

## 220th Knowledge Seekers Workshop - April 19, 2018

( , )

(:02). they made a new video about space travel for humans. (:15). I would like to say thank you to all who participated last Saturday and Sunday for Spaceship Blueprint. .. the love of Giovanni for his daughter .. (:18). We have seen some international reactions in respect to the teachings of Saturday. We have seen some radical movements by world leaders in trying to understand what we showed implies and what will be the implication of it. We have shown the Iranian lift system and the reduction in weight from 7.1 to 6.1 kg and below, so you have ofund a key, a pattern. This means that the nation is in control of system fields by plasma without propulsion and this gave rise to immediate reaction. This was done to shock the governments that they are behind and that there is a need for it and what will be the ultimate goal. My wish and hope is that governments understand and take the next step for peace from what we have shown. The production of the space system flight multi-cores is not an easy one. The Iranian reactor that was shown was a single reactor you have one running system, they are very easy but also very troublesome in some cases to control them. (:20). He draws the Iranians reactor, we all have seen inside of it, it has a motor underneath, double and triple cores and full of Alpha radiation inside. This creates a lot of new conditions because we produce plasma inside both cores. If you get it right and cause the right amount of M field pressure. The pressure from inside goes one way and the other one goes the opposite direction, it causes the lift. It is very seldom unless you are on a mono-magnetic system that you can create 2 similar direction system that can lead to interaction, lift, or separation. Mono systems are very hard to control. In the deep space mono can help. What we did with the new dynamic system, in your reactors with the Gans balls, all we did was to take the fuel away, as now the Gans carries the fuel, we have withdrawn the radioactive material and the fields that were released by the radioactive materials have prevailed to a new way. What we did with the nuclear material was to create a PI, that was the whole target, we wanted to produce H. (:22). and then from create a PI. With the Gans material we are already in the PI condition because when we create the PI we can use the fields of the PI to interact with the fields of the planet or the universal entities that you can create motion. The Gans's become the creator of the fields that we wanted. We have given up radioactive material, high pressure and rapid control, with the radioactive materials there are a lot of beautiful controls, because within these materials you can also withdraw them, the plasma density changes. We can create like screens to block the radiation to enter so you can create the PI density. With the Gans you don't have that freedom, it is constant so you have to find new ways to control the speed of the rotation of the PI either way, or the strength of it that it gives you lift or motion. It's a compromise between the Gans or the radioactive material. Some of you who achieve and understand the next levels of interaction can create double core PI systems which are pure PI and then let them work against each other and then create the lift and motion. This is important in production of the M field position. In a reactor that is closed sealed and single we literally pinpoint where we want our PI to be and we can just go for it. (:24). This is where I want you to be when I shift it a little higher. In your dynamic systems with motors. In the dynamic systems you buy, you have a very big problem, the PI fields created in this Gans dynamic is of a lower order field extraction, this means that to be able to create very strong fields with them needs a knowledge. With radioactive materials we start very high and have an input. It's not just the field of the PI that is playing the game, but the environment of the PI you create has an effect on the PI strength also, so if you can accumulate it you can

reach a higher order strength to get faster motion. We reach PI condition in hundreds of ways. to understand how you can use the fields of the PI is totally another game. (:26). If you convert the PI to heat it's a different ball game. if you create an interaction of plasmas becoming a material that's a different ball game. If you bring a PI in interaction with another PI that leads to the creation of the conditions and environments is different application all together. When you start making these reactors, I have seen many enthusiast building and making formations, they say they don't see anything, but in fact, are feeding everything, you are creating the fields but leaving it open for anybody else to use. From now on try to imagine yourself as a magnet and try to understand where the field would go and bring that into the dimension of the PI, then any of you can become part of the space game or anything you like. When you have a magnet in your hand without interacting it's just a metal you don't know that it is a magnet, when you bring it to a piece of metal, if it is a magnet of flow its fields and try to imagine where these fields can go. If you have iron dust you can see the fields going out and coming in. He draws the fields. What you have noticed is that there is a reason for these space gaps between the field lines (:28). Do you remember MG field positioning, you'll find that these fields are coming in, the space gap you don't see is opposite to the space gap that you actually observe. This is where we have to close this knowledge gap. You have a 4 field reaction, it is no difference then what we explained about a PI. It has the same characteristics and same fields, the same proposition. What you don't see but you have is what you get. In the space gap there are fields either going in or coming out. (:30). If you can see the iron dust as lines, is it the field going down into the magnet or coming out. 14

(:37).

(:40). How to get in and out of SS.

(:46).

(:48). .. you have a soul in the center of the body in the brain, so you have a soul. Then we said, the soul in reduction in strength and interaction with the physicality of the environment in, leads to manifestation of the physicality of the man. Wherever I send my soul, whenever it gets cool enough or short (weak) in the strength then it becomes my physicality. Now that I have a physicality how am I going to feed it, control all the cells. I need to feed my physicality because now it has a strength of the environment that it is in, but what will I need to be able to feed to keep this physical entity in the physical manifestation on this planet. I hope you know by now. He draws a head, the totality sits here, in the middle of the head, a shining star, then this star has strange dimension of physicality, we call it a brain. (:50). There is something else a part of this physicality that radiates out and it's called the fields of the brain, but it has a big problem. It comes across motion and its fields reduce. ... so in reduction in strength brings control in the soul of the physicality, now the problem is solved. You have to make sure that you take charge and the emotions are controlled that when the fields get to here it manifests itself. It means if you can control your E you can manifest your physicality. It means you can feed physicality through your soul, there is no need for all these dimensions of the killing, and not eating because killing .. . (:52). we have to find out the answer to where we are going wrong. It's very simple, it says I don't want to eat anymore, I don't want to breath because I am killing, when I am walking I am killing, and even the stone is alive and the rest of it. Now you don't even need to inhale some bacteria's for life that you don't kill. I have taught you how you can feed yourself and bypass your emotion, if you know what that means. It means becoming detached.

Because when you are attached you react and you have E towards it. Shall we become as cool as a cat and don't show anything. Or understand that the energy I need to maintain my physicality in respect to the environment I am in, is a condition control of the fields of my soul to the strength of the interaction of the manifestation (:54). of matter state in that condition. I can become totally invisible when I want to and be very visible when I want. that I can control it through my soul, the emotional strength of my soul. To feed the man in the space you need to get energy to his soul that then you decide how to manifest yourself. These are part of the rapid understanding and development that you need in case you get trapped inside your own SS. What if my partner is fiddling with the reactors and suddenly I am half in and half out of the SS what am I going to do? Or I am in and he is out and he can't hear me any more and he is panicking. Don't forget we are working as a team. Or solidification comes while half of my arm is in. How am I going to get my arm back. As I said there will be many funny accidents for those of you who are testing for SS technology. (:56). We'll see many SS hanging in the sky and nobody knows how to get them down. As they say, just getting a piece of cloth doesn't make you a tailor. Now you have the cloth, to be a tailor you need to learn many tricks on how to handle and cut and sew the cloth. Mr. Lin is making a fortune selling motors. (:58). In the video people tried to fly by jumping off castles, castle jumpers. Now we have plasma jumpers, then after a thousand years the plasma releases and you come out and there is nobody left that you know. ... because you can't all get the same strength out of the reactors. Some of you make reactors on 90 degrees. In Beijing there is a UOF that landed on its side, it was trying to go through the earth but it didn't work so it got stuck halfway up, upside down. They don't know what to do with it, (1:00). so they decided to make a radio station out of it. Because if you solidify when you touch the building this is what is going to happen to you. These are not the fairytale, but the reality which is going to hit home very hard, very soon. Now that you have a SS at home what are you going to do with it, so do trillions of people out in space. We know people who are testing are creating a huge new phenomena known as plasma balls in space. A number of people are putting reactors up and are literally changing the environment, highly plasma charged, and they don't know what to do with it, and every now and then they get a massive explosion. The explosion goes as an energy down the high tension cables to the power stations, free energy you created and the government charges for it. I told you lot that if you were dreaming to see a flying machine, oh my god (1:02). you are going to see it, and you are going to understand it. Rick will show photo of Chinese UOF they made into a building. This is an amazing building, we don't know when it will un-solidify. We don't want this to happen to you. He shows the photo of SS stuck and can't go anywhere. It was in the shape of a plasma, but now it solidified, the field of the earth has given it physicality. If you think this is a joke, many of you are going to have this. I have seen hundreds of thousands of mistakes like this. A UOF which doesn't calculate or mistake of the field strength at entry changes and your physicality changes. Even though this is a building built, it looks like a SS, but very soon you'll understand what I am talking about. .. when your space reactor solidifies halfway stuck into your dining room table and you can't touch it. (1:04). This is what we'll have to understand. ... sometimes 2 or 3 million years before the plasma balances, an old man with a know how or a kind of animal walks out and says, oh I saved this from something, but he doesn't say I made a mistake. ... now the fun starts, be aware of the direction of the field. We had someone say, one of my motors wants to go the other way. It means you loaded your reactor the wrong way, offlow the motor because he knows where you are going. (1:06). but you don't know. ... if your motors stop, change one of the motors speed and see if it starts going, it means you are

draining from it. You are experiencing what I call a lock of M fields. Don't worry .. ... because MG field has locked to the earth, you can't even turn it. ... your M or G matches or locks into ... many of you have missed one of the biggest things about the flight systems. ... look at the Iranian space reactor. you see a small and big reactor, when you have a big one sitting the small one flies. (1:08). We always talked about "twinity" but because it's a dynamic twinity both can fly, but with the earth condition you have a lock, you have to open up another one. It means you need 2 sets, if you want to work very easily, or you load up your reactors with a twin set. You don't need any motors, you load your base reactors like 128 to one ratio in reactors and then you make the top reactor 124. The stronger trying to feed the top creates a ?? and trying to catch up it creates your field. You don't need a motor. This is how in space rotation is created, feeding with a large difference, if you can go to 1 to 500 or 1000 ratio, which means you are going more acidic or alkaline, or more G or M, then in feeding it or capturing it, trying to feed it creates motion. This is the secret of motion in the U, now you got a free lesson. By the way, the court in Belgium will decide on 25th of May if we are going to prison or whether we can take it up. (1:10). our doors are on standby and we know exactly where we are heading for. In that case we have 2 SS on the standby, there are no courts or judgments in planet Zeus. We are hoping if there is a good judge to carry a minimum 5 year sentence on DL for deception and lies to the court. But we'll see. there is no shame for them in killing scientists... understand how to load up, double loading, and many other way of field control .. it's amazing how you don't see the field control.. (1:12). repetition of the Iranian space T in the hands of the Chinese government. It will be beautiful to see the flight from China. We'll show the next dynamic flight systems most probably from Beijing and it will be a great honor to set the nation. You have to understand the play, motion, direction, ratio of the fields. Listen to every part of the Spaceship Blueprint days, Dr. Rodrigo showed something so important to understanding to the understanding of the Pl, I said to myself, these guys don't understand. Then Giovanni brought home about balancing fields to the direction of the field of the soul. What he did with those patches, he didn't do anything else but in a way dictating how much of the soul he wants, where he wants to correct the physicality. You are looking at everything upside down 13 36

(1:18). Very soon KF will release its own cores and Star Formations at a very cheap price. It will be the same price for Chinese and others. ... When you load your reactors be careful you don't load half up and half down, that half of your SS is going up and the other half trying to go into the ground. It tips, many of you will see this tipping. When you see the leg of your SS is broken, no it's not an accident, your reactors went the wrong way. One side is trying to dig in and the other side isn't going anywhere so it breaks at the reactor base or whatever. These are all do's and don'ts of the space of playing with the space program. (1:20). We gave you the blueprints, but from now on you enter into a different dimension of testing. Up to now you were in the physical matter you could see and measure and feel things, now the feeling is very much different. Now it's part of you. ... how we can manage to create fields. (1:22). Test how you can make products so if you get trapped you can at least make a chair to sit on, or try to run some tests from the teaching how to make some ice cream, bananas or whatever else. We are opening one of the KF forum and I'll try to guide if you show me that you are serious, not just curious. I will guide you to the flight position. 23 03

(1:32). Any questions. ....

(1:36). What we have to understand is MaGrav is M and G, this is exactly what we said from the beginning, M, G, so magnetically it sits within gravity, the minute a system manifests itself, as we call it M, it is already has a destination because there is a G somewhere which is given it a sign, come here I need you, my partner, otherwise it has nowhere to go, it can't manifest itself. When you become more mature in understanding of the fields, you'll find out sometimes your field gets saturated and you can't work with it, your reactors get saturated and they just become clogged up. It means the fields within the reactor are not called upon by another system. This happens quite a lot. Every now and then you have to clean up your system. It's a very natural phenomena because we are tuned to (1:38). use certain strength fields but in the process of using our reactors these are there field strength come in that they have no destination to go to, but they sit within our system, some of it becomes the energy part, because in decaying in their fields and strength they become part of the others, but generally you see this done frequently when you travel in the depth of the U, you see some huge SS do regular cleaning up of their fields, because it has no spectrum to use it so it clogs the system up. The way to do it is you understand the spectrum which is blocked inside, you set up a system away from your SS, you leave it like a moon millions of km away and you trigger it at the strength that you have clogged up, so everything gets sent to the one which you have sent it ot, or by the time it changes the fields that it comes back in what you can use. Because getting useable fields in the U is a commodity when you come from a specific strength and you have and you have to use a specific strength. Sometimes you can use your inner and outer reactors to cycle it when you are on a stationary condition and you aren't going anywhere. Many times you learn, this is partially the reason we showed the Iranian space reactor, you switch off the 3 bottom ones and you repair, in that process you run your top reactor as a single space system. It can be done, you do a conversion of the systems and sometimes one of you base reactors literally disintegrates or losses its boundary, so you don't loose things, you go on a standby and you restructure. (1:40). then you share fields and you ?? the boundary, like the 18 balls into the ?? hollow (hover) position and then you repair, you establish the reactor which is not functioning. All this will come to you, it's inevitable, man's system is no different then the rest of the universal systems. 25

(1:46).

... there is law in the U that you'll soon come to understand. Things can only be done through the wish of the soul of the one who has done it has asked for it and no more. (1:48). This is one of the things you'll soon understand especially in ?? space. Q: Based on spiral, and the PI interaction, where does time find its place in the representations, could it be that time finds its place in the past as well as the future is the same, takes place simultaneously .... ? Do you want ideas or reality. ... it depends on what is reality to you, what is time? In the dimension of the speed of the transportation of a given strength time doesn't exist, because it is of the same line, the time only exists when there is a difference in the boundary and the strength of the plasma, when you go from the stronger to the weaker or visa versa, there is a time of transition and transmutation from one to another. It depends on where you are sitting. I can hold my life at the strength of the field of this planet, which gives me the closet minimum loss and live here thousands of years, many do. In the space we don't have time because the losses in strength are more or less not existing, so it's life ever lasting. On this planet you have a tree, wall, floor, water and everything else, so the strength ?? is always continuous and a lot of

consumption of it, so time exists for one to degenerate into the other. If you are a man of space and understand where I come from there is no time because I live on the strength of the full strength of the spectrum of the U, everlasting, omnipotent. (1:52). But if you are a human and you live in the dimension of ?? direction of the field strength conversion day and night, because the field strength continuously changes, trees and shrubs and everything else, you have a time, it means a span of conversion. You call it time. There is no future and no past, but if you live at human strength ?? you are always there. From the time of the inception of the universe and Unicoise the time for the Creator is zero because he owns the totality of ?? it is from Him. But for a man who just comes in and uses a part, trees and other bits, keeps on ?? then he can extend it if he can do it. Why is our life span extending a little bit, a few years. Why don't the Chinese who are so short receive ?? getting taller ?? energy is put in, so it reverses the process and doesn't ?? the G field which has been on the ?? level of the soul and the physicality. This is exactly what happens to your vegetables, are bigger and thicker and heavy, but in fact what you have done is to change the atmospheric conditions around them and they growing in the atmospheric condition, they don't live on the condition of the present, they have created a field strength which is a million ago when it was this size, but because you don't know it looks like magic, they don't tell you. So time has changed or the fields strength has brought such a conversion. Anybody who says they go time traveling ??? unless you are the Creator. (1:54). Q: Does the Creator live inside or outside the creation? Both. Q: Or is that a wrong question? The third option is do you want to speak to Him for Him to tell you. The reality is that life across the U is created out of His, but at the same time He is all. It's like the ocean, all of the fish are created out of the water they don't come from somewhere else, but still the ocean holds the fish. There is no better description of it, the Creator is the ocean, and within the strength of it manifest the fish, plants and life. Is the ocean the creator or are the fish within the creator. That should answer it, it's the same. Now we are in the ocean of the fields of the Creator but as ?? small beings we are created from it as part of the reduction in strength of the given time and position. If you consider the creator, which part of it, to be the ocean of life, we are the life which lives in that ocean. We are part of it, through its existence we exist. (1:56). Was there a past to it or future to it, yes, because some other fish, the ocean has always been there. But some fish appear this year and some next year, or no fish last year and this year there are fish. Because of the process of the interaction of the fields of the Creator has led to the creation of what it is to confirm His existence. In a way by the existence of the fish we confirm the existence of the ocean, but if there were no ocean there would have been no fish. the ocean doesn't need the fish to confirm its existence. So shall it's my life. Q: ...

(1:58). Q: what about those who lag in T and don't have internet? In the time of Christ there was no TV or radio but his voice was heard through the STM and this is one attribute of the Messengers of God, we do not need the Internet, we reach the soul but the time of maturity ? when they hear. those with TV have already heard the voice and they understand and many of them in time will come to be part of the whole structure. The knowledge doesn't belong to those who can get on the Internet, because the main stream media doesn't publish things about it. If you have understood that it is your soul which controls it, so through our souls we teach, we have already reached the STM in Amazon, he is already aware of what has come. (2:00). Q: I really feel that something has changed people. How did Mohammad travel from Mecca to Jerusalem in one night? You have to read the scriptures there is a reason which is in there. We explained in the last teaching to the Islamic world in their own understanding there is another ?? and what they are capable to do. Anybody is capable to do it now that you understand the

operation of your own soul. (2:02). Q: You talked about having an "anti-reactor"? You made that word don't put that in my, there is no anti-reactor. Okay, an inner reactor without anything, and if we have an outer reactor with dried Gans in layers then inside we have all the fields we need and if we can control that? This is the question I put to other scientists, what do you want to do with it. This has puzzled me for months and now that we have got to this point we can ask the question. What is your objective, what you create as a PI as fields where you can house it in an empty place where the water was. What do you want to do with it, you brought the bucket of water what do you want to do with it, wash the floor, feed the cat, do you have a purpose for it. A lot of KF people have these reactors, they know they have an energy in it, there is a PI in it, but they don't know what to do with it. And this covers 99% of the people. You are just like helpless chickens. You have everything, but none of you stand still and ask what am I going to do with it. Let it fly, but you don't gather it together to fly it. If you want ice you have to put it in the freezer, a tea you have to boil it. How come we know what we want from the water but not from the PI. (2:04). This is the main problem with all the K Seekers, you don't have this with the government scientists. 'What are we going to do, create plasma, but it's a box of water'. You have to find an application for it and then you make the tools for it ... find a purpose for it. 40

(2:09). 57

(2:20). One of Core member is a beautiful people, schizophrenic.

(2:26). Video of Gans making with coils. (2:28). starts. ... (2:35).

.. where was the CH<sub>3</sub> Gans ball on the first one, was it put somewhere to the of the room. (2:38). .. Do another test with the Gans ball completely out of the building.

(2:40). Check the Gans balls for how much is still in it, whether some went to the water container.

(2:42).

... our people produced material from an open space. Okay now cage it, cover it, we know there will be something from outside. (about how to test ) (2:44). ... I think about something and then you talk about it. Because the souls are all getting connected. Many of the UC wanted to see proof of the strength of their own soul. Now they have seen it's good. So that's the strength of the soul. ... in space you'll see so many strange and beautiful things that you could not even imagine.

(2:46). ... those of you who do a lot of work at home have a lot of fields around, you have to know where the cat was or this or that (2:48). or where you left the last Gans and the rest of it. Be very careful when you do tests at home, analyze your results and what you had in that place before, what it is close to, and then you have to start learning how to take all the factors in the work, then you come to better conclusion. He closed the fish tank and sealed it. N coated Cu coil and a Zn coil. (2:50). CO<sub>2</sub> appears on the N coated coil and CH<sub>3</sub> on the left side (Zn Coil). Yes that is correct because logically you have 2 ways, CO<sub>2</sub> gets loaded first and that's pure CO<sub>2</sub> without Zn is very hard you always have a factor of Zn in it. It depends on how you set it up and if you created the right current flow between them, if you don't put a load you only get ZnO<sub>2</sub>, if you put a load you between the Cu and Zn you get CO<sub>2</sub>. (2:52). Can you put an LED between the 2 plates that an energy compensation is there and see how the reaction changes, when you don't do that you create a ZnO<sub>2</sub>, we know that and people just connect the wires without compensating for anything. Unfortunately it doesn't work that way. This proves

what we said all the time. And hopefully you can show us again. You have to look what is in the room or was in the room or behind the wall, that it forces it to react first on one side. (2:54). This is the problem with research of the Gans. He draws ... next time put a N material underneath, or wash the floor with N material. you'll see big changes. (2:56).

(2:58). Q: long question.

... Part of the system you can do is creation of motion in the U is not done the way we usually do it. (3:04). The motion comes from the rapid gradient difference but in respect to the third position, on one side you create a very strong material and on the opposite side you create a very weak material in the same dimension, the middle one becomes the rotator. .. the two on the ends are field rotators but the one in the middle physically rotates. You can do this in your dynamic reactors to create motion, and it's very simply done. You can use this in loading your space reactors. In the system for 129 Tesla we had one very strong and one very weak ... they create a motion in the center. We used a SF. (3:06). ... people expect others from the space to come and teach this, but humans developed the motor so you are a step further. ... I plug it in and leave it for 30 days and come back, maybe it's working. Then 6 months it just starts working, then a year later yes it's rotating. .. you are playing with the fields. .. we detected the flow coming in at 129, not going in. Then in reverse we saw the same. (3:08). Of course you can create motion without motors. In a SS they don't see the PI rotating they know. The PI is controlled by the speed of another PI and not by motors. What you saw in the video were all M fields pulling each other. It was a beautiful demonstration of the field forces. .. a part of it has slowed down enough to be in the matter state and you can see it. But how are you going to use it. There is a force there so use it to get a backlash and the Gans's to rotate. Now we see the motion is there, but we have to find a way to get it to build up. (3:10). base reactor have to G and the top absolutely has to be M. You have to know how to load it. You have to put a drop from each in the others. You need a diamond structure so you need Deuterium, if you arrange the D in the right way you get a physicality. .. I'll get you there but I won't do it for you. I spent 2 to 3 hours in the lab for the Chinese development. It has to be done by the Chinese, I think they'll be in space very soon. (3:12). How you convert field forces to the matter state. In John's video you saw they can feel the heat, they have learned field conversion. Why do they feel the heat, when you have a PI and put a Cu plate underneath, now it has to change into the matter state, but it comes as a radiation of the field, not as a heat of the heat and then our body converts it, this is how we have 76 degrees. Now we know how to convert matter to energy and energy to matter. Then you have your reactors and you have to create a funnel for it. You need an extremely heavy G field but when you collect it, in the end it has to go out. Read the papers, creation of matter .. creation of gravity, black hole. That's the way it is, you can't just bring it in, when you bring it in you ?? coming in 200 and when you push it up 600 (3:14). a massive order of magnitude. Try to understand how fields play and not what you like them to play and you'll all move in that direction of light. Q: can we leave the Gans out and just use the fields? That's the whole purpose to put the empty ball in your cores. .. I explained that you need an empty hollow base. (3:16). then you have to have a Gans. Rick was one of the first to show the hollow center from spinning Gans. 13

(3:18).

(3:30). ... this system has been used of millions of years, but you have to understand it. Where do you want to go. .. the neutron is the feeder ... it's not just a single PI there are multiple PI inside it ... in the dimension we travel is above this. When you travel within

the PI of the PI because the neutron is a PI itself (3:32). but if you can create the PI of the neutron and understand the subdivision of it then you are in a different world of creation. I said, I teach man everything so he doesn't fall behind or become a slave, but man chooses a slave, at that level. You push the boundary of the science, I can teach you everything about the U, but when you don't understand what is the use of teaching. 35 .

(3:36).

(3:38). Ofur people can form a SF with their souls and create a SS. I have seen this many times.

(3:40). Many other populations have done this earlier (on this planet). Of course, I have witnessed many of it and it's beautiful to see. The vessel ... the way it's done when you witness it, ?/ the candle diminishes and it turns into a light. Because the soul is the controller inside of it, it has a conscious he's aware of the other souls, in that process the other souls decide, I am going to be nowhere that I can create the condition. It's not that I am going to be higher to give, and that process starts the whole circle, as you say, rotation of the PI fields without motor. You see the stronger is actually the one who is a more powerful giver, it has no condition to give, it gives unconditionally, you see that soul moving to the top core, and then in the flesh the system is made. Where this comes in the dimension of the field of the totality, man has not yet matured for that. Q: When the need arises for man. Man is so selfish I don't think that he will come to that. (3:42). Please donate for rapid progress.

(3:44). Video.
