

## 232nd Knowledge Seekers Workshop - July 12, 2018

( , )

(:15).

... I have started a platform and we don't have enough people on this planet to support man in space. (:20). We don't have enough trained intellect to take man into space in the long term. Space the way I have taught can't become the exclusivity of one nation, as American or Chinese or whatever, it becomes the property of One Nation as One Planet, but what I have seen in the past few months now that we are on the verge of opening the space the way we are doing it, earth will be depopulated and to what extent will be what we decide. Do we create passports in which we allow a certain number of people to leave a country? Would we face in the western world what Africa has faced for decades that the brain drain has gone into the western world and Africa has suffered. Now the western world will loose a massive brain drain into space. One of the reasons for it is the beauty and freedom of the space. ... How can we support this depletion. We have done a lot of injustice to ourselves and now it is coming to catch up. Humanity will decide how many people we can loose into space. (:22). .. In the past few weeks I have had many sleepless nights thinking how I can guide mankind to understand how and what is sitting on the horizon for it. There has been a big question mark for me, have I prepared mankind for such a change, prepared enough, or do we need to let this run for a couple of hundred of years that then gradually things build up, but by then we'll have the same rat race as today. Those who have nothing claim to be the leaders and those who actually supply the back to everything live in the starvation. I see the need for the change of the teachings and I brought it into the meeting of the UC. Teachings of just Thursdays have to be taken out to the public. (:24). Very simple teachings in leaflets with pictures that the man can understand how things are and how he can help himself. That doesn't need reading if you are illiterate, that doesn't mean you'll stay behind. Simple understanding by simple people will bring a lot of benefit to humanity. But can we stop the rest of humanity who is learning and moving fast on this to slow down so the others can catch up. In the last 2 workshop those who are developing the T, have received a lot of knowledge, but none of you are using it. It's like my son tells me, Papa it just goes over my head. Because you don't see what to do with it or how to use it, or what is the benefit of it to me. Many of you grasped the dynamic systems, made medical system and gone for Gans's, some of you are happy to do the coils and others little things. But the effort has to be concentrated. Somehow it is the job of the EC, UC and Core Team to jellify the whole work of the KF so it goes in one direction. The time of rest is over. At the moment do we keep the T only in the hands of 3 nations from what I see in the background. Then the governments will take it. (:26). Now there are 7 nations that are heavily involved in PI T of the KF. We see them working and developing ... how do we take this to the next step. There is a lot to teach, but what I think is a time to pause, but if we pause the momentum we created for space development will die and we can't allow that. But how do we allow teachings to become mass teachings? Not just by showing a Gans or anything else. The shock will come when the Chinese for example will show the space T. It's on the verge. It's literally just the last pieces getting tested. The motors are running, the whole PI structure is fully loaded. It's just the last glitches to make perfect. Once the Chinese complete the process it's inevitable that they'll fly. There is no way that they can fail, unless something drastic goes wrong in the whole structure, which we have tried to prevent most of them. ... we have brought a new T. If we don't take this operation and override our method of teachings in a mass way (:28). what will be the outcome. We

carry the blueprint and can release it, but would that create massive changes and at the same time do we need these changes. The Chinese system is the most comprehensive system that has ever been developed. It's literally a copy of the universal system. It's the most advanced system. Everything possible has been built into this system. Except mechanical failure, in the past week I have even taken that out. They can't fail unless something beyond it goes wrong. We have gone into the direct plasma transfer which is what I spoke about last time, that even the dynamic systems are out of question. They are obsolete. I have taken the Chinese system into the full plasma technology irrelevant of the containment. ... they don't see it because they are not knowledgeable enough to understand what is going on. What is setup, I explained last or the week before, the medical system of Klaus is literally obsolete. The new non-dimensional, non-tangible plasma system are developed as ?? for the Chinese development. It's very primitive because this is how it could be understood and put together. The existence of the motors becomes irrelevant. (:30). But it is a help. The condition and beauty of the knowledge of the man and of this atmospheric condition has an advantage that it gives mankind one step up in the totality of the science of the space compared to the others who went through this path in the U. We have fallen in love with the beauty of the space but we don't know how dangerous this love affair is. We have to prepared for it. At this moment we don't even know how to overcome the condition of the physicality. A question was asked, what would happen to us when we come back to earth. When you travel the depth of the U it's for a long time. In the first instance when you loose the need to eat and you take from the space of the SS what you need as an energy and the body converts inside it and it and it gives it back, there is no waste, there is no need for the mouth and eyes because you come to understand that with the eye you can't see. How far can you see when you are traveling beyond the speed of light. The eyes only see flashes of light, it closes itself because the amount of light and information transfer is beyond what it can accept. Then you go back to understanding ?? of the STM and the physicality in being able to survive the light. (:32). When you come back to this planet how do you convert back to physicality? Or does your physicality just take the shape of the man, but the reality in the background, it's a different dimension of its existence. You see the mouth and the eye because this is what the man likes to see, but do you actually go through the whole process. How do we recognize the condition, how do we transmute, how do we come back and say that this is me the condition of this planet confirms it but sorry I can't eat because I learned how to absorb energy in different dimensions but I still go to the party and pretend eating, and put something in the space gap you call the mouth, but it goes nowhere. These things are what man has to learn and to accept. How do we ?? make the children of the space? How do we understand the growth of the knowledge? Hw do we communicate with the man of space and even with ourselves? Many times those who have traveled in space come back to earth, then move fast out because they se the feature of the physicality of the man and his behavior and it is not what they are used to. Therefore they are disgusted with what they see and they leave. This is not the first time man is going to space as I said, many times before. But this time the teaching is in mass, the knowledge is shared en masse. Because it is the time for man to move on. I am not here to prove (:34).

... The beauty of it is that the knowledge is in the hands (:36). of normal people, common people and not the governments. They keep top secret and what they wanted they released if it made them money. But this time people are doing it and there is no secret. This is what the rulers of this planet do not like about the KF, this is what they

don't want to see because they'll lose control. But in so many ways you have lost the control. ....

(:38).

(:48). Draws. You created the H, then the H2,

(:54).

... we'll bring all the changes in one go. Conversion of the energy into mass, (:58). into matter state and into every other condition has started. It goes back to the UC, EC and Core Team, start mass teaching, your job started, this is your responsibility in your language areas, come up with a plan on how you are going to teach, do not make it a magic show, we'll bring the magic. We are now ready to go and to do it is to literally destroy the present energy system we are relying on, destroy the new space system we are relying on, the food we are relying on, the whole agricultural structure, by letting it become obsolete. Let it become too laborious to even use. Why should a man put a seed down and wait 6 months that it grows, maybe the wind, rain, genetic modification harming and creating cancer, and he puts all his life on it just to have something to eat and sell some of it. Now we enter non-tangible PI systems we can feed the humanity in a very easy way. I thank the Chinese team, I walked them through. (1:00). You have a gorgeous guy in the KF Chinese space, he put his life on it and I respect him and it is a pleasure to work with these people because nothing matters but achieving the target, creating peace through the new technology is the ultimate goal. It shall be shown.

I have made everything ready, it is for you now to start the process. The delivery of the knowledge is getting complete, it's just if you are going to fight in every court, why you did this or that, it shows that this is such a powerful T that those who created the problem, become the problem for themselves. ... In the next 2 or 3 weeks we start releasing information. I have received instruction from the Chinese government not to release any videos or information unless it is agreed by the government. But the T belongs to KF and to all of us. We have built it together to where it is. We abide by the rules of the nations but the bigger structure is that the Chinese government has to open the T worldwide, to all other nations on equal measure. I see the development and confirmation to be done at the same time in Theran and achieved. (1:02). It has to be done now. It's where the civilization ?? started and it's where we will mature. One end to the other. No nation is excluded, it's how they want to approach it and what they want to do with it. I gave a hint in recent days, that the sanctions on Iran from the first of November, most probably there will be no need for oil. ... Some 2 or 3 years ago when we were battling with the Sterling case, at the same time we were talking to the Saudi government in the presence of one to the senior cabinet member, I gave them the message, tank and sell as much now because soon there will be none, and the Saudis were shocked. They know it's coming. And in the next 2 or 3 weeks we'll start releasing the self-sustaining power generator. The first phase from today will start testing in Western Europe, setting it up. We gave the same chance to Africa, (1:04). South America, to North America and the rest. The beauty of it is that the system has been in front of you for years. How the system works as a self-generator as I explained has been with you for years. You do not see it. But now as we said we can produce 1 Megawatt systems inside a shoebox. Now the shoebox is about to open and show the beauty of the shoe. But we have to show the knowledge that all of us get benefited by it. We have to understand the science as I have shown you on the screen, in a very simple way, I have shown how you can change matters, but there is still a secret in that and you have to

unravel it. It's not so easy. You have to understand how. I taught you how to make neutrons, but you have to understand how to make what I call, double neutrons to be able to use your energy, or how you allow a neutron to divide into 2 subdivisions that you can create a field flow from it that you can absorb it (1:06). and use it. The beauty of the new knowledge is that it is complete and it's the accumulation of all the knowledge that I have taught you. It's the totality of what I have taught you. Any questions. Q: Do the same principles that you have been showing here in respect to the Gans's, would they also apply to gases, and the actual physicality gases of H, Deuterium and Tritium? (1:08). Now really, because they have reached the matter state. Some research has been done in this direction was Tesla, but he couldn't complete it. In some of his papers he refers to this in trying to convert M field matter states. There are a couple of Russian scientists who have tried this, American naval forces tried this in the 70s a different version of it. It was to become a very secret T that if they could convert the matter through the M fields but they never achieved it. The reason they can't is because it has already lost enough energy to become in the matter state. When you work in the PI state you work in a full energy set. This is what is important and we need to understand. Q: But in your original patents we see the reactors and usually talking about using gases and they have this interaction between the layers of the gases to provide us with a self-sustaining reaction eventually. But that is an entirely different process. (can you repeat ..) (1:10). .. the patents describe gases and not Gans's. Is it similar with H, with a self-sustaining reaction that is described but it requires a key at the scintillating source to get everything going and it is matter level stuff that gets used up, some H or He or whatever would get converted. I am trying to see if there is some co-relation here and the previous document of the patent? In a way if you understood the patent in a matter state and look at the battery operation and understand that the system is, if you take it to the next level, a Gans and a gas, what is the Gans, it's a gas in a Nano state, so it's the same. (1:12). When you speak about the gas we break up ... let's look at the Iranian nuclear based space reactor. What did we do, we placed massive amount of radioactive material to support the change, conversion into PI and then into energy which has become dynamic plasma. Look at your ?? parathyroid gland and thymus, what do they do? Exactly the same. They convert the energy to a high level of radiation. Where we speak about Gans's, but when you change the word from gases to a Gans, then you don't work in a matter state but in a field state. That's all. But when you work in a field state then you have to understand the operation of the M field of higher order, that you can cut the fields. When a field starts from here to the moon, what we saw with, say you can bend the light. What is a light, it's a M field. But can you cut a light and take a portion of it. This is what man has not learned. This is in fact, what you do when you use nuclear material, you take a portion of fields. You have to convert the knowledge, (1:14). what is the ?? light. ?? centralization is the adding or increase of energy which can cut, give additional energy to create ionization. What is ionization? It's a singularity of the plasma. What would happen if now you work in the dimension of the fields. This is the reality of what we need to understand, the gas in the patents, change it to a Gans, which is a gas in a Nano state. But now you work with the fields of a gas and not the matter state of it. Any other question. Q: John. .. I gave you a lot last week .. you did. We have been attempting to create a neutron. Actually I think we create more than 1 neutron. (1:16). A question came up, when we create Gans don't we also create neutrons in the Gans that are floating around separate from electrons and protons? We have not produced separate electrons or protons. We produce plasmas of fields but of different measure. Q: Are the neutrons separate? In some productions of the Gans you produce neutron, but the division of the neutron is very rapid because of

the environment that we create to H and that H rapidly creates the water. I repeated this before, I asked many times, have you ever measured the level of water in your tanks to see if it goes up, and nobody does. But in fact you have produced neutrons, that those neutrons rapidly convert to H and you get a H<sub>2</sub>, the way you create CO<sub>2</sub> in your buckets, that H<sub>2</sub> creates the water that increases. Many of you have been trying to create water and this is how it is done. But you're too busy to worry about menial things like producing water. Many of you have measured, understood that, yes, you have been producing neutrons but you never captured it, and the capturing of it in that state (1:18). especially with CO<sub>2</sub> is not such an easy thing because you haven't created the condition for capturing it. Q: Is that the salt environment then? Yes.... Q: So we create a different salt environment in which to catch it. Ah... you don't need to create a different salt environment when you can use the same salt environment. So why wouldn't the original Gans environment be that salt environment, why didn't that catch it? You actually do catch it, as I explained, do to the energy within the environment especially with CO<sub>2</sub> and you release a neutron which immediately becomes H ?? produces an electron and proton due to the massive absorption of the fields within the environment of it. You produced neutrons from the first day. Now you are going to recapture it back or separate it if you want to do it. Q: So that is where the center ball in these reactors come into play, where we put enough pressure in the center ball to capture it. Maybe .. why do you want to put pressure on it? Maybe it's the way to do it? Q: So we pull it in gravitationally into the center ball? You can do. But how you separate it and hold it (1:20). If you produce a pure neutron in certain salinity which we have discussed or you can get near to it, your neutron saturated saltwater should be around, horizon. The color of the Gans or of the salt where you have captured the neutron in it. Is very much yellowish pinkish color. You have to understand what you produce. You take a salt solution that you used for your Gans and put it in a separate ball, this is my reference color before I put anything in it, and then when you have created an environment when you have captured only a neutron that is in another saltwater ball, put the 2 balls next to each other. The only thing that has been in that environment is nothing but the energy of a neutron that has converted itself into a plasma of itself in that water. Are the others the same original saltwater and this saltwater that you are holding. You'll see if it is the same color and the same water it means you haven't captured anything. If you have captured a neutron in it, understand that your ball was in a MG field of a plasma because between the plates is a M field of the C or whatever, then it is very much PI and its existence (1:22). will effect, will reflect the plasmatic field flow in the water. If you took your salts from the ?? where you started and you keep it in one of these see through plastic balls, then you take a sample of what you think you have captured and you put the same saltwater in the middle in a ball and if you think you captured the neutron, how do you know, very simple put it next to the one without any neutron and if it is the same color it means you haven't achieved it. then the new color which is usually yellowish or pinkish, more to direction of pink according to its saturation in the MG field, then you see you have captured it. You have a neutron in your hands, then you can use it. But a much easier way of capturing a neutron without going through (this) the process, you can create a condition for flight for it. As I said before, you need 1 atom of, for example, certain elements, while the popcorn of the diamond is getting created, to be in it, to be the color pink. Have you heard of pink diamond? Yes. So go and find out what makes it pink. And then find out the structure of the matter, the state of the PI. Q: Like Himalayan Pink Salt? I don't know, as they say everyone who has a mustache is not your uncle, is it. Just because it's a pink salt and from Himalaya (1:24). Maybe it has? Q: I think Fe is the reason for pink in Himalayan salt. What is the reason for pink

in diamond? Come on you guys have Wikipedia in your hands. ... John have you achieved anything you want to share with us? ... New structure for creating a diamond structure. It's an open test trial. .. (1:26). Rick, it has something to do with the way they are formed, pressure I think. ... the oldest pink diamonds belong to the Iranian Crown Jewels. ... Has to do with tremendous pressure when formed and seismic shock that propels colorless diamonds to the surface and altering their molecular structure causing them to appear pink. It has a gaseous element in it. In the diamond business you change the color if you cut where this minute gas position is you turn the color to white. (1:28). It is the same with the blue. It's a gas pressure that is inside and it reflects the light through it. It's a M field in a Nano state in a gas state of it, and this is the reason why you get different color Gans's. It's the existence of different gaseous conditions as you change, as you pressurize, extract that leads to creation of color. It has an element gas, plasmatic condition, Nano state because it open up that it gives it the color. It's ?? now the pressure and orientation of it, because otherwise the minute you cut the stone you change its orientation and its pressure on the stone and we should be able to hold the stone pink, ?? seed. Rick, it says yellow diamonds contain traces of Nitrogen and blue diamonds boron, but no similar impurities have been found in pink diamonds, leading scientists to speculate that maybe it comes from seismic shock ... Maybe now for the first time we can explain what it is. (1:30). And if you move that pressure. I used to be in the diamond business, I am one of the biggest nightmares of diamond cutters ... it's colored stone, they have no problem with white stones because you have to see where the mother is and you cut it out. It's finding out exactly where this gaseous pressure sits and if by accident it's on the edge and by accident gets cut off when they are cutting it, it (turns) to a white stone. Many times when pink diamonds get cut they put people on top of the cutter that they don't convert the stone and suddenly it changes to white. But it just happens that you release that neutron gas inside it and it changes color, (1:31). If you understand this you understand why we have different colors in our Gans's, it's a N structured plasma, it's what and how it orientates itself. ... Video by John (1:37). That was our attempt to create a crystalline structure by utilizing and varying salts, one more alkaline and the other more acidic and moving the fields via the acidity and alkalinity. So what would that do for us, are we going backwards in the knowledge or forward. (1:38). Q: It was our thinking to try to create a different C structure. ... So which one do you like best? It takes time. You wet our appetite and then say nothing. So what are you going to do with it. ... we can put that into our top reactor to create a stronger H3 field. We created a neutron structure... . (1:40). ... I hope we're not going backwards. .. (1:42). Yeah, I am listening to learn. What can you do with this? Or do you want me to tell you something? We think that by adding the CH3 and CO2 we are ... moving the fields .. 2 different C are linking up in salt environment. Maybe like a diamond structure? But is ... or put it this way, why are you trying to create more diamond structure C? Because I am not sure that we have the perfect fuel in our reactors. (1:44). Our reactors have been spinning for a month and we are only getting a little bit of activity. The reason, can I speak openly about your tests? In one of the videos you sent you showed fields and how you measure them, but strange enough, I repeat myself again, you are not bending it to use it. You are feeding the ceiling, the cat and most probably yourself with the energy, but you are not carrying on to the space. There is a lack of understanding, or a new comprehension, the reason you're not getting there. Q: remember we have the big field with 18 MaGravs. No, no, there is a huge difference why you have the 18 MaGrav, and a SF. The reason you have the 18 MaGravs is it is your launching pad to create a balanced environment. The 18 and 6 MaGravs have nothing to do with your flight system. When you put a MaGrav system

and test it like everybody else does in the room, (1:46). you have everything flying everywhere (shows fields going off). The reason we put the 18 MaGrav system on the floor and 6 and 12, is to create a homogeneous system flow of fields without any interaction with outside the ground or whatever. You haven't understood. The 18 plates which I asked you to put your system on is to balance the fields, it's your launching pad. ... it has nothing to do with your flight system. Back to your flight system, you have another problem which you are not solving and that's why you are looking somewhere else. ?? if you don't have at home you play outside. He draws a SS, you have your SF, you are creating your fields, I repeated this before, that's why I ?? like to see. It's fantastic what you are doing but you don't see it. He draws the fields coming out, you go 200 meters away and you feel it here ... but you have to learn like the English football player ?? You have to bend the fields. You don't want the fields 200 meters away, you are very happy you can feel it, but my friend you need the fields here, (bending down to the bottom reactors). (1:48). This is why you don't get any results. I saw your video last week, I thought, they show it there but they don't use it. You are continuously feeding, you are a ofuntain of energy at the moment in that building. It's no good, you have to bend it. As it comes here (bottom reactor) it gets more energy as it goes up, it's building. Bend it like ?? I saw your colleague standing up here measuring fields with a buzzer, it will not work because you have opened a ofuntain. Once you bend this in, it comes. I'll show you how it is supposed to work. You create a ofuntain of fields and then it hits a solid barrier, what does it do, it splashes. At the moment you said to me you can feel the M wind above it. The discussion in AZ, this field (above) means you are loosing energy, you created a wind. You should feel no wind. In the Chinese system, I tested and put my hand on it, there is no wind, because we have managed to bend it. When you stand in front of the system, it's just like you get a cold chill wind in your forehead when you walk in the cold. When I was standing in front of it a few days ago I said to the guys feel the wind in my forehead. (1:50). Because if you put your hand above it we don't feel any, we have managed to bend it. 10

(2:00).

(2:11). John shows video of the fields ... (2:12). That point where you go up and it's beeping, are the fields that are coming in from your system. It shows a leakage. That ball on the top shows a massive leakage. Because now you have confined the space to, and then at that point it becomes matter state ?? plasma field of the matter state, and you feel it, the reason it goes up on top of the system it shows that there are so many fields that are leaking. In fact, you should see no fields in there and a bending in. Q; Can you tell them how to bend it? Oh, they know, they know how to do it, it's by ... look at it this way, it's by the transfer of gradient of fields. You have to create lower fields at the lower level that it can go to it, to feed it. And that is all that needs to get done, but somehow it's not getting done. It's understanding the flow of Pl. Dr. Rodrigo does it. (2:14). Congratulations and greetings to the new born. The understanding of it is that you can be at a position to do it. That you can extend it, that you can bend it inside and then you'll see the structure, those 18 cores are there to hold ?? and they are doing their job. What you are showing me is exactly what it is supposed to do. If you look at it, the 18 cores are like the egg shell and you have a chicken inside that is jumping out. .. The 18 core are your launch pad, nothing to with the flight system, but there existence allows homogenous energy to be available that the base cores can pull in that they can become part of it. It's your rapid deployment of fields. Q: Is it love yourself? It has

nothing to do with the love, this is pure PI transfer. Q: Yeah, so give to yourself, where is the soul of the reactor. Yeah, in so many ways it is in the center but you have to find it to be able to adjust it. (2:16). It's conversion that is missing in this. There is no use trying to go and find better fuel, you have everything there, and you show it, a dome is suddenly there. SO that there is the biggest ?? going up. You have to bend it in. The first dome with a gap is what the MaGravs are producing. They are containing and doing exactly what they are supposed to do and the second one is doing its job, but you have a leakage, hole in your pipe, the balloon is bursting and leaking. So you have to bend it. Do we understand John? Rick says, in the old days of gas reactors it was always rule number 1 that the PI doesn't touch the walls of the reactor, and different types of N coating would be advised to repel the PI from touching the walls of the reactor. Which would also be true in a nuclear reactor and others like CERN when the PI touches the walls its the end of the experiment. (2:18). That's a hot PI, we are dealing with a cold PI, a universal PI not even a cold PI. Q: Are the principles not the same, you had a shield, the Al plate or other types, the N coated Cu dome you used in the Insano? Yes we did that in the Insano. The people have been so closed in all the time since the Insano to be able to create the flight. .. I keep saying but it's there. I am one of the worse teachers, but I am one of the easiest people to teach. The worst thing about me is I don't spoon feed. An example of it is, I tried to spoon feed you with the MaGrav system and you see what a mess it has created. They went backwards to destroy themselves. Everything was wrong with it, let's build on the next step ... we done this. (I think he means you didn't follow through to completion). And you want to play in to the hand of those who discredit. With what you have done, why should I do the same again. I have taken charge with the flight system with the Chinese and I'll get it through, the same as I did with Iran. It's not that one (is better) then the other, or there is any difference. We are just allowing the development ... I have a problem with the Americans developing this? No, I have no problem, but John is very intellectual, he was with the ?? Sears group he knows M field work. (2:20). very well. It has to be done by a layman and not a scientist. What is it going to be. We had a cold war and nuclear race, now it's going to become American and Chinese? No. I have shared a lot of knowledge in the past 2 weeks when it comes to understanding the T that all do it the same. Because when I do it for one I do it for the other. To me the way the T is going, it has to go with the Chinese, because through the Chinese we'll find the world peace. I don't see peace through the Americans. If we show the flying system in the next 10 minutes the Americans will come with the most horrendous way to destroy every nation (to confirm) that they exist. This is my problem. There is nothing wrong with the science or both things we are all part of the same. I see the world peace through the work of his Excellency president Zhi. And we'll achieve it. There is no other choice or way. If you leave this T with the Americans, they'll claim they're god. And god knows what, they'll want even breathing charges on the air you breath. There is nothing wrong with the system, it's there, it works, but they have to call "Beckon" to come and bend it for them. Watch the movie, "Bend it like Beckon" and then you'll understand them. (2:22). There was a movie made about a footballer who was famous for bending the ball to go into the goal. Beckon created a condition of sliding football. And that corner on the top has to be that sizing kick, that it bends the fields. Would you achieve it by changing composition in the top core, or by creating new PI directions. It's all there to be done. But the biggest problem is to fly in Beijing or America or wherever. So what? How are we going to get in it? Or how to get out if by accident we happen to be inside it? You saw the guy with the buzzer, suddenly the field creates and he's inside. How are you going to get him out? John you can shout as much as you like, how are you going to do it. How will you

manage to create that ?? bell for him to come and go? How do you transfer energy across? Then if he got stuck in there, how will you feed him? What happens if your cat happens to sleep under there when it's getting made and he is part of the system. ... how do you keep its physicality that it doesn't lose its soul through physicality. (2:24). How do you not decompose the man through M fields, like a cube of sugar in hot water. You create the fields that there is no physicality. Don't think that these are ... this has happened many times in the space. And it happens every day because nothing works according to the plan. There is a rule in the U, that you change your systems every so often, because they get clotted and you have problems and then you can lose this and that. Or you find problems creating new animals out of it. The fun starts once it's done, once we show the fields, you're ahead. AZ has been ahead for months. And the only thing that is left, ?? you need the stronger fields. You have everything and you show it, the last video shows it exactly. Just bend it. Just put it in, in pulling it out, in interaction with its own fields, it doesn't ?? bust, but it leads to light. I don't see until this moment until you don't find a way to bend that field, that there is any need for new fuels. You have everything right, the composition right. the composition looks to be perfect. And this has been in discussion for months now with AZ. One of the first things I did in China was to feel the top, do I feel the M wind, and there was nothing there. At the height I stand, I said to the guys, (2:26). I feel the wind in my head, in my forehead. Because it's the ?? center of the STM and I can feel see it. I could see light, we saw the smoke coming out because of conversion of energy to matter. They are very advanced in China. I love the people I work with in China, they're sincere and work in one direction. They'll achieve it, and I keep the government continuously debriefed, that we don't become ??? achieved from this planet, but we shared the knowledge. If anything happens to me, there is a key, I am sure the Chinese will release it to KF. ??? because this time the knowledge has to be equal across this planet. This time we have to use the knowledge for the purpose of peace. Maybe there is a reason there is delay in AZ until it is achieved in a different direction. When the Americans change their tune to peace they will achieve it. The true peace, not by gun policy the way we see they use guns more. We kill more to create peace, what a nonsense. Any other question. I have a notice in the background that we have Jalal talking about his little worm if you like to show it. (2:28). Shows video. Rick has a name for, it reminded me of the Horseshoe Crab ... the oldest living creature, 400 million years and has blue blood. .. We explained the reason for the blue blood, because of the cesium Oxide in the blood. (2:30). shows. . the ball there .. last week it was here. .. before it was like a tail coming out of it ... (2:32). ... Q: Do you see a heartbeat in it? (2:34). Q: How do you know that it is a creature? The materials move due to the dynamic flow of the Gans's. We have seen this before. if it's growing and moving, it can be due to the flux flow of the fields in the Gans. (2:36). It's structure, but you have to understand what it is, is it gaining mass, but does it have a structure of life. When you have a salt Gans you usually start seeing crystals around the container coming out. That creature a confined environment for life to grow in it. Then you see conversion of the materials through the field interaction. It conditions like this you are in Pl conditions. Q: I am not 100% sure that this water is pure water. If it is life, then somewhere when you have been cleaning, the protein has still been transferred through. And some of the protein has linked up with the Gans and the CH3 or with the H3 or whatever, now it has an energy support system to live. (2:38). I am sure there is some AA there, and the water is seawater. It's possible, you have to understand what is and how it is and how it is created. .. many of you have created creatures in your packs because you just don't consider that AA on the top as much, but that much is enough for life to begin. You just need to attach it to Mg, Ca and anything else that might be in that

environment. Rick shows the horseshoe crab. ... (2:40). ... we have seen the same with the labs in China. In the future we'll set out to create entities the way we set out to create Aluminum and Zinc. If eh man understands and can create, if he has a fish farm, he can create the fish out of the fields (directly), without any diseases. If the target is to create the muscles of a fish you can do it. We can do it we don't need to be a genius. We can create the conditions that allows that kind of life to expand and exist. (2:42). Q: If we maintain the fields distribution by the top reactor, blocking, or separate the fields back to the bottom SF, then the bottom reactors get more pressurized by the higher strength, what effect do they have in a visible way, do they show new PI abilities by that? repeat it. can't make sense ... (2:44). It has to be returned back, there is no if, if you don't return them back you don't get physicality. Q: What is that physicality that we might get? The physicality depends on the strength of what it is. Initially there are a number of things that happen, one is the vibration, another is the light depending on the strength, you see gaps, sometimes you see striped gaps because the fields tell you it's not correct. This is why the center line is made dynamic to overcome kind of gaps. But there is the knowledge, know how of how to make gaps, because they're storage, the door, there are all sorts of things. Rick, you mentioned shimmering before. On the first day when Armand and John were there they could feel the fields. If they could have brought those fields down they would have seen shimmering, lights. That's the next step and they haven't managed to achieve it in 3 months. The fields are there, they can feel them. (2:46).

(2:48). .. Dr. Gautoua makes a presentation about how he is teaching in Kenya. (2:50). Plasma Science Classes in Kenya that started in 2017... (3:10). How many people have you taught? About 1,000. What results do they get from taking the water away? ... .. What we have to understand from teachers like you, for example, where did the diabetes come from and what causes it, is it the operation of the pancreas or is it physco somatic. (3:12). What happens if you just drink it or if you apply to both sides of the pancreas and change the pancreas. You have to find a permanent solution, not just a replacement for insulin, just because it's water 25

(3:16). Lady from France thinks she created water. (3:18). 30 CO<sub>2</sub> pads in a Ziploc bag, did the same with ZnO<sub>2</sub> CuO<sub>2</sub>, CH<sub>3</sub>. After 3 weeks there was like 1 cup of water in the box, she thought there was a leak in the bags. (3:20). After checking for a leak but there was no leak. She repeated it in another box and water formed again. ... (3:22). In 3rd experiment used a thermometer, it was 23 and 25 .. the PH of the collected water was 8.2 (could be more), the PPM meter was 69 very pure. (3:24). Did I create water Mr. Keshe? You measured the thermometer so you know that there is a temperature difference. It was CO<sub>2</sub> + ZnO, but in a different ratio. So you have an energy transfer from one to the other and in that energy transfer you have created an energy, called a transfer, which the doctors do, and you captured that energy which is equal to the water. What would be interesting is to put this in a sealed box that no moisture from outside can come in. repeat the same experiment but in a totally sealed glass and see if you are still creating water. Then the condensation will be eliminated and won't be there. Then you'll see the transfer of energy. What is the ratio of the 2 pads in respect to each other. I didn't calculate it. (3:26). Put it in a sealed container and come back to us. Rick says to weigh the bags to see if they loose weight. I told everybody is a scientist in this T. You don't go to the university to get a PhD. Suggests to write this up for the KF Journal. We have a gentlemen from a university especially for scientific papers in the KF Journal. (3:28).

(3:30).

(3:32).

(3:34). Q: Molds of different shapes can appear. ... is there any danger in developing molds? Not really ..

(3:36). ... when I saw the first indication of the energy getting converted, when I saw the smoke, that is an indication that the energy is getting converted. ... (3:38).

END
