in the PI condition. (1:22). We walk into a new world of science, of PI superconductor

resistors, transistors and every other filtering we want. Nothing has changed. Some of you may have used K before because I did when I started making the first N materials using NaOH. I could see I needed radioactive material in this composition, because it would give me ?? without buying radioactive materials like smoke detectors, I could operate in the same region of radiation where I had my N and Gans material and I had my radiation materials also available. This is the first time I reveal this to you. I went looking for caustic to see if they added K to it. Because in the composition of the K by the ratio of the distribution of the energy, you have K 40, which is radioactive of a specific field radiation. So I had my condition of radioactivity for control of production of certain gases, especially Deuterium, right there in the shop, then I bought K salt available at any chemist. So I delivered a specifically energized radiation controlled environment by the choice of salt. there are a number of salts you can buy to do this. I am a Nuclear Physicist I understand the structure. For the first time I am teaching you to understand. A lot of people were wondering how he does this and that, now I educate you in the process. (1:25). With this T we have the matter, the N and the Gans made of the same ?? which is strong, because they are made of all the same elements. If you can decide the composition of your alloy. You can try the resistors and transistors out of other materials. Now you see the game changes. As I said the teachings are complete, now it's adding to the knowledge. It's the same N coating, but understanding that even the CO₂ which you produce in these containers have different strength. This is crucially vital and absolutely important for us to understand this. Let me tell you why. We have the new Wiki site coming on. You have the isotopes, elements, MG field strengths of not only the isotopes but also in respect to the environment they appear. If say from the known elements of 200 and some, of atomic mass or weight or number. Now we suddenly have millions of new materials and compositions in a Pl condition. And it's how your body uses them. We don't bring millions of materials to make the cell of the liver or heart, the body as it's in the Gans and vacuum state uses different strengths of the isotopes of the same matter. (1:28). Now the game of the world of Plasma has changed. Now you can decide the compositions and when you make them what you want it to be in the alloy that you can make the Gans of it, and not only that I can make a specific CO₂ out of it that it only touches the cells in a given neural System in a given part of the body. Now we will see how many PhD's you'll get, billions, that's why PhD's won't have value anymore because we share the knowledge. We are all professors and graduates. Start playing and working with this new knowledge. When you make a CO₂ with Mg it is not the same as CO₂ with NaOH or K, the percentage of K dictates which layer of which material will come out. When you find 99.99999% Cu purity that 0.00001% of the impurity contains all the elements and it has to be across the boundary of this material. So you create, release 0.00001 which is a specific, say nickel, which is there, and then you create a new ?? salvage condition. (1:30). This new knowledge has to be exploited and used in detail, then we'll understand how we can specifically categorize what kind of CO₂ we make. It's the same, look at your Ni or Zn, when you produce ZnO₂, if you understood this, now you produce it with K in it. then look into the structure of the brain and see which neural S has more of a K link to it. So using a Zn plate that created a Gans of Zn with a Mg or K or Ca of a certain strength, you can target the area of the Neural S you want to repair. And in reality you don't need to digest it, you just put it in a bowl as a dynamic core, or you put it on a coil and you deliver it. Because it's an instantaneous delivery you get an

instantaneous result, because you bring the position into balance. Now we'll really start playing the game of PI T, understanding it and manipulating it the way our body does. As I said we don't drink or eat a million different items to have different cells. We eat specific elements, (1:32) in a matter or Gans state and then our body through its glands decides what energy to give out or to reduce it to become a cell of a heart as a muscle tissue or a cell of a lung tissue. Now we see the game, PI becomes beautiful to play with. It gives us the opportunity for production of superconductors and super resistors at room temperature, where you can automatically switch them into each other with the flick of a thought, because now you work with PI. As you look more and more to the PI state away from matter, changes a lot of things. It doesn't change, it adds to and strengthens the knowledge now we have more ways to do things. Remember how you produced CuO₂ and you changed the rate of the current flow you got different colors, you can do the same with composite alloys and the beauty of this is that you can create new conditions, environments, and new tools to achieve what you need directly. (1:34). If you have a heart blockage, then you can identify what has caused the blockage, is it E or P or what material, then you can produce the parallel in the same strength and open the blockage without any brain hemorrhage where the particles can move, because now it's the energy and you transfer the matter into a PI condition. Understand the PI structure that is in addition to the matter structure then you'll start changing a lot of things. For example, if you have a Cu wire, I explained how to solve the problem of high temperature when high current is flowing through a N coated wire, that is so the wire doesn't melt inside the N tube of the wire. Now (with this new development) you have a composite material, an alloy which you decided before and you heated it up, the N structure doesn't get touched (by the high temperature) but at a given current flow the Cu starts to melt. (1:36). If you N coat the Cu wire perfectly, and **then cut the end off, and then put a current flow towards the matter you will empty the copper from the center** of the (Cu) tube. Now you have a true N tube. And then because you did the work to make different layers of it, you have a true composite N tube, which one let's say a centimeter tube can behave for everything you need, because now the center is empty, and the center is full, is actually, because it's held now by N material, is one of the most powerful centers of Principle Energy. Now you see the game changes! But if you touch it, it'll break, it's so fragile, but now you can use, ?? hang it, use the superconductivity for Zero Time communication, levitation, MG positioning. When you use this method to melt the Cu, if you melt it fast that it goes out of the N tube you've created and with it if you take out one of the structures of the N materials that is connected to it, it will collapse the tube. (1:38). It's matter state and you say, it burnt out and disappeared. So you have to be very careful when you are producing N tubes that you don't touch the outer layer. The outer layer of the matter state that you can keep the composition of the N tubes for superconductivity or whatever (??) So for example you made the Pain Pen coil now you can drain the matter state out of it (Cu), you will see the power changes by an order of magnitude. Let's look at another step, we haven't developed such a T to be able to melt the Cu without losing the N coat ?? disappearance of it. ... Let's make a hole through the Cu solid state matter, or use a tube that is not N coated inside and is also not made of the ?? pressurized, for example tube making, if you want a specific condition, or you can use a tube, but you don't let the inside of the tube to be N coated. You N coat only the outside and do it with the layers of different isotopes of the PI condition of the matter. Now you can fill this

center with Gans' as you desire, or coils which you have N coated differently (Mg, K or whatever). (1:40). Now you see the game changes by a magnitude. The coils you made for the Stacker Units now get a Cu tube and N coat the outside and put inside it another N coated tube. The game changes by order of magnitude. The same goes for the other elements, and how we can manipulate the understanding. In a very simple way we see a totally new light in the N Pl T. You can do a lot of observations (tests) with coil making. (1:42). He draws some small circles, these are your tubes, ??? you want to ignite some ??? ... you can speed up your N coating in 2 or 3 different ways, ... you N coat a Cu and Al wires, and Zn 2 or 3 cm, and let's say you have a transformer here, now you have 3 N coatings in parallel with each other feeding to one line, you can decide which one you want to transfer or feed to with energy. Or you put on the other side of the unit different materials, Gans and you can make the same connection. In understanding the MG field you can operate in a different zone. It means you can speed up your N coating. You connect it to a power supply, you can decide to keep the voltage constant and change the current flow. You choose a lighter n coated material on the entry and heavier on the exit, the eddies flow of the Pl, ?? will N coat because the left side wants to reach to the other and you'll N coat your transformer and cables in a much faster way. The G wires on one side pull the other side and within hours you N coat your transformer. This has another advantage, you can control power the same way. (1:45). ??? I could control the flow in a ?? voltage situation. If you want to change a current or change the composition of it. You dictate what materials in the coil you want to be N coated, Zn, Cu or whatever. . If you look at it, this here is the Cu plate, this is the Zn, and the medium is the Cu wire. The only thing you have moved is you have changed from the liquid state media to solid state media. this is the power and beauty of this T. Now you can N coat the materials internally of the elements which you want and this opens a new dimension in the world of metallurgy, computer development, communications, satellites, and everything else you can imagine. You choose now the frequency to broadcast, and you choose MG field so anybody can use any isotopes. Hundreds of billions of people can use one line to communicate. (1:47). We thought with the present cables for communication were superior, now we come into a new dimension in the world of Communication, if you understood how to use this. The beauty with this is you don't need to use cables you only need a small tube. The link of communication if you made the same one is the matching telephone number, you just contact. Now that you understand the totality we take you to the true space T. The T has opened a new horizon. Now you can make composite Gans', when you see a CO₂ on top of each other you see different colors because now it's a Gans one made by NaOH, another by Mg etc. Always understand the order of magnitude and the composition. (1:49). In homeopathy they have 12 different salts in body, now make a composite of the variation of the 12 salts plus every element which man knows and then you can see the variations go into billions in the body for the production of the cells. Now you understand how the body works. Now we can play the U game, part of the research in the U which we achieve is to open this Pandora's box. Does the Raman Spectroscopy have any room or can we use the Raman Spectroscopy of the Pl to achieve more. ... How far can we push the boundary of the knowledge? I just received a text that the tests in Tokyo University confirms the non-toxicity of the Gans. Officially as a scientific data we can confirm for those who have been taking or working around CO₂, you are dealing with a non-toxic entity, because it's a copy of your own body. (1:53). We produce these

materials under specific conditions and they are of a specific dimension. In following tests we'll change to other parameters. But now the tests shows in principle the T is non-toxic and with what we just taught it opens a new dimension in the world of science. ?? How you understand the totality to produce what you need. Those of you looking for new components in the world of communication this gives you the breakthrough you have been looking for. I used to get high tension Aluminum cables to do these tests to confirm this. And I used to link them with the Cu, nickel wire and chicken mesh (1:55). And it works. **I have access to every composition of CO2 within the body of the Man.** What part of the Gans' of CO2 turn and become resistive and then it turns and becomes conductive. I know how to do it. If you understand it then you'll understand how you can connect on the medical side ... of a nerve cut in the spinal cord. When the cord gets cut or damaged it's not like what we normally call a cut, but you speak of a change of the orientation of the crystal of the C, or the PI of the C which now reflects the information to another angle instead of directly to the next cell. So situations like nerve damage or cuts through the neural S becomes irrelevant. Now you can grow the same nerve (back). This is what we saw for example in the bone structure cut, because we create the right Ca combination, because we take Ca from chicken or whatever, this allows the bone to heal and we don't see any crack or fracture or breakage. We see that with Naomi (car accident) with the pictures coming from the hospital. (1:57). Now we are learning the mastery of the science. Now for example we don't need to put a horse down because its got a broken bone nor do we need to operate on it. We put it in a condition of the Gans of K with the right Ca and Mg that it supports the muscle, bone, bone skin tissues and neural S, and you put this S around the bone and within a few hours it's as if it never happened. Everything is a natural process. I know how it feels because I have used it when I broke my bones ?? within days (it healed) and now when they take the x-rays it doesn't show any sign of fracture, because it's a natural process. This is perfect for heart operation where the muscles have gone weak or ceased working. You create the condition of the PI of the muscle outside ?? standing the new composition you can flow it, you just replace or ignite the muscle tissue work and that's it, it's done. A lot has and will change. Those of you looking for energy transfer, have not understood, using 2 Systems doesn't give you any transformation of energy. You need 3, the booster, the reduction, the booster, you automatically transfer Megawatts. (1:59). ... we need to understand that we can expand to the point, the limits, that we can manipulate different conditions. We create the conditions. Look at the screen, we only talked about the Na, K and what we put in, look at the picture next to it, we predetermined the condition of a material to be of a given composite here, and then we choose the plates which is a flow of energy in a plasmatic (condition) from one to another. We changed the ?? media valve, we keep the same composition outside as we see it, he circles the 2 boxes, now instead of changing the K ?? chloride or Mg salt, change this from a Cu to a Al wire. And now put the same thing in parallel or series with each other. You see the world of electronic, computers, communications everything now changes. You don't need to make elaborate silicones and the rest you get any piece of thing and make your own. (2:01). The beauty of the new science is that it's not patentable because it's already in the public domain. It is free to all of us to enjoy. ... Another 148 teachings, I can teach you so much until the cows come home, it depends how much you can understand. Now the next step for your understanding is not the Gans or N state, now you have to understand the Free PI state.

It's where you don't see the Gans but you feel the effects of the fields which behave like a Gans. Because there are creatures who operate in this realm. There are lives which depend on this level. To your eye it is transparent, but to them it is visible and tangible. Now you come to the world of the UC which Man has no visual or sensual observation of, but has to rely on the field interactions of the Plasmatic kind which we have not been educated yet to understand which goes into the inner sanctum of the Pl. The process of understanding the PI T NOW changes. Let's take another condition. (2:03). Let's change the medium now simultaneously but let's go into the dynamic cores, he draws 3 cores, you made the cores of different composition, you put the AI in the center and made it as heavy as possible, you put some AI in outer and made it light, now you have a different proposition if you understood, if you change the same composition of which you made the material, or the salt which you added to the S, you rotate the outer core which now has a matching piece of AI in the center. Now you have created a beautiful spoon for the rotations of the cores by the AI having the same strength as you put in the center core, having the property of the electron trying to find its balance, start the rotation, not only with the CO₂, H you created the feedback, now you have created the dynamic rotation of the PI or the Gans, and the P rotation of the entity. I referred to a long time ago, a planet doesn't rotate because of fields in its inner circle, core, Caroline Core, (2:05). it rotates because of the interaction of fields btn its outer boundary and itself. The speed of rotation of any planetary S, Star or moon, is depending on this, which has never been understood by the world of science, because you are of the opinion that you have been taught to look at the rotation, but look instead at the rotation of the proton in respect to the electron, now that you understand PI T, the surface of the earth has become the electron of the proton of the inner core (of the earth). And the balance interaction btn the 2 dictates the speed of rotation of the planet. This has been the mystery of the creation which no one has understood. Why do we get the higher speed on the surface, or different radiations on the strength of the surface of different suns, that is dependent not on the field of the sun but on the P boundary which is created by the PI matter state of the entity on the outer surface. I have explained this in a very deep way in one of the books. Now you understand the depth of the knowledge. This is what I taught last week with that tennis ball rotating and lifting the weight (Renan demonstrated), and I said now put the tennis ball around ?? make it as you had the cores 1 and 2. There is no difference btn that which is a solid matter of the planet and the core inside (??). So in a different way the electron has changed its position that running around like the moon, (2:07). has become the electron of the PI of itself, through the same fundamental teaching as we said, the matter, N, and Gans are all made of the same thing. Now you understand how the speed of rotation of a planet is dictated by its own surface rotation in respect to its center core, now the electron is a solid matter outside, the electron is the outer boundary of the structure of the matter state we see in a star, because the intensity of the strength in the center is so much it allows the expansion of the environment that the weaker and embed and embrace the stronger within itself, because its the source of its own existence. This is another mystery of the source of the earth, moon, sun, whole galaxy ... the U has this structure, the weaker in strength has embraced the stronger inside and uses it like a leech to feed itself. Look at the position of the soul of the Man and the structure of the brain. The creation of what you call, "God Particles" is the manifestation of the visibility, tangibility of the strength of the environment of the media of which its been given by its

environment, so the cell of your brain where your finger is a God particle of the existence of the manifestation of the control of your arm ?? of your little finger. (2:09). So now you see the depth of the knowledge. It's all the same but it takes different shape. When you put a suit on a man, a ?? swimming trunk, a shirt, doesn't change the man, the outfit changed but the reality essence is the same as the man inside. It's the same with the understanding of the total knowledge of the U. You have to unravel it ... why does it appear to me this way? What have I missed, where is the link which I need to understand to be able to replicate, to live and to operate within. This is the knowledge of the creation. If you have understood what I taught you in the last half to one hour, then you have come 1 step closer to understanding the creation of the world of the Creator. blessed are those who understand. Then if you understood this, do you need power generators? Or a SS to travel? In a new product coming out by the KF very soon, it says we brought the energy of the U within the body of the man when you drink the water. I has a lot of meaning, we have brought the essence of the mother into the center, it's the P that has to decide what it takes from it. (2:11). This is why Gans and N T which we have developed is so effective, because we bring the power of the U and you take what you need because its already predetermined by the body what it has to be. The science of the T is beyond the comprehension of the Man because Man has made himself the restriction of the matter state. If you allow this confirmation of the self of existence to stop being the point of the denial of the knowledge man will achieve huge understanding of the U. This is the problem we ourselves have created for ourselves. It has to stop when it comes to the PI, not when in the matter state because this is the condition which we interact at this strength, but if you understood this and you can extend the knowledge to the point of the elevation of the energy of a process then you understand the process of the evolution. And when the evolution, you understand the change and gain in the strength of the soul of the Man. Now you understand the body is the outer layer ?? where the tube inside the center of it is the soul of the Man. You understand how you can manipulate the fields, the matter, Gans and other points of energy, (2:13). to the advantage of the man to what he needs and where he needs it. It's taken us 10 years of teaching to go from the CO2 manufacturing, understanding that media to today to understand that to date the Cu, Al or anything else is your medium. You change the 2 sides of the wire and put in the center a broken bone, within seconds you'll not even know you had a broken bone. Once the Man understands the full process of the knowledge of at least the operation of the Gans within the structure of his own body, no man will die of any diseases. Man will instead die on the choice of the transition his soul ?? to another soul, or by accident. And even some accidents can be reversed, even if it lead to the loss of life, he can put the life of part of the body back together and allow his soul to exist. We will show this in the future when you understand more. it's very much like how we now see the amputation, they take you to the hospital and they sew you up, but now you don't need sewing. You create a field transition btn the 2 sides because they were made of the same (material) and they just link up together. vohla. (2:15). It's important to start understanding that the medium cannot only be NaCl, it can be Mg, it can even be instead of liquid, of the PI itself. This is how your bladder works, your heart chamber pumps, your intestine pulls the food along, this is how we observe through our ?? site the U. So simple. The cavity and the ? determiner of field forces decided in the eye gives the Man energy to see visually. In the heart the strength of the E pulls the blood. In the bladder the need and the field strength of the

rejection to confirm the existence. It's the same cavity, there is no material in it but the field strength creates and pulls the matter to itself that it can sustain life. (2:17). To the ?? acquired level for the existence of the rest of the elements for the body. Three different media, one liquid, one E, (it doesn't need to be NaCl), and one by the fields of the matter strength which is given the structure to the wall of the bladder. The MG fields in the cavity of the bladder doesn't pull your ?? blood but it pulls your Na extra and Ca extra and the others. Now you understand the process. The world of science doesn't need to be afraid of the PI and Gans T but be embraced to explain the totality of what has not been understood and that fear has to be brought out of the Man because he needs it that he can understand it that he can take the span of the U for his own existence. It becomes very, very simple, but very complicated because you have more things to handle and to understand. If you understand what I just talked about then you'll understand why most of you can't achieve tangibility of your SS. Because you are not creating it, you are hoping it'll create itself because you haven't made the right conditions of the media for it to be created. (2:19). This is the true meaning of the transmutation not only of the elements but of the PI of the creation. Beyond the understanding of Bahala, bless his name. He said the maturity of the Man comes when he understands the transmutation of the element. Now we are teaching you the transmutation of the fields, and the essence of creation of the PI. It took Man billions of years to understand the transmutation of what we taught 2 or 3 years ago. Two or 3 years later we teach you the transmutation of the PI creates and allows you to travel the spans of the UC beyond this U into the Unicos which is a U of the totality of what we call our U, the cosmos of Universes. Because for those who understand this in the time to come, traveling across the U becomes the child's play, as you travel from city to city. The knowledge which those who understand in the UC now we add it to you too. Now we teach the totality of the U, not the ?? Man. And it will take the Man even a long time to understand the last 10 sentences. (2:21). Try to expand on the knowledge according to what it is, and not what you want it to be or it becomes the present fallacy of the modern science. They show the O goes through the walls (lungs) because they have made machines to confirm their fallacy. try to understand the operation of the fields, that each field as it is actually going to a place is taking from the place in its G field also, it's a long and not a one-way tube. When a ray goes from A to B outside it is x-ray at the M field strength, but inside it's G in gamma ray strength, because it's pulling itself, it's like you standing on a platform with a rope, you pull the rope to go forward, but at the same as you go forward the rope itself has to go back that it is there for you to be able to pull the next step. This is the game, the roller platform you are standing on is the M and the rope and inside which creates more power is the G. In the U there are no rays or fields that doesn't possess the balancing force. the G of the place you are leaving has to match with the M the arrival destination. (2:23). Even when you throw a stone the reason it doesn't continue to fly outward, partially is the G field of the earth but partially it's its own MG field flow within the structure of the stone itself, in balancing its own inertia with that of the planet. If Man understands this it will change a lot, because even the stone on its travel carries its own MaGrav strength both in inertia and MG field strength. The same is with the elements with the Cu in the middle. Any Questions, please do not divert to anything else what you want to present. Stick to the subject, if you have a question on this we talk because this is important, you can always show your experiment. Is it possible to bring the soul where the body is already dead? Yes. How can we do that?

Use some of the knowledge, because the body is dead but the soul still exists in another dimension. Do we need to provide a P for that soul to ... (2:25). It's the soul which has to understand if it wants to manifest itself as a P. If you take the center of the earth and another position in the U ... it's the field strength which allows the condition of the boundary which dictates how the earth will manifest itself in what shape or form in that position. Just because you move the center of the earth doesn't mean it's the end of the earth, but it means another manifestation of itself in another dimension according to the strength of the environment. When a man dies the soul or the scent ... (break in audio) .. they are these elements which the environment decides the presentation. Christ did this and nobody could see, he did it with himself, and he did it a couple of times for an audience to see to show the power of his knowledge and mercy. When Christ came off the cross the P was finished but the soul existed. (2:27). He understood the pain and reason, when he came off the cross the P was not the same as when he went on it. Those who were near to him understood the essence of his creation and saw him. The resurrection is very much like if you take the center of the earth and put it in another position it will manifest itself according to the new environment, there might not be any water but it has to be acidic. So you see the acid planet, where as here it's water, Zn, Cu and everything else. Is it possible to bring a soul into its P dimension? It's already in P dimension in respect to the other souls, they see and hear each other, but not at the strength of the observation of the Man. If you have very much like a saltwater, create that condition, then you have what you want. The whole game has changed and a lot of things become much easier. (2:29). Do we need to change or do we bring in new conditions that the change occurs the way we want it. Do we want to see the resurrection of the P in this dimension, because when the body was in this P dimension the body was created according to what ?? it had, blue eyes, blond hair, white skin, but in the process of evolution and knowledge and existence on this planet, the desire of the soul come to be black, brown eyes and something else. And now that you bring the soul, it will see the P and say, this is not what we want, my father was blond and blue eyes and now its this. Now you are looking at what you wanted to see, but what is the sense of the soul? This is exactly how Christ came off the cross and how people close to him saw him, and they moved away from Jerusalem and nobody noticed. The resurrection is not of the P but of the manifestation of the appearance of the soul in the (speed) strength in which it is happy to be in, with the new strength of the evolution of the understanding of his environment. (2:31). Zoroaster did the same but the man never understood so he hid it in the flame as the soul and the energy is of the same. He explained it as fire because that was the only way man could understand it. He explained it in the name of Ahura Mazda. I made man in the image of Myself, depending where my image has to be, earth, moon, or another galaxy. I appear in the image where the environment allows and would like to see me in. Question, you talked about CH₃ as a giver, M point of exit, North pole and acidic, if someone is a giver does it mean they are acidic or at a point of exit or has more CH₃? The thing is this is a narrow way of understanding the knowledge. (2:33). Because CO₂ and ZnO₂ are givers also. It's the extent of the giving which decides the desire of receiving. When we talk about CH₃ it's because of the availability of Tritium in the P1 state. Actually Cu gives more but it takes more also. Do we have to E balanced in order to give to our soul and does anything which is E balanced exist? E is a middle layer with the soul and P on either side, that is gives manifestation of existence and confirmation of

both. Without the E you'll not have the soul, without the E you'll not have the P. It's the intermediary, this is how you feel in respect to your environment and you may grow tall, be brown, white, black or yellow, or with 2 finger and 4 toes. (2:35). So when you speak about **the E it is itself part of the process of the dictating of the evolution**. And it's the intermediary, the balance, the transition. It's dark or what you call black (dark) energy, or what we call transition energy. It's the E that decides how the P will manifest itself from the source, which is the soul of it. He draws 3 circles a smaller one in the middle, you have the soul, E and P. And this (he draws an Infinity Loop around all 3) has to be. How much of the G gives that you become tall and how much of the M it takes that you become short. This is how the soul wants to manifest itself in P, and that's what you see, the image of itself. The bigger proton (soul) and smaller electron (P). This brings an ethical question, does genetic engineering interfere with the soul of the man, or with the P that then effects the soul? That is for the wise man to understand. (2:38). A question that the soul is static and the P dynamic. Keshe says, oh my god so far from reality. Next question. One time you offered an interpretation of the "Hidden Teachings of Bahala", Possibly it has to be written, explained. I have done that before, I explained the true meaning of the Hidden Words of Bahala to Caroline. In time she will translate it. The Hidden Words are part of the structure of society in deep space, ?? man must understand himself?? A lot of people have started to read him. Read it in the language of the soul and in the intention that Bahala has written it. He has translated in a way that Christ did with his crucifixion. The teachings of the prophets of God are an insight into the workings of the Creator Itself. It needs the man of wisdom to see it, then nothing is hidden. (2:40). If you read the Hidden Words you come to understand the secret of creation. In the P matter state which is ?? replication ?? of the creation. Can a soul walk into a P by agreement or other means? Yes it can I have explained this and it's only open to the prophets of the past. This is how the soul of a man becomes a soul of the prophet. You can ask for it but if you are not of the strength of it. Nothing is hidden it's all transparent, but if you ask and part of it is to be received to elevate the soul because it brings balance and totality, then yes. You can't take, but if its available and you have the strength to receive, this is how the coming of the prophets are forecasted or have been preset by the other prophets because they know at what point this energy will manifest itself in what shape or form. Because they are part of the line of the Creator so they can see how the light will come and interact. It's very much like you stand by the side of the road and you see your son driving the car, you know how its going to look if he crosses the road, the next junction and the rest. Q: could one say that all souls are based on the crystal structure of the PI fields ..? PI doesn't have a crystal structure, it has its own field orientation but it doesn't have a structure. (2:43). There is something which hasn't been understood, let's add to the knowledge. The inner core and any PI entity, earth sun and the rest, the PI field balance on the surface dictates the release of the field, (he draws an Infinity Loop (IL) from the outer surface to the inner core), at the point at which it has to be given, even though both are dynamic. The structure of the matter strength dictates at what speed it wants to ?? lower over the transition point and connection to the Principle. Why am I born with 2 fingers missing, I should have had 5, you have to see why the soul has decided that in the structure. You call it genetic defect, I call it the E effect of the soul on the "CD ROM", it's the information and not the CD itself. Because at that point with 2 fingers short it attracts energy which it needs. This people will understand, if you satisfy

... I'll explain in the coming time. The way we can grow toes and finger, you can allow the elevation of the soul to be satisfied in the dimension which it needs, if you don't have 2 fingers, because of the P interaction of the E and ?? in respect the soul has changed, you might find the 5 fingers back. (2:45). Can we correct the deficiencies? Yes it can be done. We have to understand which part of the brain, E and soul we want to interact with. With what I taught this morning everything is possible. The problem was the medium which was your blockage, in how you control the field of the PI in its current and its potential difference. You can put them in parallel or series, you get a potential difference or a current flow, would you like Megawatts at the end or 1 mV. Now, my friends at the Innovation Center I hope you have been enlightened. Question, you've been teaching us to start thinking in 3 or 4 dimensions instead of 2, so we must think not only of the elemental states but also the field strengths and the power of the field strengths? That's what I have been teaching you for the past 3 years, you just woke up. What type of MG fields does an enlightened soul take during astral projection or when it separates from the body? (2:47). Understand the structure of the soul, which is in line of communication with itself being the P of the second and third dimension. What does this mean, very simple. When we talk about dimension its not the way people who talk about 4th and 5th dimensions (? New Age people ?). He draws a stick man, the body is the P, the E he draws a thick circle inside the head and in the center a green dot, this is the soul. The next step is the soul itself is connected to the soul of the Creator, he draws green circles, and the Universe itself, that in this transition it has become the strength of the soul, he draws a line from the circles through to the soul. So what you get is this, he draws an IL around all 3. Then this entity here (the farthest circle), is itself a manifestation of a given strength of itself being the soul of the soul, this one now becomes the intermediary of another soul, and he draws another IL with it. How many does it take to reach the soul of the Creator? Or the totality of the soul of a man the way we see here ?? , he draws a circle around back to the man. ... this became the solid earth and the souls ... is the P of the soul of the man which leads to creation of his P, the boundary of the soul of the Creator, at the level of the strength of the observation of the man. (2:50). Does it mean that we are the radiation of the soul of the field of the Creator? The answer is yes. I made man in the image of Myself. What I felt in this environment I created as a Man, even though it's all conditional on the environment which has created itself. question, someone came to me who had a motorcycle accident 16 years ago where the nerves cut and he has a mix of phantom and P pain. I experimented a lot on him, I put ZnO₂ and CO₂ on left arm and 3 minutes later pain reduce 50%, he was shocked. If I create loop btn his right side of brain and left arm and shoulder with CO₂ and ZnO₂ would the body learn to restart the communication to the arm and perhaps re-grow the damaged tissue? Yes you can do I have done it many times and so have many of you. Is there any problem with (using the pad) crossing over the spine? No because you look on that as a P connection, but don't forgot you have an outside Aura, the field (can pass there), You don't need everything to be (perfect in P way), (you have) the connection first through your fields and then P finds its way to connect (through it inside the body), (2:53). through the nerves. It's beautiful when it happens, because you pinpoint where it is to be, then the fields are created and the subsidiaries are created. We see this in the body very often and we ignore it. If you look at people with spinal cord damage and are paraplegic, but if you touch the toe they still feel you (it), or the leg, and hot and cold. The main line of communication, and

partially some sub nerves ?? the aura is still totally intact. But you need the spinal cord to move the P, the main part of P. The doctors say the sub-nerves are taking the connection, (that must be their explanation ?) but how much of the connection goes in the sub-nerves ?? most of the communication you feel is through your environmental condition connected to your brain. In conditions like Coma I use this heavily in P damages. I don't look at the connection of the nerve, 'oh yes it moved', I look at the outside aura connection with the toe, which is not moving. the nerve to the toe on the P side is not moving, but it's like you putting hot water on a tube that is plugged up with ice. (2:55). If you put a heat outside it and it melts you get a line of communication established and it opens. Especially in damage in the neural S from the brain to the extremities go to the furthest part of the body and establish a line of environmental connection in what you call an the aura. Still it receives the same. He draws a stick body, let's say this is the finger which is damaged by an un-repairable cut on the arm, you put a Patch on the hand and one on the brain. You tell the finger to move but it doesn't, but then the E (through the patch) tells it to move, now you have established a non-linkage (? a communication link in the aura), (draws an IL btn the brain and finger), now the P tries to find a way through the arm to make the connection to the finger, you open the block the the body moves (re-establishes the link). This is one of the most efficient ways to get the paralysis to move again. Or even the Coma. Because you can by-pass the cut part through the aura and re-establish the P link to move the limb. (2:57). You change the environment the tube expands and opens the blockage and moves again. It works by changing the field. Question, is what part of the brain do we use to open our Light Body. It's very easy we do that, it's been done, we see the manifestation of God in the light, that's why we see the ?? , we have our own light but it depends on the purity of what you give and what you receive. According to the E of the man and the value of the essence of the matter state you'll see a white, black or gold colored light. When you see gold it's connected with the E of the P and it's a manifestation of the creation, White is the soul of the essence of the creation, when it's black it means it absorbs everything and nothing is given. In Christianity we call it a black man, a black priest. (2:59). Is part of the brain involved in opening up the creation of the L Body? ?? In these conditions it is not the entity itself but the environment of the entity that it dictates the manifestation of the color. When you see the prophet of God in the light it's the other souls that they want to show him in a bright light, it depends on which side of the teaching it comes. It's the same with your own aura, not many people can see, you hardly can see your own aura, nobody can ?? some people claim they can but it depends on how far they are from the position of their own soul ?? but in reality the light and the color of it, it shows it's (the person's) understanding of its own creation. One day I'll show you, when the man matures. We try to keep away from the hypocrisy of the past, raising the dead and the other things, we try to avoid. We try to help man to understand the knowledge of ?? life it's not magic. (3:01). Someone wants to show the production of water, this is important so please understand. We taught this is the past and a lot of you expect the water to be outside (the container). For those who are wise to understand observe the elevation of the water level inside the container. Some people put a plastic bag inside the water in the container and allow it to collect the water there. It's more or less the same process and some have achieved it. Is John from Arizona online, he exited 1 hour ago ... oh, it's too late for them. Rick shows a "water creation conditions via field interaction" document and reads.

(3:03). He put 50 mls of CO₂ and ZnO₂ in plastic bottles in a plastic bag in a plastic container as an emergency kit along with 2 P Pens and a coil and left it in the trunk of his car. Over time the fields combined in a way to make H₂O. Another option is that he noticed when the temperature rises to 23 or 24 Celsius that water forms on the Gans bottle, maybe the temperature could be controlled to increase the water production. Keshe says it's another observation and we see a lot of people testing it. You create an environment inside an environment and now it's about testing it and seeing what you can create. (3:10). You absorb because the Pens carry moisture in them and you create a replication. people were getting this effect on the outside of the bottle and this is another version of that but inside. .. the beauty of this is that people have started to observe the minutest things, they've gone past what is there (on outside), the observation is important. Klaus asks a last question. ??? some people have been working with harmonics ??? and installed a Magrav and now the field comes up bigger and bigger, like electromagnetic fields. The E fields of these ?? are too strong and they don't want to change anything, what do you mean. Can you repeat the question. Some of his friends worked for 20 years in room harmonizing of magnetic fields and they installed a Magrav and it quickly built-up very strong fields. (3:13). The lady called and asked him to remove the MaGrav because the fields are too strong, like magnetic field. I said to her the challenge in her E ?? was too big for her. Keshe: We know and have even considered to market the MaGrav as an E unit. Our research shows that because of use of ?? S the production of Gans, we produce a certain amount of ZnO₂ into the Gans. This come from the ?? 2 sides of the same plate, Zn, ?? not that we do it on purpose. You have a plate on either side produce ZnO₂, ??? every day E because of the field interaction. We know many people who have made or bought the MaGrav Unit, it has changed the environment of the house. They tell you something has changed in the house, because it's a MaGrav strength it elevates the soul and the E and you find out you are not in that position. (3:15). Someone wrote that in our house there was a lot of shouting and now it is very calm. We don't know why but we always see this before we put a MaGrav Unit in and they say, I don't care that it doesn't give the full 100% energy, but it has brought peace to my family. The Italians want to market it as an E unit, a happiness unit. It comes because of the Zn coating on the coils. remember you can join the agricultural development and can research in Ghana or sponsor someone to do it for you. (3:18). We see people interpreting the knowledge in their own way, it is not wrong and everyone will bring the knowledge in their own way. Do not be afraid of criticism or of adding to the knowledge. (3:20). Next week we'll try to show some of the fields which lead to the creation of the SS and then it's up to you to take it a step further. Next week we'll spend most of the time showing videos etc, which have been made in the past few weeks, for the establishment of what we call the PI field for the establishment of the SS. Because now a lot of you can take it to the next phase with your own knowledge, and how you expand it. Arman comes on. You'll see the measurement and detection of the fields. One last Question from Arman. When you use the caustic you release the into the water correct? You do also some things at the same time. (3:23). I know why Arman goes that way, we explained in the teaching of last week in respect to Deuterium and Tritium and the ?? speed of separation of NaOH especially ?? with Al and the creation of a specifically strength field material of CH₃ when you have the Cu and Zn plates in the caustic and when you have it after in the NaCl, creates and supports the creation of

Tritium and Deuterium. In some of the Nuclear Reactors we see this because the Uranium isn't totally pure, and even though we centrifuge and do everything possible to purify, and not to have any salt which leads to the ?? enclosure of pellets and the rest in the nuclear route. Due to the nuclear decay the material reaches that point where the salt is created inside the fuel rods, in some very specific conditions and then it leads to the ?? corrosion and everything else. We see it very rarely in the Nuclear Industry but it exists, we are aware of it and have seen it on rare occasions. So the environmental condition leads to the creation of the matter that we don't want and in that process in higher speeds of the meltdown condition, it leads itself to the creation of Tritium. There is a very simple process and this is part of the PhD that we initiated at the University, is to understand this, (3:25). and avoid the condition of the Tritium into the Deuterium and (make it go) back into the production of gold and heavy elements. If what Arman just put his finger on can be fully understood, then meltdown becomes an impossibility in Nuclear Reactors. And this is very important, as we know in the past few weeks with the heavy earthquakes in the area of Fukushima, they had a problem with reactor #3. This can be stopped (with our method) and even if you loose the water you can still contain the meltdown, if our colleagues in TEPCO understand how to do this. You release a H, but it can be used, or you create an environment for the H not to switch over to become (??) , the salt content in one of the fuel rods which could have been corroded is enough to start the mayhem, and this is what happened in reactor #1 in Fukushima. And this is where they have the problem. We have seen occasionally, even though they centrifuge everything in the Nuclear Industry, the production of the salts in some of the pellets, fuel rods, and this comes purely through the nuclear decay. And there is a process in the ?? that we can stop this, and when that ?? comes in touch with the H in the water in the cooling S leads to rapid production of Tritium and just takes over. It's not how it's been taught. There is actually a presence of this material, rapid decay into salt. It decays into a field strength of the salt and then because of the environment it takes its P manifestation, and ?? you produce H but if you know how to control it, due to ?? if you can make presence other things you produce Tritium and Deuterium but very rapid. Thank you very much for today. end
