

160th Knowledge Seekers Workshop Feb 23 2017

(Standardizing the Plasma, Using dry Gans to measure and use as a filter, Constructing buildings in deep space, Do not put Gans state inside living animal, More about making Gans and Nano materials correct way, , Tomasz made polished Nano Disks to feel Plasma, applying Gans water to skin of animals, Doctors cure by enforcing a condition plasma processes,)

(:13). We have come to the point in the development of the T that we have to bring in a standard. Government officials have started to test the T and naturally it comes to standardization. (:16). When we mix water with eh Gans the water moves up and the Gans down, why? 31

(:19). What happened in TEPCO the scientists had difficulty measuring, the more water we get from it the lower it goes. So we dried the Gans and used it as a filter. ... but now we can measure it, so many milligrams of Gans has such a strength and properties. For the scientists we have to explain Gans in a totally different way then what we are used to, in a 3D property, which has never been done before. .. this behavior is the characteristics of H, and what is around the H. (:21).

(:34). Video of John in AZ, by increasing one reactor the fields change. What we see is the behavior of an electron. The PI field was increasing in one direction, so the connection ?? plans in that direction, doubles. Now in what's getting developed you don't need that S, you use the ?? energy that you expand the strength in that direction. All this needs measurement, and how to measure the strength of the field we are going into that we can create a shield to be above it that it doesn't interact with us. Now these things becomes reality. What about if you place another Gans next to that one, how does it change, or if you mix 2 Gans together what is the effect, or do they stay separate and each one does its job. The way our body does when we mix our food, meat, vegetables, bread, we don't eat them separately. (:37). And when our body changes it to a Gans it decides which one it takes. Every entity stays on its own strength. So we go back to the medical teachings, how does our body measure everything, when something is not the strength it needs it rejects it. We do it every second we breathe, when we breathe in the lung has created a condition, this is the strength I am going to apply and accept, the rest can be rejected. The same with the food, this is what I need, then the level gets absorbed in the Lymph, then the cells decide what it will take from it, the rest it sends back, for example it doesn't need the Cs and sends it back, the Fe is not the strength I need so it let's it go. Now we have to find the tools to measure the PI and how they work. The new T is not like the old days when one man came and put something on the table, the T is so vast it encompasses the whole of humanity. In the coming time we will receive inspiration and enlightenment by those who have done it already and are passengers of the U. (:39). We have to make the first step to show that we understand, rather than being given the golden cup. We have to mature and this is what's about to happen, we have started the process of maturing in Africa, but it can't be done here alone. We faced this very recently, and coincidentally everything comes at the right time, we asked NASA for collaboration for the measurements of the fields. The headquarters said not to collaborate with KF, because they might go faster then us. So now we develop a T that takes NASA out of the equation. We have to do it because now the products are in the market. We have to quantify why the PI of Zn shows this effect. We faced this one 8 weeks ago in Tokyo, with the cancer research, how come Zn converts cancer in 8 hours and CO2 in 23.5 hours. How come and what is the difference in the strength? If you look C is 12 and Zn is around 60, look at the conversion, is it the principle where we

said reduce it by a factor of 20. (:41). If you reduce 5 hours which is about 300 minutes, 6 hours is 360 minutes, then add the C which is 24 hours roughly, multiply by 60 and you have 840, what is the relationship of 360 by 140. If we go by the PI weight of PI, plasmatic mass, what is the ratio, this is the only way we can start understanding the behavior to bring measurement of the material. We did this with Gamma and X-rays, where we created a certain levels and saw the damage on the cells, then created a measurement of it. We have to go more or less on the same path again. But in understanding the flexibility of the ratio of the atomic PI mass. You have 6 hours and 24 hours, the mass ration btn C and Zn is about 5 times, the time ratio is about 4 times. (:43). If you take what we said in respect to the heavier elements by 20% and 30% in the C, do we come to 1:6 ratio. We see that as we go higher in the mass we get shorter in the time. Is it the G field that creates such an effect as absorbing more energy from the cancer cell. Or is it the effect of the M field of the Zn, which in effect gives energy to the cancer cell that goes through conversion. The understanding of the effects of the fields of the plasma, and the effects of Plasmatic positioning are the next biggest challenge for the human race. Understanding the field forces of the Gans on this planet will teach us how to travel in deep space, how to position ourselves, protect, absorb energies from the environment for what we need to justify the absorption for our needs in deep space. The process has started. (:45).

(:49). The buildings we'll make in deep space will come out of the understanding of the interaction of the PI, where it will be hard and where soft. We have been through this process since the time of our own inception, we are nothing but PI, it's interaction gives ?? and soul and interaction within the cell ?? divisions and control of the fields decides that I need a heartbeat to keep it together ?? call it a bone. We don't deliver bone or Ca to build in the womb of the mother, but field conditions on a preset arrangement and the level measurement changes the plasma of the energy to Ca. So cement and brick factories are from the times past, because we decide whether we would like a soft or hard end of the bone in the middle. Would we like it to filter energy the way the bone does in converting Lymph to bone marrow by passing through the tunnels. These are no longer dreams but realities and we have to create the materials for it by application of different Gans'. We need to understand what measurements of Gans are needed to create certain properties. Man will build cities in the depths of deep space, in places where there are no planets. (:51). Because Man knows how to create the conditions of the materials needed for the construction of what it needs, as do other civilizations. This is the passage through which we are going, now the first steps have been taken, we have developed it, now we have to measure it and then we'll know how much we need for what material, and what to do to have a solid state, or a liquid state for food. Yesterday the Veterinarians called a meeting with us to learn how to stop a disease that kills young puppies in Africa. Caroline came across one and treated it and it works. They didn't know where it came from and it went back home, by coincidence it belongs to one of the presidents. World leaders are being touched by this T. .. put the LP on the body of the dog and it gets absorbed in, 80% of our energy comes form the environment (20% from food), now we changed the environment of the animal. They will be using the Gans in Accra to save animals. (:55). Why not the rest of the world. They aren't concerned about FDA because they have seen the results. We have been acknowledged as a new T, a breakthrough in the world of science, as an addition to what we knew, we added to the knowledge. We ask you to bring the knowledge forward, what does what, how can we measure. There are not many S in the world that can measure M and G simultaneously, and measure one against the other, and at the same time being able to

position where this change is. The insight will come from setting up different test parameters, and by not getting what we wanted but instead achieved something else. We saw in AZ the top reactor has started absorbing new materials to it. (:57). It drew new material, production of new matter out of the atmosphere. We saw this with peter where he tried to produce gold and after testing it was nickel, Cu, Zn and other things. So we know we can produce matter from fresh air. But because we couldn't understand how to use it we overlooked one of the most important teaching part, and that is the production of materials out of fresh air. We have to go back to it and dynamic reactors are a condition of it. We need to measure it that it doesn't become random, each time we get the same pie or cake with the same same taste exactly every time, but this time it could be on Earth or Mars or in deep space, because we dictate the environment, create the box of the energy of the U to create the conditions that we like. I'll teach you something that is the norm in the U, and it shows you the enlightenment. Today you pick the phone up and you get a voice or see the picture, but in deep space you create a condition of the earth which allows the soul to be in a P structure of the Earth, (:59). you can talk (to Earth). Do I need to be on Earth, not to miss home, but I am home in the deep space with what I have on Earth. You might not understand but in the future Man will. Do I need to come back to Earth to be with the ones I love, to feel the atmosphere of what I was used to, or can I create the condition that what I love in soul will be with me. Would we ever miss home as home is with us through the soul of the interaction. In the writings of Bahaula, bless his name, even a stone has a soul. Now it is for us to understand and measure the strength of that soul. In the Agricultural section they have come to understand the soul level of vegetation. In time we will teach it in public. They are still on the first steps, but they have started to grasp the idea. Why some of the foods we eat touch our soul and gives us pleasure, so they have to have the same level of soul as us to equal to our E. Now we can start measuring. (1:01). Now we can start being part of the others. Part of understanding the measurements. This is the reality we are facing and now it can't be hidden because now the governments have put their hands and feet in it and they are not coming out because they are using it. .. we are putting our members on the government boards to teach these organizations how the knowledge is that we can set up standards. Because it's in use and in demand we need to speed up the process. In the next few weeks we announce the meeting of the world FDA's in Accra, for standardization. We are heading it because we have produced it. The KF knowledge seekers have been the front runners. (1:03). I have made the teachings so simple that it takes any scientist less than a minute to understand. This is how those of you who teach the workshops have to do, make the link to the present knowledge so the people feel comfortable with it. Do not teach is as a Holly Grail but as something we already use. I teach the N and Gans in such a way that scientists understand that this is a new knowledge that I have to learn or it will be me that is left out. It's very simple, when you teach workshops carry with some ring magnets, a Cu plate, N plate, and Gans. You explain that the Cu is in a molecular structure so it's tightly packed, then we create a different atmosphere condition for the Cu where we expand the environment of the temperature around the Cu, (1:05). When matter heats up it boils and evaporates, but now we are using caustic which we boil but before it evaporates, because of the immediate coolness of the surrounding box, it goes back (to the plate) but now it's in the gaseous state and can't go to the matter state and thereby becoming Nano material on the surface of the Cu plate. At the point that you are able to see the black N material it is at about 50,000 layers deep. ?? You can put a few magnets around it in the space and you can see how it moves?? Then you explain that this is the N material but it is still attached to the (matter, Cu plate). This is the first time Man has managed to produce n

materials out of the same matter. You don't need to buy extra, what we call "popcorn nano" material to glue it on the surface. This N material is part of the same surface. The caustic was a new environment that gave the N material and it was the presence of the Na in the atmospheric condition of this planet which allows this to happen. Salt is the common denominator for the separation of the molecular structure into N, so you use the same knowledge, last time was NaOH this time is NaCl. Next we again change the environment of this new material by putting it in saltwater. We have N coated Cu plate on one side and on the other side a non N coated plate. The Cl creates in the water a condition of M, acidic, then the Na along with the O of the water creates the G part or Alkaline. It is the neutral confinement (in the box) that allows the N material to separate. (1:08). And now instead of the N structure attached to the molecular structure you get a single plasma of the material, a Gans. If the speed of the separation is fast enough that it can't attach itself to an O, you will get a pure plasma. You can let them touch it, this is the first time Man has managed to see a single Atom, Molecule. Everything that is floating in that Gans (is a ??). We were told that you can't see atomic structure, you would need such an expensive electronic microscope to see an atom, or a telescope to see a far distance star, and now a man can hold it. Then explain to your knowledgeable scientists everyone you see in the container is like a sun and it has the same power but in small packages. It is you who decides if you want to have earth conditions away from this Gans or Saturn or any other planet. It is you who decides whether to bring 2 in proximity to each other in what we call MaGrav positioning for it to be hotter, cooler, the life style of Earth or whatever you need. In 2 minutes the man of the village becomes man of the space science. (1:10). This is what your job as Knowledge Seekers is, to inspire the true knowledge about the creation, from then on it will be easy to discover how to measure and work with it, which way to apply it and where. **You do not put Gans state inside matter state in a living animal, the energy conversion is too fast and it's dangerous.** Both in the receiving side of the N coated material and on the M side or release of the energy, to outside the body, you create environmental change inside the body. Man up to now is used to injecting matter through needles into the body, because it's a lower state compared to the energy of the Gans, therefore the body accepts it and doesn't see anything (change). But now if you start to work at the level of N materials which is at the level of the body inside it, then when you put it in the body it creates mayhem at the level of energy transfer. This is why we said that when you look at matter and how it interacts (at the lower energy level of matter, it is very different). On the other hand with N and Gans you have to look at field transfer and how they interact. That's why we said that when you test potatoes with the Gans you do not put the ones not treated with Gans in close proximity because you still get field transfer and the results won't be correct. The fields of the Gans coated study will effect the non-Gans coated ones. (1:12). To see the real effect of the Gans on the potato they should be separated by at least 100 meters, because they have already made the interaction of their fields while they were together in the potato sack. Try to keep the interactions as far as possible apart from each other. It is the time now for truly understanding the plasma and not just showing new games. You need a deeper understanding of the interaction of the fields, not just, how can I mix things, this is still the entanglement of physicality in seeing one thing to another. You have to look at the overall field interaction. The questions are, do we need, how much, where and to what position from ?? ... , not I mix a flour and a salt and this is the taste I get. Now it is much like the hot moist air from the ocean interacting with the cold dry air from the land. We have to look for the field interaction and not matter. Our biggest challenge from now on is to standardize and measure because now we have to quantify, in doing

this we'll understand how and where to apply it (PI). For example, what strength do we need to be able to separate a craft from the Earth. (1:14). Presently, you need a certain amount of speed/energy to be able to takeoff when you fly with a plane. We have to create the same standards, how much G and M fields do we need and what is the G and M field of the Earth in the Sahara or in the deep ocean, it is totally different. In deep space to move from one position to another we have to know what is surrounding us and how close we are, (here we put more fuel in it, but if you do that in deep space you'll go nowhere). In deep space 50,000 km/hour is by an order of magnitude ?? of 50, that is nothing compared to what we can do. The understanding of how to (change) position in deep space comes from comprehending the reality, the truth about the work of the PI. How much and how far we can inspire the others to be able to measure the PI. Now our biggest challenge is standardization. Benjamin has made many charts and now we are structuring it, the framework is set. As a lot of you are selling MaGrav coils or whatever at your teachings, (1:16). you find people asking you, can you tell us what this field strength is?

Some of you teach the wrong way, you didn't learn the basics and then you couldn't get the results and said it doesn't work. I have seen some of you doing steam coating the first time, NO WAY! have you seen me steam coat on the first time, no. Covering the Cu plate with caustic is sacrosanct, (1:36). it's where the (Nano) process starts, then draining it and using the voltmeter to realign the layers, HAS TO be done. Many of you have forgotten about it and don't do it. so if you haven't realigned your layers how do you expect to get energy to transfer. Now the N layers don't work, so when you go to produce a Gans the layers don't work under its direction, the Gans doesn't give the same effect. I have seen people making coils and piling them on top of each other, you damage the layers, how do you expect to get anything from them. Nano layers **should not be touched** from the time you create the layers until you fix them in your MaGrav Systems. You handle them as if they're a toy, you crush them, damaging the layers and then they don't work. I have seen people making Gans connecting the wires in the wrong way. Those of you who are teaching have to learn to do it properly from the foundation. These are the basic works, first is the production of N layers, if you make the foundation wrong the rest will be tainted. I have seen a lot of videos, etc people promoting themselves in the name of the KF. I have no problem with it. It is the ego of the Man. But please do not teach the wrong way. (1:38). Please don't abuse the name of the KF to make yourself a lot of money and then give a bad name to the KF because you are bad teachers. We have seen people abusing it, a new way to make fast money, no, you will fail beyond. People whose work is totally wrong should not be in the structure. Mike Nasser is one of them, the way materials are produced are totally wrong. Do not promote wrong teaching. This cannot be done. Let Mike come back and we'll teach him how it has to be done, the correct way. We don't exclude no one, but those who teach wrong have to be excluded by themselves until they learn the right way. We have seen another name, they are burning houses down, creating fires. After 10 minutes on the KF teachings now they become the gurus. They have no clue. Now that you are going into international teachings try to teach correctly. Don't abuse the name (KF). We warn, because I will start putting the names of people to be excluded because you don't do it the right way. (1:40). This is not a cow to milk for your own benefit, because this has to reach the people in the right way that they can benefit from it. This week we disconnected a lot of people off of the Zoom line as a warning. If you teach the wrong way, abusing the name of the KF we'll block it. You can do what you like in your own

name but you don't carry KF links. I encourage you to teach but the correct way. Do not abuse the KF name going out and making a lot of money for yourselves. I have nothing against you making a lot of money, this is the future and teachers institutes will open to teach all sorts of things, but do it the right way. ... Now that we have become an international space T institute, the people will see it and you'll lose credibility very fast. Do not teach unless you have yourself understood. I see some wrong work with ?? Farhrad in Germany, in the development of the N layers and it has to be corrected. We saw that with Richard but it has been corrected, he learns very fast. (1:42). It wasn't until he was here with me that I could see his mistakes. This is one of the reasons that German manufacturing wasn't showing results, because Richard wasn't producing what was needed even though he worked so hard. He was one of the most sincere guys, but he couldn't understand that the process was handled the wrong way from the beginning. Now he knows. We see this with South African work. This is not a gold rush, it's a rush to teach humanity. What you do doesn't touch me or the KF because people can see through you. You'll see that the re-organization of the KF was to teach correctly so that we can go to the next step of the space T and helping the humanity. We have started working with very high level in governments and they understand it and are measuring it. Once we put measurement and standardizations those who make mistakes will stand out like a sore thumb. Reorganize your teaching so that people understand the correct. To do that you have to first teach yourself the correct way. Those of you who see wrong teaching bring it out, because we have to be open. (1:44). But don't be insulting to each other. I see a lot of ego trouble. Be prepared to accept that I do something wrong or I need to learn something. I learned a lot and enjoyed working with Richard while he was here. He can see what he has done. He is so hardworking that it breaks my heart, but from the foundation everything was wrong and now it's corrected. An openness of learning inspires us all to learn more. I see a lot of mistakes. ??? I have given a green light ?? to stop the abuse, we'll close it down if it doesn't stop. It has become a milking machine for people to prove how wrong they are and they think they are right. We need these kind of links to allow more and more people to learn, but we don't allow it to become a point of abuse. We need the structure to be correct and we have to do it from the beginning. My openness and straight talk has always been the cause of our success. When we see a problem we explain it, when we see correctness we explain that also, and when there is need of correction we correct it. It's a problem for us to say that you're wrong and that you don't do it the way we do it. (1:46). All those who are teaching should stop and reassess your teaching and understanding, and do it correctly. Don't go to the people who are making mistakes but since they have been doing it for a long time they think they are correct. Questions. Tell us please where are the pure teaching methods, where to look for the right way of teaching the core instructions. A link to the original teachings. I think that the webmasters know where those are. A lot of this was done during the 3 months in Trane Italy. (1:48). A lot of the teachings were done by other Knowledge Seekers, Armen has some good videos. Rick says that someone suggested that the Kids Workshops were useful for the some of the basic teachings. It's a little scattered where some of the original teachings are, you might look at some of the early Knowledge Seekers Workshops and before that were the Public Teachings Workshops were quite useful as well. We do need some place where people can get the teachings from the horses mouth. I am not a horse and I don't speak. There should be links where people can click on for example, what is Gans. There are a couple videos we made prior to Fukushima on how to N coat and make Gans. (1:50). Vernie in Philippines made some videos on Fire coating, but there are some weaknesses to it's use, and a lot of people stuck to NaOH, and a lot of people use different salts to produce

CO2, but they are different strengths. It's not just because it's a CO2 and this has been part of the teachings and understanding ??? We have to stick to a standardization until new lines of thoughts are brought in to apply for different applications. Now that we have new management in KF this will all be brought into order for the education side. The new facilities will allow for new dimensions in the teachings, but it all takes time. (1:52). Now with the governments coming in we have to speed it up. The new thing now is the mass teaching on television and radio, and this is becoming part of the what the governments want to do. The depth of the need is so great that you can't wait 10 to 20 years to transfer the knowledge. We are seeing massive starvation coming out of the new charts from UN, 50% of children in the US, the most advanced nation, or so they claim, go to bed hungry at night. No food on the table, in Ghana it's only about 7%. How do we feed these people to get them the knowledge to stop the suffering from lack of food. Food is simply the transfer of energy and now we all have the knowledge to do it. We have the water tanks, why not this is what has to be done. .. in coming time what food we need will come down the water pipe. (1:54). ?? it the ... knowledge transfer, you are adding fluoride now to the water, you can as well as the PI to it so that anybody drinking it receives the nourishment. We are working very heavily in this direction in Ghana. Poverty in West coast of Africa in huge but not much hunger because you can get everything or find food somewhere in the lush jungles areas. We can transfer food in the (water) pipeline and it doesn't matter how long it stays in the pipeline it will remain nourishing. We are working with 2 organizations in areas that you could ever imagine. We can create conditions that make the formation of cancer in the body of Man impossible. You'll see it in the next 2 to 5 years, I am putting a S together in the background for the Italian government. We have signed the first commercial agreements with national organizations. The KF has gone beyond the Gans and the others. We are moving internationally beyond Gans'. (1:56). In the coming conference in Italy you'll most probably see the first feed line that will come in the future through the city water pipe System, you'll get all the nourishment you need for your daily life in a cup of water. It's (properties) don't deplete you open the tap and receive the water. We change the structure and vibration of the Man. We change his E that he feels comfortable in himself. In the coming time you'll see us with World Leaders as scientific leaders and I mean we, because they will demand to know and it is their right to know, because they want to make the change. We don't hear much from the Norwegian Health Minister, they have been watching and they have seen the breast cancer (the case a couple weeks ago), she is a women. Their position is dead in their attack. The process is going so fast, because the most advanced nations need this to feed their people because the poverty gap is becoming too big. At 15 to 20% you'll have riots because parents want to feed their children. When your stomach is full there are no problems. Instead of building walls the governments should look into how to transfer the energy through the (water) pipelines. (1:58). There is huge work going on in the background, you'll see in coming time. Slowly we begin to interact with governments. We have to be correct so that we can deliver it and it can be done. The addition of certain Gans' in drinking water will become the cornerstones of reduction in cancer. The third cancer trials has begun. We'll release the data how cancer's are reduced, when it's completely done. In Japan we work within the Court structure, it will all be fully transparent to the Judges. .. water supply are one of the easiest ways to change the conditions. (2:00). In London they recycle the water and we know that the use of contraceptives has effected men's sperm production. We can use the same channel of the water supply to change the conditions to feed the nation. The reality of this T is beyond the imagination of a lot of people but there is no choice, we see it. The change is

upon us we cannot stop it. We have to see how to bring it about, not in the container of CO₂, ?? and in power generation and the rest. We inspire but it's for you to bring the knowledge on the table. The European governments through the false information rapidly developed to block (the T) I have shown their hands and they'll be in their own positions. The blocking of the knowledge by the American government was one of the best things that happened to us, we didn't go underground, but over by the Internet ... blocked by few. (2:02). I thank the Chinese government for not putting the ?? file on the KF internationally, ?? Those who teach in China, I have seen a new one come on, please educate yourself the right way, handle and teach it the right way and you'll find people ??? other scientists will find the missing link in their work and they will use it. They'll bring more to us. We are looking for a structure across the KF that we all become teachers, developers and users. Something interesting happened a couple weeks ago, showing the woman's breast on the internet usually bans you from the Internet channels. They didn't ban us, ?? those who understood the change. We are reaching a place where people who want to confirm their existence through (? attacking) us has become irrelevant. The structure is to understand transformation and transportation of the energy within a structure of the body of the Man. It is within the working part of any system, (2:04). be it the man's body, animal, ocean, waterways, or vegetation. Try not to get trapped in what you have done, but re-educate yourself and add to your learning. One who does this continuously is Armen, he doesn't stick to the old way and goes for another way, what happens if? And this has to become the habit of a lot of us. We are in the comfort zone of the Cu, Zn and CO₂. Elevate your knowledge to the next step, what if I put more things in, bring in new environments in, by doing this we should see a lot of new developments. ... the KF groups are leading the space technology and we try to bring the Iranian government in because they have a vast amount of information, if we can inspire them to understand that this is the time for peace, because they are the leaders in the space T. Getting Iran to share their internal knowledge will be key for rapid development, we were beaten once and we are too shy for the second time. (2:06). The structure has to come that we teach every level and we ourselves go to the next higher level that we can learn more to teach more. Try to under how to communicate in deep space, these are the technologies we need to develop. How to interact with other entities, this is upon us now, it's not something in the future anymore. This is one of the reasons, what I call the gap in understanding of the totality of most of the knowledge of the U by Man. He can't understand the line of the thoughts and the science of the people of the U because there has been so much ?? emphasis connected to the matter state. Understanding the universal line of communication is essential for us in breaking into space. We can't teach them English or French, but if you understand the strength of the E of the intention then we have understood the ?? I started explaining this last week with putting Zn of different strength creating the E and then you see the interaction. What if you put the Gans of the happiness strength, the reaction of the sorrow, the tears, joy, and the rest next to each other, because that is where they are in the brain and see how you can communicate through your E through each one (independently) without effecting the other. (2:08). that you don't misread the joy as a sadness. The crying of the tear is not of the sorrow but of the joy. Systems have to be developed, that out of the whole group only 1 reactor shuts down, or all the reactors totally shut down. We showed this 3 years ago on Christmas day when through our intention we shut down the reactor number 2, there are videos on the Internet. Now we see the same intention by the application of PI through mechanical means or PI T. Now it can be shown how it's done through the material. This allows to bring a lot of materials in order, changing things ... different groups are developing it. ... what forces cause changes in dimension and

production of different things. What materials are created when we make new conditions. (2:11). Shows video from AZ where from one side of the room they zapped the PI and the motors stopped on the other side of the room. If he was using the same line why didn't the other things in the S shut off. Another case new materials are being created on the cores, this is becoming very important. (2:16). Sharing a video from Tomasz with 9cm N coated copper disks in Caustic and then polish them with fine paper, and then N coat again. Keshe corrects you can get grapheme on Cu. It depends on plastic container, ground up coke bottle necks. (2:20). The behavior of grapheme can be replicated in other materials. ...?? it's like the space in the middle of the earth filled with water. When we talk of the 50,000 layers not all of them are of the Cu, in between you most probably have Zn, C. In the Raman spectroscopy we got in Belgium showed that we had Gamma sources and the rest (that's how they started calling us terrorist organization) it was due to their ignorance, the change in the Cu came partially from the C grapheme structure, SP3 and SP2, in formed amongst the N layers, it's not that everything is pure C, you have these PI MG fields amongst these spaces amongst the N layers. (2:22). Some of the effects that we have seen have confirmed that they can be there. (carry on with video). he holds the 2 disks one in each hand and spread 5 fingers, then point the disks at each other and feel a kind of magnet field between the disks. (2:24). You can put your leg between them, it's mainly to feel the fields, have fun with them. Mirrors of your soul. (2:28). Very interesting. Rick says like amplifiers of the hands. The hands are like tentacles into the energy of the U. There 5 fingers, the end of each finger is a line connecting to U energy. One finger is 1 line. the size and shape of fingers and toes, the structure on the muscle tissue you see on the lines of your hands absorbs and gives different types of energy from the U, so you receive 5 times more energy when you have 5 fingers. If you look at the leaves of Coriander and Parsley, there are more tips on Coriander so more is absorbed. Our hands are a good way to measure because we have this connection with the atmospheric part of this world. (2:30). Our hands are on the emotional part our feet are on the P part, the toes are very short because the point of receiving energy from the earth is direct, whereas the hands absorb what is in the atmosphere part of our life. The lungs and heart have to do without emotional part, which is to do with the brain part, which is to do with the atmospheric and gaseous part of this planet, our hands are part of the same, but they become multi-tasking, providing us with grasping P things, but at the same time the tips of the fingers are the feeders for what we receive. the behavior of the 4 legged animals is different then we who are upright and absorb energy from the atmospheric condition. This is why you see with the monkey, humans, and chimpanzees that we behave different, intellectually because we feed from 2 levels. The 4 legged are connected mainly with the energy from the earth, so it's mono. We get energy from both, from the ground, P part of existence, and from the gaseous part, which is our E. (2:32). That's why we use our hands in showing E, it's shows more and easier, because it's part of the way we receive energy. The way our body through evolution has changed, we gained an advantage by being able to absorb multi-layer energy. You see that people who are shorter have a different behavior then taller people, because at different levels of earth's atmosphere we absorb different energies, even by walking. We have to add to the knowledge. Our height, position of our fingers (have an effect). We have seen a change in behavior of people who get an amputation, if you can record before and after you see a totally different behavior, because they receive different kind of energy, that type of energy gives a different psychological pattern in the E because our ?? outer body is connected to our E. There are a large number of studies with leg amputees, it's because you receive a different strength in the energy. (2:34). Our understanding has to be

extended to further steps. We absorb 80% of our energy from our environment. We explained this to the Vets why we rubbed the Gans on the animals body because we absorb most of our energy from the environment. The dogs come almost dead condition and they can give any liquid to them, so they rub it on the skin. And they couldn't understand but now they do. Even the hair on our body is a way of receiving and transmitting different energy, and even the hair line ?? and with women the shape, color, texture of the hair creates different kind of E. We never understood this. It is a link into the Space Energy level. It's not just sitting there, it is a receiver of the energy field that is needed. (2:36). Why are we all born with hair and then later we go bald and you have different feeding and E. Why does our hair color change as we grow older, do we receive different energy with grey or white hair or do we give different energy from our brain, of course we do. Now we understand this and have to add to the knowledge. In the picture you see the finger are holding so they are adding to the reception of the fields, mono energy, now they way you are holding these disks you are dictating what energy you want to have more of. If you made a concave disks would you see a different kind of light in between them, because now the concave is reflecting the energy back to each other in the center. These are the ?? put them there and see how you create light. Rick says what if you put them close together and vacuumed them out. Yah, there are a lot of ways. We have to understand the reality of the interaction. (2:38). I have explained in many cases it's because of the interaction of the fields, the materials have their own field strength. Would the condition change if 3 touched the disks with only 3 fingers. Of course the field strength gap will be different. Openness to new understanding is key to this T, the minute you reject it means you don't understand the totality. John of Argentina wants to confirm the curing of many dogs with cancer and other diseases, with Gans Water, They are producing 100 liters per day and curing many people. Wait, you don't cure you process, curing is the job of the doctors. (2:41). Rick says you don't understand, we don't use the word cure or we have trouble with the doctors, therefore we process. Keshe explains, **when you cure you enforce a condition that you have created** on that condition. When you process you allow the freedom of the choice, it's the body that chooses what it needs to take. It's the freedom to use the energy for what is needed. We don't cure that is the job of the doctors and the present world of medicine. John applied the water and they got rid of the cancer in less then a week. The amount of testimonials appearing on the Internet for KF technology is so huge, they want clinical trials. (2:43). It's gotten to the point that scientific organizations in charge of controlling say let's do it in a way we can quantify it so we can measure it. Because it is there they can't deny it, the people are sitting in front of them. People in the regulatory offices are using it themselves because they know it works. It changed our life, but now lets put it to a clinical trial so we know how much by measurement and who and what effects. Rick asks how can people like John who are helping people all over the world be brought in or do they need to work with doctors. At the moment we are in the third phase of the clinical trial in Japan, which will force TEPCO to open their research over the years because they have done everything scientifically. This will bring us a lot of scientific data and Chinese government has a huge amount of data in the background. We know that Americans are working in the background measuring and developing systems parallel with us. (2:45). We are trying to organize simultaneously with the Rome Conference is to bring Health and FDA officials all together in one position to open discussion channels that the governments and regulating organizations come up with a solution for measurements as much as we have to, we are the pioneers. You say you washed the dog, what was the size of the dog, the cancer, how much how often did you wash it, etc. In animal trials it is first kept for 1 week that it gets used to

the new environment so they are all in the same mental condition before you start adding chemical cancer to their body. ... the science world wants to know do I drink a liter of Gans or is 30 mls enough. (2:47). We see a huge interest in men and women regards libido, the effects of PI on sexual behavior. ... a lot of people with high BP how to use with people with low BP. These are the things we have to quantify. If we quantify these data it becomes easier for the scientific world that is all they are interested in because they get paid to put parameters on it. My parents were "home doctors" did they go to FDA or did we learn it by nature. (2:49). We pay the science world to keep us safe. There is a new medicine for High BP, I call it a racist medicine, FDA approved, if it is given to those of African origin it creates huge lips. Is it the first time FDA has approved racist injections. It's good for the white man but not for the Africans. How do we organize ourselves with these kind of medicines. (2:52). John says some people say they produced Tritium Gans, calling it CH3. How did they measured it. Shows photos of African man taking the new HBP medicines and lips enlarged. It's done by the Pharmaceutical's. With women it's the top lip and man the bottom lip. it will be interesting to see what is the outcome of these kinds of developments. (2:55). Man says that the animals are more receptive to T. After rubbing Gans water on the animals head they quickly began to drink and eat again. (2:59). Let me add to the knowledge. The puppy gets the disease by being removed from the mother very early and creates the disease and when they get the ZnO₂ they immediately change through the support of the emotional part. In the humans we see the same thing with anorexia, you don't push in a lot of Gans' but support with CO₂ and ZnO₂ with just Gans Water until the person has received what they need. (3:02). You can change the life of an animal with very little material. (3:07). Video of Gans Ball with a SF inside the ball. A tiny MaGrav with a massive field. You can connect it to the large MaGrav if you like. (3:10). He uses a combination of bees wax, and "resin" you heat them up and when they melt can add Gans. Keshe says, understand the principle the beeswax and resin are already converted energy in the Gans state so when you add Gans you enhance the property of the same thing and bring them into a stronger condition of the Gans field strength. (3:12). This is not something strange we already use it in different applications but we never talk about it. Gans water can be used very effectively by mixing it with already converted material in the Gans state, like mixing it with body of fruits, or body of vegetation or body of meat. Here in Ghana we can't disinfect meat we buy from the market, so we wash with the Gans water of CO₂ and CuO₂ and it kills all the germs more or less instantaneously. We are promoting across Ghana Gans water dispensers for disinfecting food in restaurants, it instantaneously kills most of the viruses and bacteria's which effect huge numbers of people. The food when it's cooked is already in the Gans state, (3:15). that's how we eat it and the PI energy of the CuO₂ with CO₂ depletes energy off the material. It saves billions for medication for the government, for people, and no missed work. The interaction of Gans with products that are already Gans like food will become the cornerstone of the use of this T for the common man on the street. Everyday millions of people get infected with diarrhea and everything else. Now we have the solution, it's just a spray of water on top of your food. Eating vegetation with dirty water is the biggest source of infection across the world. You can't use Dettol because of the taste and smell. The implication and application of this T goes beyond what we can imagine we can do. What was shown here on the video by Tomasz, it is because you enhance the condition of what is already Gans, you make the Gans dynamic, so the powers are stronger. We are working on the same principle. .. (3:17). What we see is the interaction of already converted materials. We'll see the T used in a very wide spectrum of the food industry. (3:19). TEPCO did this in their trials and saw massive

results. It enhances both the materials and the Gans PI field strength. (3:21). We are funding another research and it will have huge impact. First of all we have scientific data that can't be denied and they are done by international standards, and leading scientists are involved. Is Zn the emotional connection for dogs and cats like that of humans? Of course. But it is different with vegetation and fruit. Dr. Kota did research and in Australia to confirm the soul level of the vegetation. (3:23). Rick read an article where some people want to change the status of plants to sentient being. If that is true. What do you mean if it is true, it is. I mean if it is accepted by the law makers. Can you imagine tomatoes and bananas in court. (3:27). Q: If the animals are greedy how can they control themselves to keep balance with the humans on the earth? We live with animals and have observed that if left to themselves they become obesity. We had a little dog that we left behind for 3 months and it psychologically damaged its own gums so it couldn't eat and would die. When we came back his gums were all black. We have seen dogs greedy to possess one owner and nobody can come close. So there is a greed maybe for attention and food. How to solve it is to satisfy that emotion to keep it from manifesting physically. We see jealousy in children when one gets more and by giving equally there won't be a problem. (3:30). In Islam Mohammed said you can marry 4 wives but you have to give equal to all 4, and nobody has managed to do it, I don't know how they manage to give to 2 women and satisfy both emotionally. So yes we are greedy and we try to find the parameters of it. Can we satisfy the greed through Gans' or do we create another level of greed which are stronger because now the lower ones have been satisfied. In man obesity is greed to satisfy the emotional part because we feel lack. It's a lot of research needed. It's not the PI T, it is trying to understand our life. (3:32). We need to understand more about our own structure and now with the new T we have more tools to understand it. If animal reproduction is overloading. Maybe it isn't overloading but satisfying a need, we need to understand more. It's only our lack of knowledge that keeps us from understanding. (3:34).

(3:51). ?? question about AZ making the SS appear and disappear. It's about the strength of your environment that you become part of it. ?? The G field of the earth is dictated primarily by its own internal structure. the same with its M. In the structure of the planet we have a fixed level filter, called the inner core. How much we use dictates how much is left over, and it is done initially by the early stages we lose huge amounts of M fields as MaGrav, but at the same time we gain, not only partially the field, we gain huge amounts of matter state inertia added to the mass of the planet. (3:53). So there is continuously a huge imbalance, you can read how many metric tons are absorbed annually, this increases the inertia part but at the same time our MaGrav reduces because of our proximity to the sun as we get pulled closer and closer. The closer we get to the sun the higher the order of M and G fields are consumed and given. Because we are closer the interactions from the sun are of the higher order. In Saturn's position your M field is much weaker and the G is also weaker in attraction. When we get where Venus is the fields are even a higher order. Our annual cycle will become shorter because we come into a higher. This is why I talk about the fallacy of Einstein, $E=MC^2$, primarily you can see it when you look at the Solar S structure when you speed up the planetary S in respect to the sun. we don't work on a fixed circular distance, the field strength gets higher. When we begin to travel more in the space we'll see stars begin to appear and disappear because of the strength of our observation, whether it's there or not. We will crash into structure that were not there and then they suddenly appear, because they are not at the strength of the vision of the man or the ?? . We have a lot to learn. (3:55). So you can make yourself to become equal to the M strength of your

environment and you'll not be observed (invisible), by the S we have, but you can be confirmed through the field strength. We have launched the building of the laboratories, clinics, launch site, factories etc. but we need support to complete it. If we go to the government we make the mistakes of the past. It is us that have to make the change. I have put my life and all my assets but it is not enough. The target is 250 million. end
