

## 207th Knowledge Seekers Workshop Jan 18 2018

(The plants or vertical people use the gaseous part of the planet and the mineral or part just as humans do, Man heavily consumes vegetation and part of their soul becomes part of us, The story of Adam and Eve is man accepting part of the planet and getting attached to physicality, When we breath we absorb huge amounts of protein through the gases and through the salts in the liquid in the lungs they become Amino Acids and source of food and elevation of the soul, plants do the same through the salt content in the Gans of the leaves, We have a composite soul through the diversity of the fields we absorb but plants have a mono soul and are more resilient and can live thousands of years, We learned about photosynthesis and photons but we find plants in the darkest cave or bottom of sea so life doesn't depend on the light of the sun but rather on the MG fields of the sun and earth, The leaf works like the CO2 Box and converts the MG fields of earth and sun into matter state of O and C, This is the fundamental secret of creation needed for space travel, A simple leaf shows us how through the MG field pressure it can absorb matter and convert it into a Gans, into energy, and by a strength push change of another field in the same environment can create matter, How to make Tritium and using the top 4th reactor change any fuel, As we got AA on top of CO2 Box the leaf also gets AA on top and because it's of the same strength as internal it absorbs through, The tree line reflects the distance from the center, Why leaves turn colors in the fall and drop, There is life within the magma of this planet, In space we are not looking for life with arms and legs but for life that has the essence of the soul existence, For the space lab you don't need to keep on creating fuel you can change from H, to Deuterium to Tritium and create anything you need in space, We need to learn how to absorb the huge amount of fields in the factories that produce Nano and Gans and this will supply the space lab, For flight the gas reactors and the Beads give full spectrum for matter creation, The vertical people have emotion, If I am not mature enough to go by myself I can join in on a spaceship and then if I want to go off on my own for 1,000 years I can and then join back to the status quo of life, The difference between matter and Gans state, The body is totally in Gans state, When you elevate the soul all the souls get elevated and not just the man even the animals will understand the change, Elevation of the soul is access to higher strength like on the spiral and it comes through giving to elevate the others, What fate is, It doesn't exist we decide from our soul and the religious people have fooled us, About forgiveness, When you pray you transfer energy from the physicality to the soul and later when you need it you withdraw back from the soul you did it yourself, During sleep our soul travels in other dimensions, , )

(:12). (connection not very good ... broken )

(:20).

(:22). (break in connection ... ) (:29). ... the body of the man needs both the atmospheric condition and matter content of the planet the same thing happens with the tree. 30 00

(:31) break (:32) Dr. Gtoawa reads Constitution.

(:58). Dr. Keshe starts from the beginning again. Up to now we have been explaining the body of the man that it uses both the air and the mineral, or what we call the solid state part of the planet. **For the first time we understand that it is the same with the "vertical people", they also use the gaseous part and the mineral or physical part of the planet, and as humans we always looked to our own benefit and thought that, that was it, plants breath, take in C and release O**, but in fact and in reality this

is part of their process in absorbing from the gaseous part. They don't do it for us to create O, they do it as part of the process to be able to absorb energy for their part of life, and when the condition between the atmospheric and the ground, **what they have chosen as their legs, or what we call their roots**, is in sequence and in balance, then that dictates the state and what type of plants, or trees or what we call the vertical being may become. It's an entity life and it's the same as the man, it has a soul, a dimension to it. **We understand more now that the root is gathering the energies from the physical part of the planet and that is because they can't move to have the diversity of the air they breath or the minerals (1:00). or what they take from the storage on the physical side of the planet, so they become limited, restricted to what they can have, as far as that root can go** and how much that root can build and dig into the ground they are in, or they can attach themselves to another entity to be a part of. It is that same as what we do, rely on the air the gaseous part, and then the matter part to eat as a physical food, so do the plants. Last week I explained how the plants absorb energy, the why and how. **There is a need to explain further so we can learn more about this beautiful structure which they have chosen to live, they work through this process, that we have understood more through the teachings and how they actually elevate themselves and become a mono-entity, and at the time of the death of the plants in different shapes or sizes or forms, or all vegetations which man consumes, we negotiate physicality and part of the soul of the plant with us, as humans we consume heavily vegetation, fruits, roots and in that process, or cycle our body has learned to transform and accept part of the soul of the plants and trees, because it becomes part of us. It's not just that we eat a part of an herb or an apple and that it has nothing to do with us. (1:02). In the old time we were told that Eve gave the apple to Adam and that is where the problem started, in reality in that process man got attached to the Earth, the apple was the attachment to the physicality of this planet, man had to take something from the earth for the first time to be part of it, and that became the shackle of the man to this planet.** The apple what they say was the sin was connecting the physicality to the STM, this is what we have to understand in the meaning. In this process how a plant or tree absorbs energy is what we call photosynthesis, is us again trying to make ourselves important that they release O and we understand it. Bur what is and how does and the process happen. **At night when the MG field of the planet is higher because the pressure of the sun's MG field has withdrawn because we move away from it and it is less, then the whole process of the plants living structure for absorbing energy, which in that process absorbs protein as well from the environment to feed itself, because we do the same, when we breath in we absorb huge amounts of protein into our lungs, (1:04). partially as a mixture of gases and partially when they reach inside our lung the condition is created through the salt and the liquid in our lung that they automatically become AA, they become a source of food, of elevation of STM through the lung.** The plants also do this but we never understood this and it's important to understand that **what we have is a composite soul, because we absorb a diversity of the fields. Plants however have a much simpler soul and for that they are very resilient and can live through, that which we can't live through. Trees live for 1 or 2,000 years, some 5,000 years, and some plants only last a few months and others a few years. We have to understand the trees and plants their path of existence how it works so that we can learn how to live in deep space. He draws the walls of the leaf a cross section, on the bottom we have CO2 and the top O. (1:06). Underneath it we have another process which is MG fields of the Earth and above it we have MG fields of the Sun.** Up to now it was hard for us to understand the process but with the knowledge we have

gained we know **that between the leaf's sides there is a Gans which is a diversity of different types of salts and liquid and according to the content of the salt, it dictates what that leaf, what level strength of C will convert, will accept, then the MG fields of the earth or sun are the composite plate changer.** If you pick up a leaf of a tree or a plant you'll notice that there is a slight color difference between the one below and the one above, they are not the same color. They are in a way not porous, (1:08). **but Nana coated.** If we have understood what was in **our CO2 Box, with a Cu and Zn plate where in that environment we created a condition of MG field strength of the C that it lead to the absorption of C and a mixture with the water created the Gans of CO2. This is exactly what happens here.** Plants have triggered a beautiful system to use the condition of the planet, this very tricky, it is a beautiful way that they have worked. Last week on the Photosynthesis video they said that **a photon comes in and the daylight creates photosynthesis, but we find vegetation in the darkest part of the deep sea and in caves where there is no light. Therefore life is not dependent on the light of the sun. The life of the vertical people depends on the MG field of the sun and the strength that can pass through and at a point and position.** Through understanding this the game of understanding the cycle of life for vertical people changes. **Why do I teach this today? Because we are opening deep space travel for man, (1:10). he has to understand these secrets of creation. This is one of the vital points and will be used in every dimension of the space and deep space travel.** This is one of the fundamental points in understanding of the creation of the conversion and plants do it so cleverly, and us humans who have not understood it up to now, and just pass over it and find different ways to confirm that we (think) we understand it, and just put things in it because it gives us a lot of PhDs at the universities. I call it the PhD of the stupidity rather than adding to the knowledge. Look at this picture, you know that **you have 2 N plates, one on either side, you have the contents of what we call the salt and this salt is 100% connected with N. Why do we give N to the plants, because they need it, it's their salt agent inside the leaves,** and then others constantly create the next condition. This is why when you put N in a specific way in the M field of the 2 plates, now we understand that the leaf of the plant is a MG created Gans condition, then we understand the role the N plays, but the process is just one step further then we understand. **What happens is, let's say during the night the MG field from the earth, (1:12). it has the freedom to go further then it can, it can push further beyond its boundaries, don't forget it's not just one layer but every layer strength moves up one notch up on a level higher.** What happens, here **no C ever crosses the leaf, the same as with the lung no CO2 ever crosses the lung, never does just because the MG strength between the 2 N coated plates (1 plate is different then the other), and now the MG field of the earth reaches further up, that it goes through the leaf in so many easier way, it changes a condition and creates a position of C MG field inside the leaf, and as we saw in your Gans bottles, the C in a matter state in having its match inside transfers across through as an energy field.** It is the same as what we have seen in our lungs and what happens is **the energy of the C transfers to join in into the leaf, and the leaf has a certain thickness or size and it has a certain amount that it can hold on to during the transformation during the earth's MG field to the sun's MG fields.** (1:14). then when the field strength of the sun changes, what we call daylight or facing to be at the highest maximum facing, then the beauty happens in the reverse which not many of you have managed yet to reach and that is, now **the MG field of the sun allows the energy to convert into the matter state of the O, in a way the plates reverse position, and the MG fields of the earth creates the MG field of the C, and**

**the MG field of the sun creates the MG field of O** which now becomes in that level according to the pull and field strength of the sun, **released as an energy across and converts into the matter state. This is one of the cornerstones of what man has to learn for deep space. How to convert the energy into the matter state**, which the plants do every single day and leaf, every second of the life, from the time of the establishment of the first life in a horizontal and vertical level. **A simple leaf shows us how in one MG field pressure can absorb matter and convert it into a Gans, into energy, and by a strength push, (1:16). change of another field in the same environment can create matter.** The KF Research Lab is trying to produce matter state so understand this process fully. This goes to the space lab you are trying to develop materials for your fuel. Taking it a step further and understanding the totality of what we need to do, it brings back **the CO2 Box. No one has ever tried, while the plates are in the box, putting different MG fields around the boundary and see if this C changes to O.** I'll tell you one thing, 99% of you will start producing O. **This is part of the cornerstone of the flight system you need to understand. A lot of you have been working to create H, Deuterium and Tritium, but if you understand this process you can use the G field forces of each reactor, especially your top reactor to convert and change the material to what you need, Deuterium to Tritium and T to H, gain, release, absorb, retract, go forward, pass the speed of light, and decide that you don't need to feed fuel inside to change but you need to create a condition that creates M field forces which gives you G or absorption, (1:18).** very much like CO2 coming in, or repulsion like O which is repelled. This goes back to the Chinese and Iranian space agencies that are working on these things. The Americans are far behind and will never catch up for 50 years. Change of the condition of the (MG field) pressure comes from understanding the structure of life, the vertical people. **If a single leaf can bring in an O or C, or change it to a C or O in the matter state**, so if you extend your knowledge it's very simple ... **put another layer in, O here will convert to H there or anything you like.** In our tests we do that we put galvanized sheets into the Gans, this is exactly what the plants do, with a Cu or Zn plate you get a CO2 but now if you look at the galvanized plate, you have introduced Fe, Ni, and everything else, so you have increased layers by layers, and the combination of the totality of that gives you CH3, what about, if you understand the work of the leaf and **if you take the C out of the CO2 and because you are in the Gans (gas??) state you have achieved Tritium.** If you have understood this process (1:20). **you can change fuel in any reactor in any combination using the 4th reactor even more to create a condition of G pull from the base to the top.** The reality comes that when you create this condition to absorb C from the environment as we have seen from our CO2 Boxes, we get AA, the same process, as it appears here as on the leaf of the plant, and because it is on the order of the strength of the AA internally, it transfers through and becomes the food, energy transfer for the plant to take what it likes, then in this process, C according to what the salt combination is, will determine the type of C that gets attracted into it (there are different types of C). **The salinity the environmental roots matter which it brings in, decide what type of C is absorbed and what O is given off. This dictates the condition of the O in the environment or the atmospheric condition which feeds the man, animals, which dictates the behavior of the animals because then it touches the soul of the animal because it's in the Gans state.** Now everything (the knowledge) has been corrected, but we have to understand the totality of it. (1:22). We have to become aware of the reality in the total dimension of the existence, because if you understand this process then when you land or are in Space and you want to produce a matter, you have to see what is available

**that you can interact and absorb in a field strength, not necessarily salt that from the other strength you can reduce or produce matter, or conditions of the fields that you need. You don't necessarily need to convert everything to matter, but you convert MG fields of one strength to another, which means this gives you the capability that if you have composite materials here you can change them to simple materials. Now you can take composite fields in the space and convert them to mono-field strength that you need by creating a very simple filter, which the vertical people have already achieved for millions of years. The understanding of the Nano structure of the leaves of the plants, and the salt composition of the whole structure now makes sense, then you understand the field of the earth are limited to the strength in the matter level according to the distance from the center, then you understand why we have the tree lines, why certain vegetables, greens and herbs only grow in certain conditions and in certain areas. for the first time you understand why plants loose their leaves (1:24). in the Autumn time. We have come up with every chemical combination except the fact of the reality, that when it comes to the Winter the Planet tilts slightly away from the sun and this has such a huge impact on the amount of the fields which come from MG fields of the sun to the earth MG fields which that process can't support the absorption of C into the leaf anymore, not being able but having so much content constantly of salt, leads to what we call autumn leaves (Fall colors) and then the same process comes back in the Spring. That's why we don't have such a variation on the equator because it's (MG fields) constant there, the Amazons and all the green pastures are there, because there isn't much difference, it's always the same distance from the sun, the sunrise and sunsets are more or less the same (MG field) pressure. If we understand this we can change what we want and what we saw with the hurricane into an oasis, all we have done is to change the condition of MG fields in that space. Once you put a Gans on the ground in a large enough volume it changes its environment, constantly and permanently. .... now you understand the connection not only with the STM but also with the vegetation (1:26). the vertical ones and horizontals and the swimmers and now that we understand more we have to accept life within the planet earth. We are looking for life in deep space, something there that matches us so we can communicate, but if we understand the process of the interaction of the MG and understanding the existence of life within the sea there is also life within the magma of this planet. There is life with interaction that allows life within the center core of this planet. We are not looking for a man with 2 ears and 2 legs, but for life which means that it has the essence of the soul of existence. As long as man is looking for life in the space with somebody that can talk, understand, and have 10 arms etc. man is still in the doldrums of thousands of years. We have to accept life in the essence of the creation of the soul of it, not in the essence of the manifestation of its physicality. The sooner we understand this we'll progress to be able to live within the span of the U, then we'll have respect for every being unconditional regardless of its physical manifestation. If we understand this then we have reached a point, (1:28). that we can convert any fields of any strength, be it a matter, gaseous, or field, into energy matters of gaseous, matter and fields according to our own desire and need. I can still make a spaghetti on Planet Zeus and it will taste exactly like the spaghetti in Italy, because in that I have the memory of and within me sits the emotion, the taste, and I can transfer this the same as I can transfer in the leaf to the emotion, to my great grandchildren to my friends who have and can get a conditional connection, emotional to me, and in that process I can do whatever I like. We have to be much more clever to understand what and how things are done, how we can be able to see and understand to able to feel the**

emotion of it, be part of it, use the emotion of our soul, (1:30). then the E of our physicality, and at the same time be able to transfer from one to the other. When e can create a link and be aware of it that we can connect the E of our physicality to the E of our soul, then we start progressing in a totally different way, because we can interact between the 2, we become aware between the 2, and then we can create a dimension that they are both happy to coexist and be part of each other, this will come to man in a very big way in the time to come. Part of the teaching of today is for our research labs in matter and field production and part of it is for those who work **in the space lab, if you understand this then you don't need to keep on creating Deuterium or Tritium you create a condition that the field forces from one allows the creation of what you need in the other and in understanding it you can change from H to Deuterium to Tritium, and in creating that you create a rotation of the fields which gives you the G pull that by feeding to the iron?? ion elements of the plasma of the neutron at the top it allows it to create in totality the sphere of the magnetosphere of what you call your spaceship.** (1:32). This is what is the next step in the development of the understanding between the physicality, the soul and the condition of **those who still like to be in the matter state condition but have the beauty of understanding that they can travel in the depth of the U without fuel or food, because then you can produce anything you like anywhere in the space.** The problem with the KF followers is copy cat and repeating what others do to show that I am intelligent. You have to push the intelligence further. We see these changes especially the M field force changes in the Factories that are getting setup in the KF across the planet. **The proximity of such a huge mass or number of N plates in a single room, creates a condition that allows us not only to benefit by the Gans' produced in the containers that we tank, and in the tank rooms that we produce, but if the scientists of the KF take the next step and be able to absorb the field flows within the Gans production, N coating, and plasma rooms, you'll have access, not to the matter state, but in the field strength of the energy, then those of us who are involved in the factories create a new position amongst our systems that we collect the fields,** (1:34). and that's why we are here, not the matter state that makes soaps or the water to drink. We have to **become aware of that we become field absorbers and not matter state absorbers and conditions, then we can produce in a very different way the fuels of space.** This is one of the reason the KF space labs in China, Africa, USA, will be equipped to **become suppliers of the field energy for the space labs which they support.** Then we don't just look at the Gans production but we **look at the total fields produced within the environment of the production of Gans', production of holding of Gans', and other elements.** So we look very much like **the body of the man, the Gans' and the liquid is the feeder of the physicality and the fields produced become the feeder of the soul of the system** and this process will become a breakthrough for most of our scientists when they understand this. **You can bring let's say, mercury into the factory and walk out with gold. Conversion of the elements occurs exactly as we have seen with the leaf of the plant, conversion of the C in changing position to the creator of the O.** You can do the same. (1:36). **Step up or step down, but not by changing the matter content of your system but by changing the field environment of the system, or absorbing the field environment of the system. This brings a new game into play.** If you look at the flight system shown by Marco 2 years ago, with **the 4 cores and the beads, is the exact explanation to the connection to the planet and the air we breath the gaseous and matter parts. Inside the cores the gaseous part can change constantly, but the beads can't because we have fixed them, then you can take energy from the total spectrum, the go back, the gap, the position between the gaseous and the matter**

state beads dictate what matter you want to in an energy form that then you can convert it as you have seen in the leaf to the matter function. It will take man a thousand years to unravel the past 30 minutes of teaching, because **you have to open it up, what energy fields will give us H, what combination of the fields will give O, what will create tomato, and what is the strength M field of the cabbage.** If you take these further up, going back to our medical doctors who are abusing all this, (1:38). what do you do with **the part of the body which is damaged or has created extra without actually doing any operation.** We have seen that Dr. Rodrigo has achieved a lot and so has many doctors, but now you have to understand how it happens which is exactly as you see in the leaves of plants. The science has to be in totality and in understanding the reality, the facts and not just making up to fit in as we have seen in the Photosynthesis video by the American Education system. The mechanism that they came up with was literally a bunch of capacitors to be able to hold, then **if you go a step further you understand why exactly some plants stay green all the time,** why some plants have a short lifetime, why some vertical people dictate to manifest themselves in different shape or colors and change the color of their flowers as they need, because **for the first time if you understand this, that the vertical people have emotion, which is the confirmation of existence and to guarantee the existence,** these people don't like me here with the red color so I change it to the blue then people will take my seeds or nectar to somewhere else. **The change or evolution in the color of the plants comes through the feeling of their essence and the emotion of their soul,** not just by ?? random, (1:40). so does in the animal life but man has not learned this nor progressed to go to the next step, but we have to now that we have joined the UC, **we have to understand the work of our own U which is this planet.** The MG fields on either side of a plant, it doesn't matter how it is, standing up or drooping or if it is flat on the ground, it's exactly the same, because it has dictated this color and **this position is where I can grab what suits me from the matters which are in the environment and from the matters that I can give out. It's the same process with everything else in the U.** The assessment of what you can take out has to be considered first, then **you decide what you need to take out to get what you need, you can put in. Field interaction between the dynamic and static systems is the key to travel in deep space for those who choose to travel in a physical matter as what we call the spaceship (SS), those men who understand more and elevate in the depth of the soul will take into deep space as individual souls,** then they become shining stars, because then they decide the position of it. (1:42). Most of the teachings in the past few weeks has been for **those souls of the men who have matured to reach that point to be the creator of their own in the dimension of the existence of the emotion of their own soul, what we call in the physical matter, a soul of a hybrid.** Or would like to go in a jumbo jet to have plenty of people around to confirm your existence. What we call soul searching takes a different meaning when you understand the total teaching you have to become mature to be able to cross the line, or **mature enough that you decide where you want to cross the line from physicality to become individuals. I join a SS with a group of thousands and when it comes to a point I take off,** I want to test and be on this plane, it's very much like when you are on a jet plane and you fly from one place to another, not everybody who took off at one point will go to the same place, some will go to other places by their choice. In the space you can go as a group, but **then if you want to go and camp alone somewhere in the mountains, then at that point you use the strength of your soul, that I am strong enough to be able to do and whenever I decide in 1,000 or 10,000 years, (1:44). on the next flight I join back in and become part of the physical status quo of life.** This is now a fact with the

amount of teachings that have been done, that many people will start testing and have tested and different research labs and governments are working like crazy mad out trying to be the first. **Those of you setting up the factories you have to consider the MG field forces within the structure of the factories that it becomes another source, dimension in which they become the fuel for your space labs, not carrying Gans'. If you carry Gans' they'll convert in the span of the U, if you carry the fields they absorb others but stay in constant condition as you set it up, they become part of the soul, but (don't ?) become the totality of the soul, but when you for yourself in the dimension of the Gans then you have to battle with the condition of the Inertia, because it's a matter state, but when it's fields then the Inertia has no field forces on it.** The difference between the Gans state and the matter state is very simple, **the condition of the acceptance of the strength field of the matter state Inertia, where the Gans stays at the strength of the PI of the MG field, (1:46). and not the Inertia level. This is why you can create matter and you can create Gans, when you reach the strength of the Inertia you manifest yourself as the matter state, if you stay at the strength of the MG field plasma, what we call even the soul, the you stay in a Gans state. Inertia is a fixed condition acceptance of the other field strength to be in position of the state and condition. The body of the man has no matter, unless it is a dust and it spills or falls on the body of the man. The totality of the state of the matter of the body is Gans in total. Even if you have an implant it works in the Gans state and not in the matter state. And if some of those who do these kind of operations understand this they'd devise a totally different system which is much more effective,** because then their system absorbs energy like every other part of the body, if they Nano coat it and embed it, then you don't need a battery for a pacemaker. there is a lot to learn and understand and it is for man to take off the shackles of limitation off his shoulders that he can carry on to live and become part of the travelers of the U. As someone said to me have you opened a travel agency (1:48). for space as you are promoting it so good, I said, because I know how to do and have been a travel agent for a long time. You have to understand what is called ??satellite-zation but in fact it is **a conversion a matter to Gans and Gans to matter state of a higher order, because now you have more energy to give to it and you can create a condition in the matter field strength that when it comes it delivers itself in matter state.** Now you understand how clever the horizontal people think they are, but in fact the vertical people have been doing this for a long, long time but **they have compromised their physical motion to steady positioning and not wanting too much.** It's like someone who only like fish and chips for breakfast lunch and diner, and he doesn't mind because then he doesn't have to go and look for it, everything is right here. The process of understanding the technology is gradually unraveling itself, but according to the understanding of people, individuals, in a very much shorter time you will understand and you will see that even **the animals will understand the change (1:50). Because when you elevate the soul then all the souls get elevated and not just of the man.** The **process of conversion and extraction of the fields will become one of the most important parts of the deep space,** what you extract that what you can get from, **if you go through a high field density ocean of a higher order, do I need any of this, or can I tap it and preserve it like the leaf does and in due time convert it back into the matter which I like,** a spaghetti, or fish and chips. The understanding of the conversion and the ability to convert will allow man to become lifelong passengers of the U. Then the life of the man will not be limited to a meager number of years as the man calls it.

Any Questions.

**Q: What do you mean by elevation of the soul? (1:52). It's that you get access to a higher order strength of your soul. The STM is like a plasma, in the original teaching we always explained, he draws a spiral, this is the field combination between the G and M field, your H sits at the opening of the spiral, C a little farther in, gold still farther, etc.. The elevation of the soul is access to a higher strength (draws an arrow from the H inward), when it comes to higher strength it's not only G pull (inward) it's a higher strength of giving (arrow outward) of a higher order. Then this is the true essence of creation where you can give more, not what you might take in because you already have a lot to hold on to anyway. (1:54). The composite STM still sits here (between the H and C), but within it, it has all the essences, it's just that you have more in what you gather (draws dots inward along the spiral), that when it comes to the higher elevation you have some that matches. Just because we have a composite soul doesn't mean we have elevated so much. Elevation of the STM comes from his understanding, not just man but for any creation, is, how much is he prepared to give from his existence, which is G what he is holding on to, to give that, that holding on to isn't important but by giving he allows the others to be able to elevate to use the higher order of their own strength, in a way to give more. When you start the process of giving it is contagious. ... so elevation of the soul is to be able to give more, and not to take more, this is the greed of the man. When you give more (1:56). the essence of your integrity to hold on more to the essence of your creation changes. In fact when you give more you have less to be attached to and you have more to give. Q: How does attachment effect ones ability to move through the spiral? of course when you are smaller you more easily move through, when you are fat you can't go through a small door, and the door gets smaller as you get closer to the center, the Creator. ... (1:58). .... the more you give the smaller you become, the more expert you become to give, and find the best way to get in. Q: Is the elevation of the soul a permanent condition or more fluid, like elevated in the morning but could later in afternoon come down? If you feel your soul is elevated in the morning and less in afternoon, you look and see how much you have stolen during the day, that you have actually put the clothing on this way. ... does the food slows us down? In a way it doesn't, we are that leaf, (2:00). which we convert to CO2 the energy into the O or whatever, we convert the O into the matter state that the other beings use us. Man has never understood this, our aura is a food to those who are around us, who need that energy, we are converting energy, I have written this at the end of one of the books, God is Creator of all and man is converter of some, we think we have when we do everything but if you look at the essence we are that leaf which converts the matter state from one to another, the other beings need this to exist. This is why we cuddle each other, this is why we make love, we don't put an egg on the table and say this is mine and you put yours there and then we'll get a child out of it. We exchange energy and fields and in that process we give with our E, this is why you see the elderly cuddle the young, they hold on to them and don't let go, because literally the young convert the energy much faster so I just grab as much as I can while it's here. This is why the grandpa is with the grandchildren this is a free energy source, come on I grab. How many times do the grandchildren say, grandpa you are choking me. (2:02). ... trumped up charges against Arabs. we became a terrorist because we didn't give the technology. (2:04). 27 (2:06). Q: Can you explain the process of giving more to elevate others. Yes I can explain it. ... you are mountain climbing and one of the climbers loses his grip and he is dangling, (2:08). you reach out to save knowing that you could lose your life.**

In a way you give all the physical strength you have to pull that person up, it doesn't matter who it is a friend or stranger, this is exactly what it is, there is no other way to explain it. You give to elevate, to save another life. By elevating another soul you allow it to save another. It's like a father who gives his life for his child so that he can carry on with his life, where the father's life isn't very important because I have given, I have done what I came here for, **to guarantee the creation so that it loves the Creator.** ... Shandor .. (2:10). ?? about plasma dilution ?? way of elevation. .. The process is not diluting it is adding, when you dilute it becomes weaker, but when you add, when you give then there is more to give. ... (2:12).

(2:16). If to go from A to B it takes 3 months of walking I can take a jumbo jet and get there in 1 hour. **The physical life is the 3 months walk, in the space you decide to go faster, you bring the soul out and put the physicality on, your haven't died but now you have created a condition that you can go faster,** you can go in no dimension, vroom. We have taught enough about the fueling of the body, the Gans, etc. now it's for us in these teachings to decide if I want to go the 3 months walk or I bring the soul out and go instantaneously and when I arrive and walk out I am still me. **This is what I am trying to teaching, in deep space if you go with a UFO, a spaceship or you decide to go faster,** I have my own private jet, vroom. I don't need to walk. The man has to decide if he wants to make the tiring walk or instantaneously. Up to now man has chosen the 3 months of walking. (2:18). **But to be able to get there you can't pollute the air, go the wrong way that can damage all the environments, and make a few people homeless because you need that run way to land.** That is all it is. Then in that process how you'll feed yourself in that 3 months, or you get there and have a really nice time, you know how to convert etc. this is the difference in a simple way. After 3 months of teaching on the soul it starts to make sense what we have the capability of. **Q: What is fate?** In which language and which path of belief. If you are Iranian and you have faith then you say it is my destiny. In English you say I broke my leg ... it's my fate, I'll see what happens afterward. (2:20). .. etc.. **fate is how we would like to interpret others wishes to suit ourselves. The fate or the path of the life of a soul is one, to give. There is no fate ... .. fate as a religion doesn't exist, those who want to fool themselves can make. Anybody can become a guru for themselves. fate as a path, somebody says my fate was to end up like this, in a way we planned it through our physical life that our soul brings us to this point, a point of balance and not a judgment.** ?? our soul knows the position of the correctness of the physicality, because we don't or don't want to understand what we did physically to be where we are, then we call it fate. (2:22). When you don't understand the work (things) that you have done and this is a consequence of it, then you end up in that position, which was a correct position, I paid to come here and this happened to me, why not look what else your soul has done and it is fed up doing it. 29 Alan Sterling case of rape, etc..

... **Persian lady .. You talked about how we can hide truth in religion,** it's true, in Koran, it says you can partially lie when you are danger. (2:26). and Allah is a giver and has no child or anybody equal to him ... if we are creators, I have children and they are not able to give to anybody, what is the difference between Allah as Creator and me as creator? (she is difficult to understand..). **No there are 2 or 3 factors, first of all, the part that says you can lie about it ... we saw that with the disciples of Christ, it comes from that because the guy had to say it to save his life** (Peter lied about

Christ), **but again it is how strong is the path of belief you have that allows you or how much confidence you have that allows you to lie to be able to save your own** (2:28). life by lying about your faith. tells story about Moslem lady lying that she converted to Christianity and lies to the people that she is a Moslem. She said that if I say that they'll all start doing things to me. I said, you are not really a Christian because you don't stand for it. ... but when you talk about the God and me, the STM has found attachment for the physicality of the existence, whereas the soul of the God has no attachment. Do you mean when I go on the other side I am more close to the Creator? You don't go on the other side, (2:30). **when we have the condition of the soul of the physicality, we carry the soul of physicality, the soul which has come in touch with physical existence, so we are aware that we can create and that we can be dependent on it to a certain extent. Whereas the soul of the Creator has no dimensions, it has no attachment to manifest itself, to show itself it exists to become manifest** in the matter state, or the condition of physicality. It is a big difference. It's very much like when I was talking with our researchers, the problem is that **most of our researchers look for a result to confirm what they are doing is correct. They don't have a belief that what they are doing is correct. Those who look for that always have a problem explaining it**, because then they fail. We have Alek and Armand they see it and do it and believe what they do is correct and the consequence of matter state doesn't matter but sometimes they fall in it and say, but you have to be able to show. And I say, this is not the time, because **as long as we have to confirm our existence by confirming that something is there we are still entangled with the soul of the physicality. When we know and believe that what we do is correct and are giving everything to be there for the others to elevate, then we have reached the soul of the Creator.** It's just how can we explain to these men of physicality, that things are happening, it's irrelevant, (1:32). you don't see it, but I feel it and don't need to see. When the man gets that confidence and understands it elevates himself to level of the soul of the Creator, at least on the path to it. **As long as you look for physical confirmation to the true physical existence, you still have that dilemma of being a matter state soul.** We say show me and then I'll believe you, it means if I tell you to look in your soul, you have seen it, then you are denying your existence through your soul, and this has become a very good trick now a days. I don't need (to see), but you have to show it to yourself. **Q: What about asking for forgiveness from God? First of all, why do you need to get forgiveness. If you are aware that you have done something wrong and have reached that point, you have done something that needs to be corrected, or you are aware of what you have done wrong, then you have already judged and forgiven yourself.** This point of forgiveness when you ask to be forgiven, it means I am aware of what I have not given that I was supposed to give, or am aware of what I have done wrong, from my soul. Never ask anybody for forgiveness, because even the God doesn't, because when you ask for forgiveness it means you are aware and have judged yourself. (2:34). It was one of the Commandments, never judge and never be judged, but when have understood that this is me, this is what I have done wrong, I was supposed to do but I didn't, you have already understood and your soul has already elevated. This is the beauty of it. He tells a story of the cashier who mistakenly gave him too much, and by returning it everybody is peaceful. (2:36). We don't have to worry to ask for forgiveness. We have to be correct in our conduct to ourselves and to nobody else. In the space people will come to understand what this means, when you start coming into interaction with those who don't understand what bad habits the man has, to kill, to steal. **Q: I cry when I think I should take more responsibility but I just can't.** This comes back to the point when

we create an emotion, I know exactly what you are trying to explain. When we get to the point of emotion, the position that I want to do, I can do, and I should have done more. **There is a beauty in this. In that position that you have understood that you could do but physically you didn't do and you have realized that point that comes through your emotion, you have already elevated your own soul.** (2:38). This is one of the beauties because then I have the courage to do it the next time or the time after, because now you banked the strength, this is what I need and I didn't have, I gave from my physicality knowing I couldn't give, I could have done more. I have created that condition through the emotion of my physicality to the E of my soul to have it that the next time I can do it, even though I might not be able to do it when I come to it. **We bank everything in our own soul, we elevate our own soul. It's the point of the death comes when the total physical soul gives itself to the STM.** It's very much like we have the MG field of this planet which reaches the span of the U, but you still have the MG field of the matter state of this planet, which is very limited but still when this planet blows up or gets absorbed it will all become one, the physicality, the essence of the physical will join the MG field of the center. In essence, **it is us who have to understand this separation and this power. We can give from our physical soul into our emotional level that passes to the STM itself.** It's a savings bank and they call it a church, go and pray, who do you pray to, where does it go. My soul is the closest thing to the soul of the physicality. You sit and pray to your physical dimension (2:40). which adds to your totality. And when you need something then all you did was to take from your bank., which you prayed before and then now you found a match and your prayer become a reality, you did it yourself, **you transferred the energy from the soul of physicality to the soul at the level which is needed in the body and then it found a position, a new balance condition,** and that was what you were asking for because you banked it. .. the power of the STM is immense it's just man who let himself down. Q: What is the new image of an ET with a ball on the web page for? This is the man offering his soul to the U. This planet is known as the blue planet. (2:42). The SSI logo was designed by Iranian scientists in a very specific way, it has a lot of meaning, which is written in the archives of the KF. The man offering his soul to be part of the UC and not his physicality. She shared her dreams of blue UFO. (2:44). The point is in the world of creation we all reach a point of maturity in different strengths and levels of our own capacity and we are all capable to reach the same level. As a human being we tend to, we have been so much forced by those who understood the weakness of the man in not understanding his soul, that we have lost trust in ourselves. We can create anything of what is our wish, our point of desire to have and we given it different names. I came across this at a very young age and I thought, why don't the people see and understand it. In Iranian culture when you sneeze we wait because there is something going to happen, we say, don't do anything for a few seconds because you sneezed, it's part of our culture. tells story, the aunt was about to go to visit them but she sneezed and then said, we don't need to go because they will come here. My aunt didn't understand that the souls inform each other, so she says it was the sneeze. (2:46). **At a very young age I was aware of how our souls inform each other** 22 **Q: When we travel with soul do we have to leave our physicality at the place of start and create a new physicality at the destination and can we return to our old physicality?** First of all we always leave our soul in the dimension of physical life when we rest, there is a condition of what we call unconsciousness or whatever, the STM in a way leaves the soul of the physicality to be in charge of the body, because not much can be done with the body when the soul of physicality is resting. **Our soul travels beyond,** or in a way leaves a trace behind, to other dimensions. (2:48). **Sometimes we**

**call it a dream**, it's not that we leave but we never traveled. Because our soul has created this attachment to physicality, but it doesn't necessarily always stay with the physicality. The time of sleep, rest when the body goes into the position of just running **sleep, at that point the STM is free, because it has a connection but leaves the operation, because at this point the physicality can't do anything wrong**, it can just kick the wife or whatever, but it can't do the mischief's that man does the whole day stealing, robbing or whatever they do or work, so the **STM is free, it takes that chance to take a run in the creation, but it is still attached to the physicality**, it knows where it is, like a bird that migrates from Siberia to equator and back again, our soul has that freedom, because we don't understand in the emotional level of the brain we don't see that space, we call the flight of fancy, but most of the time when the physical condition has nothing to do, our soul is free. It doesn't just sit there waiting for it to wake up so I can start working, but as it has no connection, it doesn't matter if I am at one point and then I travel somewhere else. The office still runs (2:50). ... but when I am there ... **our soul is free but it has taken a commitment of looking after this physicality during the time physicality is here because it needs it to do. We feed our souls through our daily work or absorbing energy that it can do its work.** Body is with us in a physical condition in a dimension free to travel. The soul doesn't sit inside the man watching what he is going to do, you haven't yet understood anything about the soul. **Q: The Iranian government had this technology for at least 10 years, why don't we see any support from them in the main Media about this knowledge?** There is a lot of controversy about my work in Iran and the president took all my files and the present Iranian government can't find them. We know where they have gone to and who is handling it. All my research development has been taken to a certain part of the Iranian government, which the present regime doesn't have access to. The KF supporters in Iran are very large we don't have a problem. (2:52). If we start any kind of connections they'll mark us as a terrorist organization and KF stays clear of all these things ...

(2:54). Let us look at a brighter future by us being open to reality and not trying to confirm our physicality. We were born to elevate our souls to its maximum potential and that when it is free of this physical dimension so we can serve the others in the U. the sooner we understand the faster we come to the final point.

(2:57). Rick wants to write the top 100 Keshe quotes.

(3:00). Music video
