

## **158th Knowledge Seekers Workshop, February 9th, 2017**

(More on DL, Space ship reactors, Hydrogen as plasma, giving away his medical devices, How to make Gans of H, spinning of CH<sub>3</sub> looks like our Solar System, The whole story about Fukushima entering Plutonium stage explosion imminent and American connection, reincarnation and about the soul and traveling in space,)

(:11). We will make an important announcement within a couple weeks about the KF. Governments are starting to take notice of the new T, especially in field of cancer and radiation. I thank you all. (:14). People asked why I focused a second time last week so much on DL. We have made a breakthrough in regards to DL, and you may notice that since then he has not posted anything on the website, about the fire where the Russian woman was killed, because this gave him an indication that we know too much. The second clue I gave was that the director of ?? Phillips were innocent and got pulled into it by him, so they got to know that we know about the scam they set up 1999 when the software programmer was dead. There are 2 pieces of missing info in this case, the murder of the missing scientist in Holland 17 years ago is directly connected to the murder in Belgium 8 years later. The people involved are still active and DL is one of them, and the research team and security have come up with a very interesting result. The person interviewed by the police for the murder in Belgium in 2008, and now the securities have connected the picture of the person who died in the fire and the name of the person, who was supposed to have shot himself. The person involved has been writing patents by DL in 1998/9. (:17). ... the death in Belgium and 2008 follows the same procedure as Fabio's but in a different way. The major witness in the murder of the Russian girl I met 2 times as a colleague of DL, this is the first I found this out. The missing suitcase was the key. .. the next step was my murder by the same guys, the same way as the accidental fire was setup. The murders are connected to the same people. (:22). ... the Belgium Police were involved in the murder of witnesses in prison. .. this has all helped to find the people responsible for stopping new technologies. (:25). (:31). .. It's a year ago that Sterling walked into the Police station to turn himself in, now we have solid evidence against DL and expect him to turn himself in. (:41). The murder of the girl (in Belgium) is a copy of the murder of Fabio. I promised Fabio's father that I will bring the murders to justice. Two brothers, 2 drivers, one watching when they leave and the other carrying out the job when they arrive. The 1 watched Fabio leave with me from Barletta, and the other in the Roll Over. This was no coincidence. In this way we do our job and I thank all of you, reading all the lies put out by DL, and you trusted and stayed with us. This shows the hand of the criminals, we have seen no sign of DL, most probably he is on the run. Most probably he will write more rubbish, securities will release the connection of the 4 men. They never tested for poisoning of the compression scientist, we are asking the body to exhumed and tested. (:43). One more point, DL write more ... you have put fear into the lives of many people, now it your turn. (:44). Now we go to the teachings. Last week we disclosed more in the Space Technology. There is a fundamental point that is to understand the process of the fueling. We have seen many trials where they load acidic with Alkaline, where they tell of the ball gone missing, or they see a different motion in the characteristics of the material. You will not achieve lift, motion, and construction of the P entity unless you bring about 2 points at the same time. The first is the S of motion, the MaGrav S, where you encapsulated with the confirmation of P existence, this is extremely simple. (:46). You made the platform with the reactors on it and the platform revolves, then there's the SF with the "Delta" "Y" formation, creation of the voltage difference in Pl field and current flow. (:48). ... delay in ... while waiting

... we get restricted from showing a lot of medical research, but we work in other ways to share knowledge. (:53). The SF is for the flight S and the platform is for the physicality. The 2 are independent but entangled in their confirmation of the existence of one with the other. The total interaction of the 2 will give the P in the dimension of the UFO. The lift S (SF) is within the dimension that is created, and the E part get entangled with the interaction of the P. On all faces you have creation of dimension. The rotation of the disk creates a spherical mushroom that the fields from the top come in, and this allows this S to create G positioning motion, (in center) in respect to the planet or any position where the interaction of the fields btn the layers (:55). Or the 2 cores that are creating the lift, and the third core which is creating the P gives you manifestation of the UFO or flying S. Don't not think that you have to work only with large scale, you can also do it with a very small disk at home, for less then 2 to \$300 you can build your SS. A small disk can make your car fly. this is what we were going to show in Enhoven. the interaction of the flow of the energy btn the cores on the bottom with the cores ?? (on the SF), allows you a current flow of PI in Megawatts. The difference in this direction will give you current flow, this is the Potential Difference and this the current flow. (:57). You'll have to decide what the fuels you put in the different set of cores are made of. If you choose fuels of the matter state of the earth you will be bounded to earth. If you choose the fuels from the gaseous part you will be on the fly zone and never be able to go into the matter zone. The choice of the fuel gives the dimension of the flight. If you extend the knowledge to understand that you can have a S which creates a G field force, but if you understood from the teachings of last week you can create yourself structures of buildings, what you are used to. In fact, the reactor cores make the structure of the building, you position the cores in specific positions which will give you the shape of the house you want to perceive. In the morning you can live in a rectangular house and by the afternoon you want to change, you move the positions of the reactors and you'll now have a circular house. (:59). You can pack up and move, this is advantageous in the construction of the buildings. It can be used as a position to set conditions in an earthquake zones where buildings are separated from the p structure of the body. It's very inexpensive to purchase the material to produce the same. The horizon of using this T is vast, beyond imagination. Last week I explained how you could make sections and sectors with reactors, this is no different. It's just to inspire to use. At the present time one of the dreams of man is the railway, you decide on the cabins without the railway track. Expansion of the railroad track into the jungles can be avoided. This what we are teaching is not something new, we offered this to central African nations 3 - 4 years ago. (1:01).

(1:04). They did a test in AZ last week, as they approached the reactors the speed changed according to their E. 30

(1:07). Remember Alek Beads, you connect for preload to the Y and for the after load to the 3 base reactors. Do not forget the use of capacitors. Now you have your energy source for your reactors. Remember that it takes billions of years for a star to be formed. It takes time for the Beads and the magnifying of voltage and current to start building up according to the load that you add by the use of the reactors (on the railroad track on the platform). Remember how you created the capacitors and the feedback from the load side on the current to the supply on the voltage, then what you see is very simple. I have given you the source without the connection to the earth. It takes time to build the voltage and current. Our friends who are in this development with us understand. The more load you add, (1:09). the higher voltage you receive, if you ask more, you are given more. You'll find your S will come into operation, then you'll have a power

generator, a flight S, and you become self-sufficient. The existence of the confirmation of the energy comes from the choice of the fuel in the reactors and many times I explained that you have to look for H. Last week I said, find a way to produce H in a Gans state. We have allowed and shared knowledge with 2 of our closest friends in the KF how to do it. This is needed so that in the early stages that the mayhem doesn't break through. We have gone for the loading of the H reactors, the you are not limited to earth, but you become the passengers of the U. **The Hydrogen as a Plasma is key to the motion of the fields in the universe.** You can create a condition even for a PI of H, (1:11). to behave as a C to give you a structure in the crystal lattice that you can see the P (? of the SS). Go back to the part of the teaching where we spoke about diamond structure look at why in the body a specific material creates tangible heart crystals structures you call Ca, the bone structure of the Man. C13 in a specific orientation of the 3 layers of it becomes Ca, it manifests itself in the matter state of the Ca. Then you'll understand how you can use H to behave in interaction that you can have a soft tissue, hard tissue, bone in a diamond structure of the matter which you want or would like to manifest. No Ca goes from your stomach and becomes part of the bone, the energy and the composition of the fields dictates that that will convert to the P matter of the bone, when you die or take a piece of physical bone matter in your hand. (1:13). Understand how the body of man creates transparent and soft tissues and it can do the same in the structure of the house or in your flying object. You can create within the structure of the SS, tissue, membrane, muscle tissue, softness, hardness, as you decide. According to the choice of the interaction of the fields from the basis of the H. The diamond structure of the H is one of the most solid and powerful structures that doesn't get damaged or touched in the U unless you decide to change the field ?? of the environment of the H. When we spoke about CO<sub>2</sub> as a gas and then we showed that the CO<sub>2</sub> can become a Gans and it can be dried and you can physically hold in your hand. However, according to the law of physics gases can only become matter at very high pressures of whatever, and you went against the perceived and presumed knowledge. Now you'll understand that Man will create solid state matters at any strength he likes, soft tissue, .. walking through the solid state from the solid state Gans of the H. Especially H at the Deuterium level, PI field is the key into the space travel of the Man. (1:15). You cannot create reactors which have CuO<sub>2</sub> and ZnO<sub>2</sub> and travel into the depths of the space and not to be touched, as the field strength will create different dimensions for the PI of the Gans of the entity (?? SS). Where H has in the Deuterium level, more or less solid state matter, which means it doesn't get effected by the environment which it is traveling into. So if you travel with the reactors which carry CuO<sub>2</sub> and coming nearer to planet Zeus, there will be no strength because it dilutes, your SS dissolves around you, because the field strength has interacted or been influenced by the environmental condition. Whereas in the case of H according to the minimal common denominator environmental strength your SS will stay in the same state (not dissolve or dissappear). The knowledge of the space is very simple, it is the man who has put restriction on his own understanding. The task for the KF supporters or people who work in the space level is to develop the Gans of H. I have released the information to 2 trusted people in the KF so that if anything happens to me they can carry on with the revelation. Go back to the fundamental teaching, (1:17). not in what you wanted, but what is the reality. You have seen how you created solid C in the form of Gans of CO<sub>2</sub> dried, then you can produce the Gans of H so a few of you can make deep space travels without ever being ?? There is more teaching, when you understand the structure of the Gans of the H, plasma, then you have to find the soul of the H, then you'll understand the operation of the Creator, ?? as in His soul, and the ?? construction of His E, you can manifest anything from the

H without ever touching the H. This is the knowledge of travel within the U. We don't just teach the Man, there are those who are more educated (ET's) and now they'll learn the ?? of their work. Understand that the division doesn't exist, cooperation and collaboration and interaction is the key to development and success of the H in a Gans state, H in N matter state, and H in the field strength. (1:19).

>>>

(1:26). We are extending the Cancer trials into HIV, where we can deliver the T through the injection as well and see the change in HIV. We invite you to the trials and collect data on this disease. (1:28). We will see if it works and how, it's a trail case. Last week we showed the breast cancer case, but we found out that we can't show these things on the Internet because of ethical conditions on the Internet, even though it's scientific. We have one of the famous actors (from a famous movie) with HIV in our trials and he wants to be known that he is part of the trials. We have another famous actors. If it goes well they want to promote KF. Some people asked for the trials free, but as we have to provide our own funding we can't do that at this time, maybe later if a government picks up on it. (1:31). We want to show how you can increase the production of energy in the body to a SS, so that you can understand the connection, because you can use the energies of a SS to remedy the illness of the Man. So you would go in one room on the craft and be given high doses of energy from PI fields from excursion into space you can deliver it without harm to anybody else. therefore you can't create infections and viruses inside the craft. We will teach this in time and also decontamination that the energy balance before and after departing for an excursion is the same and that you do not bring any viruses with you into the communal area of a SS. This is part of the medical application, we measure the MG field strength of a given aura of the Man. The aura has to be the same when returning, and you pinpoint some markers that have to be the same. For example, if an energy package attaches itself to your kidney but you loose ?? somewhere in your liver but the balance is the same, we can see what has happened that we can return the balance, that it doesn't cause any problems. These are the developments that gradually the medical side will come to. (1:32). Keshe has a 20 foot truck container of special medical equipment for paraplegic treatment, chairs, etc. that he has in Barletta. He collected these pieces over years, they are worth half a million Euros. He will leave them at the disposal of the doctors if they want to use them. (1:35). Like for the leg 2 pieces can be attached with a reactor on it, etc. They can be used for post Chemo treatment they attach to the femur and help with bone marrow and immunity. Questions. (1:38). Someone trying to produce H Gans, he got a blue colored water, is this the first step? Good Morning, but how blue is the blue. (1:40). I got micro-hedrens, micro particle of H, ??? (1:42). Keshe says, the blue, blue color if you use Cu is N atomic Gans of Cu which changed to that blue, I have some of it, but that doesn't necessarily mean H, if you explain how you produced it, you mentioned that you have a Cu in your S and you use the Caustic in a specific way, it's a translucent blue. One of the Gans of h is transparent blue. Is the Cu on its own or do you have a plastic with it? It's on its own but in a plastic container. On one side N coated Cu coil, the other side also N Cu, in the middle a little salt, and (?) H. (1:47). Show us next week. I think you may be on the right track. When the knowledge is shared we will open the books. Renee from last week shares his work on CH3 production. (1:49). He has 2 glass jars, Zn plate connected to N Cu in other jar, and Fe connected to the N Cu in other jar, one side of PI battery connected to each side. (1:56). Shows videos of rotating magnetic field in Gans. One particle collided with another in reverse direction. Why? It could be

because you made it with Fe and they like to coagulate, or as a Gans it has to balance itself out. This is how you get positrons. Depending on the field strength, the electron becomes positron and changes direction. If you look carefully you'll probably see other particles doing the same, when they balance out the fields then they return to the normal rotation. It's MG field positioning themselves. (1:59). This is why you need to add Gans' into your solid state Gans, or N particles into your Gans or Pl, because if you look at that cloud it stays steady, the motion of the N or matter state is what stirs up. This is why the earth rotates, the inner core (see Book 1 and 4), is a mixture of the Gans' N material, Pl, and matter state. And here you see why you have to mix the N state of the material into the Gans, because that stirring creates a balance of fields. In the space reactor we see the same thing, the stirring of the fields by rotating the disk will do the same. He has a neodymin magnet underneath spinning at 500 rpm, at this speed the particles are very active. (2:05). Keshe says the CH3 is made from Fe so most likely the particles are N Fe and that's why they get attracted to the spinning magnet. (2:08). Shows another. Keshe draws on it, you see a configuration of the 3 layers that position themselves by MG field strength. Rick says the side is spinning like our Sun with the planets around and the outer layer like the asteroid belt. It visualizes a lot of what we are talking about. Some particles are floating on top, some in middle, different layers. It's very interesting. (2:11). He was not able to control the light turning on and off at the MaGrav with only his thoughts, but only by going near to it. Try, don't wish it to come on, but rather, would you like to see me happy, then it may come on because it makes you happy. You tell what feeling you want from it and let's see if it listens. How would you explain fire in terms of Pl. Fire, as we know it is a release of energy in the matter state, (2:13). it's not that you just see what is going out, there is a huge amount of energy coming in, even when you call it burning. It's a matter specification, we don't have a fire in Pl state, you don't see fire on the surface of the sun, you see the interaction of the fields which gives light and radiation. The matter state is the only place you see the tangibility, it destroys itself when there is too much to be released and manifests itself as a heat and large enough as a fire. It's a Pl interaction at the matter level strength. The light we see as daylight is matter, field interaction at the Pl level. Fire is a matter interaction at the Pl of the matter strength. Q: there is a report that reactor #2 at Fukushima has melted through the concrete containment and is going into the ground. What is really going on there with contaminated land and water around the facility? There is an alert out, we are aware of it, but TEPCO at this time has decided to cut links with the KF. (2:15). We prefer to stay that way, sooner or later they'll come back. Our problem with TEPCO has been confirmation of their work with us, that they have to hide it, we informed them that they broke sanctions by working with us during the time sanctions were enforced, and they didn't like it, but sooner or later they'll come back. In the moment we are in the hands of judges, and the trials are a backup, showing what they have done. I can't tell you any more, they hijacked the technology and thought they walked away with it, but as they say, they don't know the rest of the rhythm. There is a high level alert and the level has risen nearly 8 times inside the reactor #1. They'll come back if they need help, but they have deliberately burned all the bridges with us, because they made a few billion dollars and now they have to answer for it. There is a solution for it, we can make systems to do it even at a late stage, we'll have to see. It can become worse if there is a rapid interaction and drop in the system. there is no control it's just a heap of radioactive material. There is a way to do, we suggested it. (2:17). they jumped off. They thought they were very clever. We just have to wait and see. We are continually informed what's going on inside. there is going to be a disaster if it goes any further. The only problem we have, they is a possibility that the interaction and

conversion of molten material is leading to creation of plutonium. The system has moved up a step, I could be 100% wrong, but the time it has taken since the accident 5 years ago, it could have become a "fast breeder" and that's why we see high levels, it could just be a few patches which have gone into ?? production of Plutonium which will inevitably lead to the blowing up of the rest of the structure. This could have been stopped, there is a way to reduce the activities, but at the highest we knew was the 75 per hour, but at this moment it's like 5 to 600/hr, is reported, which means we are definitely entering the Plutonium phase. high level interaction into uranium leading to high release in reactor #1, we will see this in the other reactors in time to come. (2:19). It's a natural proliferation, the S has stepped up from Uranium to Plutonium and now it becomes faster and faster. We could see a massive production of Plutonium in the next 6 to 12 months, longer or shorter depending on what they have put in there. Don't forget this was expected, reactor #1 was used for military development of Plutonium. We announced this a long time ago and TEPCO didn't like it. Japan has illegally entered into nuclear weapons technology. The Americans, IEA, know it. That's why reactor #1 went this way. They started proliferation and went back on the agreements since the Second World War, and this rapid increase confirms our suspicions that reactor #1 was used by the Japanese for military purposes. Creation of plutonium at this level with a high level radiation from Uranium is very, very rare, it's not impossible, but they started a seed from most probably 2008 and 2009, they entered illegal activities of proliferation. I don't know why the Americans are not putting sanctions on Japan so rapidly as they did with Iran, but that is the decision of the new administration. But IEA has no teeth, now we'll see, if it goes we expect a massive explosion, with it goes plutonium and the rest. (2:21). This is an extremely dangerous case. I was reading, the levels have gone beyond Uranium to Plutonium levels. The level of radiation gives a good insight to the nuclear physicist what material has been used, it's part of the process. Reading from Tokyo, the recent reading is far higher than from 73, ... and described by some experts as unimaginable. The electric company said that an atmospheric reading of up to 530/hr has been recorded inside the reactor that was hit by a huge tsunami in 20\_\_ . ... TEPCO is to begin a 40 year decommissioning. ... In British decommissioning of nuclear reactors is 30 years, but in Fukushima it's impossible. A single dose of 1 is enough to cause radiation sickness and nausea, 5 would kill half those exposed to it within a month, 10 would be fatal in a week. (2:24). ... We warned about this, there is still time to overcome it, but it for TEPCO to openly discuss with KF. TEPCO people had come to Italy and then drove high speed cars to Germany to show that they had not been in Italy. The game is over! There is a solution even at the Plutonium level. Don't forget we are watching it very closely to protect our staff in Japan. We have entered the Plutonium explosion level, it's imminent just a matter of time, how fast, it depends how far the meltdown has gone, has it embedded in solid stone or has it gone vertical because it is literally on the edge of the country, there are sub water levels that are cooling it down. This is a warning call for TEPCO, we will not negotiate with TEPCO any further because it's a waste of time. But there is a solution, we tried to help them with the stolen T, let them sort it out. This is a warning to all those around the ring of fire, because there is a huge amount of it (Plutonium). (2:27). You have to understand Plutonium weapons T in the H level, Hydrogen bombs going into plasma bombs which are under consideration by the government. You can't start a chain reaction in Plutonium unless you have embedded in it, or if material has been cascaded in a specific way that it has started a chain reaction. We are not talking about 1 cm, rather the whole reactor is showing 570/hr. TEPCO has a very good reason to hide it, we think it may be as high as 800 to 1,000. This shows that there has been a seed of

Plutonium, seed of proliferation. This is why we produce and use centrifuges to take these pieces out. This is part of the weapons technology to use centrifuges to take these pieces out, or advanced nuclear power stations, but it doesn't happen so easily. piling can be a reason. If we see one trigger, it depends how it comes, we'll see the first Plutonium war explosion. If it goes there will be nothing left of a half of the city of Fukushima. (2:29). That radiation level is highly dangerous. They are using the tablets, but there is a way that you can confine the radiation using the PI T. We are there to share, but not in the way we did before that they do all kinds of things to cover up, we can release the emails from TEPCO. We wait for the judge to make a decision on TEPCO, then we will stand our position. It's dangerous, we have entered the Plutonium stage, the Uranium range was 73, the scaling up means Uranium to Plutonium. The next level is horrendous explosion, we have no scientific knowledge on that level. The nuclear chain doesn't stop at plutonium it carries on to heavier elements that are created in a specific condition. There is a possibility that some new materials are created in this condition and in that process the instability of new materials would lead to a new wave of explosions, (2:31). because the half cycle is too short and the energy is building up. ... There is no technology to control it. There is a way to use PI T to cascade it and drain it, but TEPCO is not willing to show that they broke sanctions, so they can go to Iran and negotiate, then we'll enter direct negotiations with them. IEA is aware of it, and why have they not imposed sanctions, it was done openly and known by the Americans. Very soon we'll understand. The strange thing is how far will it go with releasing more. They tell you in a very subtle way, they said the containment building still has a 1 meter hole in it, which means the radiation is massively entering the Pacific Ocean. It's like with the first accident, and now it is leaking into the ocean again. You are in grave danger. Start looking at the radiation in the Pacific Ocean, North China, less in North Canada, we see sudden increases in radiation in the ocean towards Hawaii and California. (2:33). Part of this radiation could be the cause in the earthquake reduction due to field transfer. It's quite possible, I looked at the fields of radiation now across Pacific Ocean, it's horrendous. Maybe TEPCO will make a full evacuation of Fukushima into other parts of Japan. If the radiation release reaches past 700 to 1000 then we are at the ignition point. In weapons technology we carry a pile of Uranium and Plutonium in the warhead, it's the ignition which is the key for release and high level radiation is needed. It's not just the Plutonium that starts, now when it goes into ignition the rest of the tons of Uranium that are on top of it become part of it, the chain reaction starts. Time will tell if it goes up in next few weeks or 100 years, only the Japanese know what they had inside. Two 3 years ago I said there is a pattern of Plutonium production and now we get a confirmation of it. (2:35). Under WWII treaty Japan can not produce weapons grade nuclear material, now what they created most probably becomes the noose around their own neck. Why has IEA allowed Japan to produce Nuclear Material with the full knowledge of the USA and IEA, we understand the reasons, as they were creating a "Cube Crisis" condition next to China. This was supposed to pressurize China but it has backfired. If you remember the Cuba Crisis with Russia, this was planned to be used that way, now the S has exploded inwardly. Japan will become unlivable. If reactor #1 goes a chain over time will cause the other 3 reactors to go. Sorry about this, but we told this years ago. Uranium doesn't create this kinds of high level activities ... in some Uranium meltdowns we see 150 to 200, this is 530 (most likely these numbers are massaged) which means it is a Plutonium chain. Let me explain, what they are reporting is actually reduced from the blanket of Uranium on top of the Plutonium. It's not necessarily from inside the area where the Plutonium is at. (2:38). Q: can we put the Gans on the coast? It's too late for the Gans, it's past the time.

I still offer the T to the Japanese and not to TEPCO. The way we did with Yukoko going to Japan before, if the Japanese or KF Japan decide to overtake the condition in TEPCO and the government allows, we are prepared to show ways to deplete the Plutonium, it happens all the time in the U and we know ways to do it. Rick, says it looks like it has melted through the containment on the bottom, right through the floor. It can be done with reactors, it has past into matter state, you have to confine it with dynamic reactors specifically loaded in a way that you can extract the energy in a column. Very possible, but that is a problem for TEPCO. (2:40). It's not just a point creating that much radiation but the whole pile is about to go. They built these reactors on stone, if it hasn't melted the stone layer you might find the cooling and there it could go on for years without exploding. Rick says that in past few minutes there has been reported an explosion in a nuclear reactor in Northern France, but they say no release of radiation. These reactors in France are being stepped down for years now. Are large number of reactors in France are on step down. (2:44). Q: What would a Plutonium bomb explosion be like. We have never had one except tests. Depending on level of explosion, the direction of wind, if it gets ?? back on itself, it leads to a H explosion which is part of the process so you get back to back multiple explosions. The radius is 2 to 500 km from the point of detonation. Then there are contaminations in the sea. If you are in proximity of these explosions you need to make filters of dried Gans, CO<sub>2</sub> plus CuO<sub>2</sub>. Make sure you make a dried Gans of ZnO<sub>2</sub> and make layers in the filter like with C filters, make different layers of totally dried Gans. You pass the water and air through it, this is the only way it absorbs radiation fields, the only way. Because of the strength of it you can filter water and air. (2:46). You have to liquefy everything, soup will be the main food, ?? it has to be filtered the same way. The land will be totally contaminated, it will land all over the place and a massive way. We hope it doesn't happen. I can read the email from TEPCO you'll be shocked. (2:48). .. there is no solution because it's coming from inside the reactor, we have no experience with this. Keshe response to TEPCO on ?? 2016, " to head of TEPCO communications, I forgot to mention one point in your email and the dishonesty in it, the email of confirmation of the sanction breaking by TEPCO ... now the case is in the hands of the Judge and TEPCO will receive heavy fines for sanction busting. .. they have entered the wrong way by stealing. (2:52). He reads TEPCO email confirming that they received materials from KF. ... (2:54). They are angry we went public, because we wanted not just TEPCO to make billions (from the conversion of Tritium to gold), but that the Japanese public benefit. (They have proved) that there is nothing wrong with PI T especially in the nuclear area, because it's built for space where is nothing but radiation in the space. They are mad that we went public but we sent Yukoko to do the tests and was public about it, that is how they found out about us and came to us. They used intermediaries so as not show that they were breaking sanctions. I am an Iranian nuclear physicist and at the time of accident Iran was under nuclear sanctions. A lot of you were wondering why Obama didn't put me on the sanctions list, because they needed me to carry on the work in Tokyo. That is the only reason I was never put directly on the sanction list, because they needed the knowledge I was carrying to help Japan, and don't forget that these reactors are owned by the American government and are under UN treaty and America is responsible for Japan's nuclear Industry, according to the Second WW. Britain is responsible for Germany and both of the sanctions have been broken in one way or another, in Germany ?? with Iranians, (2:56). in Belgium building reactors to match the medical application. The IEA has broken its own sanctions heavily just to the favor of a few, but now it is play time. 29

(3:01). Sharing Health Pens, very long 144 windings and 16?, he uses it for early prevention against viruses and flu. The end point of the pen comes out as far as the length of the coil part. (3:06). Does Mr. Keshe believes in karma? You have to explain what you call karma. (Not clear explanation), when your energy finish then does it come in another person. You have to explain in a very detailed way. (3:08). If you think by dying you come back and get reincarnated into another body or your soul gets reincarnated in another body or child whatever? Yes. I don't believe in that, because of the way I understand the process of creation, and that is you never die, it's a transformation from one state to another of a different strength, but it depends on what you have gathered in the process. The way I understand the process of creation, reincarnation in the level of the P in the same dimension is an impossibility, but you can when the soul is free to manifest itself in different dimensions, but you still have connections with the souls with which you have interacted or you have created in the process of your life. Reincarnation at the level of humanity, back on the human race is more or less impossible, you can't kill yourself and come back again. That is my understanding. (3:10). 20

(3:19). The E changes and it happens instantaneously, I have seen a few. E has a direct effect on manifestation of P. You tell me how you can do, if you are in control of your E that you can attract with your soul, you can change your dimension and direction anywhere in the space you don't need a SS. Many people travel like this across the U, many, because they control their E and they decide the place of manifestation. They carry both male and female as you call it, but it's not a reproduction organ, it's giving from to exist, you become the "Adam" and the "rib", that's where it comes from (story in Bible). With your E you can and do exist, and that is what they call, when the souls fall in love, because it's the sharing of the essence of the energy of the creation. But it will take Man a long time because he doesn't have trust in his own existence, let alone knowing that he can control his E and his soul. Because we have always put a separation, that there is a God and the fact that God is the creator of their own soul which connects (is connected to them). (3:21). Is the human blood connected to the emotional level because the RBC have lost their cores. Not really. Birds has DNA cell cores, they mention the intermediary layer you were talking about before for the materialization of the fields and the RBC light up as we all know. The creation of the blood, is the connection btn the E and the soul with the P part. The P part or the Fe which comes from the planet you are created from, which gives you the Hemoglobin, the beginning of the structure, and the O is from the dimension of the AA side, the 2 create a flow. The blood carries both a field interaction, composition of the E as one side with the AA and on the other side is the metal, which is the P, O does the E side and the Fe and Hemoglobin does the matter side of the connection to the planet, of course one effects the other and that is how you share everything btn body, the E and P part. (3:23). If you look at it the brain is the gaseous part and from the neck down you are in the matter state, the matter of the muscles and everything else that are the attributes of the P part (of the planet). In deep space travel you, can never die, the assumption that you go in deep space, die and disappear. In a way you never die, if you understand your soul you decide what you want to learn, you become a rocket on your own. When they find a man who has found the path to his soul he will exist anywhere in the U. The path to your soul is the ?? to the life in the U. Q: So why are we building a SS and not an activating station for our body? We are teaching everything it is you who decide which ship to take. There is a donkey, jet, car, at the moment you are happy with

a donkey. We are showing a little bit more, there could be a car too. We teach everybody, just because you have donkey we still use cars. (3:25). How is sound used with the fields, to help build a star ship, next to Gans and Pl? When you do it let me know. Rick is trying to create a Pl with sound using water. .. If we teach everything in one go nobody will be left behind so we go slowly. Final words about DL. End.
