

17th Knowledge Seekers Workshop – July 3rd 2014 (1st hour VERY GOOD)

- **Main topics of this Workshop**
 - **Keshe talk about the Meeting with the Indian Guru in KF**
 - **New Settings in the Systems in the Lab (Feeding the Reactors at the Same Time)**
 - **Breakthrough in the World of Plasma Technology (Creating Plasma Without Energy)**
 - **MaGrav Fields of the Motors have No Effect on the Fields of the Plasma**
 - **It's about Create Conditions and Not Achieve or Produce Something**
 - **Trying to Replicate the Work of the Universe in the Reactors**
 - **Example of the Egg to Explain Interaction btw the Plasma and the Matter**
 - **Interaction of the Earth with It's Twin Sister (Earth Evacuation)**
 - **Teaching this Technology to Man become No Housebound**
 - **Correcting the Ways of Humanity to Go to Universe Community**
 - **Process of Creation on this Planet**
 - **Understanding Why We Need Man and Woman to Create Life**
 - **Virgin Birth is a Reality**
 - **Another Forms of Life in This Planet that We can Not See**
 - **The Natural Process of ITER Atomic Fusion**
 - **There is No Anti-Matter but Principal Matter**
 - **Water in this Planet Holds the Protein and the Gans**
 - **Getting "Free Energy" from the Reactors**
 - **Proton dictates the position and Vibration of the Electron**
 - **How the North and South Poles are Created.**

(:01) Rick says that the topics of this workshop will be systems and new settings. Rick hope to hear about the Guru that visited the Foundation last week. (:03) **Keshe comes in.** I was saying that Guru Mahan joined us last Thursday in the afternoon, we had discussion and a private meeting in respect to Keshe Foundation and his group that it is a large organization. We understand the position of Guru and at the same time, in the same way in the process of world peace he was invited to the meeting with the world leaders. He accepted and we received an email that a representative of him will be there in the 14th, he has requested a second meeting in August, a second meeting has been agreed for the development of the technology in India in conjunction with his Association, so we most probably see KF... So the Guru will be back to the Foundation to open the Institute as a University in India. So we are moving in the next steps of teachings in India. Meetings like this are becoming more frequently, with officials of different governments and different groups. By large we are moving in a different direction, that was always my hope, that we don't end up in one place to be the Center. We expect that this process carries on much faster. (:06) The point with this world peace treat is that we have not yet received a new response from any of the world leaders. We had no response from Vatican, so we need to send a second invitation for Vatican. We will see how the things

progress, as I said we don't expect many to attend, the reason is very clear in the Peace message and the letter in my name. So as usually I pray for their Souls and hopefully elevate them to a position to be very (??). In respect to the setting, what we have done Armen and Marko will explain in more details, we have gone into central position, and centralize feeding. What this means is that in the past we went round feeding each reactor one by one, now we have set the systems that we will explain in the position of feeding simultaneously all the cores, which this means that from now on the central control all reactors by one feed, which means all the reactors are fed at the same time by one feed line. This never been done, it's interesting to see the development, but the whole purpose was to take the control out of going around all the reactors and interfering with them. So we feed the gas at the same time in all the cores, in a way the reactors choose what they want to take, which one needs the feeding and which one that doesn't. The process was very interesting. This allows us in the near future to literally connect all the motors of the reactors to one power supply to. We go on by up and down in the power and in the gas feed simultaneously. (:10) This brings a lot of new facilities available for us to do so, the new setting are of 2 SF interconnected with 2 of the reactors. We have seen strange phenomena and feeding and we will see how it develop in the coming days. Now that we have 8 reactors available in the floor and 2 that is getting ready by John at the moment for use of Gans only, all the systems up to now were set up to use gases, we have broken a new dimension in the world of science where we are producing Plasma without any energy input, by purely interaction by H with the Nano Materials. This has never been done. At the same time as the Nano material produces gases into Plasma, then itself contains the Plasma, which means the Plasma in the reactors contains by what it produces, this is an unknown science in the world of Plasma Technology. We usually use different techniques called hot Plasma or whatever. Now the containment produces its own Plasma and is fascinate to see how this developed. When you come into the lab be deaf and blind, don't look for physical rotation of motors to get confirmation of the Plasma and that the things are in move, and at the same time do not listen to the sounds and the interference with your understanding. To this effect yesterday we shut down two power supplies to the two reactors which are not physically rotating and we saw no difference in the outcome of the Plasma in the monitored systems. We carry on feeding gases into the core and we still see rise in the Plasma, so the physical rotation of the motors does not have any interaction with the Plasma rotation. (:13) We go slowly as each reactor come stay still we will draw the motors to see the effects. So the Magnetic fields of the motors have no effect on the field of the Plasma, because they are in the matter level, so we hopefully should reach a position where we see no physical rotation of the cores or the motors but we the rotation of the Plasma and the holding of the Plasma in respect to each other in both systems. Rick asks if the job of the motors have already been done in terms of producing Gravitational fields inside the reactors. Keshe: What happen is... When we started the Institute and when we went into the lab there was a sequence of events that was set, and one without the other one would not happen. And now we have the same pattern of sequence of actions. Initially we open the whole structure creating Nano Layers, using caustic, then we used the Nano Layers to reduce Gans Materials and some energy, then we use the nano layers in the inner and outer surface of the cores. In fact, the process which started in the third or fourth week of the Foundation in the lab was to go into different directions, one was to create a Gans of the

material and one was to use the same Nano materials for lining and production of Plasma in the core. The direction of the Plasma in the core is not to be used as containment, is in the same process as to produce Gans, it is the step to produce Plasma, and in the coming weeks once we achieved this point we do a way in the Gans layers, because the Plasma will hold itself inside the position. We are going to smash John's core to see the Plasma inside it. So the process has been to produce Nano Layers in one direction in the matter environment like a sea salt to release the Plasma, or in the gas environment to release the Plasma through gases, in fact there is no difference, it's about creating the condition, not to achieve and produce something. We created a condition of the Earth, we reached production of Proteins and Gans in a material state, now in the reactors we are creating the condition of the Universe in the Cores. (:18) We produce Plasma in the same way, but through the gas material. John is busy with 2 new cores, and the next step is to use the Plasma that we produced to be used into 2 small reactors. The difference is with the Plasma in the gas state is that now the Gans are themselves in a Plasma state in the spherical Plasma state, so in this state we don't need to coat the inner cores with more Nano materials, we already produced the Plasma in the Gans state. John is building new settings, and at the same time Armen is producing the same system but in a plastic (?). We can not see what happens inside the core of John but we can predict. The reactor of Armen shows us the same characteristic, we see a transparent one and we see one inside the core. There is a high possibility we use the three reactors together, because the size is irrelevant but the containment is relevant. In the coming days we are going to the next step of development, which is using the Gans... Production of Plasmas are going in different directions, one is use of Plasma through the gases, using the nano layers as containment and when we use the Plasma we don't need a containment, or to produce the Plasma when we use the Gans state to create the same MaGrav field. I hope we are right that the production of the Plasma through Gans materials is very much like the structure of the center of the Solar System Stars. In the Stars you don't get so much Plasmas like nothing, like a Magnetic field center, or you get <unclear> it as a matter Plasma which is very much the way of system that John would predict. (:21) We mixed the Gans of Co2 and the Gans of CuO2 to see are they mixed, we know that we need to mix some water. <audio unclear>. If you can go the next step, we need the Gans in the vacuum state with the nucleus inside it. So the reactors and what we have done is been step by step understanding and developing, there is a next step, we have seen production of material in the Iranian reactors in the window we see Gans of matters. Now with the 2 reactors of John, we try to build a Plasma curtain, at the moment 2 sets of SF are next to each other, we are studying their effects and their interaction. In the coming time maybe after the holidays we will put John reactor in btw the two, so we create a curtain btw the two, a plasmatic curtain, and this curtain, dependent of what we put inside the cores we would be able to achieve matter condition, which means that the friction btw the mag fields of 1 SF on one side of the curtain, with the plasmatic mag curtain will create friction, and that friction we can control the strength of the field in both sides, and can lead to production of matter. This is the next step. This is exactly in what happens in the Planetary and the Solar Systems, the MaGrav of the Sun in interaction with the MaGrav field of the Earth in the point where the Earth is leads to production of N in a huge amount. Further out the same process happens in Saturn with He, therefore by creating a curtain we give a imaginary Mag field curtain to create a condition of the Solar System, being the curtain

the Mag field of the Earth. Maybe in a year, we put number of these small Gans reactors in the formation of the box, where within the box, depending of the field strength we create in the box we can produce new materials in the box formation. Not as a curtain, so in the Space craft you produce areas with given fields, and in that position you produce water or whatever you need in Plasma state and you convert it into Gans or matter. You got to realize when you carry large number of people, you have to create environments where continuously (??), and this is the only way we done. Boxes or rooms or environments are with continuous flow of Mag field from the central core or the cores leads to productions of materials that are needed. This is how in the Universe matter is created. (:25) There is a misunderstanding that in the Super Nova materials comes and become a Solar System or Galaxy, this happens in a Plasma condition, so Plasma which carries the total Mag field strength mass of Plutonium in the right condition will become Plutonium. You create the environment for it. Part of the misunderstanding in the world of science like what they call as Cosmic dust, this Cosmic dust are Solar dust, which are the main parts of the dust materials we see in this SS, that is created by the packages of energies of the MaGrav fields that left the Sun, and as they reach different environments of the SS they convert a Plasma to matter. So production of cosmic dust is exactly what are we going to do in our Magnetic curtains. The structure is very simple and all you need to know is if you use more Cu, you end up with the production of Cu near the curtain, and so on. You create the MaGrav field of that environment, and you literally sit in what you created. In some Space Tech you see like great systems, what it means you don't need to have boxes all over the place, you place environmental boxes with the different cores that they can change environment and you move it along btw the center core and the SF or the boundaries cores. So in fact as you move the core along the system you produce different materials, this is done in emergency cases. It means you move the Earth closer to the Sun to produce something else, and you move further out to Saturn to produce He. This is part of the tech that we start to develop in the next months. (:28) There is a very interesting subject going on in the forum about the slavery that is going on in the Foundation. In fact if we do not put time in the time of the KS in the lab these guys will sleep on the floor. This is the true KS. Keshe goes on talking about real KS and those who are not. We do not respond to these allegation of slavery. (:34) Another process with all this knowledge is about what to expect and not to expect. We push the limit of science at this moment. I try to explain the Plasma interaction in a very simple way for the KS. Left two eggs on the table in the lab last week, because I knew that the discussion about the interaction of Plasma comes up. If you want to understand the difference btw a Matter and a Plasma just get an egg, the egg in your hand is a matter, break the two eggs in the table, next to each other, now you are going to see the interaction of Plasmas, there is no physical bounding, but there is a interaction of the matter btw the different parts of the Plasma. The Plasma of the yolk, and the Plasma of the white that has a Plasma of the water, it is the same. And if you break different eggs next to each other you see that they all open up and create nearly the same shape structure, they are not all oval. The boundaries shapes are different in one direction, depending where the line of the connection. The white part of the yolk is actually where the fetus starts, that creates like a pull, and you find the pull of that material does not allow the total strength of shape of the Plasma of the egg, as it is inside the matter. This is the easiest way to explain and understand the interaction btw the matter and the Plasma.

This egg is a matter, once you break it you have freed it for Plasmas to interact, if you put two eggs next to each other which is broken then you the two Plasmas interacting. This is one of the reasons I did this experiment with the KS. I explained to Elyia last time, what the purpose of the KF is and why we are releasing the knowledge. (:37) Keshe talk about a guy who wants to use the tech to predict EQ on Earth. Mr. Keshe talked about him in the last WS. If you put a numbers of Magnets around yourselves in your home you will understand every plasmatic Magnetic field has a Gravitational field and a Mag field which is a repulsion. And if you are in a dynamic condition, if you move the Magnets on the table you find out you interact the magnets btw each other. The reality is that the Earth and the Solar System have a twin sister, the twin sister every time has come closer to Earth has created a (??) in this planet. Every time you bring the two fields together like with the egg on the table they will come to the point where they will interact and they mix, so the point has come as we see outside the Solar System that the Twin Sister is about to approach in the coming time, but the whole structure of the SS is in one of the arms of the Galaxy, and the Stars are created in the outer boundaries of the Galaxy and they get pull to the central Mag field of the Galaxy. Galaxy pull them in as Earth is getting pull towards the center of the Sun and this interaction btw the Earth and its twin Star is invertible. (:40) People who have access of this knowledge outside this planet will see this coming up. The process of teaching in so many ways is offering man no house bond. If they ask why we teach this, what they call the day of judgment on this Earth and this SS with the interaction of the natural processes of the mag fields will bring this into action in the time coming, so what is gonna be the evidence of these 2 SS and mixture, what is gonna happen with the humanity? You have no option. The tech is there to give at hand, by in a correct way. As you go empty your village because of a tsunami we are here to empty the village of Earth. As two Magnetis come together the twinity system and this Earth and its twin Star will come together. On Earth there's been a habit of man to fight and create wars and if this comes to Space creates havoc, even jealousy, superiority in the Universe condition, we are going to run in a lot of problems in a large scale. **It is time to teach the man before we take out. You choose on your terms and we put the conditions! You have to decide, and the decision is not physical, it goes to the understanding of the Universal level. What you talk does not count, what your Soul acts is what count!** And this is the same for people that do not know what we have been set, and they will be judged in their own level. **Your Soul decide on how as a physical body will behave. We know the time of interaction of the two SS, we have enough time to organize what we usually do, this is not the first time, this is very much like a SOS team. When these things happen we take position to do the correct things. If you want to know more and how, you have to teach yourselves how to behave.** This is part of the whole teaching, Physically and Spiritually. So the next step is to set a system that can accommodate man to survive in the Universe, you have to learn how to do it in a way that man understand. The problem is to teach a number of people who understand and leave the Ethos of the Foundation for the Universal Ethos. Now on we go in more depths to understand the Ethics and the Physical conditions. Because without one you can not do the other. (:47) Process of Creation on this Planet: you created the Proteins, and then the Proteins have its own MaGrav fields and the change in their strength of position of the strength leads to the creation of life. If you look in the whole structure of life in this planet is exactly the same. The origin of the Creation comes from

the same quant???. There has always been the story of chicken and egg, which one came first. The first came the two or three Plasmas, when 3 Plasmas come together from different strengths the one which is in the middle create the quant??? Of difference, and how his MaGrav fields position and adapt themselves leads to creation of entity. This goes back to the beginning of this talk today, the MaGrav field from the Sun in interaction with the MaGrav of the Earth and the curtain of the field leads to creation of N. Now you have a Plasma which sits between the 2 Plasmas of different strengths and create like a tornado, so the vortex (a spherical vortex)... so the interaction between these 2 curtains, one on the lower side and the other on the higher side leads to creation of matter. And these matters as they position themselves, they can organize themselves it leads to organized materials. And in the case of Earth because we have H, N, O and C these four form a Plasma individually. Once the protein is created in being in different conditions has led to production of material, and these materials has led to creation of what you call life. And this life have a control system that it goes in the Emotional and the Physical system, what I call the leech. Leech needs to store food, needs to disposal of food, need to keep circulation of food what you call the Kidney, the heart and the rest. So the process is a natural process, and life has never been introduced from outside to this planet. It is a little bit hard to understand. Come back to the egg example: in one egg, how does the egg becomes a chicken? At the pleasure of see new life here in the Foundation we put ten eggs and in some weeks they had a chicken. I was explaining how life of the chicken starts, you have a cock and you have the female that has the egg, when the MaGrav field of the sperm of the cock sits between the two MaGrav fields of the yolk and the white it create that vortex, and that condition. Then that vortex creates new condition of matters which is embedded in the fields, like in Johns reactor, if you put CO₂ on it you get CO₂ in the environment of the curtain. Embedded in these sperms and the yolk is MaGrav field of the DNA of the chicken, its actually a Plasmatic Gravitational field strength of this cock in different formation. So what it does, the Plasma of the yolk and the Plasma of the white, with the creation of the new environment of the change, there is a difference in the gap, because now there is a gap between the white and the yolk with the sperm of the cock leads to rotation and new environmental condition of the vortex, or what you call Mag field motion, then this material changes the Plasma of the white and the yolk into Plasmatic MaGrav field of the DNA of the chicken and then you get the beginning of the life as the Plasma change into matter, then becomes an egg and then becomes a chicken. Now in a simple process you understand how life starts, why you have a man and a woman to create life. I was explaining this to Armen that if you understand this you are a woman in the name of Armen and you have the capability of changing slightly one Grav field of one egg in a specific condition which is possible for a woman to fertilize another egg of herself and lead to creation of man. So in so many ways Virgin birth is a reality, if you understand the real process of creation. This touches a lot of people and (??) in position of (??) bless his Soul Christ. This is the reality of Physicality in life. Was there a woman, was there a man, was a chicken or an egg? Now you understand the Physical structure, now you understand the principal process. In how we split a male or a female this comes out of splitting responsibility and sharing the burden of life. When you are two you can do more, you can support life more. So, in so many ways we understand why the human race has split in two sexes on the race of this planet. And this allows the process of selection much easier. This is what has been decided over years in this planet. (:54) So, in a simple

way, by understand the structure of creation of the reactors you can lead in so many ways to creation of life. Now make sense to a lot of you why I keep saying when you turn your reactor on, pray for it, because the interaction of the Plasma in different condition, it can lead and does lead to creation of life. Is understanding the structure of the Soul. This been in so many ways a better look, an overall look on what we do, how life is, and the purpose of why we are here and what we are doing. Now you walk away from matter, walk away to direction of Plasma then you will see and understand. Man in time will become refuges in Space, as I became refuge in Belgium, but in large scale. You find a new home. There is a lot of questions in the background that have been for years. Soon we will be aliens to others as we lose home. The same thing has happened in the past, and those who have found home here who are not necessarily visible to our eyes, because we have chosen matter direction instead of field direction. So, are there people among us who are not originated through the MaGrav field differences as I explained with the egg? Yes there are! Are they part of physicality as we see, and some beyond us? Yes, because they do not have the field strength for us to observe. Are they here to damage? No, because they would have been done millions of years, man is too weak. Are they here to support? Yes, in so many ways yes, but in another hand they are aware of in a way they have to move home. That is why we see more and more activity in Space over Earth. People are moving, because is imminent. It is not something we can change, we can't change something in the Galaxy that it will come. Earth has been created in the outer boundaries, the same as Saturn and in time it will take the position of Earth. So Earth is moving to the inner cores of the central environment of the Galaxy and the fields forces in this area forces and pushes the two stars to come together to become one, to guarantee their existence. So this is part of the process of the natural process of life, natural process of life in the Universe. If you look and understand it better most of you have the idea that when the neutron splits it becomes an electron and a proton, now look what happens: electrons and protons both are MaGrav fields, protons are steadier and the electron the mass of Plasma is much stronger. Time will come that these 2 will come to the position of push or as a Plasma condition that the electron due to loss of his MaGrav field will become weaker enough that will join back to Plasma, so you get a new neutron created again out of the same split but in a weaker state. This state will carry on till the point of this neutron radiates enough energy out that it will split again in a electron and a proton in different mass scale. This is in a way one of the reasons that you see different radiations effect from different neutrons in different positions. Some of these neutrons are created from the neutron attraction, or by electron being going back into. As I say ITER atomic fusion is a natural process. In the papers that explain about the black hole we explain the same interaction about the two SS. **(1:00)** What I have been talking about this morning is more or less what I have been teaching in the last week in the lab. So we are sharing the knowledge, there is no paper about it, the knowledge is passed and understood in that way. If I was going to write this it would take 10 years to write this simple way, in ten minutes you understand the whole process of creation and the reasons for changes to come. **(1:01)** The whole process of teaching from the Gans is becoming more and more apparent. The whole purpose of this teaching is to enlighten, not to divide. But unfortunately some people who come to the Foundation get the wrong intentions, they find out soon that they keep themselves out of the Foundation, this is been happening for years. This happened with the authorities in Belgium, we have no

problem with this, in so many ways if for example the religious accept the (??) it becomes the end of their (??). Which holy book has written the condition of the coming of the Messiah? And who has to decide? The people who have to decide, if they decide it is they are finished with their jobs. Is too much power. We are in the physical term and conditions which are here, but in another hand we have the strength to carry (??) we know the atom and to be<unclear>. So if you think that the religious leaders will run (??)? No because by accepting this they will have to finish their own job. In school when the teacher comes back to work, the support teacher has no job, because the original teacher is there. We are in the same position. **(1:04)** In so many aspects we do our job as our job to inform and deliver, but in another hand we know the proposition. And we know exactly what the outcome will be. So in reality we go to Vatican and deliver our papers, but we do not expect that the Pope will jump and say yes, the Messiah is here. Because by jumping like this he has no job, his job was to prepare for when the messiah would come. There is something happening that is very interesting, we went to Vatican and before we went in it was Sun and when we came out it started again. The same process happened here again last week when Guru Mahan was here when we started after lunch, the whole system started, and it rained and storm. Then we agreed in what condition humanity is and we go from together as a religious leader the rain stopped. Then we went down and we see, during the time of discussion there was a lot of washing and now stopped, when we agreed. So this is the physicality putting some conditions, but it happened accidentally, we do not know. Accordingly to Italians this is very unusual. So the process is understood, but it has to be understood in its totality, none of the religious leaders will run to Keshe Foundation, because by running here they put an end to their own structure. But in other hand we don't ask them to end, because they have all the facilities and access to humanity to convey a message in message. For us is very hard but the temples and church already have the followers, is to unite to advance the humanity to the next step, and be ready to depart from this planet. But as I said when we go to another planet there is no mosques and no churches. We are here to support not to destroy, and in time people will understand. This goes to the religious leader to take heed then they have to follow. Once they lose their respect it will be very hard to gain this respect back. It's a decision making to serve humanity, not to serve oneself. I think I said enough for today. There is a lot to understand. Life start even when you mix Gans together, because there is life and they have to interact. We sit here in the lab, the CuO₂ is changing to white becoming like the structure of the Brain, because fields on the top have different interactions with the fields from the bottom of this spherical shape and then the difference in Plasmatic MaGrav field btw layers, in interaction with the water which is here and the atmosphere of this room leads to the creation of the protein, because that Cu change to nerves protein. I will explain this in the future. They move the things where they should not move, but this move is important, is like the heart beat of the mother, if it was not the heart beat of the mother, as I explained earlier, the heart beat of the mother is the essence of the creation, a fetus when they come together with the sperm of the man and the womb where egg can fertilize<unclear> this egg creates a tornado, but at the same time, if you gave it a motion direction very much like the heart beat of the mother, which is needed, then you see the (??) of the Brain and the position of every thing accordingly inner MaGrav field. One of the Plasmas of creation sits in the core of the Brain, and then you have a second Plasma condition which is the physical body, and the you have a third one

which is the rip, the place where animals hold their eggs, they all have the environment where they can fertilize, it's the structure of the bone. Very much like the reactors that we produce, in so many ways the position of the Brain and the position of the Womb have a lot to do with each other, this is part of the reality, this is in the reactors we set up in the lab, every position, every MaGrav field strength has a reason, so the heart beat of the mother creates the turning(?) and way for example a chicken grows the eggs around every few days underneath her, in the incubators where they do chicken they move them continuously, that movement partially dictates because the Brain and other works has to be set. If you leave one egg in the position continuously you will find mal functioning in the product at the end, so the MaGrav field of the heart of the mother has direct effect on the Brain and body structure of the child, then you understand the importance of this.

(1:13) Question: Since the matter is the weaker Plasma and the anti-matter is the strongest Plasma... <question confused> Keshe: We don't call anti-matter, we call principal transition. There is no anti, there is a reduction in the strength. I said anti-matter on the Book 1 because we had to open the knowledge to start with, but if you go further in the book number 2 or 3 we explain that there is no anti-matter, no black holes or dark matters is one Plasma which opens up and its from a different strength form its origin and manifestation, is the principal matter, the manifestation is the matter state and btw the two there is the transition matter. So, Plasma starts in a certain point in a certain strengths in package as it releases its fields 3 dimensionally till it appears in the eye of the beholder. What is matter to you is not matter to somebody else. So from the point of origin to the point of manifestation its called transitional. We don't call anything Anti-matter. The principal Plasma in fact is one Plasma, as it radiates out. This up and down quarks is no sense, if this was reality so Earth should be up quark and Saturn should be down quark, and we have a lot of quarks in the Plasma of the SS. The Principal or the Center, or what you call black hole is the Sun, and as it radiates its fields, according to where these fields come to become, it become matter or Gans state of the matter, then they manifest themselves and they appear. So there is no difference btw the Plasma of the SS and the Plasma of the electron or a proton. You have the Principal which is a Star, you have the gap btw the Star and the Earth which is the transition fields, and the when it become matter becomes Earth and it is a matter strength, so there is no anti-matter or dark matter, is Plasma. But in a way in the first book we come with the whole idea from the beginning this way, because that would create a lot of problem with the world of Physics. As we open the knowledge we have to get a foot in, now we open the knowledge because now you understand this differently. I saw something popping up in the Skype and it said something to do with Plasma, what in atom Plasma and a molecule Plasma, and I wrote a few lines, and there were some comments in this morning because it came back to me. **(1:19)** A Plasma of a molecule is no different then a Plasma of an atom, but with more mass, and the Grav field of the matter of the Plasma on it's surface is equal to what you call the matter strength. But is not converted to matter, stays in a Gans state. What this means, Gans is a Plasma carries a MaGrav field strength on its surface, at the point of interaction of let's say CuO₂, you don't have MaGrav Plasma of Cu and O separately inside each other, if you get a Cu on its own, in a Gans state, you find out that its MaGrav field strength on its point of manifestation is different of the CuO₂. Because is the field strength which appears, that was what I explained earlier, we make a condition, curtains or boxes where MaGrav field in that box is equal to Cu or Gold or

whatever you like. Because when the fields come and you can blocked and only can connect it with another strength then you create the Gans and then you can easily put back into matter, so its transportation of a total mass, is easier then the transportation little by little. If you can make a container for the Plasmas in your lab, you have one Plasma, there is not pieces of Plasmas in the reactor, in the container, you take the amount you need accordingly with what you need. In the lab originally we had a 4 cm gap as measurement with a 6 mm tube, now that we have 13 cores on the floor we have 8 cores plus 5 inner cores, so we feed 52 cm of H in one (??), into the system. We don't choose who takes and how they react. The systems will what they need to convert to reach a condition, yesterday we saw the same, once we set up the Star System, do not hardly created any visible data, but we see the other one continuously changing, and after now we can see a pattern, suddenly the second system pinches all the fluxes from the first one and the total amount goes up, without any access on (??) its being changed. So the Plasma works in its totality not in parts of it, so quarks and anti-matter is a non sense in the Plasma world of science. Is what you need to produce, as I said earlier, the quark in the Plasma of the Sun is Earth and the down quark must be cosmic dust or so. This has been imaginary jobs which people who do not understand, but in a way is good because explains the Physics at the time in that level of understanding. We don't have the anti-matter, what is the anti-matter, is an opposite matter, nothing goes opposite, the fluxes flow in the SS is what goes up, when becomes matter or Gans the it has a MaGrav field as a package that can interact with the package of the Sun and be attracted back into it. So how did the quarks been made, or up and down quarks? Its by the fields which get to a point that then you get attracted back to the center, this is what came up with theories of the black hole that eats everything up. The things they think they see in the Plasma, they call it up and down quarks these are literally in bigger scale the fields which have converted to matter state or near matter state as a Gans state of the Plasma of the proton and it manifest itself slightly different entity. There is no anti-matter. **(1:24)** We had to speak the language of the Science when we wrote the first book that we could explain this further on, and this was the purpose. Keshe says that Kyrk is working hours to make this knowledge understandable. We have to put a Physical structure to it, that it could explain all the understanding, and if you look at the Book #3 we show the real the Plasma, the real shape of a proton. Then you opens up in 3D spherically, then if you understand the way the fields come out, then the interaction of the fields is not continuously the same, is very much like tectonic plates, their fields find friction point, when they can cross that friction point then they move on and they create another friction point. This is the noise of the heart beat of the Earth created, this how the heart beat of the Sun is created, it is interaction friction and they go, but this is because it is homogenous at the level of the Sun, it is a rhythm, is a continuous rhythm, the same. In fact the noise is the interaction of the fields which they rub against each other and they get to a point where their friction passes a point that moves on and like the light that is one of its products, the noise is another product. So this is what you call the heart beat of the Sun, or the heart beat of the Earth, is due to interaction of the fields and when they move against each other which one is a matter and which one is an anti-matter? They are both fields which their interaction leads to the noise and to the light, and the manifestation of the matter in the outer boundaries of their fields. **(1:28)** Lucian asks why the fat created in his container that disappears when he put in another container. Keshe: It does not disappear, you move

from the environment which created it. If you have a number of cups next to each other all the cups in the structure doesn't stay constant, as the field in each container changes, change the other next to it. In changing the environment, if you look the texture of it, sometimes you have a fat sometimes low fat, so what you do, you move a Gans which is MaGrav field based entity into the environment which is not to keep his balance. So returns back to its gas state, by absorbing the energies and the fields from the environment of what you put it. If take the fat from the top, and don't put in a dry plate, if you can keep in another salt moisture which comes from the original one you should be able to maintain it. You have to go back to what we always say, its changing the condition, when you change the environment you change the condition, so you have a new material. **(1:30)** Lucian asks further, that if he spending time and effort to create the protein you don't need to keep in a water salt environment, I want to extract it and put in a closed container or do something with it, because if we are forced to keep it like water state, that means that the practicality of it is almost zero. Keshe interrupts: No, no, no... stop. I think you missed a big point, maybe I can explain it in a different way. Can you explain to me why the protein of the man is in 8% of the water within the body of the human body? You have to keep the same condition you have to keep liquid in it, we have the same discussion with John yesterday, we can not put the Gans of the CO₂ on its own without water, so it will sticks to the wall, you like to do things which is beyond the limitation of physics. The Gans if you want to hold it you have to know how to hold it. <audio break>... if you carry the protein you have to create its condition. You can not just move it because you want to move it. The protein in the bdy of the man it is not just protein of its own, its 80% water which is the connection of it, protein can not exists on its own if you move it you give a different environment. You are in the Schizophrenic condition, the water is the essence to connect together the Gans with the protein. On this planet, water because of the MaGrav field of the O has this property of holding the Gans together. Now you moved you changed and it disappeared, because you did not put in the right container. **(1:33)** In Physics you say that the gas takes the shape of its container, now you put one molecule of H in a bottle you brake the bottle, that will take the space in the room, where you are. You brake the house, it take the size of the whole Earth atmosphere if there was not other MaGrav field condition to hold in that condition. Everything has a container, the reason to stay in that container, you cant take the protein which is developed in the liquid of the water which you add the salt to it and you say why does not exist, because you changed the condition, for it to exist, for human body to exist in this condition of Earth MaGrav field you need the medium of the water, and the reason for it is the O MaGrav field properties, when you put the water in that and the salt it can hold it. If you have different sets like we have in the lab and you take proteins from different containers, put that together, this is what I call the truth about the creation of life. You will start see if you can hold in the container the condition of the salt and the water in the container the beginning of a new life. You become the Creator. Because now you have put the egg and the sperm together, put you need this essential part to keep the protein in the matter condition in Gans, to have water, to have H₂ on it. Because the O bound is needed. When you put in a plastic jar you have CH bonds and you can not hold, if you can make a container of O you find that you can hold. This is the essential part of life in this planet, and the way it has been structured. You can not just move the protein, it is not a stone, it is a living thing which receives energy and that energy needs to be

dynamic, and that dynamic condition is created by the water, that is how life exist on this planet. Try to understand the totality and not go half way, this is a schizophrenic, your container is a matter and the protein is the Gans state, and the matter because is in this condition it can not give, so the Plasma of the AA that the fat absorbs. What it need to come back to gas? You see some stains has left behind, but this is because of the process of the structure. **(1:37)** Go back to the picture that John posted, with the rings, then you should be able to understand why. The top layer of the nano material can not be once becomes the top layer to be positioned at the bottom (??), because accepts certain conditions of MaGrav fields to be in that (??). This is the process of the change. The inner skin can stand the transition of MaGrav fields of the Gans, the inner skin can satnd the matter, and your outer skin is your matter level MaGrav field. That is why you have layers, if you had your Gans in your outer skin you would not exist, this is why in the life of a man, when that state appears, the water disappears then the flesh body of the man disappears, and if you mummify and be able to hold that top layer most your 3 layers, you find that you can keep them. This is how the preservation is done, when you find one of these big mammals in the North pole and it was the same shape, because the water and ice have the same characteristic, is made of H with O which balances it, so the body stays that way. That is why we put thing in freezing condition to conserve it state. Frozen condition became very near the Gans state of the matter holding, but it is not there yet. **(1:39)** You can't change the environment and say why not. You must understand how the material exists in its original environment. If I take a lion from the Saara desert and say why doesn't live, it is in his environment. Any protein needs you put the environment space in the water, it doesn't matter how it is shaped or formed because the O bounds somewhere, then O bound allows liquidity and flow. Have I answered your question or you still are lost? He understood what Mr. Keshe said, but triggered another question about how the oil and other things can exist without the environment. Keshe: You don't see a dynamic sugar, is C-H bound, still exists, if you look at the chain that is operating in in the environment of MaGrav field strength. That is why when you burn something you need O, there is no burn if you don't have O, the burning process the disposal of energy comes through O, it is no other way you can do it. You can have as much C-H bound as you like, even in the body of man, the conversion of sugar needs needs that water which is O carrier in the body. You can't run away from it. It just because you do not have a C-H you can not do anything, and in the combustion you go, look at the total composition of the fields, without even you pressurizing it. When you burn you have no O you have no fire. So the bondage is O to disperse the energy. In your system when you put a plastic or whatever that dynamism doesn't exist. Put it in the vacuum condition of the ceramic then you will understand more. **(1:43)** Question about how the MaGrav field release the energy to produce a power in the reactors. Keshe: In the generators you only create Plasma that only creates DC current, you don't produce an AC current. To produce energy you have to interfere with the fields which are around in the environment of the Plasma, and in two different points of it. So whatever you get in the dynamic spherical field it is totally on DC bases, you want to change to AC use different things. If you want to create a dynamic Plasma in your reactor and you can take the potential difference from the two and the current flow from the center then you create a DC power. The power generators which are in the process of being done by the Italians for the Foundation now, they have decided to put the reactor in a transparent tube. So in fact you will see your

reactor how it operates, and see all the mechanism inside the transparent tube. This design they called Star 1, with a Star in the center. So a lot of people can see through actually the operation of the reactor and the set up of it. And you see (??) in two different points, which means that inner core and outer core connects the system when you tap energy out of it. This week we had a condition in the Iranian reactor. **(1:47)** If the Plasma moves in a different direction or rotation we get a potential difference in the Plasma MaGrav field strength, and a current flow btw 2 positions which because we have 2 cores, that allows the Iranian reactor to run. So you are not looking in the cutting of the field, you are looking the position difference in the Plasma, as it goes through the transition time, you take one transition point, you take near enough the principal and you take matter position then this is your voltage. But this is in Plasma condition. You have to look for position, not to field (??) as it is normal with the AC. There is a misunderstanding about the position of the electron and a proton, the assumption is that the energy absorbed by the electron will change its position, if you look at the size of an electron and a proton, proton is a huge thing and all the energy which comes to even from the electric current, you see the motion the vibration of the electron, this is dictated by the proton, not by the electron itself. Because most of the energy which comes, is absorbed by the proton, and in changing its fields strength it pushes or absorbs or attracts the electron back to itself and creates its position, even though electron has his own MaGrav field, but is minute, it absorbs all the energy which is coming is partially correct but most of the energy goes to proton. It's the proton which dictates the position and the vibration of the electron. So by another hand most of the electrons are of the same MaGrav field strength so you create a loop btw them. And the vibration is automatic across the one when it fields are released and absorbed. So this is another misconception in the world of electronics. Electron vibration which you call electrical current comes from the expansion of the change in the Plasma of the proton mainly, then from the electron itself. You look for a gap btw the two (electron and the proton). What energy you want to absorb or you look to the Plasma of your reactor itself. And you choose the position where you want to have, what power and energy you need. You don't have this huge differences, because of the reactors (??), is the negative or order of magnitude in respect to the center of the Plasma which use the strength of the field in the point, as you go further to the center the MaGrav field is stronger so the magnitude goes higher. The power order by magnitude is not multiplied. So for example if you take the surface of the proton and you go down by one cm you get tenth to the power of the same one. If you go another further 1 cm the order of magnitude now is ten with the power of thousand, and if you go 1 more cm you go to the power of nine. It is not done by multiplication, so if you choose position in the reactor, that you understand the properties in that point and the field flow from that point to another point, you get the Plasmatic current and the Plasmatic voltage. We still measure in matter state because our systems are still in matter state. **(1:53)** Keshe goes out and give the microphone for the KS. Marko assume. It is very difficult to say something after this two hour of explanation of Mr. Keshe. He thanks Mr. Keshe, and start to talk about the reactors and the attempt to try to understand the new terminology, as the change from anti-matter to principal matter. Marko talk about what Mr. Keshe said about become refugees in Space. **(1:59)** Marko talk about the reactors and the formation btw them. **(2:04)** Armen assume. Armen explains that matter is the container of MaGrav fields. We blanked ourselves so much that we don't feel how these MaGrav field become

matter. The Gans is in another state of matter, but they are in MaGrav fields. You have to release yourself from the matter state, matter when it is open up, you open up the fields. They say that people are searching for industrial solution for Gans, and this does not work like this. Armen say that it is all about fields. **(2:17)** John assume. John talk about the next step that is measure the MaGrav fields of the elements of the periodic table. **(2:23) Keshe comes in.** As the MaGrav field goes by what we call mass, what does thi means? When you put four more H into atom of C which will make CH₄, now each Plasma of a H add its principal matter strength mass into the center mass of the C, so the center mass becomes bigger, now you have a bigger ceneter mass, now the expansion, the size of the Plasma expands to a new level. So if for example the center mass, the manifestation of H is 40 mm, now that you add 4 H and each have let's say the diameter mass of one, now the manifestation of the mass is at 44 mm not at 40, by adding the mass you extend the boundary at that level, then the Plasma interacts with another Plasma. You don't put a Plasma f a H inside the Plasma of a C, you add into the center mass, in the center volume. Now in that level when you come to another CH₄ that what manifest itself as a CH₄, when you add an O or another element, then as a Gans all that move in to the fraction increasing in the size of the envelope. It is not in the matter state that they link up and the electron bound. You increase the center mass but the center mass in a given environment has a given size. So you always take the volume from a CH₄ to a CH₃, because in the environment has to allow it and if it allows it happen. In the whole matter state the temperature and the pressure which themselves are MaGrav fields dependent but in a matter level you interacts btw matter fields strength when you do with a Plasma you interact as a Plasma level strength, it is a big big difference. Temperature and pressure are all MaGrav field based, it is not something extra, but it's the pressure of the MaGrav field in a given MaGrav field strength. So you can have a temperature at the principal matter and the pressure at the principal matter and any position in the transition, but what it happens in a given strength then it becomes a pressure or a temperature, so you add volumes or mass of. If you read the book in respect to the definition of mass, is in one of the books that I explained, you have Gravity which is a pulling, and you have Magnet which is the repulsion. Gravity always sits in the center, Magnetic goes out, the difference btw the two strength is due to the mass. **(2:28)** When you have Gravity is internal interaction, absorption, going from one field to another from the same strength. When you put 2 Magnetic fields together you have 2 forces not one force, this is the 2, repulsion on a back end when the field comes in. And then at the same time in a Plasma condition you have 2 exit points which face each other too, some of the fields interact to create the Gravity, some of the fields still stay back to back opposite and then to your exit. The exit or what you call the North pole goes up to the North pole of the Plasma. The entries which are weaker creates the South pole and that difference creates the flow of the MaGrav field through the center of the Plasma. This is something that the Physicians don't understand. The Gravitational field in the center the similar (??) of the Plasma in the field do not create the field flow of the Plasma. The field flow is created by the similar poles being enters and exits. If they are entries they go to the South pole and if they are exit they go to the North pole. And this is why even when you look at the Plasma of the Earth you have a different rotation of the fields in the Southern hemisphere and the Northern hemisphere. Is primarily due to the exit poles, if it is an entry or exit pole and it always go to the same direction, that is why you got the Equator line, but you still keep

the same atmosphere, because in the point of separation the Plasmatical MaGrav fields go in the direction, because they are weaker. If you 2 exit poles facing each other the (??) are stronger, and if you have two entry points they are always weaker, so that gives the dynamism and the motion and rotation of the Plasma. Now you put this together, you add another Plasma into it the dynamism btw the North and the South section attracts the Principal mass of that element to the center to become part of the gravitational, but at the same time you created a new layer in respect to its environment. In the future when the scientists can measure the Plasmas they will report you, the measurement according to the same atmosphere, you say such and such Tesla atmosphere condition the diameter of the Plasma of CO2 is this, is a mass ratio, and that mass ratio create a different size of the envelope. In the matter state then you change into the fields of the friction. What you call the pressures of it all the interactions will call the heat of it. **(2:32)** When you are traveling from one point of the principal matter to the point to be manifested the field forces still exert. But it is a field, only in the matter strength, if the environmental field is equal to the Plasma then you manifest yourself, this is how you become cosmic dust and the rest. Because don't forget that this turbulence creates a lot of different fields all over the place, is very much like a hurricane, every thing goes in, and what comes out is the balance of the fields. **(2:33)** John assume once again. **(2:35) Keshe comes in** again. In most of the reactors you run you have only one reactor, you don't see interactions, you observe what is different from the second before. In the Foundation we observe interactions. The new set up where we put the SF, up to now we had 2 sensors that were attached one to the central core and the other to the boulder core. They are measuring the environmental Plasmatic Magnetic field. What this means is that they are not attached to any core they are standing free, one is facing one core setting which is the half core and the other is facing the full spheres. And in running of the reactors we see that one set is building Plasma and then the other set just grabs it, adding to its strength. But we don't see reduction in the field of the one which has lost this pick. One system is creating Plasma MaGrav fields available and the other one takes it without disturbance the balance. We observed this only in the environmental section, is not that we are observing one core, we are observing the total environment around the 2 cores. And the way the detectors are set we observe what is coming into the environment of the Plasma too from the lab environment, and we follow that if is addition or loss or if it is increase. You see that the Plasmas share fields without losing any of theirs to the next atom or the next Plasma entity, by allowing it to take without damaging their own. This is very fundamental. Not just because you give you gonna lose, when don't see drop in the field we see a gain increase further on. At the same time what we have noticed yesterday, when we put the motors on we don't see an increase, we don't see a change in the detectors. When the KS walked among the fields and the cores we don't see any reduction. So these fields at these levels do not interfere with the body of the man or body of the man MaGrav field does not interact with the field that much that is not noticeable. This explains why we move in the environment without the exchange and this will be the same in the SS. **(2:39)** The increase activities around the Earth atmosphere is to fold, partially to move out and partially to move those whom is not visible to man and they don't have that ability to move. The atmosphere of the Earth will be bright, and this is not just because of the MaGrav field of the Star system, but for those who will be prepared to give hand in the time of need. But there is a selection point, and that selection point is

decided by the Soul of the man not by the Physicality. You find out that most of the presidents will be left behind. This is a normal affair, maybe drastic for man, but normal affair. **(2:40)** Question about if this Plasma of the twin sister will not interact and create light. Keshe: Will be too fast when it is done. Don't forget that the Plasma of the SS is very thin, is more or less a shell of an egg of thickness. The process is very rapid. Its very simple, if you put 2 magnets together when they come to a point of full interaction you don't see when the other magnet moves. They are just together, the only time you receive this you hear the noise of the click. This is a normal process and this has been repeated, like you have the emergency services when you have an accident there is a pattern to this on the Universe. Then those who understand the day of judgment, they know what the judgment is. Those who brought the Noah's boat story to the man were the passengers of the Noah Boat, if you understand what it means. This is the process. **(2:42)** Question about how regular is this phenomena in the Universe. Keshe: This is regular. It is just changing positions. Question of how often the sentient beings are helped by other Universal beings. Keshe: It is often, very often, like when you have fire in the house. This is a normal process, at the same time when there is a need to save then the job is done. There is no difference btw the humanity and the rest of the creation in the Universe. Nations are left alone to their one. When there is a tsunami man goes to a boat and plane and get there to help. Now the position is the same. It is not just because its us it is any different its just that the man did not have the intelligence to understand what is going on. We see a pattern and we know that this is about to happen. By the same time man has enough time to develop by accident life came to be intelligent on this planet and now there is an intelligence that needs to act. By the same time, just because we take you from the village we don't want to produce another village condition in the Space with all the problems with it. We have seen what happen, we've seen this on Earth two or three times in the past. The state of Israel, the Jewish community got very interested and anxious that they found a new thrive in Africa. They went and they brought all of them back to Israel. As we know the black Israel Jews just because to save the tribe, so we are doing the same thing. But for people who came from villages in Africa living a village life, now they are in Israel, they have to learn the life of the society. It is no difference. They have to learn rules. In the desert you don't have a car; you don't have the conditions which were there. Now they have to learn about this. The human have the same intellect, so this is the same situation, it doesn't change, is just that humanity is too far behind in the village. But if you bring it in you have to teach them how to use the microwave before break the microwave. This is the process we try to get into. You are not concerned about what or how man worship, in what name and how he dress himself. To us every man is naked, we just look at the Soul of the man, not the physicality. When a Siamese boys is born with beautiful eyes, two legs and two arms carries the same Soul, this is what matters. We start teaching and we start to show you the process, but in time. The book one was in a language that the president could understand it ad we could expand on it, we do the same thing speaking originally the language of the man, and then in time we will develop and progress to what it is, and it is not unusual. The scientists who are looking for a replica of a planet like Earth, as I always said, look at the fringes of a Galaxy, if you look for a physical life as man is used to. In this position the Plasmas of the stars have enough room to create planets, and the planets have enough room to find a position where creation and absorption and reduction of the gases to Gans and to life can sustain. And as the MaGrav

field pull off the galaxy, pull the planets or star in then it comes the point of interaction. Not necessarily sometimes with the twin star but with other stars which are in the same gap space moving in. Its like you can from a motorway and another comes from another motorway. But it is not family, but it is another C?? that is moved to get into the same tunnel. This can be observed in Space, soon will see himself, so we are there to try to educate. We don't want to have African tribe with camels and goats to come to the city and not knowing the microwave, we teach the microwave first before take you out of the village into the city. There is no panic, it is just the process that man unknowingly will be taught. We are opening the book fully, those who can not handle to cook get out of the kitchen. **(2:49)** Question: Are we talking of tenth of years or thousands of years? Keshe: We are talking much less, if you see so much people with high intelligence above you flying around you don't move house to it necessary. You don't wait till the house gets (??). If you want to understand the process just go back to the cycles of disasters of the cosmic level in the Earth. You get a good indication of the date. What happened to the dinosaurs, count there. One of the interactions in that time the two stars were too far and they were in different position in the Galaxy, now the boat have moved closer to the center and at the same time there is less gaps because others are pushing is like an atoms. In last few second there are is orbits they became on star, because the pressure pushes, will pushes the electrons into the center. When I wrote ITER atomic fusion and people could not understand it is what we see in the SS when the planets just move into the center. A lot of papers are written in language of man but they are in essence in Universal conditions. Question about if there is no difference btw the SS ant the atom. Keshe: Yes, there is no difference. It is 9 electrons. Rick asks if we see Mercury jumping in to the Sun that would be a pretty good indicator that something... Keshe: No, no. If Mercury does that is because his MaGrav field has become weak compared to the MaGrav of the Sun, and in that state it moves in. All the planets moves in. Go back to the understanding of the structure of the Plasma, 90% more or less of the field sits in the center, we are just a speck of dust in the total lot, even though we think Earth is very big, but if you look at the total mass of the Solar System we are literally nothing. Even if we like to think we are very big but what is 5% compared to 95%. And in that 5% we are 0000,5% of the totality of the mass of the matter state. So Earth is irrelevant. **(2:53)** Every thing moves in into the center, because then the 2 stars will become one, and then the condition will create a new cycle of existence in the more center core. This problem exists in 3 different dimensions, you got to interact and understands the 3 dimensions. You have an electron which can merge with his proton, then in the larger scale the MaGrav of the Earth dictates when that electron moves into the proton, because is in charge of its environment. Now the next step is the Sun MaGrav field dictates where the Earth and the other planetary systems are in respect to itself, independent of anything happening in the outside. But at the same time the MaGrav field of the Sun has a saying in the position of the electron, in respect to its proton, because it's a master, and then the center MaGrav field of the Galaxy has a say on the position of the Sun the Galaxy, position of the Earth with the Sun, and the position of the electron in a proton. But in totality all these electrons on Earth decides the speed of rotation, the position that makes them an electron are totality are dependent on the MaGrav field of the Black Hole that align in this Universe. So is not that we get pull, or we get absorbed by our Sun, but at the same time the whole thing in the Galaxy is moving to the center, and that pull is partially dictated by

the Galaxy itself, but mainly totally dictated by the central line MaGrav field of the Center of the this Universe. It is a natural process. I tried to explain this with magnets on the table, if you take spherical magnets and you make clusters and you see how they move and follow each other. With magnets you teach the position and how this is going to happen, different Plasmas they can make and different conditions they can make, this is not that normal so everything is getting pull, partially pull because the star is coming the system is getting pulled to the center of the Galaxy, that brings some pressure in, but at the same time the galaxy itself is moving to find its position, it still moving itself to the center of the Galaxy and to the center of the Universe. Because what the Universe center line is, is radiating out is becoming matter f the boundaries of this Universe, this is why we can't see beyond it, it is the same we cant see the outer layers f this Universe, we call them a lot of names. They are trying t make this fusion with an atom and make this collusion, is the same process but it happens through the MaGrav field of the environment of the Galaxy now. The 2 Stars or the position in the way the Earth is getting moved and the SS is getting moved to the center of its Galaxy creates the condition, we have 2 choices, stop to going in or put you somewhere else. **Sometimes when I see the behavior of the man I think sometimes is better to let them go, but there are Souls here that they need to be moved.** We don't move just animal Souls like man which is an animal we move the Souls which is been developed, being a fish being whatever. Human thinks they deserve to be saved. But in the same process we try to teach how to produce food and everything that we can survive in another direction. We are trying to show you how to fish. **(2:59)** Keshe says that they will post the letters for the religious and world leaders.
