

21st Knowledge Seekers Workshop – July 24th 2014

- **Main topics of this Workshop**

- **Update About the Reactors**
- **Replicating in the Reactors the Inner Core of the Earth that Contains Not Only Matters But Contains Plasma and Gans.**
- **Talk About the Tests with Gans Materials**
- **Yukako Left**
- **People Leaving Foundation and the Understanding About This**
- **Encouragement to People Create Foundations All Over the World**
- **The Simplicity of the Systems**
- **Everything in the Universe Works in DC**
- **The Free Energy is in Your Hand**
- **What You Call Free Energy is Not Free**
- **Using the Voltmeter in the Nano Coated Wires to Re-Align the Flow**
- **The Difference Btw sp2 and sp3**
- **The Coating of the Cu Wires is the Same as Your Nervous System**
- **It is Not One Way Direction in the Wires; It's a 2 Way direction.**
- **Nano Layers Create Their Own Atmosphere**
- **The Same Plasma Holds the Properties of All the Elements**
- **The Plasma of a Neutron splits into Plasma of an Electron and Proton**
- **Understanding How to Tune to Different Planets and Positions in the Universe**
- **Interaction Btw the Planets in the Solar System**
- **The Interaction Btw the Soul of the Man and the Soul of the Planet**
- **The Gap Btw the Star Systems and the Galaxy Systems is the Place of the Souls**
- **“Zoos” in the Space to Save Creatures of God.**
- **Using the Media to Enslave People**
- **Nano Layers Grows Back On When Scraped Off**

(:00) Mr. Keshe is alone in the SSI today. (:02) **Keshe comes in.** We try to catch up with what we have done in the last months. The research here doesn't stop because it is an alive situation; we can not just shut down and go away. We have 3 SF next to each other running, one is in Gans state, one is in Plasma state and one is with the Plasma and gases that we feed them everyday. Even with the unit we have sealed we see in the past week how the MaGrav field of the system is interacting with the outside, without any motors running. By turning on the gases units a lot of fields are getting draw to that unit, we do not know clearly why. (:05) At the beginning of the set up we started producing Nano Layers, we converted the Nano Layers to Gans and we used the Gans for loading last reactors; these reactors are very small and made of ceramic, two are coated internally with Nano layers and two have the center pin nano layer. We have to study its behavior when we open up. Other sets are made in totally different way, where when we coated the nano layers sheets they glued back on the cores, and pinned in the center and then we used gas layers to create the Plasma. Now we have 2 systems which are made of half and

full spheres but using Plasma condition through gases and we are using in the new system Plasma in a Gans form in mixture with water. When we don't introduce water in the Gans state they tend to stick together, the water is like a lubricant. The difference btw the 3 systems is that now we have a Plasma in matter state creating interaction, the others is the Plasma in state of total Plasma. The interaction btw the Gans and Coated Nano layers will manifest itself in coming weeks. In the Gans state reactors, we filed in four cores in combination with 4 different matters, so in the 2 sets with the gases is only one state of Plasma. In the Gans state now we have a very peculiar situation where we have a fixed Nano coated Mag layer and the we have Gans which are themselves Plasmatic inside rotating, we have already created double Magnetic field. (:10) The one with the coated layer is a replica of the internal inner core of the Planet. This means that this core which got coated layers with Gans and liquid inside it will behave exactly like the Caroline core of the Earth. The inner core of the Earth contains not only matters but contains Plasma and Gans. We've got to see how each of the two reactors behave. We had an incident here. One core carry CO2 another CH3 and the other CuO2, so we literally have created here 3 planet different in respect to the center which got a mixture of all three together in it. We are interesting to measure the fields, to see if they are higher or lower in respect to the CO2 core, CH3 core and CuO2 core. This is the first time we achieve this mix combination and will give to us a good indication of Planetary Systems and Galaxies. This will take years to unravel and understand. The data is very solid and constant. My understand is that the Gans Plasma will be more powerful systems, because they are mono materials and they are dealing with million of Plasmas next to each other. (:14) I switch off all the motors, no electrical current flowing. All the interactions are totally Plasmatic, and is interesting to see how much we lose and gain. (:15) Question about the mixture of Gans in the reactor. Keshe: We don't know how this material turned up to be. It was a blue color material and Armen washed and suddenly changed color. The material due to change of environment of Gans could have changed the property. We have to be very vigilant in respect not to be narrow minded. What I see at this moment is that the dark material is the combination of the 3. (:18) Even though we are in a very secure position we are still open to sabotage, we have to keep open eye of how this happened overnight. (:20) Now we go to 3D control, somebody will sit 50 meters away and try to change the MaGrav field of the system, which is instantaneous. This is fairly possible. We have to see if we affect the inner core, the center core or just the core which have CuO2 in it. We had to built systems to be able to do direct research. (:23) Scientists of the highest caliber have seen the technology, they were shocked on what is on the table; for the first time we have made Science simple, practical. This is the major point that we have achieved. We have showed that energy is not the main focus of the whole structure of the Foundation. Now we show that Plasma can be maintained and created at no cost. With the 8 reactors we are running the replica of the Planetary System. (:26) Marek is pushing things to see things, in time he will receive everything. Properties have to be seen independently. Up to now a lot of research and evaluations has been done by us paid by governments. (:29) Rick asks if people can help, regarding with tests. Keshe say that at the moment every week he is sending materials to all over the world for Institutes and Organizations. They will do another test in Fukushima. (:32) The situation in Fukushima has allowed the Foundation to be recognized, this is very important to us. (:34) The Japanese in Fukushima were trying to explain that they were trying to unit the Nation,

like Kamikazes, they say that they need to find a solution to unit the Nation; surprised Mr. Keshe to see that they have no boundary to help. (:36) Keshe talk about the development of the technology with the Japanese. (:39) People come and go and they give us gifts. One of the situations was the coming of a beautiful woman called Yukako, she came here for totally different reasons and she stayed with us for a very short term, she left for different reasons but she is still with us in so many ways. She brought the gift of Fukushima and I thank her Soul for that. You have to understand the Japanese culture, she is devoted to find the solution for the Nation and a lot of people talk a lot of rubbish. A lot of officers watched what she did in Japan. She left us and I did not heard from her but I wish all the best for her. (:43) Because we work in a way of gift, even the people who come with the wrong intention give us gifts. Keshe says how much gifts Belgians left to them. (:46) The process of decontamination does not end in Japan, its all over the world. (:48) We chose people here for the purpose they are born for. If they think they do not get what they are here for, and they leave it means that they spent their time and service here. There should be no envy. We started to see different applications with different people, and people who could not do things or they did and serve their way for the time they were here that was the reason they were here. It means that the time is not for them to be here. They've done their job, it doesn't matter what they write or what they did in the past or in the future about the Foundation, because the Foundation is you, if you damage the Foundation you do us better because more people understand how narrow mind people are, because they all look for their own self interest and what happen to them, but not as a totality. People will come and go, everyone have a short span of life, we do what we can. People who came here to learn only about one subject because this is there specialty and they don't get them somebody else gets it, it means I see in them a different beauty, but they don't see themselves. To them realize themselves is to them to find out. The core of the Foundation now as a KS become 3 or 4 people and they literally are doing the job of maybe 200 or 300 people. The amount of research done here is very much without the boundary. If you expect that the knowledge would be out of your country, set up Keshe Foundation on your country, build reactors and pay for people to be there to do it. People say: why the Foundation is in Italy? Finance your own Foundation in your own country. (:51) We were in Belgium and now we are in Italy, what happened with the Belgium scientists. There are 1 or 2 reactors running in Belgium. The time has come from people go from individual people to groups. Question about why we are dividing countries in borders with these reactors and not sharing to the whole world the knowledge of the reactors. Keshe: I think we've done this. I was told from couple of scientist: Do you know that you are throwing away millions and billions of dollars by spreading like this on internet? I said that this is because it is not mine. People pay and donate to us and we accept it. We have no boundaries. It is said that each country will set up their own systems for its own nations, because of your own short sight on it, and you can not put people in your area together, they blame the foundation asking why we are only in Italy. There is a set up Keshe Foundation in Bulgaria. (:54) If all the KF supporters put one Euro at term, to build your own reactors, your own center, you link to us you give us information and we will give you information. All the individuals who are in Spanish, Portuguese, Chinese KF start build their own centers. We are not Institute with closed doors that we talk secretly. We build the reactors in the morning and at night I send the pictures on internet. No institute in the world has done what we've done. You

have created the boundaries by your own work, not by us. The Chinese have such a power KF in China. Millions of followers around the world build their own center by their own. We give the whole knowledge, now you've seen it, its getting processed to make your own solar cells. One of the first things we can do to generate funds for your Foundation in your own language, start building the first solar cells. The Solar cells should be able to be built by everyone, you have the materials, we taught you how to do it, the Italians will produce the first, I hope that we can show you in the next week. (:56) You are waiting to be fed, you are little chickens. We see here in the park these sparrows, the baby sparrow is as big as the mother but still wait for the mother to feed him, because he got used to be fed. You blame us we don't teach everything, for years you wanted to do the Keshe liquid (??), we shown that. You cant have access to gases, very simple, now we are doing test with the Gans; spend 1 Euro buy the caustic, coat a few pieces of wire, I am sure that you can find some coke bottles around or few buckets, create your own Gans, I am sure you can go to any place. Use the toys of your children, coat them, put little Gans in it and you ca start your own system, how much does it cost, 10 dollars? (:58) The first reactors we built here was with half bottles. I did that deliberately to show the simplicity. You were looking for vacuum pump, gases or whatever, we have a short cut, we did the tests here, we shoed to you... Even if producing Gans is to far for you, you can produce energy from the first things you did. When you put those Cu wires and they got coated, if you connect these Cu wires in a small section of 10 or 15 cm, you have to sandpaper you hand, to get to the Cu, and you connect enough of them, you can generate enough energy to light your own home, with less then 50 cents. Armen and Marko and Ivan were testing this in their table just the day before they live. This is what I do with the torch. You see the torch, we showed, there is no magic in the torch. You are waiting for the Italians or the Japanese to make it? You already have everything to be energy self-sufficient, but you still look for Kilowatts, the time of Tesla is finished, go back to Edison, go back to DC, Tesla with his brilliant mind, the way he has given us on AC, was when we did not understand the way of the Universe. Now we understand the work of the Universe, now we can replicate the systems, and everything in the Universe work in DC. The problem that Edison had and he lost the game to Tesla was because of the transmission of the power, he needed to boost every few km. Now these materials are superconductive, they don't need any boosting. (1:01) We've seen how one of our patents have been announced in farm (??) that they have discovered a low temperature material that absorbs 99,9%, ok you made the copy of the Keshe Foundation in public, and now you announced that you have made a material which you already showed as a black dark material. What does this means, this black material? What does this absorbs? Absorbs 99% of the light spectrum. Ok, a question mark. Energy can not just be absorbed and go nowhere, it has to go somewhere. Even the wires which you hold in hand and continuously absorb energy to stay dark black, there is a leakage somewhere, and otherwise these layers would explode. You find that leakage and you store and you tap into that energy which these layers absorb. Now you connect them in series, you have different values of voltage in current, you put them in parallel you get different values of voltage of current. You mix the series and the parallels connections together, and you achieve the power you need for your system. Be one LED light, be it the power of the computer, etc. People have been asking for free energy, I have been given to you and it's in your hand and you don't see it. It's your fault not mine. This is the greed of man, has

blinded the man. **(1:03)** The first wires you coated and you put in the bottles in the lab is your energy source, and you never saw it. When I sat with the Japanese I said: you see the wires btw the switch and the light? Just look how many little wires are in btw it, you cut these in a space and connect them in a right way, you can light the whole house with one wire which is lighting only one light, because we have to change our lighting system from AC to DC, LED lights are so in hand. Armen will set you up a system in no time. This is what is gonna come up. You have your first free energy system; what you call free is not free, its just understanding the structure of the black material, the minute you coated those wires in caustic and let it dry, and that is the reason, I tell you when you take the wire out of the caustic the first time, and put the voltmeter on it, is to re-align the flow, that is why you do it. When you make that energy system to absorb the energy out of them, they all go in the same direction. This is one of the problems we saw in the lab with one of the settings. The flow reverses out of nowhere, because the wire has been put in the wrong way. When you set up your wires to connect with each other to make your energy system to tap into a battery, you can put a big rechargeable battery if you want, always remember which way you put your voltmeter when you were setting it up, because if you used one back to front then you find problems sometimes, in most of the cases you don't, but in some cases you do. So you connect your wires to put in a rechargeable battery, but the advantage of this is that this material stays black all the time, day and night. It absorbs all the energy day and night. You understand the structure which I explained to you in the past workshops, you put your cell near the ground. You absorb all the MaGrav field of the Erath which is coming up the Earth, more at night. So you've been begging and insulting us, asking where is our free energy and bla bla. You had in your pocket from the first time when you put your first wire in caustic, but you are blind to see it. The wire that they want to dump in Africa, that wire connection from the plug to the end is such an energy resource for you that you can sell it to the West, sending back the material. **(1:07)** Every 10 cm of Nano wire have the same capability as a 2 meter, because the balance of the layers btw the Nano Layers will not allow anymore changes and absorption. The longer you are the less you absorb, but in another hand you absorb the same as the totality. What we have found is that the maximum, 10 to 15 cm of wire is the maximum that you need. You make sure in what end you reach the Cu layer, that there is no Nano layers left to replicate the production of layers of Nano Layers, connect one Cu to one black, put them in series, put them in parallel. You do 10000 of them, 0.5 Volts or 0.02 microampere. Now, how many amps you want and how much volts you want. You have your free energy. Now, as I keep on saying we are going to Space Technology. Development of the reactors is all part of the higher development in lift and motion. Anywhere in this planet, if you understand this should be without light or energy. Go around your house, see how much wires are hanging around, spend your free time doing units and give to your neighbors, not yourself first. Then you stop blaming the Foundation. **(1:10)** I don't do magic. Now you have been asking for the liquid of the Keshe Foundation, the liquid of Keshe Foundation is secret to energy and food, I showed you how to make food out of the same piece of wire very soon. I give you things but I don't sit down to make things for myself. You think I can't make 200 LED lights and light the whole house? You've been with me everywhere, have you seen such a thing? People who talk about things that are always negative, I think they have to go and lie down or sit down till they understand what they are doing. The time of negativity is

finished, now you can contribute positive into what you have, if you want energy there is enough for you. You find a re-chargeable battery in your house; make a set up, a 9 volts battery, what can you light with a 9 volts battery. Then teach yourself the next step, and the next step, and do it for your neighbors. The research for man to understand the totality will take 1000 and 1000 of years if you go that way. The way we are doing we have (??) by nothing. Man use to give his knowledge in talk stories, from grandfather to grandchild, and that was it, when one died there was no one left. We learnt to add the skin of animals and we learnt to print. Now we do the same thing passing the knowledge through internet. There is no need for papers to write, sometimes you do, but now you record a voice. **(1:13)** Now we teach in a very simple way, you have to do the research. I have opened the doors of the new way to look at the life of this Planet, even though this time is very short. Temporally keep the ones who are short mind and the narrow mind busy, but in long term our plan is totally different. The whole structure is, you've been asking for free energy, have you been coating those wires in your lab? Find yourself a battery, that you can store a micro ampere into a small battery and connect to LED light, then you have the light, this is what we did in Holland in the lab. You've been crying for free energy and telling that the government has done you wrong, majority of you should have light in your house by the end of the week. If you knew what you are doing, or you are just sitting here waiting for a bigger thing. It needs time and it needs a lot of work. People who want to be given everything, those are the people who are incompetent so they have to stay in that position. The people who understand should develop and as I said before, you are very fast to make, make one for your neighbor. I made the systems I gave to the Italians, Italians are making the first prototype and the commercial type, the Japanese needed, where are the Americans...they have done nothing but jut causing problems to block the technology. Where are the British, Africans and South Americans? Keshe says that talked with some South Americans. He met the ambassador of some country and they agree to give this technology for the scientific community first. Governments of the higher level understand what we are doing, but they don't know how to handle the situation. **(1:17)** For six months the KS never measured the current in the wires, and they found out now that they measured that the current was there. I showed the torch to the KS last week to see what is made of, is one wire connected to another into a storage battery. You can produce 1kw 10kw, if you have the patience to connect every single piece together, but there is something very interesting, one of the scientists in Belgium, did a very interesting experiment, he put the wire in the water and showed its capacitance. If you can put these wires in a pure water with no minerals, you can the absorption of the energy by your wires. So if we can create a vacuum environment and filled with pure distilled water you can increase your absorption much higher, because you can water will slow down, and then enough fields that Nano Layers can absorb. There is a lot of effort to close the KF power cell in Belgium. **(1:20)** The KS here work in their own time, they come and they don't want to leave, they put things together and with their limit knowledge and I have watched them slowly, because you have to teach them slowly to them to understand and put the things in front of them, they devote their life and time to serve. They share and teach and language is no barrier. **(1:21)** Sandor asks about the methods to create Nano Materials and can we control the process to be sure that we created Graphene within the Nano Coating. Keshe: Any material can be made into Nano Layer, you don't need Graphene. The flow is plasmatic not electronic, by electrons.

When I speak about sp², sp³ is about conductivity. Sp³ is a diamond structure, is a resistance, sp² is conductivity. Even CuO₂ have sp³. There is a small problem in my use of language because I speak in both way sometimes, scientific and common language, when I speak about sp³ we speak about diamond structure which is a resistivity, when we talk about sp² its about conductivity. The same Carbon, the same coating, if you put 2 wires together you find out that the current flow from one Cu wire will never go to the other. I use to show this before, I use to put a battery in the coated wires together and put a Christmas tree light at the end of it, and the Christmas tree use to flash. That is sp³ combination of CuO₂ molecule sp³; but the current which flows through the layer use the speed to formation which is the conductivity. The same C has both properties, depending where you look and the connection within it. **(1:25)** The difference btw sp² and sp³ conductivity and resistivity, it is exactly like a road, if you cross the road you have to stop, because there is a lot of cars going. You can not drive a car across the road. That is the sp³. Sp² is the road itself which the cars flow down it, is the same road. It is the same thing with the structure of the molecule, just because it is non-conductive and its speed structure when you go across it and put the wires together, that is sp³; and sp² is a super conductive when you go along the length of the wire. There are zero losses in the sp² Nano layer conductivity. This is been the dream of the world of science to find super conductive at room temperature and pressure, and this is in your hand and you don't see it. If you put these wires in a very high temperature (??) and you empty the Cu from the inside you have the best Nano tube in your life. These tubes in the future will be used for healing and connecting Neural Systems, because they behave exactly the same. But those Nano Layers which you make will be from AA Nano layers, which you can replace and position in the nerve system when it is cut. This is what we are going to tech, later in the medicine, part of the medical application; because they are the exact structure. Down through the layer you have a super-conductivity and in the crosser layer you have resistivity, that is why you can not weld or connect two Nano layers together and become conductive. If this is a bit far for you to understand, get 2 wires which you already coated, twist them together as much as you like, as many time as you like, and then connect at one end, you have to rub off the coating of the Cu, connect one end to a battery and connect the other end to the light, and then you see that the light will come up; which means, in the normal conditions in the wires, in the cable if they touch like this the battery or the lamp should blow off, but nothing will happen, you will see the light coming on, but there is one thing you might understand that these Nano layers are Gaps and holes, and the batteries which you buy as a DC battery 1 volt, these batteries create an AC current too. All the batteries you use have an AC current flow as well, that AC current flow when it goes through the wires you see sparks, because they create a variation in the potential, so you might see heating of your wire, that heating is not due to DC flow, is due to AC flow; but as you are absorbing just Plasma and your are not connecting you only produces DC. It is very easy to understand this. If you make wires for your systems you can make like a battery going up and down in the same environment to make 1 volt or 1,5 volts battery. **(1:30)** Keshe talk about the reactors and cups for the use in Health applications. The reactors are getting smaller and smaller. The size of the reactor is irrelevant, the field they can produce that is important. **(1:32)** Question about the vacuum of the reactors. Keshe: We are doing now in the close boxes, in the closed box we creating a Magnetic flow through the Plasma. If you can create different Gans

and put them in rotation, you can create even gas Plasma in the center. The rotation of these Magnetic fields and different Gans will give the dynamic rotation of your Plasma inside your core without any motors. This is how its done in the Universe. Now if you can put even the same Gans in different cores and different rotations, and you can judge the distant of the fields they produce then you can start to create a dynamic Plasma or rotation of Plasma without any motors inside there. We were testing why the blue half circle reactor create so much field on the top and not at the bottom as we were expecting. We started from next to the core and we came out, up to a certain distance, something like 10cm the fields are going out of the reactor, and immediately in a micro-layer they go reverse. It is a very simple gap; up to that 10cm the field flow is outward, and at the center boundary, which is the atmosphere of the reactor, it becomes receiver. That boundary where the micro-layer is, btw the two, is a boundary of the atmosphere; this is where the MaGrav of the systems find their balance. This is the egg, the shell with the yolk and the white inside of it. This is what we call atmosphere. Inside that line to the center of the reactor is the atmosphere of the reactor. This shows how the Planet work. Due to their MaGrav field they absorb field from the outside and vice-versa, not all the systems got the MaGrav field absorb, but they radiate, because there are energy coming from the center. These are more powerful, these are the stars. The continuous flow forces their field outward. **(1:36)** So we have seeing the first formation of Plasma round our reactor as a MaGrav cell weeks ago. We put the detector near to the skin of the reactor, and we moved back very slowly, at that point it reverses, and it is the same all over the reactor with a little variation. So that point is the boundary of the atmosphere, that is the shell of the MaGrav field. **(1:37)** Question: If you have the Cu and use the salt water and create the CuO₂ in the water, don't have to cover your Nano coat wires, it will seal it... Keshe: Hold your question and let us answer everything in detail. The sealing is not a hole which gets covered. The sealing is the sealing on the level of the MaGrav field which can be absorbed by the nano layer. It blocks the field to reach. Here you have to move away from that position of matter into the field. It's not a hole that you fill in, is you block the fields to absorb, because the Gans itself absorbs what is own its way to the layer. Questioner says that he was trying experiments with white Gans with the Zn onto the Cu coated, in terms of CO₂ Gans, would be a different MaGrav field then what the Cu would be, so there would be spectrum difference, so wouldn't be sealed for saying, right? Keshe: No, you just blocked certain MaGrav boundaries to reach. CO₂ does not absorb all the fields which are in that environment, they can only matches on, or nearest to it. It would be very interesting if you could see the layer gap btw the CO₂ and the Nano layer. Questioner says that he put in 5 layers of a foil of Cu and CO₂ Gans. Keshe: If you can find a microscope, observe the gap btw the Nano Layer and the CO₂, it never touch., the only point which you would find the connection btw the Nano Layer and the Gans is where you have minerals, like Ca, which make the connection btw the 2 layers. In a way the Nano Layer is the Sun and the CO₂ is the Earth, and where their MaGrav field balances, because both have Plasma MaGrav field, that gap is the strength btw the two, and whatever can cross that gap would be absorbed by the Nano Layer, but now you limited it, you put a filter on it. With CO₂ you created a filter. **(1:41)** Your Nano Layer is super-conductive and your CO₂ is a super-conductive as well, you make a sandwich, it is like the battery. I have done this test with the Coke bottle. **(1:42)** When I was in the nuclear center in Belgium the doctor tried to prove that the energy you see is fantasy,

fake, but he never understood a Nano Layer. Whenever we saw energy through the nano materials he said that it was all false. **(1:45)** Man ignorance has not change from the time when they killed the first man when he said that the Earth is not the center of the Universe, now this became bigger; bigger egos and bigger tools to accuse. We showed the Nano Materials and how the Universe works and the structure of work of this, that you produce energy have been the cause of us to be accused of using nuclear materials and the KF are terrorist organization. **(1:47)** Lucian says that the storytelling style of Mr. Keshe is creating a lot of confusion and asks about the polarity that changes and how you do the orientation. Keshe: The orientation is done; it has to be when it is wet. When the surface is wet you usually can fix the orientation. I have a 60 cm box, I put crossed wires on this, like a dry clothes, and a mash plate on the floor. What I do is I hang all my wires on these wires, like drying clothes, and when they are wet, usually you can even put your Voltmeter in the atmosphere of the container and you see a charge flow. So you decide which way you want to go. I hold one end of the Voltmeter in one and I go to the others one by one, I don't keep on moving it, so I try to create one flow direction. I have a problem, because my wire goes outside and then come back again into the container, so my flow is reverse, so I do in the reverse way. Every time you do this you see the plus and minus changing. We even see the changes on plus and minus in our dynamic reactors. When it is wet I can achieve more direction of flow. **(1:51)** Lucian asks how he do this. Keshe: In the box I keep one position, I don't go with the two ends of the Voltmeter to the wires. I keep one wire as one reference and with the other one I go along the line, whatever is on the way. You find out that if you touch the ends of your wires while they are hanging you create half ways different flows in the wire. Check this, because sometimes you see it. You are dictating the current flow in your wires, this is how your nervous systems works. **(1:53)** Lucian interrupts and says that we have to understand the Physicality, and ask if the bottom where is the liquid is never touched. Keshe: Yes, never touched. You've got to realize another point, go back further down the line. The coating of these Cu wires is the same as your nervous system. The Nervous System does not send information only to the finger to open up, but it receives if it is hot to close. So these wires work accordingly to what the environmental energy is to. It is a 2 way communication; the flow will not be just one way. This is superconductive and the potential in MaGrav field dictates the direction of the flow. You can make a battery and you can make wires connected to each other and you say it doesn't work, go back through the wires you connected and find out where the switch is. Somewhere you have twisted too many or you have changed the environment that is slightly different, the flow changes. These are very much like a vacuum system but the MaGrav field flow potential difference should create the flow. You are dealing with two characters which are not tangible. It is not an electron flow, it is a Plasmatic flow. The same wire can change polarity, depends which end the potential of MaGrav field is higher. **(1:55)** Lucian asks how one could test the orientation of the Plasmatic flow. Keshe: The way I've done it. I have a core, I have a torch which you hardly can see any light in it, because one of the wires inside is done at the wrong way, I didn't threw away. The way I do it, I keep track how I lay everything; which end I cut from the beginning, which way I hanged, etc. Over years I learned this. **(1:57)** Lucian explains what he do. Keshe: There is something with these cheap Voltmeters, sometimes you find that when you put in DC in the Voltmeter the AC flow (??) to be very effective or whatever he does internally and the meter

become useless, I don't understand why. Lucian interrupts and talk about a solution for this. **(1:59)** What you see positive and negative in your Voltmeter we see in the Plasma reactors the same. Plasma reactors sometimes absorbs energy and sometimes they become supplier of Plasma, and because we have a power supply, the Voltage gets back into the power supply and the power supply gets damage. This reverse flow does not happen just in Nano Coating, it happens in dynamic Plasmas too. One of the meters in the lab is already damage because of this. Change of polarity in the Nano layers and the Plasma is a common thing. **(2:03)** The change of polarity happens because you are dealing now with a dynamic situation. You have created a miniature of Earth, and each one has to find, North and South of the neighborhood to be where it is. The change of polarity of the Earth is not entirely on its own, is affected by other planets in the environment of the Solar System. Rick says that he was able to change the polarity moving his hand closer and further away from the container. Keshe: When you put your Nano Materials in the box and you close the box when they are drying go with the same meter without touching any material, start measure the environment of the Plasma inside your core. Go btw the nano layers which are hanging, you will learn a lot. In an open environment you have those changes, but in Nano Layers is much higher. **(2:05)** A man talk about an experiment and Mr. Keshe says to him post the draw of his experiment. **(2:07)** Rick asks if C or Graphene is not really used or necessary in the current technology for the Nano coating. Keshe: We don't have a Graphene, we use Cu Naona coated. Rick asks if teher is any final material that could be on top of the Nano layers to protect or isolate them. Keshe: No. Rick asks for the orange oil that they put in Nano materials. Keshe: The oil is for penetration in the matter. They use in the washing powder. Rick ask about what Dirk did to protect the Nano layers. Keshe do not know about this... If you can stop the absorption of fields on it, this is by the presence of physical matter I presume. Rick talks about putting one atmic layer of C to prevent the oxidation. Keshe: Because you create a MaGrav field which literally sits next to the atomic structure which itself is a MaGrav, so it do not give space for the O get in. Rick ask about the risk for O enter in the reactors. Keshe: This is what we are doing in the ceramic reactors now, we have a Nano Layer coated, we have put water and Gans in it, so we have everything matter and Plasma all in one confinement. **(2:11)** The interesting point that we have seen in the Nano Layers is that they can find the Plasma. What looks to be more prevalent for production of these Plasmas through gases; it will be mainly center pin systems coating or covering the whole lot. In the systems we usually set we use pieces of Cu from different batteries, in the new systems with the half circles Armen has brought the sheets with him and we have one sheet, so we don't have different gaps and layers in btw glued pieces, so we see more effective system in the coming weeks. But would this give us continuous flow, we don't know. **(2:13)** Actually Nano layers are the protective layers, they are creating their own atmosphere. It is like the Earth atmosphere they don't let anything to get close. You create atmosphere in that layer, that is why they look like protected, but they are actually a MaGrav shield sitting next to each other. Question: If the Nano diamond coated is a Nano Layer itself it would not allow the metal in the surface to be able to be extracted to be able to make that oxidization... Keshe: I will tell you a very interesting point. If you put the Nano Layer under a microscope and at the interface of another layer or its field and its environment you will see a very nice bright white light. Even down the Nano material look black to us. If you have these aurea

detectors you would see a line around your wire, a halo. You have the day light along your wire. **(2:17)** Question: what kind of Magnification are you talking about? Keshe: You've got a machine you tell us. We are going to release this aura very soon. Questioner says that he can not see the light in the pictures. Keshe: Go deep enough and you will see, you've got to expand, it is very fine. Rick talk about ways to see the aura. Keshe: it is very fine line. **(2:19)** Lucian ask about if the structure when it is in Gans still is in molecular structure, like C atom with two O, maybe the distance btw C and O are lower to balance the fields... there are not anymore individuals atoms, which I don't think this is happening because it still absorbing the CO2... Keshe: No, this is exactly what is happening. The same thing I explained about the reactor of John, that at a certain point you see positive to negative; lets go inside the core, to the point of balance. Every position from the point of balance where it change position to the negative to the point of its environment has a different value, 9 cm, 8 cm, 7 cm... 9 cm is the CO2, 8 cm will be lets say C only, or O. Within the same Plasma according to its MaGrav field, the same Plasma holds the property of all the Elements, depends on what the environment has accepted to be. You don't get different Plasmas of H two of O sitting next to each other, and then they become together and then they rotate. This is the structure that you are used to in the present Physics and Chemistry, this all interact as one and go internally according to what it is and what field has been absorbed. You don't cross the energy of an O across the Stomach and the energy of a C. The energy of the totality crosses and then becomes O and CO2 or whatever or Ca in your Lymph as a package. Lucian says that is confusing; asks if the protons are mixing. Keshe: The Plasma. You change to Plasma condition, not individual entity condition. Lucian says that we are calling protons and the neutrons if they stay there or are they are dissolving. Keshe: It is all one, MaGrav field energy of them, becomes one. I think it is in the book #3, I explain this in a simple way. The neutron in a MaGrav field, and the size of a neutron in this Universe is not necessarily the same in other Universes because of the conditions that are created in and under. The Plasma of a neutron splits into the Plasma of electron and a proton. It is the same with your CO2, the field inside a neutron is enough to create an electron and a proton, but is one entity. In the Gans state CO2 becomes the same, if you splits into the matter then you get your separate C and O, but when it is in the Plasma state it is one. **(2:25)** Lucian says that they preserve the same mass. Keshe: Exactly. That is why we see the Ganses or the material in a matter (??). If you understand this point then you understand how you can tune to different planets and different positions in the Universe and get attracted or rejected from. Lucian asks about the medical part, how come one through a technical device split exact what he wants? Keshe: You create in the environment a balance for He or C. In the Lungs this is done automatically. The structure of the Lungs allows that release of He from (???). In time you will learn. **(2:28)** The splitting into sets, like a C or O or H, can be arranged by outside parameters. You can dictate what you want to absorb according to the mass you create, this is the same with your flight systems, you create MaGrav field or the mass of the position you want to go to. It is like the Ocean, the water is the same water but there is a specific you can go, the GPS point, you can find according to the mass in that point. Nobody in the universe is the same, two similar points, unfortunately or fortunately. Like the atom of a C, how this becomes a Gans. You are used to position of electrons, connection of molecules. Just go back to the split of the Neutron, it will be easier to understand then gradually try to

understand the next step. A Neutron is not 2 pieces inside and one is proton and the other is electron, it is the same entity and always split to the same 2 packages, you always gets an electron and a proton. The CO₂ is a molecular structure; you have the same in the atomic structure. We are using Tritium as a Gans state because it will be fantastic for production of material, and there is enough Tritium in the waters of Japan to give us that opportunity to test this. **(2:30)** Lucian asks if one can calculate the MaGrav field correspondent to a specific mass can design such device? Keshe: Yes. You have to do it when you are traveling in the Space, if you want to go to the moon you don't want to go somewhere else. Lucian says that he was speaking about the O. Keshe: It is the same. There is no difference; it is if you want to work with milligram or kilogram. In the lab we have 2 detectors, one is for very low and the other for very high, but at the end is the same field measurement that we are looking for, one is used for metals and the other for tissues and Plasmas. **(2:32)** This is the problem, you don't have chickens and horses, they are all chickens, but they have a small chicken and the big chicken. The Plasma of the Gans in different materials there is no difference btw that and the position of the Solar System. This is the restriction you have put in your own intelligence, open your minds and you will see it. You have all the knowledge in your hand to do anything at the moment and this puzzles me. **(2:34)** A man did test with Iphones, trying to take picture of the aura, but it is not so good. Keshe says that it needs high quality equipment to do these things. Keshe talk about the equipments to see these interactions. **(2:35)** Keshe talk about the Kids Knowledge Seekers, teach children about Plasma. **(2:39)** Question about what conditions on Earth in the past allowed to dinosaurs and other lives to grow. Keshe: The MaGrav field strength was weaker, in respect to the position in the Galaxy. We are on the Magnetic wings of this Galaxy, we are in a far further back position, so there was more room, even the atmosphere of the Earth being the same had a bigger and more freer envelope to float in. If you want to see practically you start to look at the structure of the Gans in your system. You can pressurize the Gans and see the Gans in different dimensions. It is not a vacuum condition, it is a MaGrav field condition. Now that we get more and more to the center of the Galaxy, through Gravitational pull of the Galaxy to the center, the environment is less compact, the atmosphere of the Earth in hundred millions years ago was different and the size that it is today. Some reminiscence of the old times with big animals still stays, mainly in animals within the water which are more immune to the outside atmospheric condition, we see whales still carrying heavy masses, and the elephants are getting smaller. As we move to the center we get constrain by the other fields. The same process is happening to the planet Earth, we are getting pulled to the center of the Sun, to the center of the SS which have a heavier mass. This allows different materials to be created in different points of the Universe. **(2:43)** <audio break>... When you change into matter you change from Gravity to inertia, and that is a big difference. MaGrav is an attribute of a Plasma condition. When you change to the matter state you attain inertia, that is exactly the same thing but is within the structure of that shell. You don't add to the mass of totality. **(2:44)** Question about if we still could be able to see densities of the rings in the trees like the Earth layers. Keshe: That is possible. If you look for the Geology structure of the planet, will show you a lot in where we've been and what we went through in the SS, and partially what the Galaxy have been given to us in our structure. Part of the absorption of the materials in our planet comes from the inner core, is what he absorbed from the Space, from the environment of the SS during

our travel from the outer boundaries to the central core. So we can see in a way what to expect in the surface of Jupiter, because it absorbs some material which are converted into matter. This is something never looked by the Geologists, because they considered that we always have been in this position. In this Planet we used to be in the position of Pluto, that is where we started, and as we get dragged into the center, we can absorb more, we become a Jupiter and then Saturn and the Earth and Mars, etc. Question about since everything is in the same scale, the planets could not interact with each other and change positions? Keshe: It will happen. It changes the position. You find out that some planets which are ahead of us they use to be behind us and ahead of us. Not just by collision, but by the MaGrav field forces outside the SS. So, let's say, Earth could be in the place of Jupiter and its interaction has taken the position of Mars, or Venus position. You create the condition and one finds the balance. I've showed this with the magnets in the table. Question: You are dealing basically in these cases with huge reactors that have a lot of potential, Plasmatic energy... So they could have a discharge of energy btw two planets or other planets, is this possible too? Keshe: It happens all the time. Earth and Jupiter are directly connected in respect to their position in their field strength. Jupiter would not be in that position if Jupiter was not in the position that it is today. **(2:48)** We have now gone to the 2D motion of the reactors, The reactors up to now were fixed, because of the plates or the legs, the new Gas reactors are on the roller bases, rolling legs, so the field strength of the other reactors when they run can change their position. In the coming months we will hang these, so we literally can use the center core as the Sun and start to understand by changing gases, now we see changes in the numbers in the meter, very soon we will start to see changes on the position of the reactors. Keshe talk about the reactors and how very soon they can replicate with them the conditions of the Earth. **(2:51)** Question about sound wave and structure of the Plasma and if these sounds from around would not interact with the structure of the Plasma inside. Keshe: Of course. What is the sound? It is a Magnetic field. When you add a sound you bring homogenous condition in it, you bring harmony, so the reactors and the Plasmas and the Gans will all set within the new environment. Question: And that sound can structure the Plasma...? Keshe: Of course. <audio break> **(2:54)** Question about putting a man with heart condition (??) with a health man if that should alleviate the condition. Keshe: I don't know, it is like the old man who marry very young girls, why does it kills them. You know that. Look at the totality. Lucian says that he is asking because people who have valves that sound like a clock so if you put a little mechanical device could improve the brain operation and the situation of the patient. Keshe: I will not make a comment on this, I know exactly what are you talking about because I lost mother through the same problem. The heart valves have a certain life spam and when the time or the life spam expire the heart beat changes, and change the dimensions and the interactions within the body and then sometimes you have it because of valve failure and in most of the time, some other cases due to change of the gravity in the circulation of the blood and the heart beat, the MaGrav field which create leads to cancer, usually you find cancer of stomach or liver connected to it. These valves have a life spam of so many years, being mechanical, or pig valve, etc. I've been looking for the valves regenerate themselves, it is possible but at the moment creating that create other conditions, but yes we can allow even the valves to repair themselves. **(2:57)** Hopefully with the Keshe Foundation in Malta we will make different systems. One of the problems with the change of the valves

is the two arteries which feed the brain through the neck, and this is something the doctors don't look at. So what happens, your heart is bumping blood to your Brain and you have a restriction in those two arteries. When these gets restricted the doctors make the copy of the size of your neck take the wane out and literally scrap with a spoon to get this Ca and all the residues which blocks. With the machine they find the baby in the womb of the mother with the ultra-sound, they go to your neck and they measure the restriction in this wane, but the biggest problem that the doctors never understood, is that the minute you see the obstruction find a way to clean it because as this grows put pressure in the heart. So this put pressure on the valves and then creates a second stage valve problem. A lot of heart valves failures and replacements specially on the valves which are the feeding line of the blood to the Brain comes from this restriction. If the doctors understand this, you clean in the minute you find out this, you find a way to clean it. This restriction creates the valve failure and then you need to change the valves, literally when you put the heart valve you put a life limit for the person, because these are mechanical systems and they can fail and if they do like a pig valve replacement has 10 years life spam. The minute you see a restriction of the artery to the Brain please does something with it. We need to release the blockage slowly, because if you release all in one goal it can cause damage in the Brain. We've done this and the knowledge is available for the medical people to use it. The other problem with this operation is that when they do this cleaning of the valve they put a clip, so if its left a residual before they put the clip, when they open, and when they solder the artery, the wane and open the clips for the flow to the Brain, a minute amount of material which is left in the vessel goes to the Brain and can leads to some sort of paralysis or other Brain damage. **(3:03)** Question about the frequency from Jupiter that has changed in the last 30 years, what could explain the change in the frequency of a Planet? Keshe: Frequency is a matter, not a Plasma, is the matter which is on it, detected or produces it or in it's core. The material changes. The changes in the material I have seen in the reactors. It is very much like the Lymph, the Lymph does the same and creates the same fields, but when it gets to the point it changes to behavior of Ca or Na; becomes part of the AA as a molecule. The planets in their rotation and the materials content inside them can change the matter, so in one sequence if you have lets say Uranium, through the interaction with the inner core and the conditions creates only Plasma, increases, because of that activities everything changes to Plutonium. So now you have a different frequency in the matter level. Change of matter in the center of the core in a very normal procedure, is the same of what happens in the body of the man. The frequency changes because they have to observe what is been and what condition and how it has changed, to what material it has changed, through that you can say in what the center core has changed into. Each material has its own frequency at the matter level, so you can say the change of the condition internally. Question if this change of frequency can happen not because of something within the planet but because of the interaction with the outer interactions. Keshe: Yes, more or less what they have created what they allow to do. We see now in the confined Space that we have created in the lab, we change gases in one core and we see the changes in outside the box, in the detector. But frequency has to do with the matter level and what they allow, but is mainly the material inside that changes quite a lot. **(3:07)** There is something very interesting that I was teaching to some Spiritual people. They questioned what happens with the Souls of this planet if happens a catastrophe, they all disappear in one goal, the 7 billion

of us? As the Man has a Soul, so does the Solar System, so does the Planet; we add to that Soul, so the Soul of the Man adds to the Soul of the Solar System, and the Soul of the Solar System adds to the Soul of the Galaxy. Soul is not exclusively and bound to one condition and one direction. So when the situation happens you are like a molecule atom in the structure of a molecule of an AA in the structure of the Human Body. The Soul of the man is connected to all of it through its fields. As a piece we are one Soul, but as a total Soul we make the Soul of this Planet, and this is the way we reach you, we don't reach you through individuals; we reach through the Soul of the Planet. Then this Planet on its structure creates a Soul for the Solar System, it's the same thing, independent of entity Physicality. The Gap btw the star systems and the Galaxy systems is the place of the Souls. I will show the Soul of one of the reactors very soon in the lab. Once you create an entity and I tell you pray for it, it has a Soul. Because the entity makes the decision itself to share its fields with the others to stay in balance with its environment, so is a decision maker; it has a life. There is a question that is raised, what is gonna happen to humanity when we reach the ultimate point of this Planet. What is going to happen with all these beings if we whatever. We have started teaching the Man to find his own salvage and his way out of this Planet before the ultimate point; if we manage to reach that point, then we become part of the structure of the Universe, the way with the others. If we do not reach and we see the blocks, the way that have been set up by the governments and other people to stop the process that they want to be with the materialistic level that they are, as a lot of you speaks about UFO's and flying sources and we are becoming members of this Space club. What have we done as Human Beings? I always say, look at the parallel. When the animals became extinct or about they become to be (??) extinct we go to the jungles, we go to their environments and we pick them and put them in the zoos, at least we have one, or we keep the DNA. So the zoos have taken the place of the jungles where we can keep, the environments which we have destroyed. If we do not manage as a Human Race to be out together in one form and achieve it very rapidly there are those who keep zoos, or keep environments to save creatures of God, that one day they can find an environment for it. In that case, all these that you call UFO, each one of us as we can not live in their environment, each human being, most probably most part of the World Leaders will be the first one that they will keep, because they keep the top dog (the best line as you say), will become prisoners in these cages, in the zoos of the Universe, till they find a place where he can live. This is not a threat, this is a reality in the Universe. As we keep zoos, that this animal died, so many pandas left, now we keep them within the zoos, or white tigers to preserve them and send them to another zoo, in the Universe there are zoos which the creatures are kept till they find a place for them. So my talk goes directly to the World/Religious leaders, you will be the first ones in these zoos. If the humanity doesn't come together in one goal, in a unified way to develop and allow Man to stand in the integrity of the Human Race to people who are there waiting for this event to happen to save us, they are not here to damage. The World Leaders will become the monkeys in the cage of the Universal Zoo. I hear people say that the Pope is about to release some celestial thing in whatever Space, the knowledge is freely know, as much as there are visitors, there are the people who save the Human Race but then the man has to be kept in an environment of themselves. You don't put an elephant where you have the penguins with the water. In the zoo you create environments where the penguin can live on its own and the elephant can live on its own, and each one gets fed

accordingly to its environment, and nobody goes to the jungle of Africa and bring one left cripple sick elephant, they take the best and they bring it, so my message goes very clearly, the World Leaders will be the first animals in the Universal Zoo. If as Humanity we don't come together and we don't achieve this point very rapidly the World Leaders will be the first animals in the Universal Zoo, and they will wish that they could have done something when they were there in the position of power for the rest of the Humanity. This is not a fairy tale, I open the files for you to see the Zoos very soon. This is why we started to build the cages, that we can create the environments for other things to be seen within this cage within the lab of the Institute. We don't tell you all in one goal, as we showed you the wire, you are still looking for free energy when you have the key in your hand you already been there and you will be there. World peace through Governments and Religions has to be achieved in one goal, and there is no use punishments, those who are doing the killing now they are going with the planet, because that is the point to be. Treating children in the name of Religion or imprisoning people, the people who imprison 1 million people in one corner and they (??) very soon those people will stay with the rest of (??) this planet. Decision has been made and we will carry out. Question: What about those of us who strive for understanding of the Universal understanding? Keshe: We will choose by the Soul, we will not choose by the color or the Physicality. We are aware of the Soul and what is inside you. **(3:17)** If you are born with no legs and no arms, that is how he lives but he has a Soul, and the whole body works for that Soul. P is irrelevant. The World leaders who incite wars to get more money to be more powerful will make the best animals in the Universe. We don't keep the savages with the tamed animals. We are making the book open the book very slowly, but very clearly. Keshe says that the position of the questioner is saved, and let me explain to you why. When you go to a country you always go for the leader, because this is the symbol of the nation, when the time comes is the same with the World Leaders, they will make the best examples of the Universal Zoo, not preservation, but to show how bad it can be. A lot of presidents will be interested to be in the Universal zoo, because they can not mix, the environmental condition is not there to be done. These Illuminati, whatever you call them, the ones who want to control everything, your savage is in bringing the humanity with your power together that you will not be in the cage alone, but you will be in the condition, in the community in an environment where you are with the others. They put a lot of people in confinement, they become the prisoners of their own creation. Integration of the Religions in this Planet is needed as fast as possible not because we have no answer to it, it is because this Religious Leaders will become the monkeys in the Universal Zoos. **(3:20)** Question: What about those of us who have gained understanding and create our own lift systems? Keshe: Those who managed to get in that position... You are know through your Soul, so you become part of the structure because you are the same. If you put all the World Leaders into the machine and get them into the Space they will not go very far, because they will be eliminated by the knowledge that they know what they are caring these things for. So the craft which are carrying guns and whatever, they are aware and they will be eliminated. The habits of the man has to change from killing, because we don't see the body we see the Soul of the Man; and if they are hoping that will be a craft that will take them out you will go not very far from this Planet, because your intentions are know, so why should they allow you to create more mayhem? When they can change you directly in the position you are.

This is not the only situation, it has happened before and will happen again. There are systematic works for these kind of things. We don't let a few animals change the peaceful position of the Universe. When you take over a country you take the leader. Mr. Keshe says that his call goes to the Religious Leaders, and he address totality even with the world leaders. **(3:25)** Question: How can we stop the killing? Keshe: Pray for the Soul of the people that by elevating their Souls they understand their mistakes. That is all you can do, why does a child has been born yesterday in Palestine orphan? It is a life which will grow up most probably by an abusive mother in law, or somebody else to give her a chance to live, and forever she got to know "what if I had my mother?" and the hate of the Israeli who killed her mother, so that hate carries on, why? That is very strange, we breathe the same thing as we do. If you look at the behavior of the tribe on Israel, they are not doing anything less then what the Moses did, is the behavior which is carried on to be seen as the right. You read about the life of Moses, he destroyed every man in the tribal who supported him and brought him up. So what the Jews are doing with each other? They are killing the ones who gave them life and supported them for thousand of years; just because somebody is making arms and making others enemies, why? Why does a government like British spend so much millions of dollars to open the BBC world news? In Great Britain Keshe said to his father that these BBC world news were the new tools of war, because now they use the media, they don't need to shoot a bullet, they create conditions, the words of war and put two cameras and then do their revolutions and all the killings, and in less then 20 years I proved to be right. In the past when they use to take slaves they use to attack them, and captured them and slave them to America, now they use the media. **(3:28)** We take the Love of God from your lot and then you know what it means to be paid for. If you do the punishment what happen? As Mohamed says, Bless be His name. We took the Love of God from Israel from what they did to Christ, and we saw that they desperate like nothing around the world, no home; and with the Love of what is given back to them we have seen what they have done, they didn't learn so there is no need to repeat the same. The same things go with the followers of Mohamed, Bless be His name. They did wrong and they receive their punishments from the followers, now that has be (??) that is called the equal. You don't have time because you have a human body, you have all the time in the Universe. I hope the World leaders listened to this program, and we know they do, so they can change their mood and their condition. **(3:30)** John assume and say that they are still working with the reactors trying to set up the systems. **(3:34)** Keshe says that Armen have the heart to make the step further. **(3:36)** Question about the homework. Keshe: Lets see who is going to have more powerful systems before the Japanese do. Don't forget when you coat your wires you have to make sure that the end which you use has to be fully rubbed of any coating, it is very hard, because these coatings if they are not properly rubbed they can redevelop, and then you find out you lose your connection. Spend a little more time to make sure you do a job and then you fin out that you can add as many LED lights as you like to your system. Make sure you don't put your wires on top of each other or very next to each other, because it can use the AC of the system, or create a AC condition, that discharges your battery. If you can make a system with seven LED you have enough light. If you have a Cu wire in the house, about 2 meters, it should give you a good lighting. Sandor says that he understood that is a problem to make a good connection once the Cu is coated and he talk about the experiment that he did. Keshe: If you look at your Coke

bottles the Nano grows all the way out, in time it grows. It is like a skin, it grows both, vertically and diagonally, so the best way is to destroy the first layer which leads to the creation, and if the layer creates again you have to rub out. There is a way to stop growing the layers on it, I tried but sometimes it works, the end layers that you don't want to coat, you deep them into acid from the battery from the car. Sometimes it works but sometimes can damage the layers further down. **(3:41)** In the spherical globe we've done coated with liquid and without the liquid, and we see better results on the liquid side in the night time, but it depends where you are and what the conditions are. Keshe talk about the night and day panel with the liquid, and says that this technology is now in the hands of big Corporations. **(3:44)** If you want to make a layer to attach to your Nano Layer maybe deepen in Ca and then make a coating on this, because this is what happens at the bone of man as well.
