

## **180th Knowledge Seekers Workshop, Thursday, July 13, 2017**

(Wants to clear up the little confusion in the technology, The connection to plasma is by will of man, Have to rinse Nano plate with few drops of citric acid, **Historic disclosure** about how the neutron divides into proton and electron from the energy both inside and outside or both, Rick shows bubble in rotating sphere that represents an electron, The M and G fields from space pass over the earth and become matter based on the fields it comes into contact with, it literally rains matter from space, Hexagonal Water will be researched for next time)

(:11). It's 180 continuously teaching. It comes to how do we use these teachings, how to apply it. ... to establish a space center in China. (:15). and one in Arizona. 32  
(:22). We need to clear up any misunderstanding before we can go further in the space T. If there are any questions ask. I was told that the explanation we gave to the Ministry in Ghana cleared up a lot about acidic and alkaline. They said it was so simple and then they could understand the difference between the two. The N plate always has to be positive, these don't exist in the U, God doesn't go and create positive and negative anywhere.  
(:24). The connection has to be by the will of man. We see a lot of (confusion) about clockwise and anticlockwise still going on. These are irrelevant you have to understand where it takes you and what causes you to go in that direction. These confusions have built up over time, right or left hand flow of Pl. The Pl as we said is very simple, it takes its decision according to the field forces within the environment where it exists. Venus for example, nobody says it should turn the other way, all the theories and they think it got hit by a meteorite, those are all rubbish. (It turns the way it does because of the field forces.) It's the same with all of your work. You decide whether the system goes right or left, the system follows according to the needs of the fields you have created. Otherwise you have to put a motor in it and you push it, then you go against the grain of the system and you don't achieve what you are looking for, then you say that there is something wrong. There is no left or right, clockwise or anti, unless you are looking for something which you are specifically forcing your way to get to that point. So these things have to clear out of the work of the KF (thinking). If you feel like connecting the positive to the N coating, it's not matter state anymore. It's the fields Plasma transfer. This is what I mean when I say that the whole structure is in a too confused condition, the new T comes with a new understanding, and you should not try to put the old ways on it just because this is how you did it before. ?? (:26). We saw this in the Ambassadors Meeting in Rome, we showed the system which can do 220 and 110 volts at the same time, the same distribution point. Those who are restricting are restricting only themselves to something. Plasma takes the condition, emotion and the direction that it needs to do, the way the environment allows it to do. And those people who keep pushing it has to left hand turn, or connected this way or that, it means they haven't grown out of the matter state condition and this has to change. We have to understand about these things now that we are going direct into space plasma technology. We have to let go of the old rules which were only used to guide us at the time, now they have to be let go of. It is created a lot of confusion. You create a Pl then you dictate where and how you push a stronger field, if the Pl and if the Pl is going right or left, by the strength and mass ratio you dictate and by nothing else. You can put a motor on it but the system will still change itself according to what it needs. And then you say I don't see any results because you are actually pushing a

motor, but the PI is going the other way around. If you want to see how a PI rotates put a dye in your liquid water and see which way the flow goes, and if you can follow the flow of the Gans then you'll see what it is, which way you are actually pushing and why you are not getting the expected result. At this point this are the little things we have to point out and it has to be understood. We see a lot of people taking sides and pushing their way. (:28). Anybody taking sides have to reconsider and see what they themselves have misunderstood. 04.

(:31). Have to rinse N plate very, very thoroughly, you can add a few drops of citric ?? juice to neutralize any caustic residue. For medical application Gans production you can use caustic in the production but then you have to neutralize it because it is toxic. You test the water for caustic which is a base, pH.

(:33).

(:40).

(:45).

(:50). .... can wash N plate with Citric acid or orange juice does the same. ..

.. break in audio ..(:55). When you use AA you condition your system to atmospheric compounds of this planet, please understand why you are using AA or plasma of the Gans, when you use AA it has to have (something) it prefers, what is preferable and why and how and what advantages you receive in doing so. For certain developments (uses) you don't need AA others it is good, in certain cases you are better off with the use of the Gans within a container, in others it is better to use the Liquid Plasma (LP) of the Gans. Just because you produce it doesn't mean you can use it anywhere. (:57).

(1:06). (1:09).

(1:12).

(1:15). ... leave the N plates in water with citric acid for about 10 minutes, then wash off with the tap. it's like lemon juice. ?? you can use vinegar but be careful.

... does the neutron divide into proton and electron from energy within itself or outside or both? Both. (1:19).

...go **back over this beginning** about the neutron dividing ...

(1:26). Rick shows video, a tiny bubble in center of rotating sphere. Second video. He shows clearly a tiny bubble in middle of rotating sphere. (1:32). Keshe says if you would have increases the amount of Gans inside the bubble would have been bigger because now the fields of the Gans will pull it apart. In systems with more Gans in them the bubble in the center becomes much bigger, but this is exactly what we wanted to show. That bubble sits in the center, it literally is the proton (actually means electron). It carries all the energy and the other things ... (1:34). The ball (sphere) itself is the proton and the little bubble is the electron. The balance (in the sphere) changes, then you have the separation, it depends what happens inside the glass, let's say we put heat outside the glass, it breaks up and go into a bigger glass. The proton ??? and that bubble because it's

a fields ?? it becomes itself an electron and the rest of the contents becomes a proton. Because this itself is field dependent, immediately the others create their own fields. So it creates its own center where the new proton has the same. Then this proton goes through the same process, it divides and this becomes a mass on the other side. This is how the universe divides. For the first time we explain this (for man), because it is time and the knowledge has matured enough we can break to the next step. If you increase the Gans material with a little bit of CO<sub>2</sub>, you'll see the size of this bubble increases. The size of the bubble is dependent on the field hold strength of the glass (sphere), of the plasmatic field quantity of the Gans', at a minute level, even inside the proton there is a Gans structured material, then it is connected to the G field forces of the universe. (1:36). the way we have explained before through the spinal of the PI field. **This disclosure today and yesterday is a major breakthrough, it's the first time we understand how the proton and electron are created out of the neutron. In time to come this little electron and the proton will create their own centers, and in time they divide again.** What we see in atomic nuclear structure in what we call an electron, proton and neutron, these are all divisions of each other. A neutron divides into a proton and electron when the pressures inside the nucleus changes. Then we understand that the electron and proton that are created out of the neutron themselves go into secondary and tertiary divisions, and the structure stays the same, this is why an element can stay for a long time, because on the run of the time by absorbing energy from the other protons within the environment of the nucleus, there is enough energy gained that the proton again becomes a neutron ... inter-atomic infusions of the energies. This is the first time we disclose this because we clearly see this in the nuclear reactors. We never knew. If you ask any nuclear physicist what happens when you get a division, most of the time the extra energy of the neutrons, in going in a division (1:38). they themselves become new electrons, then the protons by the energy release from the division of the neutron create a new neutron because it absorbs enough energy from the continuous division that the cycle creates its own neutron. In Nuclear physics we have never understood this principle. This phenomenon is exactly what happens ??, in the process of a neutron dividing into a proton and electron, he draws it, it releases energy to the environment and (another) proton elevates itself to a neutron. ??? this is how H goes from Deuterium to Tritium, in most cases, because it absorbs energy, a neutron is added from the absorbed energies in the environment where you already had a proton and neutron running. In space technology if you understand this process you can create any kind of H from the same set up. I explained this yesterday with the division of the protons and a number of the neutrons. In heavy mass elements, the conversion of protons due to absorption (1:40). and radiation from all the neutrons, protons and electrons, whatever they divide, creates new neutron. There is no other option, so in that process we continuously produce neutrons out of protons and protons out of neutrons, and in that process using and what we extract from the environment we keep the stability, it's not that you put the electron in there from the beginning of the time, 1 million years ago and it's still the same proton, no the PI continuously (changes) it's a dynamic state, it's not a solid state, it absorbs energy and this conversion of the proton to neutron and neutron to proton, is continuous and absorbs energy which comes in. You have to understand the totality. We say on earth the MG field of the earth from the MG field of the sun, creates residue fields and on earth we absorb it. So does the interaction of the

electrons with the boundaries and other electrons, their energies get absorbed into the center of the nucleus where does it go, unless it adds to ?? these inside which is a proton and neutron. So in any case we always have, we never understood that a proton can be elevated to become a neutron because all it needs is to add energy from outside, as it loses it gains. This is the new science of Plasma and we start breaking through, that I started to teach from last week. The science of today, the physics is based on a total fallacy which we never understood. It has been built on that fallacy and we have accepted it. We only accept it one way and not the other because then we have to find out why and now we understand why. (1:42). The world of plasma physics opens up a whole new dimension in the world of science and we have to do in the correct way and not again form the dogmas of the, what we have been told. For the first time today, at least you can say that you were present when it was announced that a proton can become a neutron, and you can see it very easily with an explanation. The same as you can understand the neutron divides into a electron and proton out of the center mass of the PI fields of the same thing. Now for the first time we understand from where the proton and electron comes, from the neutron. This is the ambiguity that have been sitting with the old matter physics, but in Plasma Physics we can do it, we just saw it (Rick's video) in a very simple way. What is your qualifications Rick. ... break ... education wise, I made it through 2 years of Chemical Engineering at the University in Flint Michigan. You are not Einstein are you? No where near that. Well you are past that, for the first time we can explain what Einstein never understood. The beauty of this technology is that you make a system and show it. We are all Einstein's, we see it but now we have to understand what we see. (1:44). This is how knowledge should be. 15

(1:50). Question about concentration of Citric Acid (to clean N plate).  
check on adding Gans water back into caustic solution to neutralize it...

(1: 55).

(2:00). the PI fields convert to matter as they pass over certain conditions to create matter ...

(2:05). (2:07). (back on)..

(2:10). Is this why rainwater has a different quality then well water? Our rainwater now is highly polluted, but if you could pickup a section turned to the atmosphere, yes. The rainwater is what comes in with the fields of the PI. (they just saw a UFO). ?? Well water filters through all the fields, the way we do with our Gans water, plus the fields it washes with itself down. Our well water is more alkaline and rainwater is a little more acidic and better balanced. can we add CO and Zn to our rainwater and neutralize the pollution?

(2:12). Yes. There is a research data we have at the KF we are doing in the background for governments, yes it works. Q: A couple teachings ago you said if we go back to making Gans during this time it means we are confused, can he elaborate? I have given you the knowledge of the U without the matter state tangibility, if you are happy with the donkey, you are quite welcome. We left it behind. you have to understand what knowledge has been given in the past 2 weeks in so many ways. Not only have we passed the Gans state and field states, we have come into the cosmic field forces which is anything you can wish for you can create. The new space reactors that we are trying to

build without motors, you don't see anything in them. (2:14). Go back to the presentation in Hanover I opened the green box with the yellow lid and said this is the empty space of the U, that's where we are getting to, now after 6 or 7 years you are understanding what I showed back then. Now we are filling the systems with this. Now we have gotten to the place we can go to the hollow space in that ball (rotating sphere) and take the energy from it and make from it new reactors. This is how advanced we are now in working with the space reactors, because anything other than that in the expanse of the U, it will be (mean) converting to something else and then you are in a big problem, because then you can also be dissolved. It's like you are sitting in an airplane and suddenly you jump up and there is nothing underneath you. Arman said now you need a parachute for the space. But for here on the land because suddenly what you built on the matter level state isn't there anymore because it dissolves in the field strength. But when you work with the "mother", the center, exactly as the center of a neutron that becomes an electron, then because it's of the same you can never be ?? (dissolved ?), you have gone to the essence of the creation of the Creator. Do we always become a voyager after that point? You have always been a voyager. We never have a real home as such? (2:16). Any living thing of the U is a gypsy of the U. Wherever I lay my head is my home, this is the truth about the existence in the U. Shall we call it a day. Today was a wonderful teaching, when I teach like this, inspiring, when I enlighten this way, releasing new knowledge, as I said, by the time we get to the 30th the whole book of the science of the man will be written, and we are in that ??, especially today. **The knowledge about the structure of the inner essence of creation has never been disclosed**, now you understand. Man in this ... transcribers make this teaching as a book and put it in the KF free papers. This is the knowledge that has to be transcribed and put up. (2:18). And when it is written and not a talk it will stay as the knowledge of man. Q: When we use the Gans to raise the quality of the water from acidic to alkaline does it change it to a hexagonal structure? (2:22). Hexagonal Water from Wiki, is from a marketing scam, it claims a certain configuration of water that is better for the body. ... Remember we were a scam weeks ago, it doesn't mean it is. ... can you do some work on this in the background and enlighten us. (2:25). Today's teaching is absolutely historical. Publish it and I'll sign it. Thank you Rick for that little bubble. Add some more Gans in it and see if the bubble increases in size. End.
