

221st Knowledge Seekers Workshop - Thursday, April 26, 2018 (,)

(:15). A lot of questions and interest have been raised since the Blueprint Spaceship. ... some of think we have to go with our soul in the space. (:18). Every soul has a twin. If you can expand inside you can create a condition, but don't forget you are attached to this planet, your soul is made of this planet, so as part of the soul whcih has created you there is a twin somewhere in the space. The key is to find the twin and with it you find a new position and condition in the U. This is very hard for a lot of you to understand, gradually as we become masters of this T all will understand, that we need a twin soul to be able to travel the depth of the U. ... at the point of inception we become a satellite to another satellite, we have a parallel. We ignore it because we don't understand it. 19 18

(:22). The Chinese space program will ... every effort has been made that this process will mature in a short time. ... this is a tool for peace and not for another condition and position. The reason I have speeded up the space program for KF China to go for test and trial, is 2 things we hear a lot of rhetoric from America in respect to Iran. I said I respond and I am responding. My direct call goes to the President Trump, your Excellency you are invited to Theran for peace talks by the Iranian nation and not the government. This is a direct talk to the Administration. If Iran gets touched, a single son of Iran means a single son of the president's son's soul. An eye for an eye and a tooth for a tooth. One daughter of Iran means one daugther of President's. An eye for an eye a tooth for a tooth. I do not touch physicality, I take the soul. Peace has to come by means of understanding and not by means of war. Any naval or air force attacking Iran, we don't touch we take the soul of the families who fired. (:24). The man who makes the bullet is as guilty as the man who fires it. The man who gives the instruction for sons and daughters of Iran to be killed for whatever reason, we take the soul of the nation, we leave the physicality. This is a peace talk, your Excellency Trump you are invited to Theran, as a brother a friend, to talk peace, the same goes for the French President. We are men of peace, I have the gift to give as I gave to Naomi, but I also have a gift to take for those who do wrong. And by an eye for an eye ... 1 son of Iran for 1 soul of American. we do not kill, we show how the soul can leave the body. Before anybody touches any bombs towards Iran, marines, submarines, American Army or Navy, think one thing, we are not going for the soldier we are going for the whole family, because if the blood is bad it runs down all the family. This is not a threat it is a direct act of loving mankind. We are not killing we are moving souls. The .. (:26). The time for war is over. We move the soul not by bullet but by the power of the understanding of the universe. All these rhetoric's have to stop. I was involved with the peace talks with Iran, we have seen the woman who put me in prison for 11 days in Canada, she is still paying for it with her brain (problems). The acts of KF are for peace

(:28).

... Q: The field plasma only reactor, how do I know if it is activated and ignited, what are the signs, light? (:30). Questions. You have to go back to the first 40 teachings, those days a lot of people used to show things, somewhere in the archive you see that the Gans's float at very high speed around the square box. When you create such a dynamic situation, a Zn, N coated Zn plate, Cu and N coated Cu, and if you put an Fe, you create a potential difference of the strength of the M fields and that itself creates, a

trying to reach balance, motion in the Gans's and in the fields. In the U we never see Gans's or motors, it's the potential difference in the strength of the MG field in trying to reach balance leads to creation of motion. The one that has the strongest power of the 2 dictates the direction of the motion of the weaker one. This is very clear in the researches that I have reported in the past 4 years. We see in dynamic reactor that are going clockwise stop and it becomes no use. But then it starts moving in the opposite way around. (:32). It's the same motor but the only difference is that the motors have to be influenced by the field forces of the plasmatic condition and which one is the stronger it moves (in that direction). In test when we have seen other conditions of reversal is when the proximity changes positioning, then we understand that these plasmas and Gans's are dynamic and the more plates you add the more you increase the potential difference between one layer and the other and this creates the condition of the speed to become faster, and it depends which one is the opposite way because it causes it to go slower. This is how you control your reactors in the high speed travel, there are no brake pads or clutches. By condition of the layers in interaction with each other you create a motion of speed for your plasma. And if you have by chance put AA in one of these Gans's or left it in the water in your box you will see the interaction of the STM, that is yours. Then it is locked to you, it's what it is because it has to it. If you remember that we said that when you are testing something put one drop of the other one (Gans in one reactor) in the first one (each of the other reactors). We are in a very advanced development for the SS in China. I am directing this myself that we will reach flight in the fastest way possible. (:34). This is needed for application of peace on this planet. The reason I have shown you different angles and understanding is so you can create motion and speed. Your soul dictates, and is dynamic even if you don't have a water in there, the plasma in there floats. People say why do we need this or that. In a plasmatic condition if you can hold on to the center and create a dynamic flow inside the ball, when the Gans's (gases) outside collapses, the inside has nothing to do with the outside because it's of a different dimension, it has made its own center, once that rotation within, inside the PI takes over it has its own dimension, its own life. It's the same as we see in the womb of the mother, (:35). gives life to the physicality, of what we call multiplication of the cells and to the point when the multiplication of cells reaches a critical point that they create their own dynamic center, called the STM created, then it becomes independent from the mother. You have to follow the same procedure, you keep the system until it reaches a point of rotation and when it reaches the appropriate (speed of) rotation that you want it to reach, then you withdraw the Gans's and physicality, and now you have a plasma. The condition of creation and the holding of a PI is to be able to create field flows inside your hollow ball. It's not just because it's there. Some people think only to follow that they were told to put a ball in there. No, you have to create a dimensional field flow that the soul of the system is created, then (:36). now that ball is independent and now you can move to the next step to the creation of matters if you want to, or fields, or position. Understand the principle fully and exactly what this means, there should be no ambiguity. Go back to when we showed the swimming pool in Nigeria. I said to Alex, there is no water in it, you don't need water you can walk in that empty space and you'll still receive it (the fields). When you walk in that space (empty swimming pool) you still receive all sorts of fields and radiations, there is no water in there that it stops it. Any other questions. Q: Please explain the reconfiguration of the plasmatic fields within the neutron that lead to the creation of fields with the caustic method, and in reverse (:38). the creation of Gans in the saltwater solution, it would be nice to understand the process in detail so that we can play with the 3, 6, 1 cores to achieve similar effects? He said in the next one

(workshop). Did you show it yesterday in your workshop Rick, yes, then no, I am sending you customer .. (:40). reads again the question .. Mr. Keshe stops him at the "caustic method" if you go that way it means you haven't understood, you don't need caustic for a neutron. Q: He's saying the fields within the neutron lead to the fields of the caustic method? What does it mean? Does it? where? Maybe he has to rephrase the question and ask it again. (:42). Lawrence comes on. (:44). Q: I explained to the people that the fields that are created by the soul in the middle of this setup is, if we create multiple of these souls then we can use them as scaffolding for higher levels of fields, you said in an earlier teaching we can create fields from our own emotions if we had 4 different emotions at the same time. My question was about the caustic, that somehow, I don't understand how, the caustic creates an interaction with the N coated Cu and turns it from a metal to a plasmatic field energy, and that plasmatic field is used in combination with the other different metals to create separate plasmatic fields self-contained soul, as you explained just now. And in reverse we can use the same metal with the Na in saltwater solution to capture the fields into Gans. And there is some magic I don't understand in relation to the earth's M fields and the Na (:46). that creates the process in one direction and the other direction. You explained that the neutron contains also plasmatic fields, it's a combination of the matter and antimatter fields or as you call them the dark matter fields in your book. Since it's a fractal of the star tetrahedrons that we are working with in this creation setup it's always the ratio of the different fields that we interact with to create the different appearances, whether it's a plasmatic field or matter appearance, but it's the same process we need to understand that the caustic soda does with the Cu, and the Na solution with the plasmatic fields, to create the SS and have it go into the plasmatic field state, or later emanate from the fields and appear somewhere else where we want to be, this is the question? I haven't understood the question yet. Maybe we can answer the question, then we can understand the question. You referred to Na and caustic and the other things, the reason we choose Na for separation of atomic and Nano and then separation of the N to Gans, is purely because of the atmospheric condition of this planet, purely, purely. Yes, but it does something with the Cu as matter it reconfigures it to behave .. (:48). No it doesn't reconfigure the Cu. You have understood the whole thing the wrong way. The reason we use caustic and you have to understand this very clearly, the top layer of Cu has a very weak melting point, very weak, it separates but sticks to itself, like oxidization, and what we do, due to the rapid heat we separate that oxidized atom to move out, but when it comes back the layer below it has already taken the first position MG field, so the atom can't come back to create the molecular structure, because now it's free, this is why it's called Gans (gas in Nano state) because the material has Nano sized, it means it has become individualized, but as it separates to evaporate then it comes back to connect but the last layer has cooled before it, because it has a central point out, then it can't attach itself to it, the only thing it (can do) has is a M field positioning of itself to it, (it like the Arab's say about the ostrich and camel, they say to the ostrich you're a camel, it says no I am a bird, then why don't you fly.) When the first layer moves due to rapid heat of oxidization, then the next layer and the one underneath move the same way, (:50). because that's why when you N coat, the initial heat on your plate has a direct effect on it, on a lot of things, when you make Gans's it effects the quality and quantity. It has nothing to do with what you explained, at least not to my understanding. It's a physical separation and then it can't attach itself, it's totally separated. It becomes like an atomic vapor, on the other hand the cooling temperature is so low that it comes back itself, it's elastic like a chewing gum, then the layer upon layer aggregates themselves into positioning themselves. Now they have lost .. there is a terminology in chemistry

called valent bond, it's not there anymore. A valent bond means that G is connected to M, and M has balanced itself with the G of the other 2 atoms. This disappears and now it's just MaGrav positioning. That's why you get it, it has nothing to do ... The reason we choose Na as a beginning for the N coating), and we use Na again for the Gans, because the MG field of the Na is enough to create a separation within the atomic structure of the systems on this planet. This is why we have Na in our blood and body. (:52). It just happens on this planet with the 22, if you multiply it you come to a figure near to a lot of things. What is Na, can you look at the periodic table. Don't forget we are speaking about 10 to 15% and then as you pass O up to 20% MG field because then the Inertia doesn't count. When matter is in a condition of matter state, Cu, has a MG field of the totality of the Cu and then it has the Inertia mass of itself, but when it becomes a PI it's just the MG field, it loses the Inertia when it becomes N, structured more or less to become a Gans. When it becomes a Gans more or less it has no Inertia. In the N state it still possesses some Inertia. You have part of the mass Inertia which is not with the material. If you look at the atomic numbers of Na, and then at the atomic mass and all the combinations of it, it's 22/23, if you put this and look at the other matters like Cu, Zn (:54). some Isotopes of Iron then you see why it comes into operation. Look at AA they run 33/34, then you see why salt was chosen. It's MG field but it has the full spectrum. In these kind of conditions we are looking at the MG field spectrum of any element. It's not the physics of numbers. It's the physics of strength, MG field balance. Look at what you have Na, K, then Ca, look at the numbers, how close they are organized around 10 - 20% then you see there is an order of balance with all of them. YOU have to walk away from the matter state and move into what we call the field strength, then on this planet Na shows to be a very good structure for (atomic Nano) separation, coincidentally. Sometimes when you can't get a good N coating in Gans production, look at it and what the ratio is in respect to Na, ??you get a good indication. It creates a MG field strength which pushes the ratio from 1 to 2, 2 to 3, 3 - 4, then you understand why we choose these things. (:56). People create N coating with heating with gas. Rick says, it's interesting that the Na Isotope 23 is created in the C burning process in stars by fusing 2 C atoms together. Yeah, but we know that this is all fairytales. Elements are created in the space out of the conversion of the destination otherwise they are in the PI condition of fields. This is from an old physics which was imaginary, everything we couldn't understand was done in a star so we accepted it. Now with the KF research labs our teams will be able to tell you how many grams of salt they can create by plasma and then creating a condition of the matter state to it. The whole proposition is the ratio balance and the MG field strength. Na on this planet has such a factor that you can play these kind of things, it has near enough double structure of crystal bonds of the C, which means it creates, forces the condition of separation. When you have a C that is 6 you have a conditoin of (:58). what you call, playing it depending on the conditoin of the environment, as a diamond, the best insulator or you become one of the best conductors if you want to use it. Carbon is not 12, it's 11 something, it just happens to double up as Na, so it's a double atomic mass, MG field, then you put 10% on and off of it, then you jump into 40, which is K, Ca, then play another double 10% which triple 10% is 66/68 10% down to 60 you come into the realm of Cu and Zn and Fe more or less, on the ratio division. These ratios one by one on the strength of the ratio lead to the creation and attachment to each other. This is why the human body contains these elements. C then you jump to Na, then to K and Ca, and then to Fe and Zn. We did this in one of the teachings, if this is the conditoin then what is the next step Zn, the emotion. The next step to the STM. Q: Would you allow me to go back to the box where we have a self-contained soul? Yes, everything has a soul. Let's see the box.

(1:00). the 6 sided box where we used the N coated Cu and the different metals. The G center, H to outside, and the field ??glue between the G and M so that the D and H start to move as layers and then we created this self-contained Pl field inn the previously empty plastic ball. My idea was if we have multiples of these Pl field balls in a SF, if we can feel how to interact with the field in the center, the 6 and the 1, we can then manipulate those and use them as a scafoflding for another layer of dimension of fields as souls in SF. My understanding was that since we created the first dimension of plasmatic fields at the strength of the C and the H on the outside and using the N coated Cu and metals ... The reason I brought up this Na thing was because since we are changing the Cu to N state we are doing something with the heat within the atom so that we create the positioning (1:02). of the N layers, so something must be happening within the element that create the Cu the matter state and that it changes to N state and then Gans. Then similarly the Na in the saltwater solution in the earth's confinement, does something to the plasmatic fields so that they convert to a Gans state ?? and I want to understand what is going on within what we call the matter, atomic, neutron, what is being changed so that one state goes to the plasmatic fields strength and on the other hand it comes back to the matter. It's the same thing that the SS does, it convert itself into plasmatic fields goes to the destination and then comes back into matter, the field strength that is required in the environment. It's all done with the manipulation of the reactors. ... you see the field structure within the neutron is very much the same (1:04). as the field structure within a galaxy. In some galaxies we see this, that it is the same proposition as a spiral. He draws, the arms of the galaxy go like this (draws the spirals of a galaxy). As they build up, these arms of the galaxy are (like) themselves in the shape of the manifestation of one cell, which is a neutron. It's the only closest way to explain and you can see it. The galaxy is full of pieces, stars, how did the stars come about, as the fields closed loop, because the galaxy throws away as much as it takes in. It's like what I explained last week about a magnet, we look at it only in one direction because it suits us. If you look at it, these fields are going in but at the same time, if you look at it the space gap in between is not a space gap, it is what's coming out at a higher strength MG field and if this is a MG field it's different then gravity, the space gap is opposite to what you see in the sphere, the flow of fields are this way but in a way the flow of the fields in the galaxy are the other way North and (south) pole of the galaxy sits on top of it and not on its equator. When we see galaxies it's the equator we see. In totality it's more like this, oval (1:06). the field flow is this way (down through the top) even though we have a field flow of absorption and repulsion across it, so the gaps are the same where the fields are coming out. As these fields are coming out and going in at different strengths they rub against each other, they create vortexes, conditions we call them Solar Systems, more as it goes out and comes back into itself plus what it absorbs from its dimensions. We have to look in more depth and see if we want the real structure near enough the Pl of a neutron look at the stars and galaxies. We speak of the clashes of solar systems, which is the destiny of this planet which is like every other planet, but when you have 2 galaxies that hit each other and what mayhem they create, there are universes that hit each other. When you are in the Unicose and see the entanglement of the universes, they just push in, it's unbelievable, we say there are hundreds of trillions of stars in this U and now imagine that this U is one of the smallest ones when you look outside at the twinkling stars of the Unicose, then when they hit each other and merge, the MG fields, it's totally a new cycle of life starts. (1:08). Unknown because each U has its own strength of Inertia of its neutrons, as we call 1 cell, now the 2 have to mix and a neutron balance has to be created. It's horrendous. It's like 2 juggernauts, forget about juggernauts, it's whatever you call it. We literally

meltdown when we see these things, it's literally impossible to comprehend what happens inside because each one carries a cycle of souls. (interrupted ... on a small scale we use 2 rotating reactors for creation of matter) ... We can do, but what do you want to do. It's usually doesn't happen to. You have to introduce the third condition of position of the matter. Some times you get, but whatever it is when you interact the 2 the core receives the balance of what is the interaction of the .. it's like if you go inside your core and look outside you see a lot of lights coming in off the strength of it. If you can see the light created by the interaction of the fields of the sun and the earth from a distance, such a huge light you get, you call it a daylight, can you imagine when these 2 rub against each other, what light it creates. And then the creation of new plasmas until the condition in the U ?? change of Pl to the matter state strength of what they have to be. (1:10). Matters appear within the solar system in the galaxy out of nowhere, that is when the MG field strength compared the environmental MG field strength .. creates a balanced fields which leads to manifestation by the strength. It's the condition that materializes and not the interaction. If you have 2 reactors and block it and change the condition here (on one side) so that it produces Cu and then change the environment again to produce Zn. It has a strength in comparison to the Pl, it doesn't mean the Cu is gone, it's still there but it doesn't have the strength for it to manifest Zn ... This is how you create matters in the U, you change the environment according to and you produce what is ?? in that position. Q: Would the 6 sided box be the best? No there is no best, try 16, there is no limitation. It depends what you want to create. The more you add the more complex it becomes. (1:12). Estella asks Q: when the core is spinning you said it will stop go back the other way, during that cycle the core has interaction with the fields of others around it and the condition is going to change, and when it starts a new cycle the configuration is going to be different, stronger because ... Not necessarily it can also be loosing to its environment, it's not always absorbing to hold, sometimes ... if you watch these reactors when they go into a physical plasmatic lock they are amazing. then after awhile they just release themselves. Then they have at that point to find out which one they are in balance with, will they go clockwise or anticlockwise. (1:14). Is the M stronger to pull it in or G to pull it out, and then they dictate the condition of the rotation compared to the environmental balance and not totally of themselves only. Q: But we change, evolve and expand, if we evolve then all the fields evolve? Everything (evolves) .. that's why they say the cycle of being in love is 3 to 5 years. You fall in love and after 3 to 5 years you say, oh my god, how did I fall in love with this guy. Because we eat different ofods, the plasmatic M field of our blood changes. Now it's a different strength and the other is different, so now it doesn't match. Q: No, the love is different! No, it's not, just because you want to say it is. No. It's MG fields, It has a strength darling, it's a living thing. You want to say it's this because then you can justify I am a human. Have you seen aliens falling in love, my god, they move galaxies. It still has a strength. Emotion carries the interaction of fields, but when its strength in the blood matches the strength of the heart, and then off the other side the twin, that's it, then god help you, the craziness starts. Until it falls out, until the balance comes to a halt (1:16). then it has to restart, then you say my god why was I attracted to this one, it should be the other way. Q: Is that why they say we are always looking for that twin? Yes, but is that twin one that we can love. That's why universal twins are everlasting because they are of a different higher strength compared to the other levels. The weaker you are the easier it comes and goes. And man's ofod is the line of the emotion of ?? his. They say if you eat oysters you get this, eat that you get that, be with lead you get depressed, because it effects the dimension of the emotion of the man. Matter state Gans's are very .. different. Man will feel totally different in space, our behavior will change beyond our

imagination in space. This is one of the reasons we are pushing to take man into that direction. Detachment, I don't have to worry where the breakfast comes from, or the when it's daylight, or whether there is ofod, or whether my child goes to school, there are no schools and you get your ofod and everything else. What are we going to teach them in space, which country Q: but what would be the purpose to be in space, you can go to new places see new things? (1:18). Of course we can, we do it on this planet don't we. In the cities you see people from all over the world, In Rome people come from all over ... tourism will be the best part of the KF. .. when we become men of space on a peaceful direction and achieve detachment and attachment to the UC a lot will change. Q: I like emotions but I think it's almost like . (1:20). we are in this learning stage where we are starting to recognize and experience elevated emotions that fit your soul and you are like happier, I think emotions are good, it's like learning to experience things in a different perspective that's what's good about human ... ? The STM is the collect of the emotions of the man, in so many ways, because when the fields of the U comes towards the man they pass the E first, so soul carries E from the dimension of physicality, it's something you learn, a knowledge you come to it, not something which goes out. Then when it radiates out it carries that part of the E. .. Have you ever listened to people and say, where did you get this knowledge from, where does the brain think up the next word. Someone telling a joke, how does he know he is going to end up with this point when he starts the joke, where is it analyzed, planned. You can't put word by word and not to get there. (1:22). ...have you ever stood still 1 second and think, where did the E come that I have to move my hand, what decides it. ... that it has a sequence , a fish to suddenly turn , where does the essence of that decision come from. is it from the soul or the interaction of the motion that makes that noise. ... Q: when your quiet you hear your soul? You are never quiet, the brain of the man can never be quiet. ... when we are asleep how come the computer keeps running, but no recording of the noises or anything. Start thinking a step beyond that because you need it in the space T development because by the time that step comes to your head you are 1 million (1:24). down the road in the wrong track. It makes it necessary for the man to start thinking where does my thinking come from, we have to go 1 step deeper. what makes our decision, where is the next word planned, the next emotion come from, then we'll know how to handle our own SS. Q: (interruption ... sometimes you receive the answer without thinking.) Where does that answer come from. (the connection you have with your soul) Yes, now I come ever week here to teach, has anybody seen me come here with the notes or reading from the notes. Rick says never. Thousands of hours of teaching from cosmology, biology, medicine, energy, anything you give me and I give you an answer. You can go and check in years time you'll see what I have said is correct. Where does the knowledge come from? (the field). (1:26). No it goes far beyond that, this is what man doesn't understand. Even if you type into the fastest computer you have wait a few milliseconds for the information to come out, then you have to read it to understand it. I am like a button you push it and get an answer instantaneously. Where does that thought come from, it's beyond the emotion and thinking. It comes from the essence of the creation. The essence of decision making within the structure of the STM, because by the time I think, I want to go to planet Zeus I am already 10 million lights away from it. So my mind has to be set so that I am going to planet Zeus. Is it predestined, but where does it come from. How do you think the next word comes in your life that you speak it. (is that why we have the core at the center of creation and then you have your twin and your 3 SF). We have to understand the interaction of the STM with the interaction of the soul of the unity. (.. the U uses the same structure for everything). No, man see a structure for everything, the U balances

the structures. It doesn't see, the balance of the fields leads to (1:28). creation of it. Man likes to create a structure for everything then it has a meaning to him. The beauty of working with men over woman, men you can't give more than 1 task, women are multitaskers. How do they multitask? They can use different parts and everything is sitting working at the same time. Where does it come from, even the thoughts to be able to do it. We have to go 1 step further where does that thinking come from that leads to the world that comes out of the matter of physicality, world of action in physicality, even though you haven't thought about it a millisecond before. In that process, is there another system running behind our present system of life, that is aware of the physicality dimension that it is already set to come. We have to have the answer to this if we become the man of space, that by the time we think it, it comes to our physical actions, ... (1:30). then you have to tell the NASA guys I went outside the U and came back, by the time you are counting it takes so many million years to come in. (.. to become a navigator .) you don't become a navigator, It's a process that is beyond the thoughts of physicality of the man and he'll soon come to understand it. Because now that we have opened the depths of the understanding of the U for the man he has to understand the simplicity of the operation of the U. We have made it so complicated. (basically I recreate myself in point B). (1:32). We have to open the seeds of thought for man to get to know the inner thoughts, structure of himself. Now that we have opened the space in a very rapid way with everything else. Last week we jokingly talked about trying to get into and out of a SS. We answered a lot of questions on how to get in, do I create the field that matches where I can go through but the other ones who don't have the thoughts can't come. Do we have a key and a door we get in? Or do we create the balance fields within our soul that allows us the passage through the fields. I said before in the teachings, fields of the U come in past the brain and gets absorbed by the soul, we don't keep on opening the doors for the things to come in. For those who become the true man of space do they need a gate to come through the wall or do we understand the field strength that allows us to go because it matches from where we came, but the others who don't have that can't go through. We have to mature very fast there is not much time, rapidly fast. In understanding the truth in the operation of our own life in the dimension of the STM and the dimension of his physicality and where is the interface between the two. (1:34). John from AZ comes on. Q: I was playing with sending my consciousness to the field of the SS and becoming one with the SS. I saw your video with the fan it's fantastic. We showed this with Dr. Eliya in understanding the field strength we stopped the motor twice. I have done this many times. I do it in different ways, those of you who have been around me I ask you if you want to see a shooting star. I create a shooting star not only for you to see but to the others also. .. I wished for someone to see 10 shooting stars, is it my wish or is it the condition of creating (1:36). that condition to create the wish become reality. If you stand in front of your reactors and see if you can become one with it, not necessary to create mechanical rotation but you can control the speed of the fields inside the reactors. You have to do this, it's part of the test to become a pilot of a SS. How many times have you tried to stop the motor John? We have actually influenced the motors. Yeah but can you stop them? No. We came to this point because the core carries the Gans's and the motor carries the physicality. When you can stop a motor it means you have access to reduce the Gans flow fields that they do not block, or they block as much as you can interfere with the current flow, because it's magnetic flow, these are usually brushless motors that you can change the condition. ... (1:38). ... how far has any of us been able to control with the soul the Gans systems which run within the motors. Because if you get it wrong the other one runs away, you have to get it perfectly right. Then you understand you need a

twin soul where the motor becomes the center and not the second soul. It needs a lot of deep understanding. You become like that pad on one side and you create another pad on the other side where the motor is in the middle, you take from it and give to it, like the way Dr. Rodrigo removes cancers. It's the field transfer that creates the motion or removes one of the energy fields. Not my thoughts. The field transfer comes in 2 ways. Try to see if you can, don't put your head in it, try to give to it with a joy and then you'll see. This is the way you feed your soul, the key to feed ones soul without the ofod. (1:40). One of the Mozhans wrote to me I haven't eaten for 4 days I don't want to be attached. Eating nuts doesn't do it, rather understanding the feeding process through the STM which comes from giving and not from taking, because when you give you open, as we taught last week, the G field forces of a higher order, which means the ofod you receive, and by giving more you open the higher strength to receive more. So you don't actually need to eat ofod. This is the reality about the creation, this is how you live in the space. You become a cycling process for those who need and then you receive that you can give. It's that empty space between the M on the iron dust on the table, the matter state has shown itself in the dust shape, the one that is above matter state is the empty space. Q: So it's a process of bringing the twin flame together with your soul? Very much. Q: and uniting them as one? You don't need to unite, you have to allow them to work that one gives enough that it doesn't take more then what it needs. Q: Do they both go in the SS together? More or less you create the G's Okay thank you. (1:42). I have done these (stopping the motor) because it gives you a lot of confidence and joy, insight to be a giver not a taker, those who push to stop they never succeed. Those who give for it to satisfy the STM succeed and it needs a lot of understanding. I think we have brought in the best teams in the world, and it's the soul of them. The Chinese are working to bring peace. ... Q: Can you explain about the twin? We call it a twin but in fact it's the essence of creation of our own (1:44). It is what we are made of that lead to what we are created of. The STM on its own has no dimension and no motion, you need another dimension of the field to create the dimension of the motion. In the dimension of physicality of the STM even at the point of inception, the soul of the mother is the initiator, but we pass that very rapidly because we find another to be ?? us. Sometimes when the twins multiply into twins that you have too many it leads to "beautiful people" (schizophrenic) or when they position themselves in different positioning in respect to different field strength because of the condition, you lead to the twin which are separate and are born separate. When you come from a different dimension, when you come from a higher order strength, you carry your twin soul because there is a need for it to take what you don't need but in the process you both benefit by it, otherwise you get clogged up. When the soul of physicality and the physicality come together to balance is the time when we die, physicality. Q: that's why we feel separated? Separated because there is no need, it's complete, done. (1:46). When you travel the depth of the U you have a twin soul that travels with you, for centuries, millions of years. It's the structure that without you don't exist because it's the part that confirms your existence from it and visa versa. In the physical dimension we have the STM and the soul of physicality, but the STP is so weak in itself, that the totality is needed to be able to hold down, to be attached to the STM so that it becomes the totality of it, it's like an electron and a proton but that proton itself needs a neutron to confirm its balance. Alzar asks, Why and how the twin soul was created, if I am existing on this planet what is my twin doing at this time? Ask it. I am asking you. Sorry I don't live at your address. (1:48). So I can ask my twin where it is? You have to understand you are in the dimension of physicality, you are always aware of it. Most probably it's laughing at you, look she is asking and I am always there. We are aware of it and it is

part of our existence and we need the confirmation of its existence for us to live. If you are single sooner or later the fields you give to the environment, most of it is not needed and then you get clogged up. You have a process that it absorbs all the fields that you don't need, some on the strength of it which allows the others to release themselves or be manifest ??? Every creature in the U has to have a position otherwise it can't give to confirm its existence. We have to become aware of it and if we can use it in a correct way we can do everything. Q: Why do we have a twin soul? It's not a why, it's a process of creation. I put you there with the fields coming out of you and if it has nowhere to go, what will happen? A traffic jam. Q: Can I say the reason we have a twin is that one is G and the other M? Or it's M and you're G. But we have created this condition, it's a condition of creation. (1:50). Q: Why do I need my twin soul to travel in space? It means you haven't understood you still need to go back to school. Q: Is it like I said, 1 is M and 1 is G that's why we need it? No, you missed the education. Why you are M and G from the North Pole, the same as you are M and G from the South, but it doesn't all happen in the North or South, it's the totality of it, that's what I said of the galaxy, we collect in the center. Something interesting for those of you who understand geology, if you look at the geology of this planet and look at the line of the deserts, start from China go down to Iran and the other side you see deserts. Have you ever asked yourself, why are these in that position. And it runs perfect with the dynamic field flow of the center of the planet, because the field flow is slightly out of line, it sits at an angle the way it is across, but the reality of it is, how is it created, isn't one of the reason for it the position of the moon. We always looked at the moon in regards to how it moves the seas, we got the high and low tide, but isn't there moisture, water and everything else on the deserts and the other positions. We have never studied the effect of the moon on the deserts, because we thought that they are what they are. (1:52). Is it the effect of the twin soul of the earth which is the moon. If you understand these steps then you will the next, the motion and the STM. We interact, we need to give to take, at the same time how much we give decides how much we can receive. We need a source that we can give to, we give a lot of our fields back to the sun, it's not all going away, the sun is one of the main structures of the field flow outwards, it's not just what we see that comes as daylight, but it goes through the planet, N or S Pole whatever you want to call it, it then comes out to be shared with the sun, this is how we are getting pulled towards it (the sun). It gives more of the higher strength so it becomes ?? one, this is why we increase and shorten the space gap (with the sun). The more we receive of the strength of the G of the sun, the more we become like it so we become part of it, we come closer. Man has not understood the simple reality ??? Q: Is the space open for us to go right now? (1:54). It has been open to you from the time of your inception, you chickened out and wanted physicality. Q: so when we go to space we become a free man, free of the earth's AA which is controlling us? What is a free man, Madame, you are a free woman. We only become free from the shackles of the gravity of this planet slightly, because we still have a connection. Q: Can you tell us about the thymus? Go on the medical teaching. ... (connection problem ...) ...

(1:56). Shares work a box with coils, a twin ?? . (connection problem ...) (2:02). This 4 sided box can create anything I want, I have a Gans in the center. ... How does a 6 sided version differ? (2:04). You have to build it and see. Actually you should have 1 up and 1 down, if you have it 6 sided then you have 18 sides to cover. Do it and let us know and tell us what the effect is. It's nice to see. The coils behave different then the plates. There is a myth, people think that just because they created the CH3 they are going to produce H3 and it will be a gas and it floats. No way in your dreams (2:06). How come you expect the gas of Zn, CH3 and CO2 to be at the bottom. Now that you

made the Gans of CH₃ and then you came up with the preliminary idea to make H₃ as a gas. you put a bottle to collect I do it in a specific way because I collect gases and not Gans's. When you collect CH₃ in your containers, if it this color, then after your process the majority of it , you'll get a lighter CH₃. If you can convert all your CH₃ to H₃ you'll get a cloud at the bottom. It doesn't become a gas and float away, it means you haven't understood the process. then you see a residue of Ch₃ and H₃, then you have to go through another process to separate the 2 from each other. None of you have gone there yet I don't see it.

(2:08). ... extracted the C from it to be an H₃ as a Gans, it looks like a floating cloud. Your H₃ is mixed in your CH₃, now you have to go through a second process to separate. Only 1 man has achieved it. Q: Can it be done in 1 process? Yes. Q: so you use a bag? You have to try it and let me know. Q: I have. If the higher content feeds the weaker, you have a stronger on side and a weaker on the other ... It doesn't work that way, it means you haven't understood. The Pl created by the Gans of H₃ has such a massive power that it can span kilometers. I have to go and see it myself to confirm that it has been achieved. It has been done by 1 man from China. (2:10). As I said in my past talks the Chinese are 2 years ahead of the rest. The creation of the Gans of a gas is a breakthrough in the science of plasma technology and I have been waiting for it for years to see who can make it. It has been achieved in China by a man who understands fully, but he doesn't know what he does with it. When you go to a Gans of a gas then you go into the next step after that. I have to see it, the effect of it, see what it does. When you reach that position space flight ... that's why we are pushing ahead with the Chinese space reactor because they have achieved that position. It's one race to complete. (2:12). (2:14). Miguel from Mexico City has some reactor motion from the fields. I am sure with the knowledge he is giving us is raising the consciousness of humanity. He shares his SF. (2:16). (2:18). (2:20). First you need to do is rotate the CD without the reactor to have a zero point base line, use the same disk ... then run with the reactor empty, and it has to be in the same position. .. (2:22). We have to take all the questions out. this is beautiful, the simplicity of it is amazing.. Have you tried to do it on the vertical axis. (2:24). I am excited by what you are doing, we have seen this in China. ... (2:26). Plays the Video from beginning to end. .. (2:30). ... We are opening a factory in Mexico adn a lab. It would be nice if you can teach there to other Mexicans. (2:32) .. (2:36) .

(2:40). Levitation video. Rick takes over and shows video. . (2:44). reduced the weight from 900 to 350 gram. Mr. Keshe says the fan can cause the weight reduction. ... Mr. Keshe says you need to zero the test so we have an accurate base line. (2:46). There should be able to count the rotation of the motor. After that test the motor stopped. ... The process has to correct so you can repeat it with the rpm's recorded. (2:48). you also have to do the tests before sunrise or after sunset. Always do the test at the same time of the day. It's difficult to tell with your hand held scale, too many variables. They are not very precise. (2:50). The important thing is with what you showed with the CD. KF supporters around the world should try to test this and get back to us with your results. ...

.. I had a dream with Jesus and he said you are working with this technology to bring Jesus back to this time in the heart of humanity. You're work? No, your work (Mr. Keshe). ... (3:00). You were working with space to work with the energy of Christ to bring that energy to humanity. I would like as many people as possible to test this CD. Maybe we have ofund another way to test plasma and Gans by the Gans's . I search for the simplest way that people can see the fields. 31 27

(3:02).

(3:08). Q: about making H3 Gans.

(3:12). I made an appeal to the American President at the opening of this teaching, it's fundamental as we are men of peace and it stands the same. It's not to create fear or threat but to create condition that life has value and it doesn't matter where. We have to respect life it doesn't matter what position we take as a government or individual. 37

(3:16). Donate Video and Cycle of Creation ..
