

## 236th Knowledge Seekers Workshop - Thursday, August 9, 2018 ( , )

(:15). Thanks to the UC last weeks' presentation. (:18). ... A lot of people want to know how it's going in China with the SS. It's not as well, after the problem, but it is good. ... bend the fields for the first time for control. We set our reactors at a high level and we tried to see if we can bend it in. The last time we had an incident, was that the fields bent away from the top reactor and all the energy was released into the atmosphere and it caused the problem we had. One of the biggest difficulties is to be able to create a rotational field back down from the top. One of the ?? is the reduction in the speed of the top core which means G pull from the lower reactors, pull put pressure on and bend the fields in. There is a limit to ... those of you who tried to match and run the space reactors, to run about 2060 to run about 2700 (rpm) that you can start creating a condition that PI has to become matter state condition of manifestation, or at least plasmatic matter state, which is like the skin of the man. (:20). In the future when mankind understands more of this knowledge he'll even understand how his own skin ?? speed it is created, what MG field creates that what we call, the illusive body of the man which we think is some sort of solid, but in fact it is totally plasmatic. In a forest I said, if you look at the skin and the skin of a tree, it looks about the same color, because we all carry the AA, but they are slightly different. If you have what we call slight skin disease, you have seen how you flake and the skin grows on top of each other, go close and look at a pine tree, it's exactly the same process. It piles up, it becomes what we call the skin of the trunk. If in reality you understand the difference between what we spoke about, salinity and condition of the ?? floor and Gans state of the matter, then you can even understand how you can create wood strength, or vegetation strength or any other condition which we might feel (we need) in the U. We understand that it is how we dictate the outer layer, it doesn't matter what we put inside the layer, then the inside layer dictates its own shape, its own destiny, what it can hold. If we understand the difference between the skin of man and that of a tree, or what we call the bark of the tree, there is no difference. We live through the confirmation of the 3 layers, top, middle and bottom layer of the skin of the man and the rest of it is contained by its field forces. (:22). The same is (true) for the bark of a tree. But we have to understand how those 3 layers become solid and how the other 3 layers in the lungs becomes soft, and what we call, ?? herbs take a very soft stem to itself. We come to one conclusion and that is, it's the atmospheric condition which dictates the manifestation of the existence. In the time when we come to the point to understand this, there is something that will become very apparent to mankind and that is the structure of the shape of the spaceship, or whatever you create is unique in the U. It means all the members of the universal family followed the same pattern of existence, because the interaction of the layers of the fields are the same, so consequently and relatively creates the same color. It goes back to what a famous man said when he created the Ford car, he said, you can have it any color as long as it's black. It might look different colors in different dimensions in the space but in reality it is exactly the same thing. It has not changed, how it interacts with the environment of itself, it manifests itself in different color or shapes. One of the things we will try to go into today is, environmental condition, because it is important in the space flight how we reach that, how we get there, and how we create the environments and what they mean to us. In the last couple of teachings I touched on it, very softly, in what we call salinity. But how the salinity dictates the conditions of the environment. These all count and are part of the process of the creation and conversion of the matter state of (:24). everything that exists on this planet. Before we go there, there is an

important issue that we started last week, actually we discussed it last week and it has to be understood by many of us. We touched on it, it's political, geopolitics and somehow we are good at it to get ourselves in it. And sometimes we do good by it and we have seen results with it. In that process we saw president Trump declare he'll at any time anywhere without condition. We made an offer to the president of the US, Theran is the best place to meet, because the conditions are no conditions. In return we return life back to 10 US citizens who are in Coma that it shows the power of the T. The last time with the Americans we showed the power of the space development of Iran with the capture of the American drone. This time we show the saving of a life and this is more important. In that process we are aware, in communication and understand that the Iranian government has shown indications that they are prepared to talk but they don't trust it will lead anywhere because of what stands on "5 plus 1" American negotiations pulling out. But Americans are getting pushed into withdrawing sanctions or a lot of other things, which we don't think is necessary because what is coming from an international economical point of view, there are a lot of governments trying to override the sanctions because jobs, security and a lot of other things involved. (:26).

(:30). ... Ella reads Mr. Keshe's letter to Trump about Iran peace talks. .... (:39). It will be the end of many conflicts and wars. 06

... The opening of the American Embassy in Theran will be the flagship of this trip. (:46). To see the opening of dialog on a direct open basis, not on accusations. We need to oversee and overlook, those of you who are KF supporters who live in Washington, as you did before deliver these directly to the Whitehouse. You did it last time you can do it this time. If you are American and live 1 to 2 hours drive get a beautiful golden envelop and hand deliver it to WH or by post. It's different when they receive it in their hand then they have to read then something ?? The last time our Washington supporters delivered directly to the WH and they have to respond. There is a procedure followed and it will be received. ... (:48).

... this is diplomacy we stay in it to bring peace. This will bring in a new environment for humanity. (:52). Once the man stops war and fear of war he will start investing in science and technology, and that technology will change the atmosphere of this planet. It will change a lot of things, it goes back to the knowledge and science of space T as we said, change, condition of change. If we run a single reactor and we see that a plant grows better, can you imagine millions of souls radiating the same wave across this planet. If one SF or one cup of Gans water has allowed your plant to grow bigger or greener or you found a space you can live in peace, can you imagine what 1 or 2 billion souls can do on this planet, with so many dynamic reactors running. We just have to learn it, to yearn for peace and use the energy within our soul to create that condition of peace. As a ?? presence on this planet I have done everything possible I will not stop until the last breath. But we have to understand what the condition brings. What will the maturity of man bring us. It's not only the STM which elevates, it's the ??(e)motion of the existence of the STM will also change this planet. What is important for all of us, (:54). is that, as part of the teaching, an important part of the teaching from now on, is not that look only at what a single reactor does, what a cup of Gans does on the shelf, but to look beyond it to what environment it creates, to what level and what distance does it change things. One KF researcher was showing me, that the reactor he was running in the research center was showing alkalinity in the whole area, moving to over

PH 8 plus, and we can go so far and it is still there. I thought, my god, if one ?? small reactor with limited capability can cover the whole area with an alkalinity field, in the hills and mountains, can you imagine what the strong wish in the STM can do across this planet. It's the change of the environment. If a core can create such a change to 8 plus alkalinity, which means more or less, zero possibility of cancer do to emotional condition, not accidental or evolution, then you can imagine what can be done with the STM. We create the condition, (:56). the environment. We have to create a position for our existence on this planet that by learning it we can do the same in the depths of the space. At the end and the totality of the teachings is the position of the man in space. The position of man understanding the position of his soul to confirm his position in the depth of the U. What does this mean, how do we create these conditions? We have to understand that the creation of the conditions is what creates the confirmation of existence. We want to show ourselves. I am sure if we jump in the melting lava there will not be much of us showing because we didn't dress properly for it, and I am sure if we jump in the icebox of the North Pole and don't wear the right clothing we'll not do much either. But the reality is if man in time learns how to operate the existence of his soul in respect to his physicality, he can jump into the lava, it doesn't matter how hto it is, because he has prepared his soul. The condition of the environment that he allows to exist in that temperature. The temperature of lava on this planet is nothing compared to the heat that happens in the depth and explosion of the stars. But in those situations life still exists because the soul has evolved to the condition, to exist within that condition. If you remember until very recently until about 20 years ago we couldn't imagine, (:58). they said there is no life in the depth of the seas and oceans, but as we had the tools and we could in those depths we saw more animals, at the positions where there is heat coming up, at high temperatures of hundreds of degrees, there are shrimps, lives, animals. How could they stand this, was it the physicality that changed in them or is it the dimension of the soul of the animal which has conditioned the physicality to be able to stand it. This is what we have to pick up. A further point is why can't we create these conditions ourselves? Why can't we create a condition on this planet that it changes everything? It doesn't have to be with the Gans water, but it is the atmosphere we can change. It's the condition that the environment changes what manifests itself in the matter state, and not that the matter state appeared out of nowhere. This is part of the teaching we give even in our research to develop and to exercise. Look at the conditions of where you live and what is needed there, what do you want to change, what are the assets or facets of what you are doing and where you live. You live in a dry place and you want more rain, but when you want it, but it doesn't change the environment of it. This is part of the condition of the evolution of the science that many governments will try to abuse. the governments will try to change the deserts into a living place, and change places to be able to start growing and doing things. (1:00). But the ecology of this planet depends on the totality of the structure of its atmosphere. If you change a desert, the condition for the layer that needs to evolve around this planet will change. Where's the change, what's it going to be, who is going to stop the rain in one place, and not knowing. On the other hand deserts might change, but what about the neighboring position. Isn't it correct that we have to understand how to create a condition that not only the desert stands, but were you are stands for itself ?? on condition that you change the receipts of the material in the position of the acceptance of the fields by the planet. Understand the terminology. You create a condition, but what you create, the atmosphere, the interaction with the field of that area of the planet has to accept and see what it can produce. Many of you have started testing and I have seen some pictures coming through on the .. is this gold, I have something else there, what happened to it,

is this Gans, I had CO<sub>2</sub> and something else there. Ask yourself one simple question, what atmospheric conditions did I change, what did the interaction of all these Gans's lead to? Is it only the cup that was next to it that creates this or is it the totality of the fields in that room. And if you move a cup 10 meters away, you find out .. I used to create a gold ?? here, it doesn't happen anymore. The fact is, every field together gives you that result. You might or might not be able to dictate the conditions for it, (1:02). you might be able to hold conditions for it. I have asked one of the researchers who was involved in the production of the materials, to start commercializing systems that can produce matter state. Very shortly you'll see through the Italian KF systems that you can buy and then load and then you can make your gold and what you like. This is a request I put to the research center and I am sure in the next few weeks you'll see matter production systems coming from KF. You'll be able to exercise, test and show how you can create an atmospheric condition, which in a given controlled condition can lead to production of matters. In the beginning it will be interesting and exciting, it's like when you bake a cake and make the recipe a little different, this time it becomes a biscuit, next time it burns and becomes something else, and another time it becomes a cake, that is a little uncooked but at the end you eat it because you cooked it. Many of you will start testing. We have seen to this and hopefully if you get materials and want to see what they are, we have found a friend who might be able to help you. You get in touch with the KF and our friend said, you have to pay for their time to see what you are creating. The samples will go to Malta and he will test it for you. There is a fee that we have to agreed on for the lab if they do it, what they can do, and or other places. (1:04). As we have seen in one of our research centers you produced such a minute amount that they can't even test it. Or what is it? We had a discussion and arguments before the communications started today that somebody is claiming to make gold and another claiming to make something else. Yes, but please video these conditions and take a video of the whole surroundings. Was the cat sitting under the table and it happened to pass somewhere and it was a gold dust and you pick it up, but next time the cat isn't there and then the gold dust won't be in the pocket. Because don't forget, remember the orange and the Gans water and how you got the transfer of the energy into ... the taste of the orange, now this time it's the cat and the gold. You have to be part of it and understand exactly the whole situation. In one of the research centers they have made a box that they can keep everything controlled and under control. We made this box in Berleta where we put things inside this box that nothing can touch it. We covered it with Nano coated materials, which means it will be continuous balanced fields, which means whatever you make is in there. But it has a problem. It has to have a MG field above what Nano coating you have put on it because now that is the filter, but you can penetrate it. then you condition purity with what we call restriction and filtering. Then you say it produces with or without. Start understanding the application of the fields of the Pl. In the present discussions in the past few months we went from the Gans to plasmas (1:06). and condition and creation of the plasma, then we brought what is known as, because you are all physical people and have to have something in your hand, we couldn't see the Pl, we showed you how to create a neutron. A neutron is created out of the condition of the interaction of the materials, and it can be any material, if you can find a material that you can create a condition of interface between another material, whatever is a residue it will give you a neutron, but have you created a condition that the neutron itself converts itself back to another matter, or becomes a collective effect of the matter, this is another part. If you go to high level, what we call heavy elements, what we call with a huge number of neutrons, you can do the same, if you done the same thing between H and Deuterium and Tritium and you extracted 1 neutron, if you

are knowledgeable and you can make the Gans of, you put such an element with 20 more neutrons than another element but equal number of electrons and protons, what are you going to get as surplus, this time 20 neutrons. But you have to understand what happens to these neutrons. On the stability of nuclear decay which comes from the essence of the creation of a neutron, brings you another dilemma. What does a neutron do? Respect to the condition it is, a condition and a position which other neutrons take to itself, it converts itself automatically, those who are on the giving pressure to a neutron and an electron, what are you going to end up with? Another 10 electrons, 10 protons, and 10 neutrons. What is 10? This becomes your new element. You have to understand conversion, the position of the conversion. (1:08). What is a neutron, it doesn't stay there as a neutron, until the cows come home. They interact, they radiate. The most unstable nuclear reaction in the U is the existence of the neutron because it gives so much that it splits. It's very much like a seam of a trousers, if you take enough thread out the trousers fall apart in 2 halves. In reality this is what you have to understand. I hear a lot of people who start to play with neutrons are disappointed, ah, it was yellow and now it's changed to orange. Of course it does, because some of your neutrons, in losing their energy, in trying to keep their conformity, and all the other neutrons in the MG field strength have lost their energy, what is going to happen. It becomes an electron and a proton, and you have a free neutron, what are you going to get? You end up with Deuterium, but it is in a condition of the conversion of the fields, especially the presence of the conversion of the neutrons and the amount of the field strength collectively released, creates a condition of 2 neutrons and an electron and proton to create the balanced field, of what we call very much like Helium, so what are you going to end up with, is D. I made a neutron but how come I am ending up with Tritium? Very simple, you lose some energy, or you can put them on the M field strength, or through a plasma transition field, and then you get what you want to get. In the coming teachings many of you will learn, if you remember I explained about the magnets, but go back to your teaching and what you understood, back to the science of the conversion of the fields. (1:10). Now if you had that neutron, the bucket of the yellow things you created and you know very soon it's going to change itself to T and some D because it is dividing, and it's a natural process of linking up. Then what's going to happen, by what you put in the boundary of that system, the you did with another protein box, you decide how the neutron will take shape, will it become gold or Cu. Would I change it to water, the field of the water, you create the condition that converts the neutron in the condition of space into water, at least the energetic water, that when you gets in, or comes near your body, it absorbs and converts it to the liquid you call water or blood. This is how environmental conditions comes into existence and plays into the life of the man in the space. Don't forget man is not the only one, billions of other races have already done so, so it doesn't have novelty that it becomes something else, man is not the only race that carries fluid like a blood. Many races in the U do. Man is not the only race that can have emotion and everything else. every race in the U has the same emotion. Now that man joins the UC, the uniqueness doesn't exist, it's in fact, understanding the totality which gives the man the knowledge of understanding, it's part of the creation, repetition of the same process and there is no uniqueness to it. Maybe the red color, yes, but there are other red colored blood races in the U. You are not the only one, I can take you to many. We have all colors of blood in the races in the U, (1:12). transparency and manifestation. It's not just the Fe that makes the red color, in the condition of the interaction of the protein there are other liquid that have the same capabilities of doing the same. What environmental condition you create dictates what you are going to get. The purpose of the teachings today is the creation of the conditions

of the environment. Many of you, this is typical of the way I teach, and you lot like a lamb to the slaughter house follow it and then don't think any more, as I call it, copycat good job, is, you just all made the neutrons. What's the next step, why not you decide the environment that the neutron doesn't convert into He or O. You want direct property of the water to be there to be absorbed, but do you need to manifest it first in the liquid form that it be there, or can you stand next to it, hold it and see that you never go thirsty. Because you become again, do you remember the cup and the orange, now the neutron is the orange and you are the cup. If you manage to transfer the water through it to a plasmatic condition, that is a neutron itself, then you achieve it yourself. This is the beauty of the process and you need to understand. You can create a condition anywhere in the U that if it fits the life of man on this planet. But what do you need to exist? It's not just the O or H, it's the totality of what you take in. Man always looks and says, Oh, i am breathing O, my .. dream. (1:14). No way! When you breath you inhale the gold which is in the air coming down to be the silver, to the odor of the cow which makes some gases in the US, or the god knows someone else who sits in Theran and does something else. We are part of the multi-structured MG field forces of gases and it fills the whole of the U. A couple of decades ago the scientists did a very interesting test and I have talked about the this before. If you haven't heard it you'll hear it again until you understand exactly what it is. They say the worst thing to do is to keep your totohbrush where your toilet is. You say what does the Totohbrush have to do with the toilet? Read the documentary, they say when you flush ?? percent has gone down as part of the odor in the atmosphere of the bathroom and you can find it on your totohbrush. Scientists have proven it. Can you imagine if you are in the desert and you do the same job (toilet) and where does it go? inevitably if it starts in AZ it will end up in Saudi Arabia, and if in Saudi Arabia it lands in the US, because this time the container is not the wall of the bathroom, but the atmosphere of this planet. Now you can see how racism on this planet has such a little meaning, because all of us are at it and we are all sharing each other, and yet we say we are this and that. Now you understand because it is the condition of the atmospheric condition of this planet, which is on the MG field of the Gans and not the matter state, (1:16). and at the same time it is the conversion of it. If this has been very hard for you because you were taught that you always absorb matter state, then you have a long way to come because it is the conversion of the field forces of the gases has forced us to live under these conditions that we absorb fields of the gases, and the field comes only when it is in the plasma condition, in the matter state it is very hard to use. So when it comes to that you want to produce materials, now you have learn about the plasma (Pl) before and the fields it produces, and now you learn about what I call the neutrons, you have to be able to contain the plasmas, and make a containment for the neutron by the plasmas and then you can decide what containment of the plasmatic you can create that, that neutron will change to the matter state or the energy state that you want to convert it to. If the MG field of the atmospheric you create around your system is of gold, then the neutron will convert itself to gold ?? value element. As ?? these kind of technology , we need to understand the reality. So that now we become in charge of the totality. Many scientists have been yearning to understand how to make water. I could make it before but not now. Those who understood and start understanding the process of the creation of the Gans's which created the field and now they can produce the neutrons, very easily should be able to produce any matter at any point in the U. The conversion between the fields of the environment and the existence of the package of the fields. (1:18). If you look at it, it's an envelop and what you put in it. But this time whatever you put (in it), the envelop converts it to what you wish. You put a neutron in the bucket and then you put your hand in, if your wish is that you have gold, you'll

come out with gold. Because you create through your wish the conditions, environmental condition that the energies of the fields of the neutron convert themselves, in addition together to the strength MG field of gold. Many of you will learn. The magicians tried to show this but they could not, and many people made (gold) but they could not explain it. Now scientifically you can set out to do it, and if you are pure enough to do it, you will see it. You can do it. But you wanted the gold on the table, you got it, you got it wrong, it appears somewhere on the floor in the corner. Which means you still created the fields but the intention was not there, you added the soul to it, ?? added the mixture of understanding to the mixture of the totality. Now that you have started playing with Gans's and their fields, and then now with the neutrons and you think you really got it this time. Now you can go and start making whatever you like, because you have the "dough" and Gans plasmatic field is the oven, how do you want it to be, do you want a bread or a cake or a biscuit. It's the same flour. It depends on what condition of fields you create and what condition you enforce for it to be created, (1:20). that it converts, in a way, what it needs extra to become part of the fields of it, to the matter state that you need. Those of you who understood what I just said, you'll be running to your lab and say, oh my god now I know how to make dinner tonight I don't need to eat. But you try to explain it to your husband that this is the energy of fish and chips, not the fish and chips, and you have to put the emotion in the brain that it tastes so nice. And you say, um, such a beautiful fish and chips. It's very easy to do when you understand. I know a guy who is dying to show us his neutron creation, but in fact, if you do the neutron conversion and you know how to play, then you should be able to create any matter state, material state, from every single neutron you have created. Armand do you want to make a comment I heard you are very eager to talk about this. Armand says he is not eager. He is at Tiahuanca, Mexico the KF headquarters. (1:22). ... (1:24). ... From your teachings in the Insano with the gas reactors we have a plasmatic condition inside, to activate we needed a radioactive material, but with Gans we don't need that. To release the energy of any Gans we don't need that strength, you talked about it many times, but we never could see it, that we have to MIX IT, to release the field. Each has a package of energy and each has a different strength. But they are in balance even when not rtoated, when not mixing it, not whipping it. many times you talked about the mixer. So to release the energy of the neutron in a salt condition we just have to whip it. (1:26). This is what I wanted to explain, the way I understand it. This whip just has to covered with N material. Just wrap it up with N material. And the effect will be different. Any comments Mr. Keshe. No, my microphone was off. We know this the past 5 years. I know. I know you just realized, don't tell anyone let them work on it for 5 years. No, why? So tell them, how do you do it. (1:28). (help him connect his video). Some people have a very nice teaching room in Mexico. ... Shows video. The mixer blade is wrapped in N material. I don't know why my motor stopped at high speed. That's normal because you have created a field, it happens to a lot of people who use Gans in high speed rotation with motors. (1:30). It's not just your motor stops and starts again. A lot of household things you are using ... oh, it started again (surprised). Yeah, the field is back again, we took a lot of energy from it. I just let it stand for awhile and it's back. Armen mixes the Gans mixture with high speed motor and N blade. Then he let's it settle. So what are we looking at. You are looking at the conversion of the energy of the Gans into the water, rapidly. It's like in Homeopathic you have to hit (the bottle) several times to divide. Yes, I know that, we have been teaching that for a long time. So what are we learning from this, Armenjan. That in this water you have created the ?? field. (1:32). This water is now energized with neutrons ?? because it is a rapid release. Any comments Mr. Keshe?

No, we are still seeing the Gans's you have created. There is not much I can tell you. You have gone through the whole process of teachings from A to Z. But the question is, is this plasma the same as the plasma that went in? No. How is it different? Now we add all the fields, whatever we have in the Gans state. Because the strength, each one is different. I have a Zn, CO<sub>2</sub>, CH<sub>3</sub>. Correct Mr. Keshe? Yes, there is nothing wrong with it. What are you going to do with it? Now, (1:34). if I take this water I can create ... Whatever you like. But you have to create the environmental condition outside it to be able to get what you want. I understand. So put a cup on top of it and put another blender you might get some water. I know John has done some experiments about this which we talked some time ago and he sent me a video, he is trying to do it. That is increasing the field forces by blending it, of the Gans's. So maybe if we connect that to this one we might learn something more advanced. We talked with John a few days ago. Yeah, but not in this teaching, I never saw you teaching it. ... This is part of understanding the space T, how you can change .. how you can homogenize. Yes, now if I use this water in patches, the environment I'll create is high energized. I can have my combination of what I need, (if) I need to give or take. (1:36). ?? environments. I can make another environment and see what I bring in. What about if you put it in a double walled jars with 2 gaps in it. That's what I am saying. ... if you have a space you can bring a third one in and see what you get in between. I think this is how you can create matter. Who is expert in this? Rick says he can add something. I looked up micro bubbles implosion, because that is similar to what you are doing. The article says, breaking 100 megavolt barrier for proton acceleration ... (1:38). ... We are going to sued again ... Okay, let me explain something. The reality is a lot of us don't consider these things, what holds, what complies with the rules and regulations and what you call universal work. (1:40). If you look at some of the space reactors which are not working, and some that are, in their design these things have not been considered. But on the other hand you can convert it to a single Gans. This is adding to the knowledge. So these micro bubbles, which you call them, which exist are collectiveness of the energy which is in the container. You can't pick them up and say this is a neutron. The totality is absorbing and releasing. Mr. Keshe if you notice that some of the Gans (in the mixed jar) are rotating, they are in movement. They have been moving for a long time. these are MG positioning themselves in respect to all those pieces at the bottom. (yeah, in the environment). Yeah. You see how you have a central position when you have a huge amount of energy, and if you look at the rest of it on the top with all the bits, it's like a galaxy and universe. Depending on the strength from the universe you are ?? distancing yourself and rotating, dynamic in 3 positions while you are under the influence of ?? earth's field. ( these are dynamic if you look). Yeah, of course they are. (1:42). That's earth rotating under its own volition. Now you understand how the creation of the fields of position of motion is created. Now it goes back to what I usually ask the people when I do a lab presentation, I ask how fast have you traveled in your life, they say, oh in a plane I think I went 900 kmh. Then as usual we'll see what conditions are created. If you very closely look at your box you'll the density is very much different from the bottom to the top. But if you look the shape and the patterns are nearly enough the same. You see a repetition. We reproduce these things, we have been at this for god knows how many years, but bringing these fields to concentrate, to ofcus on one point that they release their energy ?? still is a mystery. And it shouldn't be. Because the reality is what we said, the creation of conditions, creation of conditions, creation of conditions. What do you create? If you put Mg on one side and Ca on one side and Cu on the other, exactly the amount from which you can from, (1:44). You would ?? get what you created. (yeah, you'll ?? add on, it will be a totally different fields). yeah, (so how could

it be the same?) It could never be the same. The strangest thing is, many of you are testing developing, seeing things, but you are so ofocused to see what you want to see, that you don't know what it is showing to you. I have seen this many, many times. You are so ofocused to get to the Gans guy, that you forget that in that process you had some matter, where is the matter. Where is the gaseous stage of it. Why do we get this material condensing so much on top of each other. It doesn't stop. ( it's a condition what we created things ?? ) So you can extract from it what you need. In the future man will hold a lot of Gans's in their refrigerators and freezers and everything else, I need this and that, for every application. But you can't find any place for it because your body is still in the matter state of the atmosphere here on this planet. (1:46). Is John around? I am here. Hi, do you want to show your mixer now that Armen has showed his. My mixer is Armen's idea, we shared the ideas. I used different materials. Now the mixer market should go very big because all the KF supporters will be getting one, .. to what they can mix .. the "dough". But the thing is, what can we do, what do we understand from this. .. you have put it in there and mixed it, you homogenized the field strength, and then you do nothing with it. (Mr. Keshe I just mixed it today, to do something with it is the next step). yeah, but, what are you going to do with it? If I were you I would create children with it. ?? how to create children with it. Do you want to know? (in time I would) . Well would you like gold? (sure). .. You see these fields, how you tap into it, will give you a lot. ( How you cut in?) How you tap into it. You create the condition of a bandwidth extraction of fields and in that bandwidth, in the PI condition will give you, say, Cu, it's no use having gold when you can't use it, you can use a Cu ring. What are you going to do with it? We have seen for years people making things. (1:48). Oh, they show this ... what is next? What can you do? You have CH<sub>3</sub>, H<sub>2</sub>, H<sub>3</sub> in there, what happened, you mixed them, you energized it. (you can use it in health, it depends where you want to direct it ) In the space we'll learn something very quickly, and that is the conversion of the fields themselves, are the source of energy. You don't need to take energy from electrons or protons. The neutron in its conversion has released so much energy at such a specific bandwidth that it fits everything. And man doesn't use it. he stays around it, what we call the atmosphere of it. (we have to understand how to use it, that's where we are getting to Mr. Keshe) Are we going to see a flying cow next week? (for you it's easy to say, you are a nuclear physicist and you know everything about ) I have taught everything ... the layman, ??? a 5 year old child in China makes it in a small room. We have to see what we want. We keep on making things, but we don't actually put it into use. ( that is what I am going to do) Yes. People have to start seeing things which manifest themselves. (1:50). The understanding of this science, ... people are so physical. The Italian KF will release systems which make whatever you need. It's a creation of conditions, and they fix it. We need it. It is time for it to come out. We had the Gans machines and everybody bought these Gans Boxes and were doing this. Now we have to put what you call these ?? particle machines and see what comes out of it. Suddenly you create a condition and a genie appears in the cup. Where did the genie come from? You brought the man from planet Zeus in because you create the environment for him, ?? but you wanted to create gold. The conversion of fields to matter is something that man has never seen. It's a part of the evolution of the science, what we call, transmutation of elements. It's actually transmutation of fields, conversion to matter state or whatever state. This is part of what the teaching is, it's just that what you want is there. Convert it, Gans it, matter it, whatever you like. You have to create the condition for what you want to reach. Many KF people have jars and buckets of every Gans you can imagine from metals to beetles and whatever else they could get their hands on to Gans, but what are you going to do with it. Or is it just a hobby. (No,

it's the part we need the understanding of how to deal with it. Now we know we are dealing with the fields we need to know how to cut. If you ask me how to bake a cake I will do and give it to you). (1:52). Can I have a cake please, I haven't yet had my birthday cake. ... But can I imagine I had a cake using the field strength of my soul? (sure). All the fields of every cake all the way down the road baking. (the field my baking is going to be different then whatever you imagine). We aren't giving you any almonds, just forget about them. The creation of the condition is the confirmation of manifestation. We are expecting, if our team gets it right by reducing their speeds to come down to whatever, and then they go back up again, but they can control it to come down, they understand why they went up and why they come down, and they achieved below 2.9, 2.7, and if the condition of the second field is good enough they'll see interaction with their own system, otherwise Papa sitting in the corner can watch your body, but you can't see it. It's time to as I said before, mix the Gans's and become a creator, it's time to elevate. How many of you can make a system that can extract a cancer from your body without you knowing and nobody else knew you had a cancer. It's all in there (mixture on the screen). It's how we apply it, how we interpret and how we develop our interpretation to become a reality in science. (1:54). In some parts of the U, the UC had to interfere and this is part of man when he opens up to the UC you'll see and read about the history of creation in the U. We create what is known as the beacon of control, what it means, we don't interfere, but we know certain places, or certain conditions in the U leads to certain kinds of, let's say, behavior. We don't wait for that behavior to manifest itself, we change, what we call the conditions of the whole environment, sometimes huge parts of the galaxies or universes to create a condition of peacefulness. Creating a condition of having what you need that it leads to what you call love and generosity, whatever you call it. These beacons, or whatever you call it, carry a spectrum of fields which meets the demand of the need of the soul of the creation, not the physicality of it. The man when he goes to space will see huge amounts of these in some places. It's been done by the UC very much like, we don't interfere, but we allow the fields to be disbanded that it doesn't allow such a thing to happen. We have the same position here, something very interesting that we came across in the past couple of years, those who start using Gans's in different ways and then they found out they went through the craziness of it, but the cats and dogs went through the same craziness. (1:56). Because it touches the soul which is all of the same strength. This is how we have to understand it, and then we created conditions for it that it doesn't happen. This goes back to the teachings of today and what I said. The collective consciousness, as we call it, will lead us to understanding and change and conversion of the man and the rest of the animals on this planet to a peaceful nature. Because we created it and we know it's there and we want to create out of it, what we want. We converted the thing to a Gans and then we converted it to the fields of it, then we put the field of the Gans of Zn and something else together and we create, let's say Cu, or Al, but how come part of it we don't understand, that we can do the same and touch the STM and change the behavior of the ttoal planet. Because we come from that field strength we should be able to create the condition, to be able to force the condition to be changed. This is part of the new teaching, that we create the condition of the environment of peace. It's very much (like) the letter of today, what is it. It's very much a bunch of words, but what has arisen, the soul of consciousness, and with it, 'I can do', you wish for peace and I can send something, the others send, (1:58). and who gets trapped in between it on this planet. The fields are moving, how come if in the summer or winter and you put the Gans on one wall and another Gans on another wall, you kept the room temperature constant, and the field moving from one to another gave you the

feeling of warmth or cold, so is it the same with the man. You are on one side of the planet and I am on the other side, I wish peace and you wish peace and between us sits president Trump. Where do you think it's going to go? With a lot of love and care. This is what we see in the environment of the life of the man and we never understood it, now we do and we can do something about it. You don't need to touch to understand, you can feel it and understand it, because you have to have the sight, the vision, and understanding. And understand how the fields work, how you create the condition with the fields you create. Yesterday we had a gentleman with us, 6 weeks ago he was highly diabetic, his eyelids dropped and were closed for 2 to 3 months. He was going through the process of diabetic blindness. What that is, is the eye shuts and over a period of time, gradually as the sugar in the whole structure, it's like a curtain that looses its string it just drops all the way down, (2:00). then the neural system of the eye shuts down because there is no light coming through it, no vision needed. Gradually you go blind and like the amputation of the leg, they remove the eyeball and the rest of it. It happens many times to people who go through this cycle. What we did about 6 weeks ago, I saw him, I said I know what this is and how I can help him, for 3 months he couldn't see with his eyes. We can release his pictures covering his face or whatever. A couple of weeks ago he sent us his picture that his eyelid is opening which means reverse of diabetic. It has never been done before. He was with us yesterday and his eye was opening but he was closing it because he was seeing with one eye because he was seeing double vision. Because in those 3 months when the eye was shut the degeneration and nerves are setting themselves to go blind, has created a double vision. I said, just wait a minute. We made him 2 patches. One of the reasons he was closing his eyes so as to not have double vision, because when he was moving from one angle to another he was seeing people with a new double vision. In a matter of minutes, understanding the conversion of the fields in the brain, I made him 2 small patches and he sat there, and now the double vision was gone. He said he could see 80% better then 85%, then 97%, (2:02). and all this is understanding, even the sight of a man who is going blind is ?? , is a gift I carry with me. The gift of life is one of the facets of my ?? . And very easy, a man goes through amputation, loss of sight through diabetic, and there was not cure for it. Now we can do because we understand, because if it was you what would you do. Would you wait until the man looses his sight, this is what is happening in the world of medicine today. He couldn't touch any carbohydrate, he denied himself everything, and now he eats rice and whatever else and even takes some alcohol because now the diabetes is in the back fire. Yesterday he walked out of here with full eyesight. If we had never met him most probably in the next 12 months what would happen? A man becomes blind, then another eye, then a leg an arm. Now we see man, he is part of the bigger family of KF. He is one of our staff. He is not a stranger, but if you don't understand this knowledge how can you help a man. It's not the first time I have given sight back. Because I didn't go and make Gans's, ?? I created an environment, and my wish and my will (2:04). to give a gift of sight, is for him to receive it and replacing it within minutes. You go to any eye scientists or surgeons they'll say, it's craziness, impossible. This is having confidence in the knowledge you carry. This is understanding the totality of the science. You create these things, but what do you do with them. How do you an environment that what you have created has an application. It doesn't have to be for show, but when you need it you show the application. The more you ofcus to show something the less you'll be able to show it, because life has to be free. It's not the time and the place for, don't touch, you don't need to touch, you feel the soul, the Qi, the life, you feel everything. You feel the essence of existence, you interact. Any of you understanding this T, the creation of space, matter,

and energy the creation of the fields, because you carry in your package, every single one of you made Gans's, you carry the package of life. It's inevitable, 100%. It doesn't matter how many times you washed your Gans's you carry a drop of AA which was created on the surface. It's in there. It carries the imprint. All of you keep on saying I created CH3. (2:06). There is no way that you create the CH3 without, without, without the presence of Hemoglobin. the orange color of CH3 is because of the presence of Hemoglobin, and what is it, it's your blood. Why does CH3 effectively transfers energy to the blood, why do we use it that way. As we said last week, if you make any patches understand the totality, the salt, the ratio, you create the conditions. None of you creates the matter. You create the conditions for the matter to move or to appear. Then you can influence the physicality through the fields. Many of you when you do the medical or whatever testing you do, you make these physical balls. How many of you know where to start with. I say, 100% of the doctors around the KF have no clue what they are doing most of the time. Because there is one thing you don't understand, you make a patch that works, you have to understand is it within the field of the structure of the STM or the physicality soul of the man. You put a patch on the heart and they tell you if they feel better or worse. It's the only way you can directly know if the patch is working for your patient or not. (2:08). When I make a patch without anybody knowing I test it. I don't need to bring it, but you test it to see if it matches. People say, since you gave me the patch I fall asleep. You fall asleep because you create an environment that your body is creating new cells and they need energy and that needs rest so you sleep more. But do we create an environment that is part of the totality of the creation of the man. At the same time this goes back to what we said, you create the environment, why did I start the teachings of today by creating environment, because we are getting to the point that we need to create an environment to be able to welcome the 'beings of the universe'. You can't put a live fish on the table when it isn't in a tank of water. The part of the teaching that is leading man, what we are trying to explain, is you want to create a condition to invite the UC to teach you to understand the creation of the U. Create the invitation of the place and welcome. This is what we did in the letter to president Trump, we create the condition of environment that he feels at home. In the coming time when you start making these dynamic fields and reactors, when you run into multiple fields, you start creating conditions the same as you brought the orange in the cup, now the field is the cup and the orange is the passengers of the U. (2:10). Do not be surprised if you see things, and say, oh, I saw something. You invited it, you created it. I sat with the space reactors with the Chinese community watching it, and I could see things, but I thought if I tell these guys they'll say you're a lunatic. They don't have the eye to see. I watched the presence of members of the UC, they are there, because the field has created that condition. But our guys are totally blind to the reality of what's in front of them. It's part of the tests, the way I set it up, knowing the work of the U, I wanted to know if it there. We hear voices, noises, but where does the noise come from? Not from the machine, it's the presence of the existence, because we created that condition. The team doesn't understand. They don't have the eye to see, or the knowledge of what to look for. It doesn't have to have 2 arms and 2 legs and laugh. Go back to what I reported a few weeks ago, that we hear noises, but where does it come from, how does it change from one thing to another. Part of it is a mechanical sound, but the other part you see the entity. This is why I start teaching to understand the environmental conditions. Many of you are going into multiple reactors, before you created the cup and put the water in it, the orange on it, and you tasted it. Now you are creating fields, interaction of the fields create that cup. And if the field you create is of a specific order and existence, (2:12). you get the orange. This time it's existence. This is

how we create the condition, we don't make a trap, we make a welcome home. The same thing applies to the man, in the space, if they create an environment that it is conducive to the existence of the man, then he can manifest himself the same as he is on this planet. This is the reason for part of the teaching today, creating of the environment. Why do we need to create the environment. And what does it lead (to) when we do these things. What do we expect. Many of you will start running these dynamic systems for space flight and the rest, and you have 2 and 3 of them. In between 2 and 3 you have created a dynamic field. Many of people .. even in my own SF, you are looking for, you don't see, but if you look deep enough you understand the conversion of energy within the triangles, many times you have had visitors, but you never understood. Because the field interaction creates that environment. You know, when you go for a night walk you don't see anything, but just by accident you bought yourself a night vision glasses, now it's a different world isn't it. It's the same with the new T, you need PI vision that you can see what is inside. (At first we need to understand what we have created, what we want to create). You don't know what you created, you don't have an alphabet of the god knows T on this planet, (2:14). how do you expect to ?? of the universe. The man from the Mars comes and goes and you don't see it because you don't have the field of it. We have to understand that this is what mankind is facing with this development. This is part of the development of the T. You have to understand how I am teaching and developing the science. This is part of very softly, bringing you in. I sat and watched and I have a camera which continuously watches the operation of the Chinese system even if I am in bed, it's there it's running. I see things because I see the conditions, but our team is only interested if the thing is going to fly. As long as you want it to fly, it won't fly because you don't create the condition for it. What is the condition for it to be? We set, as I said, the umbrella, I was explaining what happened to us in the first test when we lost it. We lost all our fields and we damaged our system. It's very much like what I was explaining to our scientists in Malta, last weekend when I was there with them, I said, it's like an umbrella. (2:16). It's like you are holding an umbrella very tight walking in the wind. And it is holding, and you are holding to it with your life that it doesn't do (blow away). This is our reactor we built it. It's pressurizing. You create a sudden surge that what happens like a wind, it goes under the umbrella and it flops open, and the whole thing goes and it's upside down. All the energy which was pushing from inside has bent it over and it's released. This is what happened to us in the space flight 2 - 3 weeks ago. We created so much field force, that once the plasmatic field above our atmosphere reached a point, our umbrella opened up. We lost everything. With that rush of loosing most of the reactors had to be dismantled and put back together again. Because we created such conditions trying to get it back in order, it's gone, ?? repairs, conversion and trying to see what we can salvage from the system until we get the umbrella back together again. It has taken 3 weeks, but now we are holding. In that atmospheric condition in which we are holding the umbrella down, which are the dynamic field pressures of it, is creating a condition environment that can fit any creature of the universe. It's not just a field for me, it is a plasmatic field. As our colleague said to us very recently in one of the field trials we have a problem, since we started testing these materials in the fields we have never seen so many birds, they're all coming for food. Because we have changed the whole environment. (2:18). It's not anymore, I'll water the plants and that's it. We change the conditions of the environment and if that field can bring so many birds to be fed, can you imagine what it does in the space of the U. Where do the birds see this that they come? It's a complaint we have, even in the discussions of the past 3 days. 'Yeah, it's good but we are feeding the birds'. I said, you increased the harvest by double, you give 10% to birds. This is the balance

of the universe. If you agree to keep a 100% you can't have, you loose. It's not that you loose the matter, you lost the energy, how to protect it, so let it go, why do you spend so much money .. you already know you spent 10 Euro to protect 5 and 5 is lost. This is why in the olden days the farmers left a piece of land, the harvest, for the nature. They understood. Man has forgotten the balance. Many of you, even if you are in a neighborhood and another friend, 10 km away is running the same thing trying to beat you into the space race that he flies first, and you are doing the same thing, and you both bought the Cu from the same shop or by accident it came from the same mine in the middle of New Jersey or wherever, with that friend 10 km away you create a field in between, maybe halfway between the 2 you create the conditions for the presence of a creature. And somebody passes by and says, 'Did you see it, somebody passed by on the road something was moving'. But did it come on its own or was it the interaction of the fields you created, 100% interaction with the fields you created. Or they create that condition for themselves to manifest. (2:20). We have to mature. And part of the teaching, the conversion, the knowledge is understanding the creation of the environment, not only for this planet. Now that we are going dynamic, remember I said, 3 - 4 times today, your space reactors, in the original teachings, Armen can tell you, we call it the FP point, where the fields of the base and the top come together. Do you remember Armen? Yes. So that FP condition can be conditioned for manifestation of the man from planet Zeus with a child in his hands and his dog. What do you do? Do you stand there and watch it, or you switch it off and he falls on the ground. No, you reduce, diminish the ?? size and he goes somewhere else that suits him because he carries it through his soul, not his Swiss bank account. It's time to understand and as part of what is becoming the joining of the UC that man understand we are in that phase. We have to start building a home for the passengers of the U, by understanding and creating the conditions, and not imprisoning the way we have done to the fish, dog and the birds. Because you have to remember that this time this animal has the intelligence of the soul. When you start putting these things together and dynamic systems together, and start making conditions and you say, this patch I was making gold and the other one is there, have a look at what is sitting behind it. What stands behind it. Creating conditions of existence is cornerstone of manifestation (2:22). of creation in the U. And if you don't learn it you can't manifest yourself, and you can't manifest those who you want to be your guest. It's very much like what I said, we manifest our love to the president of the US, as a love of the nation of Iran. We don't tell him to come here, we show you. We say, you come here we give you the love of a nation. And this is how it should be. from now on it's not just making Gans's it's what conditions we create and what it leads to. If you create the right conditions you can create the liver and kidney that was missing, as we said last time. As it can do that and you have seen that it can do many things, now you have to understand that if the kidney had that condition and position. If I make the salt of the existence of the planet Zeus, I'll have guests from there, what am I going to feed them, fish and chips. This is where the knowledge and its extension comes in, and we have to learn it. Because I brought you to the point of seeing it, making it and if you have the wisdom and knowledge of seeing it, and in the future you start making these plasma vision glasses, then you'll see creatures, how are you going to speak to them. You can see, I have already brought the UC to your homes, but you don't have the sense and the vision to see them. You created it, not us. It doesn't need to be dynamic, if you put a glass of Mg in one place and something somewhere else, and between the glass on one side of the room and (2:24). a jar of whatever on the bottom cabinet and another on top of the roof for ?? , here is a condition that gives rise to manifestation of an entity whose field strength is that environment, you'll it. You

aren't seeing ghosts anymore. Now the knowledge brings us the friends from the U and in time when man matures he'll understand more. We have to listen, to see, as I said, I carried this for the past few weeks with me when I used to sit in front of the Chinese space system. And many times I looked at 3 or 4 people around me, I said, they don't see do they? They are looking to fly, and I am looking to see what conditions I am creating with the matters of this planet and leads to the manifestation of what members of the UC. I am not making a ?? I am adding to the knowledge, so that in the future when I explain to you what comes, what has been, and what you get. The team in China are looking to fly but the time is not right yet, because you have to learn that when you fly what are you going to do with your visitors. Feel the presence, feel to understand what you have created, if you don't see them, how are you going to fly, are you going to bump into them, are you going to kill them? Or are you going to create a field that it takes their soul. We are at not even the nursery of the knowledge of the U, and we can't create damages. When you sit, as I said, that are alotgether something like 300 plus cores running in these systems. (2:26). They create a combination of fields. And our team is just wishing to fly. It won't happen yet because you haven't seen what you are creating. It's no use running a car and handling it when there are 200 people standing on the ?? bumper. You are creating an environment. What happens if you put an empty jar in that glass which is in front of you( on the screen), and dynamically as you are creating the field you see something and you call it a genie. Or is it the way, if you understand this process you create a condition of transmutation. If you make this jar big enough that it can carry the size of the body of the man, or small enough that it carries the strength of the STM, you can manifest the man. But you don't see it, because the knowledge of the man is not at that point. How do you think we travel in the depth of the U? Back to the Future car? No way. Understanding the transmutation of the Pl, yes. This is the only way. And many of you are creating it. Now you are running into problems. Not us, you are running into it as the human race. Now you'll start seeing too many genies and what you call ghosts, but there are no ghosts. You create the condition, it's like you walk in the dark you don't see, you have a torch, when you turn it on you see someone standing in front of you. Because now you have the light to shine on them. The creation of that dynamic environment is that light, it shines in the presence of the ?? And you have to learn. And man, where we are taking you to, has no choice. (2:28). You have no choice. You thought I am going to bring you on a SS top, you have to make the condition that when you invite those, in the SS, can be manifested, and that you have a place to host them, and that you can control it. They do the same for you. If you think you travel the depth of the U in the body of the man, as I said, you are quite welcome. It means you haven't understood even a percent of the teachings. You create conditions, understand what you create. I looked at the new medical systems which are getting developed at ?? , I said, my god these guys don't even understanding what they are hitting at. And now what they want is to fill it in with neutrons. My god, understand what you are doing because while you are putting it together somebody must be sitting in there that you were not expecting, what are you going to do, 'beam me up Sctotie'. The tests which are getting done in China are not expectations of understanding, it's understanding the field strength and gradually the team understands seeing what they see. They tell me I am crazy seeing things. No, you create the conditions, you have to educate people. I was watching for a few seconds maybe 10 - 15 minutes on the camera and I could see things, and these standing there and not even seeing what I see, and I see them on camera directly. They don't come and move a chair for you to say that they exist, because in their dimension of physicality (2:30). a chair has not tangibility. It's like putting your hand through fresh air. With tests like this, people want to make

dynamic systems, put 10 of these different mixers together and see what you make. You don't need to have space labs, and god knows CERN to speed up the electrons or whatever, accelerators. These are your best accelerators. These are the best systems you can create to create conditions of, what you call, existence. Man will learn this. And don't expect all the guests to be midgets because you put them in there. We are entering a new phase of teaching and understanding the totality. This is part of the reality that you have to accept. If you are running a SF and you wake up in the night and your wife says, I think there is someone in the basement. Of course there is, but they aren't from this planet are they. I told you to switch the machine off, you should have done that. It's someone from planet Zeus hanging around, you created the condition and he came to have a look. But he doesn't have an eye, you see a face, a mirage or image, because he sees through his soul. Don't expect to see people with eyes and noses and everything else just because it suits what you have on. This is part of understanding and we have to. And I have to bring you so fast forward, (2:32). that mankind has to mature to it. This is part of the process and understanding and we have no choice because now we set our systems to meet, now we have no choice. Switch off you dynamic and MaGrav systems and don't ever switch them on. Because in a way I have headed you that way, I am a very clever guy. You haven't walked into a trap, you have walked into the knowledge of creation and you have to educate yourself very fast. One of the reasons we use neutrons because partially it is the food of the U. So you always have something to give, to confirm and be able to sustain life. It's part of the process. You came here today, now you see you have become a host. What are you going to give your guest. In Iran we are offering the gift of life. I wonder what AZ has seen up to now that they haven't seen before. (2:34). Because they were looking so amused to see where the field goes they don't remember, they have seen that they have made a pool of life. It's very interesting when you sit in front of the Chinese (system), and I can't say because they don't see, I see and I know what is there and what is to do. John comes on. It's interesting you brought this up. From my stand point and others in the factory that there is a palpable change in let me say, a peacefulness factor. At times I am overwhelmed with peacefulness in my own body and I know it's from being within the fields that are going on at the factory. The other day a gentlemen who is a friend of the KF and he is energy sensitive and sees fields, and when he came into the environment, it almost took his breath away (2:36). ... He saw sparks of light coming from certain sections. . ... when delivery people come in they say, hey what's going on in here, because they notice something different. You see you are in advantage point of research because you have made a launch pad with your MaGrav systems which is fixed, it's not dynamic, but the interaction of the fields are fixed base with your dynamic base, 3 base reactors and the top, creates a constant, (2:38). field strength. If you change some of your Gans's in your cores or you might change something in one of the launch pad bases, or call it your 18 reactors. You might create a condition that in that position you see things, or that there is a manifestation. We always say, we think that from here to the moon that there is nothing, just empty space, my god it's full, nowhere in the U is there an empty space of fields. And how do they react and interact. 48 .. ... I think what Armen said is correct that when we mix the Gans we energize it. So if we put our CO2 in the mixer before putting it in the lake if you will, by putting it in the blender I believe it would carry a lot more energy. My god, since when did you wake up John, go back to last year we spoke about the ?? can do it. This is what we taught a year ago. What I am trying to tell the Health people is that they can put it through the mixer and it will make it stronger. (2:40). We are actually going to take our Gans material that we had in our reactors and homogenize it and put them back into the reactors and see if it is enough to boost this up

a little bit. I want to get into something about our frequencies as human beings. A lot of times our frequencies have been dumb down by the foods and meats that we consume. We have kind of done it unknowingly to ourselves, while all of the elites if you will, eat and drink what they call the monatomic to elevate their souls. I believe that some of the Gans waters can help us elevate the soul so that it can become the vessel that will allow us to see these beings and interact and ?? the fields of the SS we are creating. (2:42). Perhaps the time is getting close when we can open up the umbrella. ... John shows 23 second video of blending CH3 and tritium Gans with Nano blender to energize the Gans. ... What are we supposed to see in that? That was energized H3. What does it do? That's what we are going to be putting in our reactors. The Chinese space test they took the neutron or maybe the H, and they left it in the sun for a day or whatever to energize it, and it changed color if I remember correctly. So you don't need to blend it, if you can put it directly to absorb the plasmatic field (2:44). of the U is much easier because it's made for that. Here you extend the physical or mechanical matter side of it, but there you strengthen the plasma side of it. If you know what you are doing or you understand it, when you have a H and you add energy to it in the right way, the way you put a neutron, it will end up to be Tritium, and it changes to the color of T, if you don't understand it, you can blend it and get there faster, some of it, but some of it if you can understand the process of it, converts itself to a C and you can get a crystal from it. Q: We also tried drying in the sun, in fact all of our dried Gans is from the sun, whether it's the salt. ) What happened ... John let me explain it, I think I didn't explain it in the right way. You put your Gans in a sealed ball it can't dry, it can only transmute. Bahuala said, 'the maturity of the man comes when he understands the process of transmutation of elements'. We passed that, because man is so mature in understanding ?? field of the U. So if you dry it and open a space of matter, yes. But what about what the Chinese did? They sealed the ball and let it to increase the energy. Armen can tell about what you are talking about if you go back to the Iranian nuclear reactor space one, (2:46). the energy reactor we made in Italy coming from Rouge in Belgium, they all have wings on them, like ear, what for do you think, exactly what you are doing. Mixing it ?? Do you remember Armen? Yes. So why do you think you are coming to it, you are showing it in a different form. (We did this 2 years ago, we had a bowl with a mixer in it) Yes, I know. Now you know why you have to mix. Part in a way what is missing in the Chinese reactor design. Armen shows his reactor with the N mixer inside. You took everything with you? Yes. Even the dogs. .. This is the process and now we understand how to use it. The knowledge has been sitting there. If you have that mixer, especially in the Chinese space reactors (2:48). flight is imminent. Homogenous structures ... (not clear..) Remember I told you there are a couple of faults with the reactors, but it is part of the learning, it has to be there. If you make multi-cores, just give an edge that it has a wing on it. Everyone, every layer will create its own homogenous fields. Space flight is imminent. If you look at the Iranian space reactors, especially the one that flew, I deliberately made that kind of ??? on the button. If you remember, you seen it, N material glued on top of it, inside, those are the wings. We are coming to the point of understanding what we knew. This is part of the process of the evolution of the knowledge. Armen turns it on. If you understand what you have in there you can fly that machine. (slowly but surely). (2:50). You have something called the neutron there. Choose a neutron from Tritium and one from H, ?? base ?? balance, and mix them in that mixer and you'll have 2 different types of H, neutrons. You have to realize the neutron which comes from the work of the Tritium and Deuterium is different then the neutron that comes from H and Deuterium, even though they are both neutrons, and if you can get the right ratio of the 2 in the ball, and if ?? yourself ?? stand there and can

be brought in at a higher order of magnitude, you don't need the walls of the reactor to be built and have separate. The neutron energy balance will create MG field of the U. Then the use of the 3 gives you the dimension of the reality of the existence within one reactor. very, very old spaceships were built this way. And they are very safe, (barking), you see even the dog says yes. This is the understanding of the knowledge. Why these reactors are safe is because if you get the ratio balance, it's like the top, middle and 3rd layer of the skin, they will exist. They can't diminish because it's dynamic they transfer energy between one and the other and the ratio balance just moves. (2:52). The Deuterium in time will become the Tritium and the T moves back into the bottom and become the H, because they give the energy to take the energy. You have a dynamic system just by the Deuterium, because this is what I have a problem, I don't have a problem in time, when somebody writes a scientific paper about it, Now Mr. So and So discovered this, oh, but it was said before, ... a famous expression in Farsi, whoever has a mustache is not your uncle. So just because you created the neutron out of between Deuterium or Tritium or H, it doesn't mean they are the same. If they were the same they would have taken position in the other one. You can use the energy difference in balance in the neutron to create the same dynamic flow. You don't need 3 elements. This is where you have to expand the knowledge of the space T. If you put 3 different neutrons, 1 from T, 1 D, and 1 comes from a neutron from conversion of between Plutonium and Uranium and put it on the other side of the room, that you create a space gap cage, you might find that the space gap allows you to see into the depth of the U. You don't need to be there. We make visual manifestation in SS this way. As you can manifest the images of entity, (2:54). you can manifest the same, the visualization of the depth of the U in presence zero time. If it is hard for you to understand, what do you think, you just drank the orange in the water, or was the shape of the orange in part of the structure you ate, why did you feel the texture? Man when he understands time travel, understanding to what ?? you can't send a camera to watch and take 20 minutes for the light to get there and come back. When the knowledge of the man matures he will create what we call, visualization of understanding of the depth of the travel in the depth of the space, through understanding of this process. You have a lot to learn yet. 45
