

226th Knowledge Seekers Workshop - Thursday, May 31, 2018

(About the STRUCTURE of LIGHT, How light behaves both as a wave and a particle, Light is a plasma and has both G and M, the new game is the light on this planet has its own speed of manifestation and is not the light of the universe, The space fuel for the new reactors has never been introduced and why you can't create the spaceship, Once the 4 field forces of the planet and the sun interact and create the plasma (light), now this plasma is an entity on its own and makes its own decision, Light radiates around the earth, Creating shielding from light, Make your spaceship at the level of universal MG fields so it can't be dissolved, It hasn't yet been taught how to bring the FP to the front of the spaceship to travel by, except the Chinese have learn it, Squeezing or releasing the plasma, You come to space to enjoy the scenery so you can create your own planet, Many stars you see are really spacecrafts, Lead Gans brings depression and sadness, Never play with Lead it's one of the most dangerous, Explains how lead causes depression, Russian gold has different elements and causes behavior change, Psychological studies by the nuclear industry how the words effect people, New scales to measure the speed of light, The current computers are too slow have to develop new plasma conductors with Nano materials, You can't go back to the future because there is no future and the time hasn't solidified, The soul structure records the past like the RNA so you can go back to play what was recorded, You can here the Christ's or Mohammad's voice, Controlling the people through fuel and wars will be over in a few days, Control through ofod and immunization is finished because when you increase the strength of the fields of the bone marrow you are already immune, not just from this planet but in the universe, The light which is a plasma when it releases its fields depending on the strength of its fields when it arrives determines if it is a particle or wave (energy), if it's very weak then it's perceived as a wave or energy, but if it is strong as a particle which it can convert into as it has that field strength to manifest, We need a population explosion to keep the human race from being depleted as we take to space, Sanctions will be imposed on America and others against peace, The electron and proton in division become irrelevant in the structure of the world of the plasma because the mother is a neutron, when you work in the plasma atomic structure or molecular plasma structure if you look at the neutron, the strength of neutron, plasmatic MG field of the strength of the neutron on this planet, If you redefine a neutron and the light it's the same thing because it has not divided into subdivisions of electron and proton or being the Mother how it releases energy, Our reactors will move from plasma to neutron plasma, ONE ATOM makes to covers the whole of the universe if you decide to create a condition for it, Clarifies how to make the reference point with the flying system, You make the reference point and fly into it, You make it with your soul and can fly any point in the universe, As a SF you start as a neutron then you decide to become a proton and an electron, Decisions are being made in Beijing and not in Washington, The Belgium Court went the way we wanted next appeal to high court in Belgium and then European Court prison sentence was not asked for, ,)

(:16). ... those who were here for materialistic reasons are no longer here. (:18). It has been read and talked about but in reality never understood, it has a lot of implication and applications now that the space T is opening up. One of these it talked about in the introduction video and in the 2nd Book it talked about **the light that mankind has seen the light as a time to work and has not seen it as a source of energy and understanding of a lot of structures. In the world of science and especially in physics we have a lot of concepts about whether light a particle or wave, because**

sometimes it shows itself as a particle and sometimes it behaves as a wave, as a photon and there is just a light and nothing else, it's just energy. But in fact if you go back to the teachings we have done, the light is always energy because now that we know the light is a plasma, so it has 2 characteristics at the same time, G and M, one is pulling towards itself inside and one is the direction of the motion of it, which allows it to behave as a source. So this Pl itself when it hits a body, we feel the heat from the sun when we go under it, when it heats us or touches our skin, it is the transfer of M field energy balance between the 2 (?what) , our body it doesn't matter where, we absorb and it gets touched by. (:20). **In understanding where the energy comes from, now we can explain the light, as a wave, as a particle, because it depends on how much energy and which part of the, what's called the central energy of it is touching us, and how much of it we absorb, and how much in what condition create field force, it has an effective force on it. At the point of its creation the light in the upper atmosphere, its balance between the MG field of the 4 forces, as we discussed before (sun's MG and Earth's MG), and whatever these field forces have created, it still has attraction to all 4 field forces, and if the position of the MG field of the earth is weaker then the light particle or MG field, in trying to give its energy to the central core (of the planet), it creates motion in the direction of the planet and with it, it brings that extra energy, as it's a Pl. This in the space T development internally in a SS has fundamental application and implications, because in the space reactors that we are creating you have the 3 reactors, and these kind of field motion which leads to creation of light is constant. Which reactors creates which energy in which direction that their interaction (:22). leads to creation of light. Many of you when you fly in the SS, after you build it and travel in it, you'll have a big problem, most of the time until we come up, mutate towards it, and that is a vast amount of energy as light inside the SS, and it's natural, you're operating on a normal system as the universal system, so the fields continuously interact. You have your rotating cores and one of the first things we learn in the space is light, intensity of it. One of the first things we'll see when we break these M fields from the top, if you understood the process of the SF, is actually what it is, creation of one sun, and replacing the planet with 3 reactors. Massive repulsion of energy from the top and absorption towards the bottom, the sun and 3 earth (like a SF). In that process you create a massive amount of field interactions. This light inside the system will mutate the body of the man, it's inevitable. (:24). At the same time when you release such an amount of light. There is another thing that will also happen to you simultaneously. This is the interaction of the fields which in conjunction with the totality of the balance of the other fields will give you your SS single color. Painting the outer spaces of the SS is impossible because it has tangibility of fields and not physicality as we are used to it, even though it has a physical condition, we can't put the flag of a nation on it. We can still do it in a specific way, but we can't stick it on. It's a dynamic skin. What becomes important is that there are some of these fields which have gathered internally, in interaction with the environment will give you the creation of the light. Most of you who are testing like in AZ you are lost at this point, and I can see that you are lost, but I want to see how you walk out of this, because it's important to see how you find your way out. You have created the fields but you can't shrink the fields. Your losses (in fields) are more then your gains. Go back in understanding the structure of the light, which one you have to squeeze and which one do you have to take pressure off, (:26). is it the G or M side? Don't forget if you create a condition of fields on this side, then how are you going to keep it to the bottom side. Understanding the structure of the light is understanding how you build your SS.**

Book number 1 showed you how to make the field, Book #2 tells you how to build the structure. Those of you who read the book go back and read it again, the light and the eye, and the understanding **of the creation of physicality out of the wave or particle, where the light has to behave as a wave and where it has to behave as a particle? And what would be the effect of it? How can you use this light, massive amount which is coming out to create partitions, floors which don't bubble like your reactor does, it stays constant. Walls which don't move** and at the same time creating these walls and floors doesn't interrupt ... suddenly one of your passengers becomes invisible. The understanding now moves into Book #2. **How do we structure the light, (:28). that by doing so we create visibility, ??invisibility and tangibility. You have the fuel but now how do you release the fuel to create that light? The game has changed and has moved 1 step up. We will see less and less people around the KF** because this part they didn't expect, they wanted a SS to be able to jump in it. Now they have to understand what they are jumping into and how it can be done. And this is ?? You have to understand the totality of the space program. And when you start understanding now the structure of the light we move to the next book #3, the **creation of the Origin of the U, because in understanding how to use the fuel and how to use the light, you create your own U. Because inside that U you create, everything else which happens in a bigger U applies and you have to understand to be able to handle it.** You don't want the child crawling from one room to another and the mother can't find it, but the child is there, because of the field variation. You don't want to leave a cup of tea on the table and the next minute it's not there because the field moved, now the cup is there but you don't see it. (:30). **Now we move into light, transportation of the fields at a higher order than just Gans. We move into the understanding of the transportation of fields,** not collection of ??, we collected enough, we called them all sorts of Gans's. **We know they come out, now how do we attract one to another, how do we structure the process that attracts one to another. He draws the sun and 3 planets (SF). You can use it as sun or as a central line (draws a line through the top reactor). Where this becomes the central line of the U but it has a beginning and an end. You have to decide how you play with the fields of this light to diverge and converge, you have to look at it that there is a third dimension to it in the background.** Understanding about the change of G fields is important. Understanding the M and G changes is important. (:32). And then you understand that how you transport the fields, what we call the light, starts and begins the game of space. Because if you understood how the light travels from this point to this point, now when you put this collectively together and you call it your SS, and you understand how you created the SS, now your SS becomes between you and the point of destination, then if you understand this in a deeper way it becomes one thing, your **SS has become the light moving from one point to another.** How you play with MG fields inside this system, as a light, as a property of the light, decides your speed, the direction and intensity of approach, then one thing is for sure, **the speed of the Universe is the new game, because the light on this planet has its own strength of its manifestation, it's not the light of the Universe.** (:34). When the man becomes wise he will see new things, understands new dimensions and that **the game of space is not the speed of light of the man in matter state. The universe has its own life strength or what you call the SOL we call the speed of the travel of the fields in the U. It is totally different and if you understand it you can relate to its destination and departure, the speed of the travel of the universal speed is millions bigger than what man can imagine. Because now you carry a spectrum of fields and then you work in the dimension of the universal speed beyond the boundary of the earth condition. The SOL on this**

(earth) is what the earth's MG field decides, whereas the SOL in the U is not what the man has ?? limited. **There is no limit it depends on what your strength is and what the strength of the MG field you produce. Man has got to understand this otherwise he'll fail in creation of his SS.** We have to move into understanding more of **behavior of fields from cores to each other (:36). that how and what we load up. The space fuel for the new generation of space reactors has never been introduced and that is why many of you have a problem.** You might create a lift but you can't create physicality. That is a different ball game. As one of the K Seekers wrote to me, you are not teaching everything are you, you are afraid of human race? I am not afraid of anything, because you don't understand yet so I spoon feed you until you recover that you can walk, then you can eat, and anything you like. With this process understanding the definition and the separation of the light from the source because one thing you never understood and **a lot of you overlooked, once the 4 field forces of the planet and the sun interact and create the plasma, now this plasma is an entity on its own and makes its own decision, it's nothing to do with what the earth is doing or the sun has done. Now it's a closed cluster, it decides, it's space travel.** If it is stronger in G in one way or another. By the law of physics the stronger feeds the weaker, **in trying to feed it moves into, and directed to and that's why it comes to feed so fast to create balance that it gives residue as light. In interaction with the field of the earth itself. (:38).** When we look at the space pictures of the earth, we don't see light coming off that way, instead we see earth as a shining ball around itself. **This is where this property comes in. That structure dictates by itself the shape, shielding and position of the planet.** Now you understand that the SS is no different. read Book #2 with the eye of the travel not the light. Understand the concept, don't just copy the pages. **You can squeeze it or release it, you create the condition of fields as you like, it's you who decides, this much or this much. You decide what fields you release into and in the direction of the flight. Don't forget that shielding is the structure of the Pl in both directions. If it was all light, us in the space would not have seen the light of the earth, it would have appeared as a black thing because it absorbs. In reality with that interaction and in interaction with the fields going down creates some fields (going out) which shows the presence of it. If you understand this then you can create directional motion shielding. (:40).** Your fields, reactors and your SS never touches or is in danger with what happens outside. This is the difference between a plane and a SS, in a plane you just get smoke in the back and no protection in the front. With the space T your system is in the back with the shielding forwards. Two different concepts and things. Hopefully nothing hits you in the plane, but you are so safe in the SS nothing can penetrate you. You have to understand the structure of the light, how much light you put out, and what G field forces that its interaction with the fields of the U gives you a shielding. **On earth it's very easy to create this shielding but in the space of the U it is not, because the facts that in deep space there are many, many fields around so if you are not careful your fields (of the shielding) will look something like this (wavy), depending on whose is pulling, and this is what you don't want. You don't want to suddenly hit a space without protection.** But the waves of the fields put pressure on that it can deform the shape and structure of your SS. (:42). **In constructing your SS you have to create a field level that is above the totality of the universal MG fields that it can stand and wave field forces anywhere, otherwise you suddenly walk into a hot bath and the sugar disappears (your SS dissolves).** Now many of you understand why your SS don't take shape, that your SF has trouble. Until you don't do these test drives, these elevations of the understanding of the totality, you'll have a problem with flying. (He

draws SF). Your SS sits there but the point of your first reactor in conjunction with the other reactors moves ahead of you. **So you always travel into "chasing the tail" like a dog chasing its tail. You have to move, as you were doing here by ?? the central G field force of the imaginary core, you have to create another one in front of you, that it not only becomes your shield but it also become the (reference) point with the (other) one trying to catch up with it, moves you at a high speed to that position. Your strength in the center has to be so much higher that the secondary field (reference point) you create is trying ot feed the same process as the light (:44). it creates motion.** You don't need the position of a moon or a star to travel into, you can travel here because you create your point there and can travel to there or there (any direction you want). You don't need to understand the forces of central G field forces, you are in the ocean of the fields of the U and this process of what you create for the positioning is what you see in most of the UOFs that we see on this planet. **They suddenly takeoff, because they have this imaginary point or what we call the FP, now they create a new one (secondary point) in any direction they like, so this (FP) tries to catch up, but you have to understand how you bring the fields to be ahead, This process has been added into the Chinese space system, but not in public.** I have taught one of my closest students how it works. The knowledge has been shared, but in time it will be released. **We do not need moon to takeoff from earth, we create our own moon in any position in the U, and the speed of travel is the ratio of the difference between the strength of the center and the point we create. (:46).** You don't need to look for somewhere to go, you decide where to go. **You have full control and at the same time due to the way you structure it, you can create multi, multi layers of different shield strength. When you decide on the space travel you have to be collectively understanding the totality of the space work. You can't be off your guard for 1 second, you have to understand the ratio of your fields, the ratio of your fuel, the ratio of the fields in your craft in respect to its environment you are traveling (in). You can't have the behavior of traveling in the water as you have when going through a solid ball.** You can't create the same condition behavior if you are in a massive plasma environment of a very high order in the center of the galaxy or towards the center of the U then what you do on the edge of the universal ?? side ?? of the galaxies. **In the past many SS have been lost due to the mistake of the captain, and it will happen to the human race. (:48).** Understand how, this is part of the space light travel and you have to understand when you program or decide your flights. **You have a sun, if the distance from the sun to its boundary is long enough that the fields can reduce in strength you start creating particles, we call them planetary. In many cases the pilots make a mistake, they do not allow these particles to return as light, but by mistake they become the stone bullet shot on its own surface Because the pilot is not aware that in respect to the environment he has created a field that the reduction in strength is faster then what he calculated, in a way he stones himself.** And as he hasn't created a second shield for it, it destroys itself. The space T has to be understood in its totality, not just takeoff and trying to move. **It has to be on the field strength and understanding the transportation of the field, which now here, as a SS you are in a matter state, then here you behave as a wave, as a light, then you come to another point which is the creation of the manifestation of that ?? point, Book 1, 2 and 3. Because when you arrive you become the origin of the light, origin of the sun, (:50). structure ?? and in time as many people have done in the past, you come to space, enjoy the scenery, you create your own planet. Many of the stars you see in the sky and you say it's a star, they are SS which they have made this condition.** Because the view is good. .. You see beautiful things in the space and you want to stop

for awhile. **This is the privilege to create your own dimension. The same applies with the STM. The structure from now on is in the hand of the man himself.** The possibilities are infinite. Now you have to understand the whole proposition. If you understood this part, then **you have understood how you can create materials in the space** as you need. If you understood this go back to the teaching, (:52). remember the reactors surrounding a center, the reactors around the edge create a field strength with the center reactor and give you the field strength of Cu, this one gives you O, this is the same as the other one, nothing has changed in the knowledge, the only thing that changes is our comprehension and then the application of the knowledge, then it's the extension of the knowledge, how much can you extend it, how can you play with the fields. **We are aware that many scientific organizations and many world governments are working around the new T, but they don't understand it.** Because you all look in one direction, you don't want to understand the totality. **I gather a Gans, now I create a Gans in direction and motion, I don't need to energy up all the time, I know how to squeeze my fields that I imitate the center of the U to travel into, or I imitate H that I am much stronger so I increase my path, the speed of motion.** (:54). And if you can in the long term understanding create a condition in your space reactors, in your plasma free space (FP), the condition of the Pl of the central original mother, you'll travel at much higher speeds, because your FP is so much stronger and the other one is so much weaker, or the other way around, you can go either way. This is the field motion because then you change direction. **Position and understanding of the structure of the light as an energy or a photon or a particle is the key to the understanding of the travel of the future for man.**

Any questions. Q: Lisa from Australia wants to ask about squeezing the fields. (:56). (very hard to understand) we have a SF with Zn inner cores and CO₂, we have created some tubes and put them around the outside of the SF that are highly G and seems to have strengthened the fields of the total fields. Am I pushing or pulling or squeezing? You are doing both. (:58). He draws their SF. ... the outer tubes are filled with CO₂, Zn, Silver and Gold. (1:00). **This is why you are feeling much more pressure inside and outside. You are not squeezing it. Your body contains Silver and Gold and now you are interacting with the S and G Gans** ... this is a very good point for John in AZ, this is a point for the Pl ratio, because when you got a Gans mixture it doesn't look at the gold or silver, in a Pl mixture as you go in you make different strength levels. ... you are playing with a stronger field you are going into the center of the Pl. (1:02). you have a combination of the 4 with a still stronger field. And I added some oflic acid. Are you planning to get pregnant, No don't talk that. You never know with this T, 3 or 400 years... **this is why you are feeling stronger fields you have moved deeper in the Pl. It's not material loaded but field loaded. It's the ratio of the load.** And how fast, this is what was written by Bahuala, **transmutation of elements, it comes by what your field force out of the matter, or what your fields take out of the matter**, going this way you get to gold, going the other way you come to H. In this what you have created is the same fields, it's where you want to cut into it. You were cutting it here (higher up in the Pl spiral) and now you are cutting it lower in the Pl spiral. (1:04). No you are not squeezing but adding to, but in a way you can squeeze if you know what to do. If you make a system here (in center of SF) which is lighter in the strength, the outer tubes will start feeding it. Q: So CH₃? No it depends what part of the body you sit or what you want to hold, you can do. We are running some tests in the background at the moment about these things. Q: When you sit in the SF and put CH₃ on the bottom you can feel the energy shoot up towards the head, and if you put something on the top reactor you can feel the energy push down from your head. What

you have created is a transfer of the energy. It would be very interesting not to use any Cu, because Cu is the ?/ of the physicality of the muscle tissue. And Zn is through the emotions and that is one of the reasons (1:06). you feel the flow because the Zn is connecting to your nerve system. It would be interesting to see if you move the Zn out of the combination and see how it feels. Q: The gold Gans makes everybody happy they all start smiling. Do you tell them it's gold? No. Is this why man finds comfort with gold. ... now you have to come up with a system to see if you can stretch it to another point, make 2 of them and let 2 people sit in each, (1:08). and see if you can transfer E from one to another, not far from each other. ... if you use **lead it brings depression and sadness because of the structure of its Pl. Never touch Lead.** Rick: Many people have reported that it seems to be true. Lead is one of the most dangerous things to play with. It's a structure. Bring up lead and gold. from Wikipedia, (1:10). but you have to look at the structure of lead in comparison to gold and in relation to C. Put it next to Zn also.

(1:14). Gold (196), Lead (207), Zinc (65). In Plasma Zn (50/55), Gold (196), **you'll see a ratio connection in some isotopes plasmas. The difference is only 10 but if you look at the number of proton and electrons present ... look at the number of neutrons in all 3, overall most of the energy balance difference in atomic weight comes by the neutrons, when you have a bigger structure like lead,** (1:16). the difference is very little but it's huge with those elements which the neutrons making into the structure. The lead gives huge amount of energy compared by mass ratio that in some of its isotopes. Not all of the lead, when we convert lead some of its isotopes are balanced in ratio to Zn which is a neural connection, and some of it is the same with the gold, but we don't have much ratio difference, very little, but the neural system can accept or digest it through the connection of the CO₂. Some of the lead, it's not that it takes energy, rather it gives so much that it allows the neural system to give more, if you look at the upper end of the lead isotopes, go to levels that Zn can't be given, the Zn becomes a taker but at the same time it gives more in the M level and then that creates a lack of energy. **You still have the same if you go to the isotopes on the upper level of Zn, then go to the ?? lower level, (1:18). then look at the upper level of the lead or gold the ratio when the system gives a lot in the M but takes more in G and now he has to give more in M, and this brings depression.** This is why when you use **Russian gold it gives you different behavior then European gold.** Russian gold is redder it has a different content and that creates different anxiety whereas the European gold doesn't do that. Russian gold has elements that touch the nerve, Zn acid level .. there was research done on it years ago because people used to get their tooth covered in Russian gold and they found that the behavior changes. ..

(1:20). The Russian mix gold is different then European gold, it gives a different behavior texture. **This is something I noticed in space development that these Gans's have to be avoided in setting up the space reactors. Then in the space you get aggressive or calm behavior, it totally comes from the neutron plasma structure field strength. As the neutron field structure increases the interaction field behavior changes also.** When you go to the Plutonium or Uranium you see different conditions. One of the **psychological studies done by the nuclear industry towards them shows why people have more fear for nuclear or any mention of it, is because they connect with what we call Plutonium or Uranium in the background of the knowledge of the man, and we give more (? importance) to these words.** This is why nuclear material does what it does and they interfere with our neural system, this is why we see rapid cancers, people who go through a nuclear process create a different

behavior. **It's all to do with the mass ratio fields strength of the plasma and not in the matter state.** (1:22). I have studied nuclear field interaction on human behavior and it's very interesting, if you listen to some of the funny talks, in a way I say, **why people fear us as nuclear physicists is because of Hiroshima and what we did, and we have related something which is scientifically interaction of the fields with us, and it effects our Zn field line with the CO2 or the communication line of the AA. In the future there will be many studies of the Zn interaction of the fields in the space. Behavior change in races in different part of the space has been observed for a long time, but at the same time you create the shielding effect in your process of the fuel, that protects you from these things.** Any conversion of the energy to a certain level is added to or taken out that, that phase is not there, you create that M filter. You actually do that in the Gans waters that you drink, but now you have to change the water into the field PI condition. **The field transformation of the liquid of the body is at the moment under observation by the research centers of the KF, how the dynamic fields effects (1:24). the acidity or alkalinity effects itself the emotions, the presence of giving energies replaces , this is why we say alkaline water is good for people not ot get cancer or whatever, because they have a process of giving and taking in a balance where acidic conditions is continuous condition and the body can't handle it.** As you go further up in the some of the atomic structures of the materials in the PI condition they become more and more dangerous for the body to handle, when we go to atomic structures as I have taught before, at the moment you are into 90s or whatever, but the moment we go to 400 to 600 when man goes into deeper space he'll find new materials they'll give different emotional feeling to man, so we learn to filter it. We have the knowledge but we ignore it because its not comprehensible for us but if you. But for example **if you take your Gans Zn to Raman Spectroscopy it gives you the elements that are called exotic and the ones that man hopes to create in the future. But if the Raman S has detected the field it means the existence of the matter, it's just that we haven't managed to convert it from the energy pack into matter state pack.** (1:26). If you do Infrared Spectroscopy on it, it gives you a list of exotic materials that will come out of your ZnO₂ and CO₂. I think Zn in one machine gives you a spectrum of 22 materials and a few are in a range of 3 and 400 and they just say exotic material not known. ... the space PI in the direction of fields that do not take from the energy of the Zn, will give us joy and happiness and the ones that the Zn and become the provider to them creates depression and sadness. And in ??? systems and now we speak of the speed of light and new universal light strength transportation, then you can't say I go 1000 times faster then the speed of light, then this light the field property (1:28). of the PI in this part of the U becomes like Pb and I feel depressed. **Would I go 2000 times the speed of light and come up with a new scale of dimensions, we call it 1 kw, megawatt, and now we have to come up with new measurements for the SOL which man has fixed himself, so he has ignore it (what is true), or in the matter condition we travel so many times faster then the speed of the matter state,** so from now on we don't call it SOL we call it kilo lights, mega and giga, and then we travel in that dimension because then we can produce new strength fields that we are in possession of, **we have become the creator of it, and it makes sense, so you can go 1 billion times faster then the SOL. So for einsteinium's and Newtonians these things can't be, but sorry, stay in the school and thoughts and education which is only good for the last century, now we move on, we have to add to the knowledge. This is inevitable in the coming times. I spoke in the beginning of these teaching about 3 to 5 minutes from New York to Beijing. This can't be achieved by continuous conversion of the curvature of the earth, but it is easier to go out**

(atmosphere) and come back in, and you don't target the moon it's on the back of the earth, how are you going to target it. You create that point and then the space ratio, (1:30). and then in that ratio you create you make sure certain fields don't come into operation that suddenly half way half of your passengers become angry and on the other side the other half are laughing their head off because they are happy. There is a lot to learn. Secondly **the present computer systems can't match the development of this T. The extension into new what we call plasma conductors is inevitable. In the new space reactors we don't use any wires, you have to use the spacing of the new N coated, N technology, space plasma technology, and even then if you observe the color of the wires change during the test because the field pressure changes on them, they absorb different amounts of energy, you go on a higher order, so the top layers get saturated and become dissolved and it's very much like the way you release the Gans from the spaces of the N layer, that will happen to it, then they create a space gap of the higher energy transportation between your systems.** There is a lot to be understood. Now we start a new science of the space T, the matter state has finished, but at the same time we live in a matter state and we have to understand the interaction, composition (1:32). the interface and interchange from one to another, how we convert one to another. **Now they say you have been traveling 1 million times faster then the speed of light. Do the seconds go backwards when you come back to it, then you would come back 1 million years before the birth of Christ or your birthday because you came back faster? No, you still arrive back at the present manifestation in the point in time. At the time you arrive. You can't go back to the future and say you traveled faster. There is no future, there is no time, because it never solidified together, to be together that you can see what you want to see. In time when scientists understand the process of the evolution of the process of the STM, then you can go into the soul structure as part of like the RNA and listen to the recording of the past through the dimension of the strength of the soul which is of a higher order, as I said if you add the Zn, Cu and gold together and you get a higher order, then you see in that recording, what energy transformation was there that when it converts to the body of the man in that package becomes the DNA, and then all the information of it is there, the color of the eye to every thing else. If the RNA can record the color of the eye of your grandfather and gives you the mixture between the blond and blue and gives you a new color of eye, then it has got all (1:34). recordings of all the transformations and transmutations of the man and all the sounds and everything else.** Then we can go back in time in that condition of that soul, **and not by looking in space and reversing it (time).** I always said, I will take you back to listen to the voice of the Christ or Mohammad, because it's there, it's recorded. **We'll see the faces, as the PI conditions that then we recognize that this is this, this is my uncle, grandfather or something else, this king bla, bla, this is a glimpse when he was going from one place to another.** The new science will bring a lot of dimensions and a lot of people will oppose it because now it creates a new dimension into the whole structure of the knowledge of the man. **Always with new knowledge there is opposition because those who don't want to understand or move with it, they oppose it, it's Always older people because they have the financial power as we call it.** As I said many times the structure **with the people who created wealth out of war in a few days it's finished, very soon. We don't fight it, when you introduce new T where fuel doesn't exist all the investments and the wars in the Middle east and god knows everywhere else, because nobody needs the fuel. (1:36).** And then you move into the space dimension of zero time transportation, the present control of the traffic of whatever, has no

meaning. Then they'll have no control over the ofod, over immunization, it doesn't exist because now if those of you who become wise enough and we have shown in cases, you increase the strength of the fields of the bone marrow, you understand the structure of it, so you are already immune, not just from this planet but in the U. We have to move on and it starts as of today's teaching because up to now we just taught up to Book #1, now we are in #2, traveling, and transporting. Now we understand the property and structure of the light, this is why Book #2 was written. You created a Pl, it releases its fields, now is it a photon or is it energy or a particle, and you decide because in the center of it is what we call, Principle Matter. It is energy when the source, what we call Principle Matter in strength has given most of it, when it arrives it has no more to give, it is just at the last leg of the fields. It behaves like a particle which means at the interaction point it did not release much, or it absorbed a lot, now it still has some more left, when it comes there is still something in it, the cup is still full. (1:38). Don't forget the condition of the creation of the H. The energy of the Pl of the light which is at the H level when it arrives it hasn't got anything (left) it's just on the last leg (of its energy), because it's weak. **But if the structure at the point of creation is at the level of the gold, then when it arrives and it impacts, it still has something in it, then it behaves like a particle, it's not just energy.** It's very simple. It depends on where you catch the ball and at what speed it hits you, and what speed was released and if it was made of a balloon of air or was it made of stone and solid material. This is all the difference is and now we have to understand the knowledge in a much deeper way. **The end of the oil monopoly is weeks away, maybe less. The same with the currency and ofod not years. And you are doing it, the knowledge has been passed on,** it's in the hands of the KF, you are too slow, because as I said, you don't have confidence in what you are doing. When you can deliver small systems that can travel the span of this planet. **In a year or 2 we'll laugh at ourselves in how we allowed the Rothschild's to control the fuel and the destiny of man with war. They'll be hunted and haunted, you watch, because it's not me anymore, it's all of you, you are getting the hang of it.** (1:40). We don't need fuel and all the wars we see created by different groups and things on the world interest on oil is finished. It's more or less over but you are not wise enough to see it, because I see it through how our research is coming up. Control on ofod and world population is over. **The biggest enemies of mankind are those who want to control the human race** because what it is, is 7 billion of us. On the average we'll hold 5 billion back on earth maybe more, but **we have to become like the Irish as you know the biggest export of Ireland is human beings and potatoes.** We have to keep on producing at a higher rate to be able to catch up with the human race that will travel into space. **How many will be left, not many educated people, or the ones who are educated and yet want to stay behind. We'll loose a huge rate of the population that want to go into space and at the same time those who stay behind with the new knowledge, this planet can support at least 2 to 300 billion. Not 7 billion. We need that explosion in population that in 30 years time the planet is not depleted from the human race.** Most probably those who are not educated will stay and those who have no intention to leave. **Those who bring population control and they are trying to do it with injections and the rest, (1:42). people will haunt them, they'll be named as the biggest criminals because they didn't allow the human race to grow.** But they'll walk away, be sidelined, we'll see a new political situation move on. **We have seen countries who start talking about peace now want sanctions against those who were claiming that everybody else is (?? terrorist). It's like the thief is among the people and shouting catch the thief, but it is actually them. Now the**

thieves are getting identified. Like I said, the Syrian war is the last war the man will see. This is our wish and our plan. We support president Zhi's plan to support the governments who support peace. We don't need war, the time of fighting to show who is more powerful is over. **The nations who carry the new T will dominate through the power of the new T. The old colonial time is over because the new T is coming up ...** when we go to planet Zeus and bring a stone from there here to sell, what for, I can produce it myself. If a lady from Australia can come and tell us what makes somebody feel happy, and is just a Gans of something, god help our scientists who still have to catch up with the ladies in that part of the world. The breakthrough knowledge is the understanding (1:44). of the knowledge, implications and applications. And now we are getting there, we are moving into the light structure. From this week we are working on Book #2. **For the past 10 years we worked on Book #1 because we had a lot of people to catch up.** Those of you who want to stay on tomato you can keep on Book #1. Start understanding the interaction of the fields. **Up to now you have only worked with 1 system, you need a second system. How can you see a magnet when you don't have another magnet or a metal. The process of the space development is 2.** Can you go back to photo where I stand with 2 reactors. I clearly showed but nobody understands. You can't have a flight without the other. In the space system you create flight with the point ahead of you. In the original mechanical system I didn't go to fly the heavier reactor, **I went to fly the small reactor by ratio mass, because now I created a point of reference with the bigger reactor, because they are both in the atmospheric condition of this planet.** I can't work with the zero time to go into the ground, so I created a new ground level that I can fly against it. As I said to you, the Iranian flight system is not a big system on the floor, it's the small one on the table. I cut or damaged myself in Theran trying to catch this (1:46). flying ball. As I just explained the FP in your SS is not your flying system, it's your point of reference to be the heaviest that it tries to feed the lightest one so you can travel. This is the new ground level (draws circle around the heavier reactor). When I took the system to show the Americans we always showed them this one (the heavier one), because I am not going to show what flies do I. This is the seat the ?? sits on, and this is the seat you have to make. Now you understand, I am a very good magician, I put everything right in front of your face but you don't see it. Those of you who always worked with ?? system to fly you can forget about it, you can be on planet earth until the Zeus comes here. I said many times, this unit (small one) has damaged me. But people were looking for something wrong. If you understand this, it's good bye loneliness, and that means goodbye to the oil industry, it's finished, I am sorry for Rothschild you have to bury a lot to understand what has happened to you. (1:48). **You put one of these in the center of the car, we showed the flying car, then you don't need the fuel do you. You have access ... you dictate this way and go that direction.** etc.. ... We don't use 3 reactors (in the car) we use 5 reactors in the shock absorbers. Go back and look at it ... oil industry is dead. Man has to move on with a new understanding and new structure. Now you have to watch the speed of the light between these 2 entities (larger and smaller reactors). This is where you become from matter to transformation of energy to what you want to be. Or you call it the **self positioning in MG fields and you fly. this dictates it's going to be there, or you are a FP and you create this point and that's where you move into.** (1:50). The space game has changed. We had the donkey, came to fuel and now we work with plasma. The way I have taught you to make it nobody can dominate the power supply. You make it at home in the night and you fly with it in the morning. Unless having a spoon at home or a wire in the wall, nobody can stop you from doing it. I have made man free. It's man who has to understand how to use the

freedom. I thank the Iranian government for this opportunity, exactly 10 years ago next week that I landed in Iran and even when I did the Iranian scientists never understood what I was doing. There was only 1 who understood what I was up to. He said, and you came here to make this, and you made it, you came here to fly. He understood that the big reactor was just a point of reference. I love the Iranian and Chinese they work in the understanding the way I work. You all looked for this (bigger reactor) and you see my finger very clearly showing, 'this is the one that flies'. You were looking for something else. You create a point of reference (1:52). because we are born in the MG field of the planet, we can't do anything. It's there, it's zero unless you create a new position.

Are there any questions. Q: I am kind of gum smacked from all the information today. My references were back when Mr. Keshe was talking about the neutrons of the elements within our reactors. you always said that Iodine was part of the process? I didn't say, it was the conclusion of people who were working in that field. Q: Is it or isn't Iodine important? (1:54). You are going in the direction of the strength of the E and not the soul, and a lot of people spoke about it. Q: If you look at the Periodic Table and you want to make Pb **Let me explain something that has to be understood. If I was going to write the Periodic Table, I would throw that Table out in the bin, for the space T. If are going work to work just with the space T you are better off to look only at the neutron levels. Because the U works on the package of the original creation of the original plasma and not on its division. When you look at the atomic structure of any element or at the combination of structures of elements as a combination PI, you have to look at the neutron combination and effect of the neutron balance (1:56). then you work more clearly in the direction of the reality in the space.** Q: everything is thrown out the window, I have started to understand thank you The problem or the understanding is, in the past I referred to the neutron, **those who reach the understanding and production of the neutron strength in the world of the science of PI, are those who breakthrough different dimensions of understanding and energy,** I referred to this in some of the teachings but people don't understand that **the electron and proton in division become irrelevant in the structure of the world of the PI because the mother is a neutron. When you work in the plasma atomic structure or molecular PI structure if you look at the neutron, the strength of neutron, plasmatic MG field of the strength of the neutron on this planet, and then you understand that this is the Mother, this is very much like the field strength of the center of ionic plasmatic fields of the Principle, that's where it comes from, and then it divides into 2.** Our scientists who work with the new plasma T in the future as they mature they'll move into the neutron levels, (1:58). not in the plasma of the Gans the matter state. **The Gans of the neutrons of the strength is the dictation of the moving from one universe into another, because in the Unicose the same game and principle of the field interaction dictates when you can change. If you look at it the structure of the light is the structure of a neutron, because now it's independent, it's not dividing into anything. It stays on its own and controls its destiny and delivers what it absorbs according to its strength. If you redefine a neutron and the light, it's the same thing because it has not divided into subdivisions of electron and proton, or being the Mother how it releases energy.** If you understand the relevance and connection, in the future most of **our reactors move from PI reactors into neutron PI reactors. We have a stage to go through which is a crystallization of it, and the Chinese scientists have achieved that in the past 2 weeks,** but they don't understand it. But this is the time in the next few months or years, those of you who **understand go towards a neutron structure PI which is a**

singularity, and then on the condition of singularity it creates a crystal condition. ONE ATOM makes to covers the whole of the universe if you decide to create a condition for it. (2:00). Any other question. Q: I have the version 2 SF with in the middle Bismuth and 1 drop of Pb water Gans, Do I have to throw everything away now? **Please keep away from the Lead, yes. I usually suggest to people bury it 10 meters away from where nobody lives. Because Pb has an affinity towards the neural system of the man to create a condition as part of the structure to receive energy. It brings exhaustion and drainage on the energy system of the man.** And because its combination is very close with the Zn and CO₂ to the structure of some of the isotopes of the O and C with some of the combinations of the isotopes of (2:02). the Zn and O, comes very close to Pb and once that is made you create a condition of feeding it. If you look at it, you have Zn at 65, then C of 12, that is 77, then add 16 of O to it, then you see how you achieve very rapidly into the condition of 203. You go above on the higher strength of the AA if you have created the ZnO₂, mono ZnO, and if you have the presence of H₂O and CO₂, very clearly in some of the isotopes combinations of higher order you match on 207. and then birds with birds, **you create the MG field of the atomic structure of the Pb, then you communicate, then by order because you are dynamic and you continuously have the supply, the atomic structure of the Pb in the box as a Gans, doesn't have the dynamism presence of H₃ as a CH₃, as a sugar ofund in the body of the man so you become a supplier.** (2:04). Q: Did the fields settle into the grapheme coating of the spirals? Yes it does. Q: Do I have to bring everything back to the raw state. Yes, how you do it, more or less. When you have a grapheme you created a space gap storage.

... Chinese .. (2:09). **Q: You mentioned we have to make this reference point, but if we want to fly to the destination we should change the field strength of the reference point or do we change the point of reference in the flight system?** You change it in the point of reference and not in the flight system. You can't keep on changing (your reference point) as a chameleon because you'll loose your boundary. That center stays with the structure with the way you structure your fields in the point ahead of you, that is where you have to change. You can actually create a condition where you reject yourself from the point and go backwards. Q: I am confused, do we take this point in my flight system (2:10). or is the reference point located in the earth? No ... there are 2, it depends which one you call reference point. **Your FP is always the same. Your creation of the point ahead of you, this becomes your reference point of flight to that point.** You create, when we were testing in Theran. The small reactor is full of nuclear based material, so I wanted to fly in this direction, I used to mark the ball, I opened the reactor and deliberately removed certain nuclear balls, so this side was weaker and I knew I would have to fly (toward this other side). I referred many times in my teachings about dictating the position of flight, because now I weakened this side or strengthened the other, so I go there ... I said we could predict which way the ball goes by changing the energy sources inside, ionization field forces. We never touch, unless we want to go on the ground, this level (ground level). Our purpose wasn't to crash to the ground (2:12). but to fly and I could fly very easily. **Now with the new PI SF, this () is the point of your reference and you create it through the combination of the reactors that you build around the system, the flight system of it, and how you do it, and how you energize your reactors.** This is your point (outside the reactor) you want to go there ... and if you can keep on changing, in a way, if you offlow the dots, this is a very difficult way, if you offlow these dots, if you want to go from Theran to Washington on the other side, you just keep on changing this point of reference. **But the**

easiest way is this (draws a single point and connects start to finish), it's a straight line flight. Because the MG field of the earth is irrelevant. You create above it and it doesn't interface with it, so this is much faster than trying to offload (the dots). Q: Is that you mean the reference point is still on the earth ..? No, it could be anywhere you create it. The reference point is this blue one here. You with your reactors create that reference point. Q: That's a FP, right? Yes. In the space and not inside your reactor. Q: So if I can use my soul I can put it anywhere in this U? ... Good Morning. (2:14). Q: Then the problem comes .. if I have never been to somewhere else how can my soul tell me where that place I have never been is, where to put that reference point? Then you have to test. I have never been to America, so I am going to go there and see. Let me explain, you brought something beautiful on, you have to understand. This is your reactor (the big one on the table), this is your neutron, by creating another space you convert yourself to an atom, an dhow and what distance this electron will have, you call it point of reference, dictates on your speed and the strength and direction of the position. If you go back to the books, as a SF you start as a neutron then you decide to become a proton and an electron, then you can even decide I want to be 2 or 3 protons and electrons, then I give myself curvature of move, before reaching there I change, and I change. This will become part of the system, but unfortunately the present computers can't control such a speed so you go back and understand through your emotion (2:16). and then you have to be a very good captain to be able to do these. Would anybody like to come to planet Zeus. Q; Can I manifest myself in different places at the same time? You decide. How are you going to decide you are going to enjoy going to a museum and which picture I am going to enjoy, or what movie I go to. You decide, at that point I want to be here, I want to enjoy what is there. When the man goes to space it's a point of maturity by losing his sight the condition of his vision, and using the sight of the STM, we'll see things different, we understand different, the speed is different. It's a conversion point. The physicality if you understand it, very, let's put it as the STM (draws a blue dot on head) somewhere there in the back of the brain. It's that soul that has given the face, the structure according to where it is, and I can continuously change it to make a move of the finger or whatever. We already know the knowledge and we have made a neural connection to it and call it the body of the man. But in fact it sits in the back of our (head) soul. (2:18). Why do we go and feel good to live in one part of the world and don't have the feeling of live in another part. Because of the same position, the same condition. If you look it is the soul which has created the body and the face. I can change the strength of the soul and the face will change, you will not see the body. And then I decide to manifest the soul here (draws a dot in another part of the room) and I give a shape and the body I like. The problem with us is that we got used to physical motion of our body and haven't gotten used to the motion of our soul. We see the body here and think we have gotten it here, but it is the soul that wants to manifest itself here. We have to change the point of reference and then according to where I put the soul this is where I am going to be, I create a fixed point, this is the shape of my body it doesn't matter where it goes. Here is where I want to move the physicality with the soul of it, then I manifest myself here in this shape. Any other question. Today's teaching is very intense, if you understood it. This teaching is the beginning of a new cycle of teachings (2:20). of space development. I think it is time to move. (Chinese guy ???) (2:22). ... new webpage in Chinese... (2:24). we closed the old Shenzaun lab because of misconduct and have just opened a new one... Q: About the Point of reference, we know birds have this to know how to get to there home, we have some abilities but they may not be developed. Can we create such a

reference point with respect to the space craft system to get to that point, let's say I want to go to a place in US and I create that point in respect to the reactor in the SS, **how to transfer my knowledge to that of the SS?** When a bird flies it's its own GPS in respect to the satellite its on, **2 points it has a POR from where it left and where it is going to, and that is how he finds his position.** Because we are physical people we look at this is the road. (2:26). **But if this is a tree in Africa and one over here in Europe now the bird acts as a satellite continuously (making) points of reference between the 2.** It's very simple. **The direction of the flight sits on its own MG field inside its brain. Because the brain has a position , in the future man knows the science will find that we have the same. It's very near to the soul of the bird, but it's far enough away that the condition of the E and the rest of it do not interfere with it. It uses that shielding, that environment for its reference point and this it's very easy to target.** Maybe we have to mature to the condition of the birds and understand it. **Because once it touches the physical condition then E comes into it. This is no E, this is the unconditional position of the 2 fields, point of reference and it flies back on the same route.** It doesn't matter what wind blows or what thing is there it remains connected. We will have this same (thing) when we travel. The problem with the human race is the thing called Earth, once we go out of it the game changes, (then) now we are another entity on our own in respect to. Up to now we fueled ourselves to travel and now we'll position ourselves to travel. It's a big difference. **This freedom gives us the freedom of the birds, where do you want to go and where to see yourself.** (2:28). When you go back to 129 Tesla (experiment) it's all set up by the same structure. There is no difference. If you go 1 frame backwards (on the video currently on the screen) you'll see a number of reactors on the floor in the Insano. All these systems you see here are still all intact and have been kept for the future reference and those who want to test these reactors can repeat 129 Tesla again and confirm. Everything here even the screws and nuts thanks to a woman called Caroline has been kept, all the gas combinations and everything has been recorded. It's us now who has become that bird and then it's our soul that ?? seeks the position. We have always been put on a plane and taken somewhere we never had to decide to create that condition. We have seen birds traveling from one position from one side of the earth to the other, how is they always come back to the same feeding ground every year again, how do they do that. ... **They are another piece that are independent of any attachment to the planet. That's all, they are a UOF on their own, but they have the shape and the control with it.** (2:30). When we become that mature to be able to travel the space without that earth connection, most probably a lot of us will do the same with the oncoming space systems. Q: **Jalal thinks that he can make the SF with his hands and he uses the energy of the emotion, but the main thing is how will he capture the fields in the position, can he use N coated balls? If you hold it long enough that it manifests its own center, yes.** (2:32). Q: Can he use the help of a MaGrav to increase the power of his strength? Of the ball or himself? Himself. Yeah, the thing is Jalal is thinking very good too fast. **Not the Jalal that is speaking but the soul of Jalal.** Q: Yes, this is your teaching Mr. Keshe. What is the easiest connection between the mother and himself, does he use the AA? Oh, you lost the teaching. You have to go back to school. **This is your MaGrav system and this is you. To receive you have to be more humble, to be lower.** Thank you. We hit something very interesting for me today. We have been asking and now apparently it's becoming a reality, **that many scientists have been working on KF technology and in fact they have not managed to replicate it. The reason is that they have not understood the essence of the knowledge. They have just copied the knowledge.** (2:34). I am pretty sure, shortly in the coming time by the

development of the new space reactors, especially the one which is due to come out of China we'll show a new evolution in the world of the science and the space T. In that process what is interesting is how the knowledge will be used for application and implication of the peace. We stand firm on the path of President Zhi to bring the T that it enforces peace, and this process is coming up, **I heard the news today that there is consideration to bring sanctions against the US for breaking rules and agreements and if that happens we want to know how the American government will cry and shout.** Up to now they served sanctions as they liked to do what they like. ... I bet you they'll talk about nuclear war, this is how they want to threaten, but I have assured the Chinese government and other peaceful nations, the T to dismantle nuclear warheads is a gift to the Chinese and Iranian governments. We stand firm on it. The true science counts and shows the power of the nations not the hollow threats and ?? **It is important to us now that we opened a new chapter in the space T today to let our people understand that the T in its essence is a peaceful T, (2:36). even if you try to kamikaze your SS or soul to the ground it will not die it will not ?? , the reason for it, we don't talk about it (now), in the future we might teach it.** We see the evolution of the peace as we wished it, it has started and I thank the Chinese leadership for the wise move. I was wondering when this would happen and now it has become a talk and very soon with the wisdom and strength of the Chinese government, the only countries which will go on sanctions by the look of it will be the US, then I will like to see how they take the sanctions, trade, supply, oil sanctions. If the oil to America stops through the sanctions the nation will cripple. We know that because we saw it in 1972, and it ?? will be much worse then that time. The peace process has started by balancing the powers that the true world leaders have taken their position. This has been my wish that China at last has taken the first nation position. We congratulate President Zhi for this action. This will bring us one step closer to peace, because it's not just financial sanctions, we give the full support and T to the Chinese leadership and this will allow them to enforce peace through peaceful manners of T and independence from these warmongering (nations) situation. I have been asking for this for a long time for China to take the leadership and now we see they have taken it. (2:38). ... this is the beginning of peace **this is the praise of all of you who were wishing for peace. as China takes the true leadership and not a bankrupt nation of US ??? ... game. ..** The decisions are made in Beijing and not in Washington anymore ... all of us have to support the soul of the Chinese leadership that will carry on the same path. (2:40). **Q: How did the Belgium Court decide on May 25, is it now legal for Caroline and Keshe act to help other people? No, the verdict last week was exactly how we wanted it.** One point was dropped by the judge, we still stand the same which allows us to go to the Court of European Justice. The next one is the highest Court in Belgium. If they would have changed anything in it we would have had a problem but because they kept it the same we can go for appeal. ... the charges of terrorism was crushed by the Americans, then they used the medical charges ..

Q: I would like to learn more of the universal language like the hand signs Mr. Keshe has given before, so we can teach others, in space we'll need to communicate? The hand signs are for those who are in the matter state, how do you communicate with the soul that has no hands or feet. We have to understand the interaction of the fields of the souls. the way you see your mother smile or how she talks to you. (2:46). The universal language comes into operation now that we have developed your strength in understanding of the soul in how the 2 souls communicate and how you translate that into emotions or the fields. New teaching on screen. If this is your soul,

and this is soul of your mother (she doesn't exist), the transfer of the energy from the soul of the mother to the STM and visa versa, that's why you can talk to your mother. In the process of the transformation we have the brain of the man. According to the strength which comes from the mother's laughther or joy or whatever, our brain starts processing in different layers of the brain, one part of the brain works through the physical confirmation, which is us, and then there is another strength which is the P1 at the level of the STM , that's incoming from the mother. (2:48).

(2:52). ... the fear and anxiety in the space doesn't exist ..

... Those working on the space in the KF now know they need to have 2 systems, ??

(2:56). Videos

END
