

## 222nd Knowledge Seekers Workshop - May 3, 2018

( , )

(: 16). Today is limited to 2 hours and topic to spaceship technology. ... the knowledge of space is unlimited and anyone who claims that he knows all, it shows the dimension of their life and they need to learn more. We carry the knowledge as totality because we are born with it. It's part of us, the sooner we learn this the faster we can travel the depth of the space. (:18). Some communications have brought up that there is a need for a police force in space. It shows that people who talk this way have not understood. In the space there is no police force and mankind will not be allowed to introduce one. Only those who understand with their souls will achieve space travel. Man has to police himself through the conduct of his soul, not by the sign. this shows the short sightedness of man. In the long term man will not carry any weapons and in the short term he won't be allowed to carry any. .... we travel through space through the soul, star wars is in the brain of the man and not in the reality of space. On the other hand we have to understand more about our own creation to be able to travel in the depth of the space. The race is on with all KF around the world. Show the video. (:20). (:22). Tomas explains his experiment. .. Gans of gold ..

... one of them is gold Gans but you say that you can't make gold Gans out of gold so I don't know exactly what to call it? Some people can and others can't. It depends on how you make it. It is easier to make the PI of the gold and then convert it to gold and try to make a Gans of gold from gold. If you have a gold then you can measure its resistance ... There is a specific way to N coat silver or gold. You know you have Gans of gold is that when you put your ohm meter on the gold you get Zero reading, this is the best gauge. For any of the heavy elements (:24). the only way we can say it's N coated is through a zero reading on the ohm meter, which means there is no conductivity. Then to produce the Gans of it you have to have 1 N coated gold and 1 non-Nano gold, then you start making Gans of it. Sometimes this is not easy it depends on how you push it. I showed that it can be done on the archives. I N coated a gold broach. When you put a (special) diamond detector on it, it shows it's diamond. On normal gold it doesn't respond, but on N coated gold or silver it reads it as if it were diamond. This is a second process to test it. You get a pure gold Gans between the plates because gold hardly oxidizes. (:26). so gold is the nearest you get to. Silver does oxidize. Then when you get gold Gans you can make the water of the Gans. This is the easiest way. In those days I even N coated zirconium and took it to the diamonds burs and showed them, they tested it with 3 different machines. But I said the only thing you can't do is to weigh it, it was 5 Karats. I N coated it in a special way that the top layers presented themselves as diamond. It's a crystal structure. They show the pictures. You can produce diamond structure and it literally tests as a diamond. (:28). You can also do it with silver and gold that they will also test as diamonds. I made a promise to the diamond boors I would not release it for the time being. Now that you have developed that technology, you can make a zirconium to test as a diamond. What should be said is that we don't need heavy elements to make Gans's from and it is not really recommended because the more powerful G systems go more towards the higher power of the PI in the direction of plasma strength. Those that want to make gold and the rest of it means you are still stuck in the matter state, where you think the heavier you go the more power you have. The true space technology you go down towards the neutron in that direction towards Tritium, then you do not get effected by the change in fields in the U. This is important and part of the structure (:30). we try to show. Don't forget I understand that there is a lot of misunderstanding and miscomprehension about the technology by a lot of people,

but in a way it has brought a lot of good things and insight but we have to teach everything. Rick asks would this be an actual N gold coating or a C coating? It's a N gold coating. Q: but with a C type tetra 3 D structure? No, it's a crystal structure, structure and matter are 2 different things. Diamond structure and diamond in the matter state are 2 different things. Diamond structure means that it behaves as a diamond, it's become ?? But with all diamonds if you exert a certain amount of pressure on them or in a given position, they become superconductors. A Belgium scientist proved that if you put diamond under pressure that at a certain point it becomes a superconductor and switches back to ?? super resistor. (:32). .. it's only for a short time. they ofund an application for it in the super fast trains (magnetic levitation) in Japan. The Belgium's asked us to find a cheaper way with N technology and we did it. You create a MaGrav system on a Nano structure. (:34). Picture of different metals he N coated. You can convert them into any Gans you like. ... the Cu wire is a strange thing you can connect (only) one end of it to a battery and the other to a light and it lights up. ... this is very important. Vince asks, you described it before as, 'it's all in the knife you use to coat your materials', could you talk on that on the different ways to N coat? There are different ways to N coat, I use different techniques, don't forget I have 20 years of experience. I sometimes use very high temperatures (not pressures) in a specific way and you can literally N coat anything. I became good at it. I can N coat a N coat itself which a lot of people don't understand. You can create N layers that they become the N layer of their own N layer. These are needed for superconductor transmission and space travel. (:36). We haven't taught a lot about the process 03

(:42).

... you could just move the object one way and we knew which way it was going to go because we knew the field from this point. This is what you do you decide from which planet you are flying and which way you go in respect to it but how much can you change. In the space travel and the technology to come you create direction within your system that you always travel in respect to. This is how you make a control system. You don't control yourself about another planet. It's a knowledge to be gained and very soon we'll bring all this knowledge together through the Chinese government space program. We invite the Americans to join us as well as the Iranians and the rest. The way we opened the Insano we had Americans and (:44). everybody else on the table of teaching and learning. It's the same again, but this time we work with protection we don't let the Belgium's come and kill. You'll see the new space reactors that are getting developed which are a collection of what we have taught. Q: I have an empty gap between the cores in my system. I understand that anything between the cores is in the Gans state. .. this is a 4 core reactor, this is what we have been talking about. He draws 4 circles, hollow in center, then Gans, then hollow and then a Gans on the end. You have to understand at what level you are pushing it and at what level. There is a lot which has not been understood. I sit back until somebody comes up with an answer for it. (:46). We expect a full flight system with the new non-radioactive based in a short time. Because you have to go through all the knowledge and not just picking one corner. When you make a flight system it has to be the totality of the knowledge understood, positioning, field forces, transmission, field and Gans structure, because one thing you'll find out, the second you start creating the right fields your Gans's will disappear, because they are in the Inertia matter state, when this takes over the fields go back, even the plastic separations you have created become nothing, nonexistent, it's the field flow of the plasma which will hold itself. Rick asks will those things come back into existence when the reactor shuts down or are they permanently erased? It depends, most

of the time they do, because you are on the earth's G level, you have distorted ?? gone to the higher level. This is what happens, you don't destroy anything. He draws a spiral, you operate here in the matter state and then you go here, then when you go back to the matter state ?? of the earth, it goes back. In most of the cases. It's the way you manifest your body according to your body. (:48). Q: I did find the system wanted to spin one way? Let me stop you. This is one of the biggest problems you people face, the minute you see the system is trying to go in the opposite direction to your setting, let it go. It means you have loaded that sequence even though you thought you loaded another sequence, then remember when you do any tests, find yourself the habit of scientists, write everything down, like Gans's, which ones, how you loaded, produced, and everything else. Then you can more or less always go back to your point of reference. Try to take pictures. Try to record everything, because sometimes you are not in the it might fly and go down again. The field forces create rotation. (:50). In the Insano we used bungee cords to hang the reactors on, it goes down and comes back up and it rotates itself. Try to detach from the ground and when you have legs make sure they have a N coating. Because now you are independent of the matter state. Now you are on a bed of M fields. if you go through the references, no SS ever touches the ground very seldom unless they know what they are doing. As long as you are separated you can detach, one of the reasons you are getting these vibrations is because you have a massive plate on the table. When you reduce your 2 legs you don't see that much. Try to make a bigger space gap between your plates bottom level and the table or the ground, because you need to allow the field forces if this is your SF with your motors you need enough gap with your legs that you allow the field forces to come in, that they carry enough that they can build enough. (:52). When you test a system do not stand there waiting to fly, if ??/ When I test a system, 20 seconds is the maximum to wait especially with nuclear material. You need for the fields to come and then to build up. It comes up and hits another system and showers back to itself. These fields need to increase, you have to find a way to increase them, that they build up, while at the same time these other fields are building up, you get your 3D structure and your lift. In the past we said the real plasma is here (between the base and the top) in the SF and not inside the reactors. It's created by the total mass rotation itself. It hasn't got a boundary. If you go back to the original teaching it was a single reactor. It has been extended to this mainly for the control. When you go into space you'll see this, it's like a museum piece, they used to effect the fields by other fields trying to create lift and motion. But over time the SF has proven to be mainly (:54). what is reliable to fly and with this you can use mono elements which are very safe. The less materials you use the less possibility of you loosing physicality, because when you have 2 elements, Zn, Cu, gold or whatever, now anytime any of the fields can hit one of the 4, so the possibility of the loss increases. Rick asks, would there be radioactivity in these reactors the way you envisioned them or is that not part of the process? It's not part of the process, ?? dealing with fields. Cosmic radiation is part of the process. My SS is in my brain. We have to open up our understanding, and understand the structure of the Pl. (:56). If you understand its structure we don't need to create the Pl to use its fields. So we are limited by our knowledge. I tried to explain last week, you can literally fly on one plasma. The whole U works on 1 plasma. He draws a circle with a dot in center. If you look at this whole U in fact it is just 1 Pl. (draws a spiral to fill the circle) The fields of this Pl have been interacting, and here it makes a galaxy because it has MG field forces from here which is going in, and you have the M of this one that is coming up, then at the same time MG of this one going that way, then this one coming this way, so all these interactions create something, then because of the space time gap then these two separate ones interact adn

create something else. The whole U is made of 1 plasma and even the Unicose is 1 plasma. The way we see that a star is made in the dimension of the galaxy is the same with the galaxies made in the dimension of the U, from the interaction of the fields of it. When you look at the picture on the back of Book #3 it's the structure of a plasma or you can call it a . It's us who has to understand and take it a step further. In reality a single PI can take you through out the U, but it depends on what strength of it you want to use. (:58).

(1:07). power unit in Washington.

.. some them said the palm was warm and the back of the hand cold and others said the reverse, that should have given you massive information. (1:14). That tells you the fields are coming (from) internally out, which means the fields are expanding, you have to block it that you can change the heat to the matter condition and you'll get the structure. I wonder if Keshe is still wrong or the students haven't understood. If you become expert at it and good at the way you make plasma you can stand in front of it, literally through the fields of your system with your soul dictating what you want to do with it because it interacts with you, becomes a part of you. You can respond to it, you become another layer in the process, (draws an IL). If you go a higher order which is the small ?? ring inside you can control the control room, if you can interact with the physicality you can find a way inside. (1:16). Any other questions. Now you understand why I taught you the MaGrav systems, why I explained everything and a ot of you worked 2 years on it, because you need an energy system that you know what it does and it works in the PI condition. The electron system you are doing, rotating, it has a limitation, it can't go it is just putting a crumb in a big pot. This is why you were taught about MaGrav, PPU, and the way the system works. If you need an AC to trigger the PI you can produce it in your own system, where you always trigger your own PI. Q: Does the temperature play a role in triggering the SF? Yes it gives you a lot of blood pressure. Temperature is the position of the physicality. Have you seen any galaxies boiling with all the stars in them. Rick says they say that because of the vacuum and space and so few that you wouldn't feel the temperature. Do you want ot hear the biggest joke the man has believed himself into, that the surface of the sun is so many millions of degrees. (1:18). ... You can walk inside the sun as much as you can walk inside the body of the man. I have explained in the teaching that the heat comes from the matter state of the surface in interaction with its fields. Inside a star we don't see that kind of heat. Rick says, they did an experiment with sapphire plasma where the inner electrode was only a few thousand degrees but the outer edges was in the tens of thousands. ... what about the core of the earth is it similarly cooler? Yes, very much. You were the first one who saw this but you didn't understand. remember when we saw that hollow center. It doesn't matter how much temperature is around the outer core, in the center it's the temperature of a PI which is none. (1:20). I call it like the Chinese system of counting zero doesn't exist. Heat doesn't exist because there is no matter, it's just field interaction of a higher order and they don't convert to an order that creates friction and heat. Rick says, this is the core of your whole teaching, this void ness where the most intense comes from, it's hard to conceive, it's more potential than anything? Do you remember those Gans's you put in the core and rotated and gradually we saw this hollow ball , which is the interface of the water and the Gans's on the boundary. This in fact in the center is so tense, tightly packed that at the point of not the matter but the Gans level state manifests itself here (edge of hollow ball), the strength of the Gans

at the periphery is equal to the strength in the center they have collected to create it. (1:22). This (hollow ball) is the soul of the system. It's like the STM in center and the Gans around the body, you are a being. But now you dictated it with the plastic (core) you put around it. I think today's teaching was a collection of teachings of how you race towards flight. People come around KF to learn and then when they learn something they call themselves god and deny the father teacher. You shall get nowhere. We have had this very recently with a couple of people with governments. They realized the knowledge comes from somewhere else, it doesn't matter what you play. Try to be transparent that what you learn goes back to where it came that more people can learn from. Arrogance of a little tiny knowledge shows the ignorance of a man of his own existence. When we teach we teach everything as I said, energy, space, material, ofod ... When you think you know everything it is the time you demise yourself. We have seen many people around the KF who disappeared. (1:24). .. Q: We have the oceans with salt water and our Gans with saltwater, what role do the oceans play between the sun and the earth and possibly all other planets? No the oceans are for this planet and this is where life can move freely, it's a dimension of matter state for this planet. They interact, the H with the O which we call the water. Look at the dispersal ratio of the fields G and M in respect to earth's MG field, this is where the G of the gases which is the O has to find a compromise in balance with the MG (1:26). with the center of the earth's G field forces, the 2 meet, H is like the 2 wings for what I call the O to find its balance in respect the G field of the center of the earth. The earth creates MG to the plasma of the matter state of itself where the earth condition which is the O, which is on the gaseous side is above the matter state of the earth. When the 2 compromise they have to come together, it needs a balancer so you have 2 H, so it's interaction balance between the 2 G of the gaseous plus the matter state which gives you the liquidity of the planet. When it is only used as the structure of this planet. In some places (planets) you find uranium as a liquid, because it's the same principle again but you have to see what Uranium ?? planet itself with the MG field of it. What actually happens is very simple for those of you who have understood from the beginning, (he draws an IL interaction). If you look at it, it's very complicated but very simple. You have a field that goes down, and through, ... and comes back, it's the loop of the balance of the 2. But here the G field force of the gaseous part in respect to the MG field Inertia part of the matter side (1:28). so you get liquidity or the balance of ?? one in respect to the other. If you redefine liquid then you understand exactly what it does. If they let us teach the true essence of physics all the physics books of today will become a very good fireplace. There is so much wrong that has been taught that even we question now what is correct and the rubbish we have been taught. In a way we question our own integrity as to why we accepted this rubbish, so we prefer to ?? so it doesn't show who we are. The people who move to Pl and Gans T are those who understand what it has been and what it could be, and what can I add to this that I learn more that I can use it. Without the past there wouldn't be the future but in that process a lot of rubbish has come in. We are still waiting for the Royal ?? Society to answer us. Anything that has got oil on it is nothing but ?? false. Q: What color would the Gans of gold be? Try it. (1:30). It's very much like Cu it depends what current you allow to flow through it, it goes from green to orange to black. It depends on how fast you release the N structure into its environment. Q: we need to get to the flight system by giving to the neutron which is the common denominator ... ? Don't understand. In today's teaching I have explained a lot of important key conditions, positions, and knowledge in respect to the space travel. A lot of understanding is needed to be done. (1:32). Learn from the process of creation of life, you bring 2 Gans's together and in absorbing energy from the womb of the mother,

they create a dynamic system that the rotation in giving the fields to each other create a STM and then the STM runs the physicality. So your systems have to be the same if you want to live an independent life in the U. There is no difference. I am not teaching you anything different at least now you understand more about your own creation. Maybe you understand what your system can create. Go back to the word of creation: I made man in the image of Myself. If your soul has managed to make you as a man, give you a dimension of physicality, you can do the same, bring down ?? the structure of bringing matters together you can create a soul that then you can create his physicality. Matter to energy, energy to matter, that is all you have to do. I don't understand how none of you understand this simple process. You are created out of it, how come you have a problem to create from it. Q: how important is the hemoglobin in the control of the flight system? How important is god in the flight system. It's just words, it's a collection of fields. What is hemoglobin, you have Fe attached to protein you make it in your system. (1:34). It's more of the fields, correction of the interaction of the fields. Have any of you reached the position that you'll be able to fly soon. John in AZ says he is getting close. Be careful you don't get your leg in. How far are you John. We've made some breakthrough understanding. How far are you in creating a fuel that you are happy with? That is exactly where we are at now. We are going to test it out tomorrow. (1:36). When you get it we'll call a green meeting. Armand is in Mexico. (1:38). ... chatting ... if you make a system show it, don't be afraid that it is wrong ... Q: Can you please give a clear procedure to make the H3 Gans? A number of people have developed there own procedure. (1:40). .. any structure can be used. You can use a flying carpet. Once you understand the procedure or technique, you can use anything. (1:42). Q: What could the cabin for the earth to be made of ...? What do you mean. In the universe you usually use the structure of the diamond and it depends on what field strength you use, you create floors and partitions if that is your point of reference to have something. This morning we were talking with our Chinese team on how to make partitions, walls or floors. Once you establish your dimensions (1:44). or characteristics of your fields. This is something a lot of you have problems with. I would like ot put your mind at ease. Once you establish this field flow. 1 kg, 10, 1 million kg has no ? with the earths because now your system itself is the dictator of the weight it carries. The fields which you have produced are important not the mass which, mass is so low compared with the fields you have created. A thousand ton is nothing. .. because now we have a balloon and inside I can carry what I like. Like I said before, when I have an envelope I can carry a million dollars in notes or I can write a check for 1 million, it's all the same. It doesn't make any difference the envelope is the envelope it carries whatever is inside. It is how the envelope is created. A lot of you have a fear of mass within your system. It means you haven't understood. Do you remember we released a picture (UOF) in Italy 3 days after we did some teachings. 3 years ago, and there was a hole in the center of it. (1:46). This is that center in the SF. The light in the center is the FP in the SF, it is so strong that these 3 (base reactors) we don't see. Rick shows picture. The Italian air force was trying to capture it. (1:48). This is of a fully operational UOF. there is a second one we took later on. (1:50). .. It's the same position but a half hour later with all the files (fields) changing, it's the central line of the FP condition. (1:52). (1:54). Shandor reads in Hungarian. (2:12).
