

230th Knowledge Seekers Workshop June 28, 2018

(Structure of the light, Belgium court case, How the kidneys and large intestine work to convert nuclear material B12 which is actually like fusion, No one should die of kidney or liver disease we can move the Ca out of the liver with the technology, About the lies in Belgium court case with the death of Nella, Wrong about Iron being the only magnetic substance in the universe would it be magnetic in the next universe, Everything is held together by M field forces, The Chinese reactor is so complete the way I designed it for everything needed in space, It will be controlled by thoughts, Through love you give to the soul and can communicate with every cell in your body, We can create new life without physicality, We come to this planet to enjoy the physicality because the rest of the universe works on the soul level and the energy, The decay and division of the neutron is a continuous process in the universe and is so simple, When a neutron decays it still has a remnant energy from the first division and continues onward therefore the Creator or original neutron is within us and this is how we are connected to the Creator, Measuring the water level in the Gans boxes making water, how life started on this planet, Life is not exclusive to Earth but like the Cup and can transfer fields anywhere where in the universe where the conditions are right, If enough people sincerely wish for unification with the Universal Community we'll deliver tonight even, The layering of the Gans's and positioning lead to motion this is how planets rotate further positioning is how stars are created, The ocean currents are created by the different salinities, This is exactly the same with the brain, We need to develop our sense to feel and recognize the Gans's, Gans Carbon in diamond structure, Why all the plastic is gathering in one place in the ocean the magnetic field of the C links up, Salinity in the Gans is created by MG fields and can't be washed out to 0 it is produced back again according to the field condition, It's about creating the conditions for the matter, Explains the neutron and nuclear decay, With the division of the neutron (it becomes a heat when it slows down) comes the release of MG fields that can be used to create anything anywhere in the universe and this leads to peace, Inter-atomic plasmatic fusion is what leads to creation of the universe, Fields in the universe existed their interaction lead to creation of the Creator, not the Creator leading to creation of the fields but where did those fields come from, ,)

(:17). people are trying to see if they can create what we have been teaching lately. **One of them is the light and the structure of light, but one thing that has to be understood is that light has a strength and intuition of its own existence, but conversion of itself into matter state, or sub-matter state, or above matter state, according to what it is attracted to and what it likes to enlighten.** Many of you are testing the teachings of the past few weeks. I think you are all looking very much. The early teachings of 4 or 5 years ago, covers what is to become the flight system of today. A lot was taught, listen to the first 10 to 20 teachings, then you can complete a full circle. It is important to understand how you convert, transport, and then transmute, and then how you become the beginning to start all over again. Many of you have skipped one or 2 pieces of this, (:20). so you don't see the whole package of it. different parts of this have been tested by different parts of KF KS and they can't connect to each other and it's time to consolidate it. Many of you who have done the tests start talking to each other. This is where as One Nation collaboration has to start. Many of you have tested different aspects of the T but you don't see how to bring it together. the Chinese KF spaceship program is head on course. We are planning and have announced to the Chinese government and the tests will start. What will happen depends on KF ... (:22).

we are ready to test... if once this takes hold there is no reason not to open the space to man. ... (:24).

.. there will be massive unemployment in US after the release of this T. Nobody will buy a single gun or missile. This will complete the process. ... (:28). **Those Americans who are always online, we have given you the final warning. Start closing your weapons factories because nobody will buy it. We have talked with governments in the background, they will cancel all their orders for weapons technology.** This process will hit arms producing nations very rapidly. The government of Belgium will collapse because 40 to 50% of the income is totally on weapons industry. I told you we don't have to do anything, the nation will strangle itself. This goes the same with a number of other governments. What we call the One Process has to be done otherwise there will be a lot of lies for selling arms. This way it's a sharp, very powerful delivery of the T, and change the oil industry. The dependence on oil will become zero in the next 3 to 5 years. This closes another chapter. it will put pressure on a lot of governments. Thanks to all the K Seekers for developing the T, we have used your shoulders to stand high in delivering the latest technologies. There are a number of hidden technologies which have been across the KF websites but you didn't notice and they have been used in the new systems. (:30).

.. the first passengers were offered to wife of KF China and in time to the Mohan's. ... (:32).

... Any Questions. (:42).

(:44).

(:46). Belgium court case ...

(:52).

(1:00). ... It goes back to the Kidney. The T if you understand it brings you everything you need. Look at the structure of the kidney. **The dialysis machines of today are a squeezing machine they are not the way the body works.** The body works in a very perfect way, this is why are a time people on dialysis run into problem, because the material doesn't work, it takes material out of the body, it doesn't convert it. **If you look at the kidney, or even the large intestine of the body, you'll understand the secret of the conversion, conversion of energy into gas, or odor, what we call diamond structure, conversion of the energy back into a nuclear composition, confirmation and gathering of all the energies together.** One of the main things the world of science doesn't understand about the large intestine is how at the last part of the small intestine and the beginning **of the large intestine have created a condition of creating nuclear material, B12, when it loses energy in the process of going through the body it absorbs its energy back to become nuclear. ?? B12. And then what do you do? (1:02). You fertilize the plants with it and we eat it back again.** If you look at our own body structure we are one of the most advanced nuclear systems, **what they call and have been trying to call, fusion.** In your body the fusion is complete, you eat food, you take the B12, you convert the energy to a level that it becomes radioactive and deposit it in certain glands and when they lose the energy your body releases it again as an energy, back as a matter in the intestine, and then it energizes it back, it fuses energy to it that it goes back to become at the level that the body can use, but then at that point it can't feed itself back. **Most probably if we go through the evolution of the system our body will find a way to feed B12 back to itself that it**

doesn't need to go out and gather it. ?? Leave it as an excrement, you plant it and give it to the plants and again through the same energy conversion you eat it back again through the animals and ofod. there is a lot for us to learn and if you learn this and understand it you can do a lot of things that it looks like they are magical. By trying to discredit the T they have stopped many people to carry on with the work, but now we'll reverse it. You have to go back to the point to understand how the process of whatever you have been taught is part of your self. If you look at what I have taught you in the past 5 years in my books and all the teachings, I have not taught you anything which you do not know, which you are not made of. (1:04). It's the K seekers who have to start unraveling the truth the way it is, the way it will be, the way that it has. **When you speak about the kidney, nobody should die of kidney failure, or liver failure or massive obstruction of the liver with the cancers where calcification stops the flow.** Doctors like Dr. Rodrigo should be able to do this in the flick of a finger. What is calcification, that it blocks the liver and it enlarges so much, and then you die of liver failure. We have seen how you transmute energy into matter and the matter into energy. **Doctors in KF understand how to remove Ca.** Blocked livers expand because of a backlog of liquid in them. It should be very easy for those who understand how the system works, they can remove Ca from the liver and all the blockages go, it's like a dam ... **You have a Ca, make it into Pl, let it transmute through the body, take with itself the energy of it, it arrives on the other side, in another dimension of the Ca of a lower (strength).** You just take the Ca out. No one should die of these diseases anymore. (1:06). A couple days ago I had the pleasure to look at a video my father sent to me. Last year in June they sent him home to die, on an oxygen machine with 2 to 4 liters capacity that he could just barely live. It's a year later, no oxygen and he travels. It was just through him using the T on his own accord. Tell DL ?? for saving my fathers life. Using the uniform of the police is the most criminal offense let alone destroying evidence. We call in for Nella's mother and the mother's lover as witnesses for the doctors that no operation was given to Nella. ... In fact the mother left the window open at -70 degrees to kill her daughter. We give evidence. The lovers of the mother will be called into court. The lies written that she was given ofod, but the fact is she was admitted for pneumonia when the mother left the window open. This is how much lying has been put into court cases. Now we call the lover in also, he was a medical person who was signed in by the mother to be present. Now you understand how we are opening the case. Lying is big in the courts of Belgium. It's all been fabricated. All the evidence has to be opened up. (1:08). ... another man .. court was told to accept the lies. ... the mother lied 4 years ago and within months of giving false evidence she lost her little girl. Eye for an eye, lying while she said she received her service, it was organized by the king. This is one the most powerful technologies that they thought they would control. They are one of smallest nations on planet and biggest nation in Africa called Congo. we open a massive case for the KF and we waited for it to go beyond the borders. (1:10). ... their (1:12) ... millions of people now know about the technology.... .. when we release it to you next week make sure you release it to all courts in the world. ... (1:14). The state of Belgium has to be brought into justice for all the scientists they have killed. .. (1:16). ... **Q: What's the best way to get the energy flow through the soul to the body. I try to feel the flow from the unified plasma. (1:18). field to the soul and then to the heart**

and the body. Let's go through this, **a lot of people have been trying to do this, to understand the flow of energy, trying to replicate this to see how you can do such a thing to get energy flowing in the body. You have been taught this. ... How does the energy flow? How does blood flow in your body? Why do certain bloods flow in given directions**, why do certain lymph cells go in one side only because they are going to be part of the structure they are traveling, **but it doesn't waste time and energy sending a cell which is for the brain to the tip and of toe and bring it back up again. It doesn't work that way.** It works on a ?? Go back to the teachings, what did we say, **transmutation of the fields in MG field strength is by gradient flow, higher to the lower, what we call love. I love you, I feed you.** (1:20). That is what your soul does with the tip of your toe or the hair on your head. Is this the position from the brain being further from the toe, or what we call the STM to the soul of physicality of the toe, that dictates what energy will go to it and how the flow of the liquid goes, or has it to do with the gradient in the strength of the field. **If you are in touch with different parts of your body you should be able to do that.** If you are in touch with your cells you should be able to do that. If you want to do gradient transfer, go back to understand how **the strength of your soul is and the strength of wherever you want the energy to go through and try to create the position that it is weaker that it allows the soul to feed it but create it on the strength of the soul.** I taught you this in the space T and that is when we want to travel in the space (1:22). **we create the imaginary (reference) point through the strength that we can use it as a position to move into, you can choose a star or a planet, but in the middle of the space you have only 5% if that, not even it's less than 1% in the universe as matter state of our strength.** So you can't lock into somewhere very far. You create that imaginary point through the interaction of your reactors and with that point you try to convert energy with, transfer in so many ways, MG fields with. In a very straight forward way that is what you are trying to do with your own position that you created. (draws an IL interaction with it). You create so much, MG field forces here (at the imaginary point) that it interacts with the smaller mass, like an electron and a proton. **Then go back to understand the totality of the work of the electron and neutron and proton, there is a bandwidth that this electron can move in. So if you master it well enough you can never come into it, but you can move further out. You create a field and then you pinpoint a field and you do it. Now change this spaceship, proton, electron, to your soul and this to your body.** Where do you want it to go? What do you want to change? (1:24). and what would it bring, the change and is that change what you wish, **is it beneficial to the other souls in the body of the man, because if a cell changes soul, or wants to be in that soul, it can change its characteristics and start a cancer and be what these other cells, elements are not happy with, and therefore you'll not achieve it. You can't do something out of self interest, you have to it on that I understand , I don't even know how, understand my own cells, my souls together. I hope you understand, that you decide on the transfer of the energy, if you understand the work of the soul, this work of the transmutation of elements, the work of transportation of ?? light, because when you transfer an energy which is from your soul, or trying to move in it, it means you create a light, you see a light within yourself.** It's a lot to understand. Any other question. When you ask questions like this, try to go deeper in the understanding of the knowledge. (1:26). Try to look at the full knowledge in totality. **I have taught you everything you need to know to travel the depths of the universe. Q: visualization of the flow is a good start,** allowing the flow is key, that is giving permission to the energy you wish to convey, allow and accept and then give to also where you connect... In that sense it must apply to the things that we

have attracted to us in our environment, it that what is going on with the interaction ... (1:28). ... it seems that where we ofcus is important to get to the next place ... how is the connection to a star system made, would we have to have a very strong field? **The thing is that the strongest fields in any star, that strength in MG field exists in every cell of the body of the man. For example if you look at Fe, the condition of this planet's strength of MG field of it, it is M (1:30). There is a test, would Fe still be magnetic in the next solar system? I doubt it because the MG field its structure are totally different. Fe is not the only magnetic material in the U, that's the biggest rubbish ?? The drop of water in the water would not exist if they weren't MG attracted to each other. So would be the wood, Zinc.** the world of science has become so hypocritical that it is unbelievable when you listen to some things and say how come people accept this rubbish. They say the only magnet in this world is the material of Fe. If you remember they were telling us that we have an Fe core (in the earth) and because of that we have the magnetism, now with the knowledge of the PI can somebody tell us how all these drops of water on this planet have become to be magnetized ?? So does the magnetism only exist in the Fe life of the strength, or for the water drop to be magnetized that have to have that attraction to each other. **With the new technology we can create that field.** (1:32). even for a leaf of a tree for it be attracted and stay with the tree, or every cell of your body to stay together there has to MG field, magnetism to keep it together. **So how come we say that magnetism only exists in the metal the iron. Because we accepted a lot of fairytales, now we understand teh totality of it and we can produce the M field of it. The structure has to be such that it fits into every dimension of the work of the U, and not only what you want.** Do we get attracted to, or can we create a position to travel into? Of course we can, now we have the knowledge. It is very simple, for those of you who have a problem in seeing how you can make a reference point that you can fly into. When we release the Chinese space reactors have a look at it, it's in there. I have designed it that way. As I told **you the Chinese reactor is so complicated, it's so easy, but it carries the creation of the spot where the SS can travel towards. It's designed that way. You can design your thoughts, 'I want to be in teh next room', I don't want to walk from here to my bed, I want to be in bed. But it needs practicing, understanding (1:34). in how we move, how we concentrate the energy.** In the space travel of tomorrow you can't create sudden positions, you have to create combinations of positions, that the totality of the combinations create what you want. It's very much like you park on a side road to wait to meet your friend there. They haven't made you a parking space there, it's not a service station, a star, a planet for you to land on it. So it's the same in the space travel, you decide I want to meet in this space, my brother is coming from planet Zeus and we meet there because planet Zeus takes a long time to go to. I create that position and give ?? MG fields strength of that position to my brother, he knows where in the U ?? he'll land there. Do you want to get on the sailing of the M or of the G, inwards. Or do you want to go halfway to suit your will because the M gets weaker and weaker, at the point of the conjunction of the 2 balances you jump on the G side which gets stronger. There is a lot to learn. But for now we have to show you the systems so then you can start expanding into it. Third world nations, Chinese structures, they'll go so fast. You of the biggest obstructions you'll see to this T is from teh advanced nations. (1:36).

... you can't sell arms if no one wants to fight. The next 3 weeks as we go into (1:42). the space development completion I tried to open a lot of things that it can be understood. We have forced the conditions of peace with the delivery of the new

technology and with it we have to understand a lot of it, transportation, transmutation is the part that you K Seekers have to rush to understand as fast as possible. Test it and understand it. In your body you do it, find out how. **Test it how you can even feel the emotion in a cell in your body. How you can change cancer cells in your body.** You all are able to. If a machine in the back and the front does this for you, so should it be for your emotion the same way. We have to understand a lot of new processes. **Falling in love, which means giving. Try to fall in love and what it means to give to a cell and see how that cell responds to you, to a woman or man and see what that response to you is, to a dog. You don't need to tell, I love you, you can give that to the soul.** The soul will feed it, more than physicality. You don't need the word, that's why I say, I never say I love you. Because, why ... what reason, then you don't need, you can give, **you can transmit it (1:44). to rule what I call, the soul of the transportation of the energy. Creating a life without physicality is very easy, but it is appreciating the life, which is important. How do we create life in the space. How are they going to be our next generations. Do I transmit an energy and I leave there and somebody else comes and puts the other energy into it, and through dimensions of the universe energy packs leads to creation of a new soul. It happens every second of the time in the U.** I always said to Caroline when I met her, **we come to this planet to enjoy the physicality because the rest of the U works on the soul level and the energy.** There is going to be a very big push for all K Seekers to understand a lot of things, because the time has come for us to push forward. **How do you feel your feet and how do you transfer your energy? You have to create that gradient in the need of the cell or understanding of the work of the STM. I have taught you everything that you (need) to do. (1:46).** Do you want to be in another room or point in the U, do you want to understand how the light from the stars reach you, and what the rubbish that has come out saying that **it takes 100,000 years for the light to get to you, what a nonsense.** And how come we all see the same little light. With a little understanding of the plasma T a lot of you should have written papers, that the Royal Institute of Science will put it on the shelf for somebody else to come and copy it and tell them, oh, we have ofund a new thing. But we have seen that the biggest lie in cosmology has gone out, the biggest cheat. Now it allows people with true science to come in. The thief of Baghdad has gone. We are free to think and develop technologies. We are here to guide. **Q: Is the model neutron, the soul of mothers, in a similar relation to teh Creator as the electron (1:48). to the proton, and the body to the soul. When we place Gans's do the energies go through a full circle to the Creator, are the Gans's magnets for light? In so many ways, yes.** One of the biggest nuclear decays in the U even bigger than Plutonium and Uranium, is the neutron, when it divides it decays. This is part of a game as said in the world of science, we always look at one end and we forget the other end because we never understood it so at the moment we play blind. We call it a nuclear decay in Book number 1 and 2. **If nuclear decay is so effective and simple that it happens every second, o we need to understand anymore?** The biggest illegal nuclear material in the world is in the body of the man or any creature is called a neutron. Because it decays rapidly and it always decays. We are all a bunch of nuclear weapons walking around because we all carry neutrons in our body and every neutron decays and the minute it decays it divides into an electron and a proton. And the electron becomes another neutron, now it's going for a time for itself to decay, to split. The world of physics and science is so simple, why have we made it so complicated. (1:50). **If that center divides itself and it still carries the remnants of the first one, if we didn't ?? need the electron, we have the remnants, the same part, the strength of the neutron, we have the same thing a**

proton. And now can you understand where that neutron became a part of the collection of the energies from another division, and then it came from another division, all these billions of neutrons have been divided and their division has reached to be the level of energy of the observation of the man. Now you can imagine where is that big neutron, which is division and it still exists, has lead to creation of all these neutrons which has lead to all these single neutrons in the creation of this universe. So that neutron, what we call the Creator is within us, has become part of us. Are we connected? We are made out of, we are not connected, we are part of, we are it, within ourselves in the center of the structure. It doesn't matter how it comes together, without its division, without what I call subdivisions, would not have lead to the creation of what we are. That what I say, you have to understand and being partial not just to a limit and from then on, it says in Torah, Bible or another book, that these things were not, because you couldn't understand the totality. Now that you understand you have to go a step further. **And then you say, is God within us .. are we connected to ... you are made of It ... you are part of It. It is you who have denied your own existence. (1:52). Don't ever doubt in the confirmation of your own existence in connection with the Creator.** Q: Shandoor teaches about Tritium. By using the 4 Gans ... can we arrange them in such a way to create a gradient to create the fields of H, D and Tritium? Say we have CH₃ and CO₂ if we put them in a gradient, the C would interlock, then the CuO₂ with the O₂ interlocking, then with ZnO, then H₂O ... what we have left ...H, H₂, H₃. When and how are you going to add these things? I thought to measure the quantities in mass ratios, to remove the salts and water from the Gans's .. then we can use it in dynamic or reactors. like presented in KS workshop 115, ... (1:56). .. CO₂ not in matter state but Gans then we have a field of O₂ in the center and a field of C around it in Gans state. With CH₃ its C in center and H₃ around. ... (1:58). ... (2:00). ... **Am I right on this, what's your view? You can never be wrong. But it's a very long shot.** Today I was in the lab. ... I have taught this for years, **I told you to mark the water level when you make Gans's. The water level goes up. And nobody did. But strange enough he says, I emptied the boxes and the next day they are full of water.** I said, this is what we taught for years.... He has been emptying the boxes and creating water. .. changing alkalinity and acidity ... (2:02). .. **what you are showing is the process of creation over millions of years. If you can position systems like this, and you can make it to start a trigger point of dynamic systems. ... without the waters then you start a cycle of life. You can even explain how water was created on this planet. Was it the O or H that triggered it.** In so many ways you are not far off, you can write any equation you like, but **can you create a condition for it that it leads to dynamic ever production of water.** Q: I am in the process of purifying drying the Gans's. I am just now seeing what happens when we make CH₃ Gans ... (2:04). ... You have to understand the process, Fe is 56, Cu is 60, Zn 62 (goes up to 65), now you can see how CH₃ comes into play. (2:06). How the C comes into play. .. you have an Fe 56 on the other side of your drawing. ... but you have some isotopes of Zn and Cu. Here I'll write something. In the center you have 2 isotopes of ?? ... it's not the same C it has slightly different M fields. .. the bandwidth of C is huge it crosses universes. .. now a totally new C with a different strength is created and allows for a totally different game. (2:08). ... remember Fe sits in the background and it has a say in the field structure of the C that is created here, and that C with the H, the free structure of the plasma gives it the orange look. .. you brought in the AA .. if you look here, **what you put here, if you go back on the history of mankind , brings the whole humanity on the table. This is life. If you can control in this box, the Zn, Fe, Cu, introduce a little Ca, Na, K, you will see a life start developing. You create life ... as**

long as you have the AA ??? you'll see animals ... what you have drawn here is how life started on this planet, a little bit of Zn, Cu, Fe, Ca (2:10). saltwater of the marshland and the beginning of life. **Life is not exclusive of Africa** it didn't start there alone. Q: Perhaps it started in the oceans? It started in South America in Europe. **We all look the same, have the same structure, because it's the enforcement of the condition of this planet. They said this is why we have this, because the other came and took over. Where did the first one come from? How did they change? Because they were created. The condition for the creation of life at a given temperature was fit for life to be created on this planet, and everywhere had the same chance, because the oceans of this planet mixed everything.** I have explained this in other teachings, you have to realize what is happening. You call it moisture, we call it rain, sweet water. But where **did the sweet water come from? It came from the salty sea and when it evaporated it left the salt behind and become sweet water, as it went through the hills it gathered some of the minerals but not at the strength that it could become part of it. When the sweet and salt come together, (2:12). we see the mayhem it created in the interaction in that part of the ocean. If you understand this, it's very easy to understand ? How come all the vapors of the planet come together and become clouds.** When you look at the clouds it's not just from Africa, it could be from anywhere on this planet. They were at a given strength to come together, a condition was created then they appeared. **Now they carried the essence of, the way you made the Cup and put the orange on it and tasted the orange in the water. For life to be created once evolved can be anywhere on this planet.** I'll give you a news and maybe you'll understand in the very near future. When the man goes to space. The condition of planet earth, **if you find another planet which has gone through the water (created water) but hasn't yet gone through evolution, will create life like this planet. Life like this is not so exclusive of this planet. Remember the Cup of Life with the orange on it, and you tasted it in the water. Planet earth with human race and life on it, is that orange, and the universe is the Cup.** You have to understand what it is. This brings us to the point of **the Universal Community. If enough of you who wish for peace and create a condition that we see the peace process start to move, and it's coming. If enough of mankind wishes for unification with the UC, and if they can deliver that with sincerity. We will deliver! Be it tonight.** Q: Excuse me Mr. Keshe, we used to harvest separately the white Gans and then the orange Gans, (2:14). but now I realize if we keep them together it creates a quite a different conditions. Maybe this is a clue for producing Gans of Deuterium by leaving CH₃ and CO₃ produced together and reaching or setting up some balance of it. **Go back to a picture in the Book that we showed the Gans's don't mix but stay separate. This is your explaining. It's the processing of the ?? time of the universe. The process we are going through with the space T is the system speeding up of ?? the process.** What you are trying to achieve chemically and by rotation, we have seen it done very rapidly by those who have done it, will take time. In the space **T through the rotation and the conditions we create, we bring that position much faster to evolution of confirmation of existence.** What it takes for you to eat the ofod, going through your body, to be digested and coming out, then when it is needed to become your skin, let's say 20 days or a week, we do the same process in dynamic reactors in a few seconds. We are doing the same thing. Q: **Can you just produce the fields of H₂O and not have to drink water and still we'll have enough water in our body? How do you think I am going to feed you in the space. (2:16).** Q: People are asking how to produce the CH₄ bluish Gans you have in your book. You said before to make a reactor like for CuO and sugar, would you give us?? **The blue Gans is created**

primarily because we used plastic coated Cu. The plastic cover brings the O in the vicinity, visibility of CuO. It's one of the most rarest kind of materials to create if you know how. but then there is a process you have to do. You don't need to go and add. You see I am a master of disguise, I know how to do it ... I just set it up to be done because I am standard process maybe because I'm a nuclear physicist. ??? the conditions of the transmutation of the elements. (2:18). It's the environment you create, and the problem is you are locked up to one ?? matter. **This morning I produced a massive system that can produce anything but it's been set in a condition that it starts the process from a neutron and then I can create anything in any position on this planet.** For me to create materials in the conditions I want them to be, literally let's repeat the whole story. You produce whatever, but at the same time you bring to proximity, it's there, you can't escape, the guy is jacketed, what does it take for you to first sweat, you are conditioned to that sweater or to a T-shirt, how much more do you want to sweat, then you put jumpers and coats, if you want to sweat less you put T-shirts on it. **I create conditions, the U is created out of creating conditions.** You put a CH₃ and then CO₂ you are enforcing conditions and then you are hoping the C will lock to the C. **The question to ask is where does the C go,** how will you see the C as? (2:20). You haven't explained that, how do you accept that. I can explain to you where it has gone. Do you know where it has gone? **Because not all of your CH₃ is converted, because not all of your CO₂ locks together. You have a free O and a free plasma field of the H, where does that go, and free Cs.** No, no, listen very carefully what I am talking about. Look at your CH₃ in that organization put a torchlight to it and what do you see? You see shining stars. Your Cs become diamond structure. When you put the CO₂ and CH₃ together you have created floating diamonds, but these are Cs in the state of the gaseous, of grapheme state of C. What do you do with it? I know what I can do with it. 99.99% will never have a clue what to do with it. I don't want a diamond. I set out to create it because I have a purpose for it. When you say the CO₂ and CuO₂ go together, this is a very nice grandmother story, but does it happen. How do you create ?? then you create a ?? demand to it. Theoretically you're okay. but how long does it take for you to add (2:22). ?? . Where is your common denominator, you are totally denying ?? of its work. You have a common denominator that has brought all these together. If you take a Nano material out of the moisture it stops growing. Your N coating only grows when there is moisture. Now it comes to the point. You put all this together, a very nice story. But what did you do with this one (NaOH) and what happened if you used tap water (NaCl). If you managed to wash this clearly, you should have ?? 10 to 20 % of your Gans, the rest will be lost in your washing system. but where is your H₃ and O₂, then you add your Zn and Cu, what sequence do you mix them, (2:24). .. what energy do they release, what MG field do they produce to create and to absorb. (mic adjusted ..) ... we have to understand the process. The way you explained yes you can do ... why are there CO₂ white layer on top and one on the bottom and you ask why is there water in between, we explained this before. (2:26). **The top is ZnO and the bottom CO₂, but the 2 trying to create balance and positioning they create motion. You get the rotation of the field. If you can put another Gans that can stay in a different layer, in trying to find their position in respect to each other your whole system floats. This is how dynamism from M fields in the universe is created. If you twist it enough at a certain speed and mass you lead to creation of a star. Even the planetary system is initiated by this.** There are no motors in the U, positioning of different elements creates dynamism. It's very much like in oceans where the salt levels or salinity leads to the motion and not so much anything else. The alkalinity of teh waters on this planet are the main causes

of motion, temperature is something that is added on later. .. different salinity in the water creates different rivers. **It's exactly the same with your brain, you at teh different layers of it. this is the brain of the planet, you call it the waters. Different layers create different salinity, different ?? falls , create different transfer of energy.** Without it we don't have the waters and oceans (2:28). and the temperatures and the space gap which they say it is. We have to redefine the science. You are doing the same. When you put these things together CH₃ and CO₂, ??? you should put your Zn and Cu ?? in and create a dynamism in it, but will it give you the hedge, the hedge is what you have on the screen, but in the reality, it's a lot of wishful thinking, but if you push it, understand it, create a condition for it you'll achieve it. **We have shown that you can create the structure of teh brain of the man in the lab.** I think the brain is dead now, what they did with it in Italy. We can create, produce, develop everything. All of you are trying to create a neutron, what are you going to do with it? I gave you a tip. Go back to another part of the teaching, when you couldn't understand it you just abandoned it, like a flood. Here you talked about the C connected and you get a H₃ and CO₂, what does it give you, crystal C. Go back to when I said, **the light and the organization of it will be through crystals. Now you have created the crystals.** (2:30). Go back to that teaching and see what we said you can do with crystals. Now that you made it go and see what you were supposed to do with it now that you have made it. You see all the teachings are connected but you don't understand it so you forget about it. In the lab I saw so many crystals in the box, I said, my god, how much people are trying to offlow it step by step. they don't understand the totality. **What is on the screen, and you say CH₃ and CO₂ link, but where do they go? You only tell us half of the story because you haven't understood what it is, what is the consequence of the rest of the story.** 99% of these Cs here, if you get it right, if you just put a C in it, will lead you to .. creation of diamond crystals. Then what are you going to do with it. You just say you have this because you are so targeted on producing H and CH₃, you missed the main thing you worked for months before, when you bought all those crystals. (It's a very complicated way to do it ... but maybe I can find it) (2:32). Let me see if I can find the video on the crystals so you can see them... you'll see exactly what I am talking to with the CH₃ and CO₂, there is another way to do it... you'll receive a video that shows what happens when CO₂ and CH₃ form a diamond structure. The next question is what are you going to do with it, you look at it theoretically, now I show it to you practically. (2:34). .. **the process is very simple, why are we producing these things .. H, H₂, H₃ and then produce a neutron, do you know how to capture a neutron,** I showed you what it is. .. Now I would like a tuition fee for anybody who would like to know. (2:36). **Q: I am trying to make the bridge with those who understand the sciences and those who don't ...** for those who are not interested in teh sciences. **All the elements are made out of protons, neutrons and electrons, all in all they generate fields and these are like the fingerprint, let's say we have a CO₂ Gans, but it has a certain field strength, it emanates, which is like a fingerprint of the CO₂ Gans. We need to start learning how to identify the strength of the fields in order to know what we have in the Gans Box.** We probably always have composite Gans's a mixture, and together they have a certain field strength which is needed for various applications. If we want to travel to the moon we need to make a system that attracts us to reach there ... My question is **how do we develop this ability, because in the physicality we know if we touch a material we know if it is plastic or metal or textile, we have this ability** because we were taught since birth how to use our physical senses. How do we develop our sense to identify the field strength? When we ??? we will not take a measurement of certain elements that we put

in, (2:38). but we will feel it by the field strength ... How do we do it? **The recognition of the fields is part of our nature but we have decided to ignore it. In the process we have decided not to consider it. But in fact, we know it, we can feel it. If you need machines, we can create a machine to measure it, but in essence we know this by heart, because it is part of us.** Measuring tools ... the easiest way to understand the strength fields is to develop it. It's a sense, so you can create it. Understand and feel it. I was holding some material yesterday in my hand and I put it down because I could feel the energy in it. I was holding another material that they said was the same, and I could not feel it. **I have built up over years, maybe by experience, by knowledge. I can tell what materials are made of.** Years ago when I was in the diamond business I could (2:40). hold a rough cut stone and say where it comes from, which river, or mine, in which country. It wasn't just by the look you could feel the energy of it. ... Once we start trusting in ourselves we can do it. It's very easy. ... **take a bottle of CH₃ in your hand, many different CH₃ and see how you feel about it, what energy does it give you. Then pick up a CO₂ bottle, and CuO₂.** We have to learn the language of the energies of the space through our own experience. You can't say how it feels to be drunk until you get drunk. I can explain everything you want about drunkenness, you won't experience it. ... (2:42). **You need to develop the senses, you can't teach it.** We are going back to when we came out of the ?? jungle. 20 came out and 2 ate the red berries and died, the others didn't and learned not to touch it. I can't teach you how to recognize CH₃. I can teach you how to feel it, hold it, which part of your body interacts with it, and then let's see.

.. feeling the different Gans's ...

some Gans's when you touch them make you feel very hungry. Something ?? you fall in love with anything, even a table and a chair. (2:44). .. plays video about how the C locks together. .. (2:46). what's the assumption of 2 C connected, I say it's a diamond structure. **The body does it when it passes wind, if there is no smell it means it hasn't gone through the conversion to a diamond structure which is an odor. What does the odor carry, trying to tell through the information, that odor has carried the information to your brain, 'don't feed my body this again',** keep away from it. Non-verbal gaseous communication between the one end to the other. plays the videos. (2:48). if you look you see shining lights, these are what you dismissed as a C. It plays a game in that bottle. What does this floating crystal do in the U. Back in the 80s the ofund the largest diamond in the U, they ofund a planet which is made of diamond. ... somewhere on this planet, in the Atlantic ocean and a couple of other oceans at this moment, **there is a continent of plastic bottles gathering together. Ask yourself why only plastic bottles.** (2:50). Then go back on the salinity of the water. the bottles that you made the Gans's out of, the original magic thing about the Coke bottle of the KF, and understanding the composition of the waters of this planet, the strength of the fields, the composition of the AA, and then you say that only Fe is magnetic, then you have to understand **the connection of the binding of the C in the CH of the plastic, and then you can find out why they are collecting in one place. It's a magnet. These environments produce a crystal structure magnetic field of the C which matches the plastic.** Now you can go on the Internet and say you discovered how these island of plastic bottles are made, but don't say that Keshe told us, and then you become a genius and you might get a Nobel Prize for it. **The reason the plastics are gathering together is through the dynamic characteristics of C structure of the plastic in conjunction with its own and the salt in the sea. This is what I said just now to Sandor, what about the NaCl. The earth continuously produces diamond structures but it is used**

for another purpose (2:52). and dimension. Q: I am supposed to wash the Gans to zero salts. Ah, **but you can't clean it there are no zero solids.** Q: I bought a salinity meter and something interesting happens, **when I wash it down to 100 pm then suddenly the next wash is back up to 800 ppm,** it means a part of the salt is held within the Gans and when it gets diluted and then it jumps ... You see it is very interesting what you brought up. **There is a place on this planet a land, where exactly what you say appears. First 30 cm of the land is salted over, and 1 meter below the same land sweet water flows in rivers.** (2:54). I said to the officials regarding this, **how come all the rain which comes doesn't wash the salinity into the water below?** This is exactly what you are explaining. **The MG field of the earth creates that condition and it has to do with whatever flows within the structure of this planet, we can't change it. They want to wash it to get the salt out. The salt will be produced again because the layers create exactly the condition.** Do you want to explain it for a second time. He shares screen again (2:56). (2:59). the factor why you get the 800 ppm peak **it means that at a given point you get that condition, the elements, it doesn't matter what it is release the holdings of energy equivalent to salt.** Q: **So it's not a salt? It's the energy because you bring it into the matter state, because you are working in a Gans environment. So now at that level you reached, it doesn't matter what material, that the salinity stays.** This is what I said about the land, it has created an environmental condition that holds to this 800 high level salinity, it doesn't matter how much it rains. (3:00). Because what you did with the wash is old fashion, you're out of date by maybe 2 years of education. If I were you I would create a dynamic system here and here and I don't need to wash ...? you can create a composition dynamic system which does the job of the washing and it brings the salinity to below levels, but because you are using a dynamic system it never hits the 800, you can position. **Where are you going to find all this water in the space to do all this washing to change salinity. You have to understand what salinity means, what is the presence of the salt, what MG field does salt carry.** (3:02). If that is the salinity you need 2 dynamic systems, M field transfer which has NaCl. Do you remember what Dr. Rodrigo did. They put the body in between, different ratio transfer, you can change the salinity. Q: My first question was to get a quantity of Gans that I can measure by weight, because if it's in a saline solution I can estimate how many percent how much is water, salt and Gans. You are coming to my world. There are no scales in the U, it's the condition you want that counts. ...

.. we created the conditions that lead to creation of this planet. If you can repeat, create the same conditions in the U you can create water. (3:04). this is what the new T is about, what we mean by saying we become independent of the planet. We create the condition and not the materials, to be created by the conditions. It's a big difference. We create the conditions that leads to any environment that you want to create. Q:.... Now your desire has become dynamic. Q: **so we have to accept a certain randomness? Of course it is total randomness, but now we can put some figure to this randomness. We can quantify it.** Q: ... You are such a new KS I have to ask you to go back to the first teachings. Q: I do and I tell others that Mr. Keshe gave out all the T and it's hidden in plain sight. This is the beauty of it, I put so much in front of you that you don't see it. And nobody has seen it. (3:06). Q: I started in 2011. So you are a grandfather in the T. What it is, is creating the conditions for what you need. **If you understand what I explained transmutation of elements becomes very easy for you. If you are giving to it, they would like to call it fusion, but there is no fusion. It is creating conditions that it allows it to be what it needs to be.** We have to understand

the whole process. **Everybody looks that the man from Mars will come and teach. The man from Mars has learnt a lot from man.** Many things have been made so much simplified even by the man who thinks he is backwards, by the 4 wheels and the creation of motors. It makes life so easy. **We still can do it in the space in an easier way but motors, especially brushless ones, you can do some quick thinking. ..** (3:08). Some of the T developed by man is like for children in a nursery to start, but on the other hand if you understand it you give a huge advantage to space development. **I use both the knowledge of space and man's and it creates beautiful conditions. ...** Charles is translating the Chinese again .. (3:10). **Q: You were explaining how to capture a neutron, can you please go back to that? What do you want to do with it?** Q: I want to go to planet Zeus and come back. How are you going to use it if you don't know how to apply it? Q: You say it's the mother. Because with the neutron I can create anything. What are you going with it. Q: Go to planet Zeus. **As an ambassador we have enough (humans), we don't want headaches. ..** What is the neutron you call it a name? Q: In all elements we neutrons, protons and electrons, when the neutron decays, ?? produce protons and electrons, so that's the mother. What do you want to do with it when it decays? Q: create anything. **You had 1 and now you have 2 children to feed. (3:12). what are you going to do with it. And if you leave it, it will decay again. Q:** That's why I am asking how to capture it and what to do with it. What to do with it, do you want me to come and chew it for you to. Dr. Gotauau I am just trying to bring understanding. You go through the process. .. what does that existence of a neutron give you. **What is nuclear division. This is one of the first things, I kicked the Nuclear Industry out of my life because a lot of things are spoken but never understood.** This is the simplicity of it, what is a neutron, the purpose of nuclear decay the common man speaks about. **Any decay, decay means a division. Look at the pictures in Book #3, Creation of the U, which is actually a nuclear decay. You have a neutron that splits itself, but in the balance (3:14). But what we see in this process is a little bit of fireworks. I am not interested in the electron or proton, I am only interested in my work, in this (little fireworks), which in the Nuclear Industry they look for energy (draws a circle around the fireworks), we get it back to boil water. But as a true cosmologist and nuclear physicist, for me (what I am interested in) is the free MG fields (released) so that I can use it (he draws a further line out from the fireworks). To use this part of it (MG fields) for G for the nation, and this part for M. This is the difference between a common nuclear physicist and one like me. As a plasma physicist I am interested in this (MG fields) to become dimension of space. A nuclear physicist in the war equipment of this (the fireworks) to create heat and destruction. This is the difference between peaceful application of nuclear ?? **Because I understand that this (the fireworks) is not just heat, something, it become a heat when it slows down. At the point where it becomes free it is my savior because if I can accumulate enough of both of these M and G of it. Then what happens to me. Part is M and part is G, at a given strength for me is ofod (taste chips and fish), Aluminum (creation of materials), (3:16). it's my water and everything else which my life depends on in the universe.** What do you want to do with the neutron? **For me this (release of PI MG field) is what it HAS to be.** For the Americans and the Russians they spend billions to get this (fireworks) so they can destroy each other more ... neutron bombs! For you to make this (fireworks) from a Gans is very difficult you have to have the science with it. But now a neutron bomb is in the hands of every man if he knows what to do with it. But do we need, what are we going to do, kill each other. What for? **But I am interested in this part of it that creates peace. When I put billions of them together then I have everything I want because I decide the next****

cycle and what is going to be accumulated and divided, and as we say, inter-atomic fusion, but in fact, inter-atomic plasmatic fusion is what leads to creation of the U. And how it became the creator of the Creator. Fields in the universe existed, its interaction lead to the creation of the Creator, not the creation of the Creator leading to creation of the fields. (3:18). But where did those fields come from?

Book number 8, the Origin of Magnetic Fields. Sperm and Egg, billions of them float in every ?? river of the world, be it from the dog, cat, man, woman and everything else, **which one leads to the creation of a being. It's very much the story of, did the chicken come first or the egg? Was the Creator created out of the fields or did the interaction of the fields lead to the creation of the Creator. Now you have the fields, what would you like to create out of it.** You want to create a neutron, for what to do what with it. I know what I want to do with it. This has become the story of the crystal ?? how they work. You all went and bought crystals when I told you that crystals will be the future of the space technology. But you still don't know what you are going to do with it, now you have seen the crystals. A lot of you will be walking around your lab looking at the crystals saying, I got crystal in the water, then can I become a diamond dealer. In the teachings I have explained where the crystals are coming from and what ?? to do. (3:20). **Partially I'll explain and maybe one day in the future you'll understand. I just said, in the body, condition of the conversion of the crystals or gases, which is the Gans condition of the gases, leads to the condition of odor, or smell which is the carrier of information. How does the STM or the brain recognize what the smell means. When you create these crystals watch how you do and what line of communication do you want to turn the message into. I have given you a lot of secrets, if you can elaborate,** just only in the last 1 minute. Shall we call it a day. Pictures from Armand from Mexico. (3:22).

We will not let Africa down because of one man's conduct. ...

(3:24). Photos of KF Mexico manufacturing, research, and teaching center are finishing the building. (3:28). When we compete the court case in Ghana, Benjamin has nothing to do with us, it's between the Police. Benjamin got caught in Ghana as working for the Belgium's and is in court. The management has taken over. Changing documents of ownership to his own person is a criminal offense. (3:30).

END
