

## 237th Knowledge Seekers Workshop - Thursday, August 16, 2018 ( , )

(:15). (:18). (:20).

(:24). we go to the next phase of what we call, human, motors, engines system and to create a dimensional motion. In due course we will teach this, how it done, achieved. But as we said in our dynamic reactors, 2 days ago, we still see creation of plasmas in the reactors, which means we don't need the motors to run the plasma to create a condition of dynamic PI system. On one of the biggest things we are learning is that we can start forecasting what the situation with the reactors could be. We had a beautiful setting up the system for the last few days in China, we could see reduction in the reactors coming down to the matter state, and suddenly we saw a change in direction in the fields where the motors were running out of control, they were speeding up. Ask one simple question, what is the weather condition? It was obvious that there was a typhoon coming in. We know from the experience of 4 weeks ago when we lost all the reactors that the weather condition drains and pull s the fields away from the MG fields of the earth. Therefore we decided immediately to shut all the reactors down to auxiliary matter level that means that they can't be exposed to what we call, opening of umbrella, that we add into that ?? so that we don't have what we had a few weeks ago. In that process we have learned for our team (:26). that any abnormality in the expansion, in the speed of the motors, then we have to step down. This is important as part of the teaching, if you go to part of the patents and development of the space T reactors, this kind of phenomena for creation of directional motion is very important. It means the fields open up into the direction of the motion of the much stronger field, adn you get pulled in. You literally loose your M shielding and in that process you are opened, anything can happen to the space reactor. One of the things that are important in this process of expansion or increase in the PI fields if you run the motors at a higher speed than you set, which means you have opened yourself to a stronger M field, you are taking direction of motion. If this reactor was not on the ground, most probably the space will move in the direction of the center of the typhoon. Therefore it is part of the learning process that how and in which direction, which one of the reactors are speeding up. When we look at the data we received over the testing, we see the direction of the motion (break ...) ?? direction sits with 1 reactor, reduction in M or G field flow, as we shut down our launch pad. These data are very valuable, in way of understanding, because once we create a dimension we see one of the base 3 reactors show increase in the speed or reduction in the speed, we can dictate the direction which the field flow of the environment is pressurizing on the reactors on the flight system, and this is important. (:28). of.. (:30). .. we have to accept calls from the governments, as long as somebody doesn't reject peace talks you can always talk, and both sides are prepared to talk. It's fantastic to listen to, the ambassadors, and see that we are still in the course and talking. ... (:32). In diplomacy, unless they tell you they are not prepared to negotiate, we are negotiating. The calls from the embassies shows that the nations are prepared to talk. When they call it means the path is open. We should pray for both nations and see if we get both ambassadors and world leaders in the track. It's a huge risk for world leaders to meet especially when there is conflict. It's been done before and we can do it again. Anyway, going back to what we were talking about in respect to the flight system, in the process of the expansion of the fields, many of you have tested a lot but you look at figures in one position. When you test especially like in AZ and others and the government scientists in the background copying the systems and doing it. It's a

teaching for you, not for those who just test something on a simple reactor. In these processes you have to look at the total dimension of the field flow. You have 4 basic cores, these cores, each one has a meaning. When you see changes in data. This goes especially to our team in AZ and another position which are testing these flight systems, or they are trying to create flight. When you have a space top reactor, and bottom 3 reactors. (:34). You have seen numbers change. Let's say you start with 6,000 (on the top) and 5,000 (on the bottom). Or you start the other way. You have to understand this system flow is dangerous, because to keep the flow going you have to feed in this direction (from the bottom to the top). In normal PI the higher always goes towards the lower to feed it and bring a balanced creation. So if you put the top at 6,000 the bottom has to be 2,000 extra, so you follow the pattern of the field flow. Another thing that will come in your test flight is the fluctuation in the top reactor, .. it's part of the structure of the flight. If this is going down or up (top). If this goes down which one of these reactors are holding steady? All 3 keep around the same speed. When you see a drop in this one (a bottom reactor), it means you have an increase in ??? you have a decrease in the top and on the side. What does it mean? That the G field forces are pressurizing in this direction, sometimes you get ... you get one dropping and one increasing. This shows environmental pressure on your system. (:36). Something on this side is pushing or on that side pulling. the structure until you achieve a full flow, or the shape of your SS, you are at the mercy of your environment. One of the ways you achieve solidification, when you become matter state with the plasma, as we taught last time, somewhere around 2,500 to 2,800 depending on what you have loaded, maybe 3,000 (rpm) or so is your matter state, you have to push the speed with change the configuration 54

... you have to be able to achieve harmony balance flow in your base and at the same time in totality. If you achieve the figures then you see the tangibility. these kinds of configurations, processes are not easy, because you have to understand that there are a number of factor (:40). in the design when you put motors which changes this. All of you have these dynamic small motors, so your matter magnetic magnets dictates changes continuously so it dictates the field, then it's how you pull these fields to the top. How do you force the fields which are coming in, and how much can you absorb on the boundary that you can dictate the condition. Until the moment that you don't make a full cell, that now the system takes over it's impossible to control. As I said last night we saw a very clear indication, it was a single question to ask, what is the weather condition, we had 5,000 increasing to 6,000, and one of the base reactors is increasing in the speed. It's running away, it's getting faster. And there is only one way, why is it faster. Which means we have not managed to create the cell, and in that process, in this setup, the field flow of the clouds above us which carries a plasmatic MG field flow, this is something in which the scientific world has to extend the knowledge to, is that the clouds do not carry electric current, they carry plasmatic current, until they come in touch with, or are reduced into the matter state, this is why our reactors interact with cloud energy pattern, because it's of the same process, and the beauty or the problem with it is our plasma reactors at this moment in time are made of water, so we have 2 similar entities interacting with each other, this is why we effectively, (:42). if you look at you reactors we are connected. We carry the same moisture H<sub>2</sub>O. Energy fields within this core already has a common denominator matter state of the plasma in connection. So it's very easy to download. If we go back on the same principle, as we said, that the strongest feeds the weakest you ... (break up) ... our reactors downloaded into the

cloud, which means the MG field plasmatic condition in such a small reactors are so much higher that they downloaded to the storms, clouds and we think they deliver millions of megawatts, in fact if the clouds would have downloaded to us we would have seen the compression in the fields, we should have gone directly to less than 2,000 , 1,800 or whatever. But what happens the umbrella opens which means we are producing massive amounts of energy in these small reactors, we are releasing neutron energy balance, which those of us who understand atomic consideration ?? energy in what we call a plasmatic condition to deliver into the cloud and create such a huge conversion of energy that we hit the transformers, then you can see how powerful these reactors are. If we get hit, if the clouds download to us we should see an explosion of our reactors. that doesn't happen, we see the opening of the umbrella which means the speed goes up, we are opening into direction so we are feeding into it. We are not getting striped , we are getting opened up. (:44). And in that process, why we are saying we are not getting striped or getting opened up that we loose our PI, is because the other 2 reactors hold on to their speed, in the same speed, or same combination of the speed. It means that the energy produced in these small space reactors is at the neutron level, because the reactor especially in China works totally and purely on the conversion of the neutron. It's not H or Tritium. It's pure, the way we designed it, we only consume, only use when the neutron is created. Neutron energy, even in a single neutron is so huge, and then we create these conditions, but the conversion of it is the biggest problem. We have to be able to contain it, to sustain it. Those of you who are now testing in different space centers especially governmental research teams who we know are working in the background on this level, you have to convert the neutron energy into be able to control it. One big fundamental principle, and that is if you have 3 reactors that can tame the top reactor, and hold it, and reduce its speed and rotation, but when you have an external entity like a typhoon, or high clouds you create, then it means the power of the 3 base reactors must be much more powerful then the clouds. This explains if you understand, nuclear atomic energy, (:46). plasma transfer energy, it gives you a lot of insight. A huge insight into full understanding of the PI in the space travel, in creating of the shields, in dynamic flow, and in the process of transportation and transmutation of elements. Because you can create conditions that this plasma flow from the top to the 3 base, you cut it up and take what you like from it to create O, H, and everything else. So you don't need to go outside. You created the condition which the cloud created outside to pull, you pull in to the conditions of what you need to create, H, water or whatever. Establishment of the ?? salt, what we call SF systems internally to create matter or materials becomes part of the structure of the understanding of the process. When we look at the field flow in the dynamic system like the space reactors, this must be so powerful that it can withstand MG field forces of the planet. So why don't we, and how do we fly? The process is very simple, you have to create the plasma shielding that you become independent cell that from there on we call always the soul of the system, or the FP condition dictates its position in respect to earth. Last night in the test it become very clear that we are loosing .. I can read some of the writings from the space people who are on the site. that we are loosing, (motors) are speeding, it's becoming irrelevant ?? ways increasing in the speed. And very simply, (:48). all we had to do was to understand why, because there was no reason for such a move, and we just asked one single question, what's the air condition, is it raining, and the answer was we have a typhoon. The position is, as we ask now, what was the pattern of typhoon, was it supposed to pass over the test center. Why do we get so many heavy rain typhoon over the space center? Are we dealing to creation, are we absorbing to be there, are we pulling such a vast amount of energy that creates these conditions. Then

the question comes, in the space can we create a condition that we can protect ourselves by absorption of the fields internally within the reactors of the system, or what we call shielding. Many of you in the process of, most probably looking on the Internet or looking at different peoples report, you see UOF's appearing out of clouds, or are in the clouds. They create that cloud. As you have seen we reported 4 weeks ago in the South China Sea, and again yesterday. You should be able, to create a condition, as we explained 2 weeks ago, the creation of water in certain position of the reactors it's in reality, we have learned how to create clouds that can lead to creation of rain. What does this mean, in the space T in the coming time ... (break ). (:50). ... what happens is it comes to the point ... people say UOF comes out of the cloud. They don't hide behind the clouds, they create the clouds. Then in a given condition in a drought, or in huge fires, can we create a condition that we move clouds over that it creates rain. These are the knowledge that has to be gained and used whenever for mankind. These are the things we'll see in the development of the T in the coming time. We know and understand the process. Now it's time to be able to expand, as I say something and in a few months or weeks some of you will start testing and say, oh, this is what I have achieved, but if you go back to the teaching, you understand it, you expanded and we got that. In the tests, now again in a short time we have seen the creation of massive clouds, we can create, was it us. But don't forget there are a number of KF supporters who have reported such things that they have created or they can move typhoons or whatever. We can't interfere in the process of the life of a planet. (:52). But in certain positions, in running our systems we create local conditions, which we can and will effect. We come to the next step in the knowledge of understanding and that is, can we create a condition that using our transportation in new ways of creating flight systems, we can control rain. We can control forests. Many of you write us whether we can devise a system that can stop forest fires. You can do, now you see it. But if you do it is the biggest mistake because you change the dimensions of the life on this planet. Forest fires are part of the structure of the life on this planet. The deserts are part of the structure of this planet. We can change harvests. we can change goods. We can change it, everything, but we have to understand what is the reason we are doing it. What is the principle behind the reason we are doing it. Are we doing it for short term or are we there to see it change. Can we use the motion and movement of the desert, but at the same time create a condition at the boundary of the desert, that we can halt it. But what will happen in 100,000 or 1,000 years when the energy of the desert which is supposed to move, has been stagnated. It's still there, we can't stop it. We can put a fence in front of it, it's like a dam, at a point sometime in the future, this dam will break. In a understanding of the toal cosmology and the understanding of what we call the geology of this planet, we'll find out that whatever we do, now that we have gained this new knowledge, will have effects on something somewhere else. (:54). Or is it, 'I am okay Jack', forget about what happens to my next door neighbor. Because becoming One Nation, the next door neighbor is part of One Nation, a part of us. These technologies and the others which are coming, these are the test results coming in, and 2 test results, we have to understand what we are creating. In a process of teaching we refer to creation of the neutron. How you created the atomic and molecular structure, or you create an atomic structure in a Nano condition in a Gans of the plasma and you lead to the creation of new dimension. But now this new dimension will be called the P1 of the neutron, can be used directly itself. How do you load this that you can create the condition. How can you transfer loads from what we call, from G to M. If you look into the structure, those of you who work in the space level, very simple and that is, if you look into your reactors the same process follows. He draws 1 circle inside another. If

your ratio in respect to your reactors, is understood, you create the field. If your ratio mass is this way, (outward) you create G, or if it is this way (inward) you create M. Then you only need 1 reactor, 1 fuel. (:56). But there are further steps in the knowledge of the space T that you can't keep on carrying neutrons with you. We go into the next level of understanding in the space T, which is the free energy, the origin of the creation of life. Which means you have to find a way that you take advantage of the fields and not the neutrons. Fields technology transfer, the origin of the creation of life, has its balance according to the process of understanding. Remember you came from Gans's and you produced the neutrons, now you have to use the neutrons to create the condition of FP, and that FP in the condition of understanding of the field forces of the ..... of the creation of the structure, it will not interact with the neutron but with the field plasma, which is the creation of his own soul. If you go back in the teachings of 3 - 4 years ago, we called this in a simple way a Free Plasma position (in between the 3 base and top reactors). Now that you have started creating neutron reactors, very simply this is what we have been teaching you from the beginning. Creation of the plasma without containment. Creation and control of the PI without containment. Because what happened, it goes back to the origin of life. (:58). We put an egg and sperm together and from it we created the STM and through it we created the dimension of creation. Now you put the neutrons together, you create the condition of the fields what we call the FP. But up to now you were in the matter state, now you come into the condition of the FP state, which means no containment. What you'll see in the dimension of the development of the reactors, as you remember you had the 4 reactors, 3 base and 1 top, each one of these has created its own FP, and the interaction of the 3 has created the condition of the creation of the PI itself. Because you have to see what you have, (draws the triangles) each segment created its own FP and the totality has created a top FP. Now your control system sits in this ( ). If the knowledge of man increases in the coming time, what you'll do, you use the motors, the neutrons, the cores, to create the fields of the FP, and once you tap into the FP without matter construction, then you create the totality. This is what you see in the SS, in UOF's when you look underneath (a SF). You don't see any containment, you see reactors without containment. You see the light. Then this process leads to the creation of the totality. A few weeks ago (1:00). I explained that there is another step in the process, in understanding the process of the teaching. In that process now we achieve non-tangibility through tangibility, and then from it we increase the understanding of the total system. Then we become independent of the matter, ?? plasma and the creation between the all fields on the PI on their own leads to creation of new life. We do not need to be tangible. The field plasma in theory, ... becomes part of understanding of the new science. Then we can do without any motors any reactor, any physical, tangible understanding. Then you understand the soul of the captain, when we explained, be it non-tangible, will become part of the process. I always said, when somebody goes in the direction, we always explain to everyone the same, is that what you'll see the size of the SS depends on the number of the souls, entities with souls which (it) carries. So as you add more passengers, the size grows. When you see a SS thousands of kilometers in diameter you can imagine what it carries. With this kind of dimensions you do not build reactors with just 1 piece or 2 pieces and you get another bar and sheet of metal and build it. (1:02). Going back to the basic understanding of the space T and the M field interaction, you go back to one principle, again do you remember the magnets. If you put another magnet in between they move out further, and 2 more magnets in and they move still further, and not you see your SS. The size of the SS is determined by the fields that it carries, and it has been preset to carry. It's very much like a tent, it goes back to the original teachings, you expand the

tent as you need. It's no use having a 1 or 2000 km diameter SS when it's only one of you. How are you going to get to the other side, it's a waste of energy to go across. In the space development there are no control systems. Any time you come across the control system is understanding the process, that the majority of the size to this level has not been achieved. The maturity in understanding of the knowledge of the space T is to be detached from the matter state. And then we enter into a new dimension. ... in that process we see how fast we can change. This is one of the final frontiers of the knowledge of the existence in the U. You came in dimensions in the Gans, matter, neutron, now you have to understand the only way you go to a non-dimensional reactor (1:04). system operation, is that when you create the cluster that it creates its own soul, and then the strength of the soul creates the dimension of non-tangibility. This is the true flight in the space of the U. If man reaches this point of maturity, then he will have achieved to travel in every dimension in the U even to the level to the soul of the Creator. You have to understand what is next, what are the reasons, the results, when you pick up a data, don't just look at it as something, but look at its interaction, how this field interaction has lead to what? Why one of the reactors slows down, why we don't see ?? field on one side, ?? didn't see the field on the other side. We see how we interact of the fields, put field forces on all totality of the systems. This is part of the understanding of the science of the U. If you go back to what I explained today, it's exactly what was explained 3 years ago in the teachings when we referred to FP. If you go back in the teachings, what you see, and what you saw a few minutes ago in the creation of FP in each quarter, it was part of the teaching. Now you understand how it can be achieved. Those of you who work on the neutron development, there is still a step to go. We came from the Gans's we created the neutron, now you have to learn to use the fields, which is a strong neutron connection to create the FP, (1:06). in all 3 spaces of the reactors that it leads to creation of non-tangibility condition. If you manage to achieve a balanced field force, then you manage to achieve total non-tangible condition, a hundred percent. When you see the spaceships which create clouds, or ones that can travel at speeds beyond your imagination have reached the understanding. As passengers have reached the understanding of the totality. if you carry such a field you can manifest yourself in any dimension in the U according to its environment. If you are a passenger of such a SS and you appear on earth, MG field of this planet dictates the shape you manifest yourself, which is the shape of 2 arms, 2 legs, or 4 legs. You have to understand that not all the creatures that come on this planet that you see end up like you with 2 legs, 2 eyes, and 2 ears. According to the structure of their origin they can appear as plants or as animals that live in the oceans, they can appear as structures within the atmospheric condition of this planet. All do not necessarily end up the way you think they have to have and appear and talk. Their field interaction from the source which they, what you call AA, or DNA, or RNA have set up, dictates the manifestation of appearance on this planet. On this planet they might appear as a fish but on another planet they might appear as a tree. Because it's according to the understanding of the field forces in that environment. (1:08). We can create conditions that in its interaction can create the co-existence of all races in the U. Because when you create the dynamic, plasmatic, non-tangible environment through the interaction of the fields of the neutron, then you understand that every entity in the U has a home to live in. then you understand the totality of the creation of the Creator. Then you understand that you become part of, non-tangible dimensions of existence. Some of those who elevates your soul to that level, you'll find out that you become detached from physicality, as we say, wherever I lay my head is my home. Wherever I have the field strength of existence, I'll manifest myself. Now you understand how easily the knowledge of creation can be

taught. It's the process that we have to understand, to be able to follow to reach the dimension of non-tangibility, then you achieve transmutation, transportation and in so many ways understanding of the plasma in the U. We say, blessed are those souls who understand. As I said, we teach you step by step, and there is still another step after this non-dimension, then that brings you to the level of understanding of the Creator. (1:10). We started from the matter state of Cu and Zn and how through the understanding of it we have covered the full cycle of the creation. To come from matter state to reach the level of understanding of the Creator. But you have, and the man's intelligence at this point in time, has grown enough to be able to take these steps in the coming time. The research center in China is still struggling to reach the neutron manifestation, but once it is reached and the Free Plasmas are created, it comes to creation of the FP, which comes to creation of PI appearance, confirmation of the existence through the PI M fields, which then makes, you'll see, the time will come when the materials, very easily, literally disappear, the reactors, motors, and everything else, through the interaction of the fields of the FP, become in the energy level and become part of the structure of the FP themselves. Either way, it is very much the same as when the man passes away, when the soul takes over, and calls upon all the souls of every single element to join in to elevate the self, to create a new dimension in its own existence. In this process we are not doing anything else. It's just for man to understand the level of the process, the level of conversion, how the STM will convert itself, and how our physicality converts to become a non-tangible, (1:12). and on its own take shape in its existence. So those of you who are worried, you went from the H Gans to the Gans, then you came to the plasmas, then you came to the neutron, and you say now you have gone somewhere new. I haven't gone anywhere new. I have come back to the beginning from 3 - 4 years ago. The creation of Free Plasma. But now you understand that the soul of the controller, the soul of the captain has to be so pure that it can accept the condition of the interaction of the fields. And if some of you are pure enough, you'll understand how the soul of the Creator shall create from the existence of the fields. It takes me 1 stroke of a pen to show, but is the man ready to understand. As in the writings of Bahuala, if I tell you how beautiful it is, you'll all commit suicide. Because you become part of it, you are part of the structure of It. We have a saying in Farsi .. It means every single drop of the rain coming together it makes in one go the oceans made from the drops, so is the drop of the soul of every life on this planet, in this U, which leads to that ocean which is the ocean of the soul of the Creator. (1:14). Then are you a drop or are you the ocean? Even though you are still a drop within the ocean, but you are the ocean which creates the further drops. And those who understand the theology of the universal existence by now have found the answer to the position of the Creator. Then do we need to teach more? This way we have completed the cycle of the teaching for the man to be able to enter the Universal Community and be equal. And from then on whatever he adds to his knowledge is according to his intelligence of understanding the soul of the Creator. How close, now that you are part of, would like to be. As I said, before, the teachings become very fast, and become faster, because a number of organizations and governmental organizations and individuals are on the path to achieve, so we make it clear so they understand what they are about to see. .. Any questions. (1:16). Or you are all ?? enough to understanding the truth. Q: When do we go to Mars? Q: Do we still use wings in our reactors with the neutron alone? What do you mean by wings? Do you want some feathers? I am assuming he means some kind of rotation device inside .. It means you haven't understood the process that I explained. .. Always when you speak about PI to understand the totality. When you speak about the PI even in 2 or 3 dimensions, when we speak about the direction of the flow of PI, itself it has multi-

facets operation, it's not all in one direction, one field. This dynamic system inside, itself creates its own dynamism. It's the same with this one (outer core) and if this one matches with this one, it pushes and the other one pulls. And this creates a dynamic system of the both systems. (1:18). Those of you who work on the space development T will have to realize it. I emphasize on it again and again until it is understood, that the MG field of your SF can never change. These 4 reactors which you start with in your mechanical system will have to stay at a specific given space condition, because without it you can't create the tangibility. None of them can fall or rise, because then you loose half of this field or half of that field. You loose half of your plane and suddenly your spacecraft is open. In the process when you come into the field free force of the PI, to construct, to understand that you can't loose what we call your boundaries. You can play with everything else with respect to everything to be pulled, but these 4 (reactors) are sacrosanct. They have to be able to contain the shape. Then it leaves you with how to play with the fields within the structure. You have to maintain the structure. ... you have to create a condition inside that it allows you to be pulled in one direction, or to move to one direction, or to create the matter. (1:20). Then you are limited to what you have created the plasmatic field force which lead to creation of the matter state or tangibility or visibility. Then you understand why all the SS you see in the U are of the same color more or less, depending on the point of interaction with the environment of fields. They're silver in color and it has a reason for it. If you go back in interaction of the field flow expansion, that we always talk about a silver color. In fact it's not silver, which in interaction of the fields ?? condition of this planet gives the illusion of silver color, but it's transparent. If you can create fields above the fields of the interaction of higher order of the PI, which the system has created itself out of, which is only as part of the attributes of Creator, you can see through these systems. It's like putting .. (break) , do you understand , the process, is applying the process. The systems in China, AZ, in governmental office who are replicating it through the teachings, it's not completed. But they have to learn the step that they can control the next step, (1:22). It's like the captains from the space reactor in China, we have chosen a specific soul that he has to train himself to be that, that allows him to be, what we call the captain. The same is with AZ, and other organizations who are running these. If you have people of the ambition and wrong order they will never achieve it, it doesn't matter what happens. Any other questions. Q: You showed the drawing of the PI and the interacting fields, and some were going out and some were going in, this relates to a discussion we were having yesterday in the plasma reactors group, so in that circumstance is there a polarity to the structure, a in and out to, how do you add up all the bits and pieces, is there some relationship to them all, is there harmonics involved or some kind of relationship to all the different parts? The process is very simple. When you create .. he draws a SF of reactor. Now you come into the neutron level (1:24). and you have created the 2 neutron dimensions because they balance themselves. In creating the field plasmas, once they are created, you find something interesting, because now it is the field itself and not the matter, you'll find that they balance themselves. The structure now is very much the same as if you would call if the AA, (CONH), the orange cores are what you would call, DNA and the green ones are RNA. Each ones carries a combination of the cells soul of itself in interaction with the others. there is nothing you can dictate, but it is dictated to, according to the field environment. And we know how the environment can effect the field flow in each reactor. Yesterday in the run away situation I asked our team to shut down to 2,00 (rpm), you can't shut down totality, you suppress to the matter state that the PI can't enter. that's all we need to do, today or tomorrow. When the storm goes away it's still not finished, you have to wait for it to balance its energy. And

then you have to create that condition that the balanced energy will create field forces (1:26). that dictates the condition of flight. { Do you need a gate to enter in a } You do not need a gate to enter or a door to enter, in the dimension of physicality as we have it. The spaceship program is the understanding of the totality of the balance of the STM. If you look at Armen or others who have been around the KF for the last 4 or 5 years they'll tell you we have spoken about the same thing, it's exactly what was taught for the past 3 years, now you understand how to achieve it. It's not that the neutron is everywhere, now we got the neutron in a free condition, we need its fields that it leads to the creation of the neutron itself. That field has no dimension, you come to non-tangible space reactors, because now you have created ?? position. It's very much like putting a scaffolding to build a building and after you build the building you take the scaffolding down. Without the scaffolding you can't build it, because you can't put everything in position. (1:28). Now you build the scaffolding, put everything in position and then you take it down. the tangible space reactors which you have built up to now, ?? is a scaffolding to create this non-dimensional, non-tangible reactors. Now you see how we take the scaffolding off, all the motors and things are not needed. So it's very easy we have to get to the point of putting the bars and bolts and joints of the scaffolding together, to put the things in. Now we put the building together, now it has solidified, it has built its shape. Now we take (scaffolding) it away and then we'll see the total manifestation of what we call, non-tangible systems. The whole human race can fit into one spaceship, if they decide they want to leave and where they want to go. This goes back to what we taught, is it time to leave, because is there a disaster on the horizon. Could be, but how fast can man achieve this? It's very much like when you see the ship wreck and you see the others floating and you try to catch everyone to be saved. Are we going to save the whole mankind and all the souls on this planet? Is it the time that the ship is about to go? Are we all in the lifejackets and floating in the lifeboats? And is this the lifeboat for humanity? (1:30). Any other questions. Or is man so in love with the physicality that he doesn't want to let it go? Well, that's probably true otherwise we wouldn't still be here on this planet. Something is keeping us here, and it's not the beer. Are we here for the tear. Maybe that's it. Q: I am reading Book 3 The Creation of the Universe and also the Fukushima documents. 1. Why is some radiation so dangerous to human life, birds and fish etc. Is it plasmatically .. what does the radiation do to effect the DNA (1:32). You see radiations are not dangerous. The source of radiation can be dangerous because if you understand that structure of the human body is in the plasmatic condition ... break .. in the Gans state, what we call radiation is a mono energetic, it's become that plasma which has reached the position of, what we call the neutron has created and released. All the radiations in what man calls radiation, are energies which are released ?? in balance from the neutron. We do not have energy release unless it's from the subdivision of the Pl of the electron or proton, (1:34). which is very rare, it's so rare because they balance each other out. So when you receive what we call radiation, it's exactly what you have here, (on the screen), this is a neutron, in that process the neutron is feeding, is releasing its energy, it has to find a matching somewhere that it can interact to, and the body of the man has that position, being weaker it receives. But the same time when we receive the radiation field we are emitting also. It's that emission of fields from the atomic or what you call molecular plasmatic condition of the body of the man which causes the damage, and not from what we receive. What we receive is 1 megawatt, what we give is more than 1 megawatt, the energy loss is the cause, not the energy gain. We have been taught a total upside down physics. remember Tesla worked on this (what you give) and Miles worked on this (what you receive). Tesla can make a Faraday cage, Miles can ?? pass

around the cage. There is a ratio in this. In the tests we know the ratio. So when you speak about are the radiations dangerous. When i set up to work with Fukosima, it's not what radiation was coming into the body or environment, it's what I could take out of the environment. (1:36). It's opposite to the present knowledge of the physics. In many of my works and teaching in private I teach this because man can't understand, can't comprehend it. You can't fill a cup in if it is already full. And if you go by the law of Newton, if you understand in the matter state, then what they say, what field exerted can follow through. To displace the water from the cup, you can't put 1 neutron in to get 1 out, you need to be able to put more then 1 neutron to be able to pass the flow of the cup. In a plasmatic field flow, there is a ratio in what has to go out, that you can take the fields in. When you speak of nuclear radiation, you don't look at what is absorbed, you look at what environment can empty that, that field can be taken in. The damage comes from the rejection or release, not from absorption, that's why most of the present radiation and what we call nuclear plasma technology have a problem. They have not understood. Tesla in the later part of his life understood this but he couldn't shape it. Go to the work of De Vinci, in part of his work, in the process of when he was opening the human body he saw the fields, but he could not. In some of his paintings, he refers to it in the drawing of his paintings, because he couldn't put it in words but he could paint it in the paint. (1:38). Now for the first time you understand, but you have to see when you have a field coming in ?? what is empty to accept that, which is much stronger. When you drop a stone in a cup (of water) it doesn't displace a the same amount of the water as the stone, but it carries the wave, the pressure with it as well. If you put a stone in the cup you'll displace the same amount, but if you drop a stone you displace much more. Radiation fields come as displacement not as placing, so they carry a massive amount of more fields. To accommodate that you have to make the space empty for it, that it can come in, be absorbed. The science of man has always looked at physicality. It's a very simple thing, but there is a ratio, an amount of fields that you can receive to the amount of fields that you can give back. It's always what you give back is more because you have not only to find the space for the energy that comes in, but the disturbance that energy has created with the other fields it has brought with it. Once the world of science understands this, half of the world energy system is solved. Not half, more or less 100% of it. Tesla touched it, if you go through his work in the later part of his life, you see some indication of it. (1:40). If you look at De Vinci's paintings in the later part when he took the body of the man and he started to understand the structure, in that process he was enlightened, he saw things and it comes out in some of his drawings. You see clearly if you understand the knowledge. But he couldn't explain it because it was something that was not in the world of science that he was taught and could think. There is a part 2 of the question, you might have answered it. Q: Why does DNA get effected by radiation when it's actually in the Gans state? I already answered it. Yeah, but you have to understand why DNA gets effected. Let's explain why, because DNA is a compact energy pack and somewhere this energy is absorbed by it. So it increases it. It increases the level. So now you are working in the H level, now you work in Tritium or maybe He level, so now you are in a higher level, because not only you absorb the field, but also what I call the energetic transfer of the field as well, and then it manifests itself. Now it doesn't work in the H, it works in the He or Deuterium or T level, that releases more, or the whole structure can't hold on to because one of the DNA structures has accepted it. DNA structure is totally AA based, so it has central dimension, plasmatic field, (1:42). which itself in some states is a matter absorption equal to what is received. Part 3, Q: How does the decontamination of radiation at Fukoshima work? The decontamination comes from the balanced fields. If you go back

to the presentation of Yukoko when she went to Fukushima and we had a live presentation. Actually do we know where in the archives these tapes are kept. ... some of it was kept in early KS workshops. ... (1:44). That was 2014 in February we started the KS Workshops and after a few months she went to Fukushima. If you look at the processing when they did the testing in Fukushima, and we know from subsequent testing in the Belgium nuclear center and the other data we have from other nuclear tests, is that we do not destroy or have gotten rid of the radiation. We have "in-locked" the radiation. This means, partially there are some other factors we can explain, when you have a nuclear element, it could be whatever, when you introduce a Gans which is in a plasmatic condition, so this creates a field, which in being a PI these fields, at some point in a strength are ?? of the nuclear source, so what it does is it locks into it. We do not get rid of the radiation. If you do an atomic test you see the nuclear material is still there. This nuclear material is radiating all sorts of fields, but now with adding a Gans which is a PI condition we lock it all into it. It becomes an electron to the .. can you hear me ... the fields from the PI of the Gans it embraces the totality. We never get rid of the material. (1:46). Nuclear material .. now we have created a new atom. When we test for nuclear material it always shows that it is there. Sometimes conversion and division to a new material happens due to, by coincidentally being ?? of the division of the PI of the radioactive material. This is one of the biggest concerns when we explained and we see the Fukushima becoming untamed and everything, how we transferred by introduction of certain elements, the Cesium or Tritium, as the understanding of the both being the same, into gold. It's a conversion of one element into another by adding one which caused the release of one more element. Fukushima is huge Japanese wish that they could have more to be able to create monatomic gold. I have explained this in the papers and the other teachings. When you release radiation in a Gans state you absorb, and partially the field strength falls enough to what it is to create a dimension that it opens up, and the damage is there. If you have radiation exposure, all you need to do is to drink a cup of Gans's in the right composition, it absorbs all its fields ?? solid state??, and you urinate it or pass it through different ways. In some of the tests we see the radiation (1:48). actually being on the sweat of the man. .. What we see the surface radiation damages, because of its conditioning of positioning appears as sweat on the body. Some of the tests in Fukushima confirms this. We actually sweat radiation through that condition on the skin. If you go back to the work of Dr. Rodrigo's we have shown in respect to the metal and the brain cancer the removal of the Ca from the brain cells and tumor. It's the same process with the breast cancers, when it opens up, the field is that way when it opens up because you create this condition out of the ocean of the fields of the matter state. Nobody puts a knife into it. It's the same as when put the magnets and you see them positioning themselves, by receiving of the plasmatic fields of the Gans through the Ca deposition in the Gans state in the body of the woman, you create that expansion. It's the same if you have the 2 magnets and you put one in between, they move back and create a space. But when you have a Ca in the breast of a woman, and you create a field into it, what happens, it opens up, why do we see the breast opening up and the Ca comes out, and it shuts again. Once you move the magnets out, then they find their position. This is why we don't need plastic surgery and the rest of it if the doctors elevate their understanding to a further step. (1:50). Because in the condition of the breast cancer, we have a matter state of the Ca which was deposited from the bone of the hip of the woman during the menstruation, to the breast. It's a physical conversion of the matter. And what happens, the matter state receives absorption, so now it's a positioning, so the breast opens up to find a new position, and when the surface Ca which is absorbed creates a M field of it, it is rejected by the body

and then the breast closes. And because the field dimension creates a condition of the existence that was the shape of the breast, because that was the position of the breast which was already preplanned by the brain by the dimension of the soul, you get the same breast back again in the (same) position. In the first test with Dr. Rodrigo the breast became very small. You have to ask what was the psychology behind that disease, that cancer to start with. 'I don't want it to be there, so now I got rid of the cancer which isn't there (anymore), I keep it in a way that it (the breast) doesn't get used. It hasn't changed, we have enforced a new condition, but we haven't changed the soul. If Dr. Rodrigo or other doctors that do this, a number of cases of these breast cancers have been done, if they understand that they have to satisfy the soul of the patient, that they are satisfied with the condition which is created, not only in rejecting cancer, but it's been accepted by the soul of physicality and the soul of the woman, you'll see the matching breast to be reproduced. We have seen that in one test and the doctors don't understand it. (1:52). Because now the doctor has managed to get the confirmation of existence in a balanced position. And the balanced position was the way the breast was, you don't need open surgery or further plastic surgery. Because it showed that at that time it was a new knowledge, Dr. Rodrigo didn't satisfy the soul. If the condition of the soul was satisfied the breast will grow back exactly the same shape. But (now) it is the beginning and this is how we do the research and how we learn. Those is medical centers which are developing this new knowledge, new systems, have to understand, you just don't ofcus in any cancer you are trying to process, there has to be an additional unit that it always satisfies the soul. It's like the SS as I said, in the SS you have this process , of you have to keep the 4 reactors in a shape that in existence they keep the confirmation of the physicality. So is the soul of the woman, if she decides she wants a breast like this and legs like this, when you process the breast cancer you have to satisfy this other reactors that it can keep the same shape. It doesn't matter what you do with it, you have enforced the rejection of the Ca, but you haven't brought the satisfaction of the soul in confirmation of existence, so you get what we saw (Dr. Rodrigo's case). In cases where the doctors actually understand and they satisfy the need of the soul, the shape of the breast goes back in position, this is what we taught in the teachings a few weeks ago, we don't need to create what we call kidney transplants and everything else. You take a kidney out and create a condition of the environment the same kidney will appear in the condition of the ?? work. (1:54). It's so simple, but now we understand the knowledge, especially now, hopefully the research centers and doctors have with today's teaching understand the creation of the non-dimensional reactors, spaceship systems, it should be very easy to understand. when you make the medical systems, I have seen it, it's part of the maturity of the system. If you look at it, they target, especially with the new dynamic systems, trying to sort the kidney cancer or whatever. Sorry you missed one part. Why don't you support the soul. In my teaching I have always said, if you can reach the soul you do not need the physicality to force a condition on it. We are still in a matter state of the medical application. Those who develop these new technologies in cancer or whatever, they have forgotten half of the body, it doesn't exist. They are so concentrated in physicality they forgot that the physicality was created out of the position of their soul. Why are you going to catch a fish, you have got the right net or hook ... just because you see the fish doesn't mean you're going to catch it. It's very much like, a program called the horse whisperer, he doesn't whisper to the horse, it matches to the soul of horse. And the horse responds. It's the same with the radiation, (1:56). in the nuclear, how we control it, we match the fields and we encapsulate it. But it is still there. In the medical application, you make so many systems to fit, but sorry you forgot the hip, you just run into physicality ??, you

have to understand that every process, every medical system, has to have a system which is always fixed to fit, to elevate the soul, that the soul exists, then you find out you can cut the breast and it will grow back to its position, you don't need to try to get rid of it, or to get rid of the cancer. This is what I have always taught, that you understand the process and not (just) look for the physicality. This is what I said, about the guy with ILS, he wishes to die, he dismantles himself to die. If you can elevate the soul, the same body which creates the cancer is in understanding it, and it will disappear within seconds. Because he sends a button, wrong button, wrong decision. But we still go for the dimension of physicality. In reality those who work with cancer patients if you understand it, you make a health unit directly for the soul, you find out the position, strength of the soul, what is the condition of the weakness, in which part. Then the physicality, oh, the guy walked in, the cancers gone. There is a magic going on. No because now you understand the level of it. The same as when you come from a spaceship you create the physicality it fit the environment, because of the soul. What is the problem why don't you understand this part. (1:58). So what do we accept, do we create a radiation to the body of the man, or do we give the elevation of the radiation, as you want to call it, plasmatic level, to the STM that it fits his physicality. Would you like to work with a soldier or with the master, the general is easier to get to the command center .. high ranking officer to get to the general, you already know the position of the general so you can dictate it. Our medical systems should not at all be concentrating on the physical part of the body. It means the science has not been understood by the doctors. Then the soul decides and the physicality will follow. I wrote to one of the K Seekers in the past 48 hours very simply, let the soul make the decision of life. And it made it so fast, because it was understood by the person and it was understood with the both souls (?? soul of physicality and STM), we agreed to not suffer with the physicality. Very simple. This is not some new teaching, I have taught this in different shape or form, I have done it in different ways for the past 20 - 30 years, long before the KF teachings started. There was an old lady in the hospital to die, she wouldn't die, she was there suffering all the time. And I said to the granddaughter, she is waiting for you to go and satisfy the condition of the soul in what she has done wrong to you. I encouraged her to go and see the grandmother. (2:00). She walked in, the condition was met, and the grandmother died the same night, hours after they left from the hospital. Because this is a knowledge we carry from the U, man has to understand the conversion of it. Our medical development has to be understood, and don't concentrate so much (on physicality), there is part of physicality that you have to effect, or whatever, but in the condition of understanding the disease is psychosomatic it has to do with the psychology, which means the soul has an effect on it. You treat the general and find out why he is destroying his own army. Because if the general understands that he is shooting himself in the foot ... unless he wants to do it. And that is his purogative, and that is why a soul decides to leave the physicality and not entrap it. Now you understand that the science, the knowledge of creation is very simple. It's just that we are so matter state conditioned that we do it. Because there is a pleasure in physicality. We make love in physicality, we kiss our child in physicality, it gives us pleasure and confirms that we exist. Not ... break .. Now from the teachings of today we understand that going in the ?? non-dimensional physical reality, (2:02). our physicians have to understand how to distinguish between the physical and psychological dimension which creates the physical dimension and those can very easily be sorted through the STM. If the soul decides to die and creates what we call psychosomatic illness like MS, ILS and everything else .. then ... we have to understand to satisfy the balance of the soul itself, not for us to dictate it. It's creating the condition and then you leave the position of

acceptance to the soul. It goes back to the teaching of last week, you create the environment and all our physicians are very tightly involved in physicality and it is difficult and you have to balance it with the soul of every single cell. That they report to the boss that there is such a change and if the boss agrees, I will change. Then you can change. Why don't you go for the top, the medical systems have to be adopted now that you have gained the knowledge. (2:04). Any other question. Q: Are there any serious threats to the earth that should make us understand the importance of building a SS for the entire human race? The biggest threat to the human race on this planet is the human race himself. So that would be problematic to build a SS for the whole human race for one thing we would never be able to decide which place to go to.... We all have different agendas. What about having one SS with millions of SS contained within it? That's the earth isn't it? Yes. But they can't come and go as they please yet, though. Oh, they do. What do you do when you sleep. ... we want to know where the ship is when we come back. We go on a stand-by soul operation, we leave it to the soul of physicality, just keep the shape, I am going for a ride out to the. (2:06). No questions. I think we frightened the people to understand the totality. Q: (continued from the Fukushima question). Will it work the same way with other poisons such as Agent Orange, a dioxin damage in Vietnam. ... There is something that now we can announce, we have explained it before but in funny ways. When you ask for this disease and that disease. One of the biggest problems at the moment, especially we see in different parts of the world has to do with these 3 M injections (vaccinations) which has caused havoc with many families, the mercury damage. As we said, we have a solution for this and in a very short time we will release the process that the families can release themselves from the damages of the injections. I have to come to an agreement with certain parts and parameters of the release of the information, but in principle, what you call, like autism, and other effects which we see with the introduction (2:08). of these 3 injections. Even though they are there to help the man, but apparently we hear that somebody has decided that we kill as many as we can, then there will be a half million of us, just because they managed to put a few billions together and they think they are god. They enforced others to control the population, this is from the immaturity of the brain and the soul, god forbid. And in that process they have created the introduction of mercury into these systems into the body of the man. Very soon we'll release papers, I have been writing a paper for nearly 3 years. I will temporally release a paper that it can be tested by FDA and the international organizations, that the effects on the brain of the children can be literally eliminated, totally within a matter of hours. It's not that we are holding back, there are certain parameters I try to release the information to. In that process, things like, certain diseases that are caused by the introduction of what I call, outside elements, by the development of the new sciences, some of them are deliberate and some are accidents. I will write and release a paper very soon. I will release a paper in a very short time in how to reverse the effects of the 3 M injections. It will be in the hands of our doctors, scientists in the medical teaching, to test, release, and free many families from the side effects of these 3 injections. Many of you, I advise you not to do it, because it is not easy. (2:10). It's not advised to be done but we will develop a process that it will be reachable through the KF medical team. We have to understand it and then, I have developed a T which you can remove any mercury from the body. The mercury is not just because of the 3 M injections, many of the people in the 3rd world nations, and in the western world suffer from the mercury damage through the totoh fillings. The amalgams from the totoh fillings carry mercury and there are a lot of suffering, especially for women, it interacts with their menstruation and their menopause and creates havoc in their life. In a very short time I will release this paper ..

(2:11). Why do we have this problem today with the Internet. Is there a storm near by. Maybe too many people are trying to get their brain drained from the soul and not the physicality. (2:12). .. break in Net ...

.. I should write the paper to release it. (2:16). ... There is a solution for those who suffer from this mercury poisoning, or additional structure. ... We can remove the poison from the body in totality, this is possible do to the introduction of new dynamic systems which we have developed. You can't reject this material through the operation of the soul because it is something introduced physically into the body and it converts itself. It's the conversion that is the problem. If you understand the work of this additional mercury it's very much for our medical team, the work of the cancer, It's exactly the same as the work of the cancer. (2:18). But it enters through the field 03

(2:24).

.. the spinal shaping of the DNA is because of the spacing of the Phosphorus. So in this structure you see why this is so lethal. (2:30). Because it interacts in balance with the spinal, the backbone of the DNA. The helix shape of DNA, I have written a paper and explained this somewhere, is due to Phosphorus. So you have the Phosphorus which already touches the helix, which then changes its position, it's not the same shape because of the interaction of the fields. In that position everything moves. This is why it is so dangerous. But what is the reason for the production of this material? There is a way you can change it if it is in the waters. You can change it very simple. You can transfer .. you can change the bond in a very simple way, because it is connected to Nitrogen, if you look at it, the spinal space of the AA, ?? is a prtoein carrier. You have a prtoein in there, N of the prtoein, H of the prtoein, the O is there, what is left is a C, and if you look at the shape of the structure, you see the interaction of the fields themselves create the C. So this is a copy of the AA by field interaction. This is why it is so lethal. It interacts, because it mimics AA and DNA, so DNA takes it as part of it, so it opens (itself) up, the shape of the helix changes and that is why it is so dangerous. As K Seekers you should be able to read these very easy. (2:32). You have 5 O's, 4 H's , 1 N , so all you need are the conversion field forces of 1 O, or 2 O's to create a field force of C, then you have a full AA, which is the backbone of the DNA, then you have the spinal cord balance of the DNA ?? hidden condition which gives you the Phosphorus, that's it. You see why it's so dangerous. There is a why you can change this in your systems. If you add CO2 Gans to it, it will destroy it. All you need to do for this is to create a CO2 and a water, a Gans water of the CO2, most probably CO2 itself as a Gans drop will disbalance it and break up the chain, then you are left with a Phosphorus you need and it will become a positive use in the structure of the body because the Phosphorus will change to the Sulphur and become part of the immune system and the phosphorus will become the backbone of the structure of the physical existence. You strengthen the AA chain. Any of you who do these tests just add 1 drop of CO2 into this combination and you'll disbalance it, because 1 of these O looses .. let's look at how you do it. You have a H2O, H2O, so now you have 2 drops of water. (2:34). What are you left with? 1 H and 2 O's. When you bring the 2 H with the O, it has to split, because if you go back in the world of understanding, in the world of creation, H gains or looses to become a C and O to create the condition of life, AA. So when you introduce a CO2 you add to condition that the 4 O's become balanced, then you bring the C, and H is released on its own. N is freed, and you bring in the ttoal balance of the liquid AA, You have a ?? P with it and now the structure is broken, the AA structure of the DNA. If you understand this you can actually use this as a benefit to the human race and a danger to the human

race. If you can add a CO<sub>2</sub> and see what it comes to, then we need Phosphorus, huge amounts of Phosphorus, because the Phosphorus and Sulphur are part of when you do the blood test, you see what it comes to, they look at your Sulphur, it's a detergent. And Phosphorus is a building block. If you look at your blood test, at the chlorine, P and S. (2:36). These are disinfectants of the higher order materials of the blood and the physicality. So if you add CO<sub>2</sub> to this you change it to the benefit of mankind, but you have to understand why and it's there. Now it mimics the DNA, when it does it puts pressure on, and then because it's missing a C in the AA chain it moves the Phosphorus in the spinal cord of, backbone helix structure of the DNA and it creates havoc, it doesn't become cancer, but it creates new elements. But if you add CO<sub>2</sub> to it in this process you'll see the effect. It can be used as a huge benefit to humanity. If you can release the Phosphorus which is one of the most needed elements in the body, there is nothing more needed in the body then Phosphorus. When you eat food, and the wrong food, forever your body is converting the elements into Phosphorus to get the guarantee existence and continuity of the DNA. Every DNA cell needs that energy of the Phosphorus, and most of the work of the body to keep the physicality in its DNA, is for converting elements continuously to Phosphorus, because every cell, every DNA, when you see a Phosphorus in a DNA, Phosphorus has a cycle of life, 1 year, 6 months, 2 months, it has to be replaced. (2:38). Where does it come from, unless the body converts it. Most of the conversion comes from the Thyroid glands, and in the Thymus. Because it uses a lot of the energy of the B12 to convert to keep Phosphorus always available for every single cell. Every single cell which is produced has a DNA, has what we call the spinal backbone helix, that those Phosphorus in that ... the guy just puts a P, you read it, that Phosphorus has a lifetime. It has to be changed. It loses its power and needs to be continuously replaced. When you have this Phosphorus, the time when it comes to be replaced, this takes its place, then it creates what you call cancer. But it is actually what we ourselves put in there, and one of the things needed. If you break it up ( ? ) now you have a bigger source for a healthy life. You can change this poison to one of the biggest benefits of mankind. Many of the problems we have in the world of medicine is because the Phosphorus in the DNA, in the spinal helix coil changes, and when it changes it moves the rest of the chain, what you call protein AA in the sea, or move it slightly to one side, then we call it genetic defect. If you continuously supply the body with enough Phosphorus, that it can't, especially in the Gans of our ?? , you would never change the DNA, you would never get any diseases. (2:40). Send this to Monsanto and tell them I just explained this section and we found a solution for your problem. This is very big Mr. Keshe if we can prove this and show some experiments that verifies your idea. This is a multi-trillion dollar idea to Monsanto right now and to everyone on the planet. All of the food supplies. But how has it been used and produced by Monsanto? It's used as, Glyphosate is a non-selective herbicide it will kill most plants, it prevents them from making most proteins that are needed for plant growth. Now we understand why, because you change the position. The farmers spray the wheat with Roundup to kill the wheat prematurely so it can be harvested before too much moisture occurs. So the Glyphosate is in the entire wheat chain mixed in with the cereals and grains and in the water supply. It is part of the process they use for killing things, and adjusting the crops... Now you understand where the killing comes from. You change the chain of the protein in the DNA. (2:42).

... what you see if you look at the isotopes of one and the other. (2:48). The Phosphorus is a detergent and so is Chlorine, Sulphur behaves or your body converts it into

Phosphorus or a Chlorine, as is needed for the conversion, depends on if you are a vegetarian or on how much meat you eat, or how much vegetation you eat. If you look at the isotopes of P and Cl, in the bottom range of one and the top of the other, they are somewhere similar to each other but they are actually what I call cleaning agents. They are there to open up the AA structure. 58

(2:58).

(3:14).

(3:20).

... When you add the CO<sub>2</sub> on the surface you get the structural (3:24). environmental change, but when you put the ?? CD and you change the shell of the ?? seed. I think it is in the very original research of Dr. Gatoa or Jim in Australia, some of this was shown, the ?? of the seeding. So you confirm the finding. We know this. We published some findings on it some time ago. You can the genetic modification of it, and I have said many times, Monsant modifications don't exist, we can get rid of it by ?? plant duration. If you go way back to one of the tests we did, we took the wheat back to a grass, and it grows like a grass. What happened when we put a seed of wheat for a long term, maybe 1 or 2 hours in the Water (Gans) or whatever, usually wheat grows like this as 1 stem. When you put it on (the Gans) it grows flat and you get 10 to 20 (shots), but you get wheat, the atmospheric condition of the .. what we spoke about the dinosaurs, creates a condition of the wheat today, where the original grass was millions of years ago. But it creates the atmospheric condition, pressure and you get that. I think we had 6 or 8 stems from 1, and it grows like a grass, not upright, spinal. We can see if you put the seed in different time durations (in the Gans), you can see the different evolution of the grass to the wheat. What happened 1 million years ago before the other layers come on it and changes it. (3:26). We have done this and have full knowledge of it somewhere in KF (archives), we have thousands of pictures taken of this process with the scientists. It's in the archives of the KF. It used to be on the original servers of the KF. ... Stefania shares about here niece who had epileptic seizures. (3:28). A year ago after Mr. Keshe introduced the soul teachings I introduced these ideas to my sister and since then my sister only wanted that her daughter at the age of 3 would stop the seizures. Recently she made ??3 and suddenly the seizures stopped. For us it is unbelievable and it's confirmation of the soul teachings he gave us. ... Thank you very much. We know about this case for a year and half 2 years, and we tried to support in different ways. ... (3:30). ... .. you told me to imagine him in the best time when I was with him, and it was very difficult ... and you told me that when I was with him that we have the best time together. In order to do that I have to pay full attention and be 100% with him, my mind could not be anywhere else, so to give him the full (3:32). of my presence and let him know I was there. And when we started to share moments like magic together, he would start to get better and better. It was so much the nurses said to me, what are you doing because now he can walk ... everything you recommended to me worked. Let's end. Please don't stop letting the embassies and governments knowing about the KF with the Iranian government and president of America. (3:34). We have to be, not peacemakers, but people who enlighten and show that there is always a solution. Diplomatic peace is not easy it's very difficult because you don't deal with one person, but a nation and the request of many, many things. But if we carry the soul

wishes of mankind we will see the end of this conflict and the beginning of world peace. It is very interesting how our wishes effects our lives and other people lives and as long as it is positive it creates a positive change. If it is negative we become the receiver of it ourselves, because we have to handle what we created. It's important that we push, resend the message of peace to all the Iranian and American embassies and any other embassies that can encourage them both to sit around the table. We have to ?? the peace, we have to be the cause of peace. It doesn't need to be our name, if we elevate the soul of the world leaders, it's the name of humanity which counts. I don't see anything more important at this moment. The Core Members know how to elevate the world leaders they have been through it. Maybe we need that, even though it creates so much suffering for many of us, but it is time to be done. It's time to ?? Somebody wrote this letter and it is meaningless and I wrote them back in a simple way. (3:36). This is a diplomatic letter and not political. Diplomacy has its own language and a lot of people don't understand it because they are too entangled in the process of politics. Diplomacy is like the STM and politics is the physicality. And we work through the same way. I work as a diplomat. You never insult, you enlighten and show that there is a path and then the politicians follow. In the future if you ever get involved understand and learn the language of diplomacy, not the language of politicians and what we see in the press. Politicians always hurt and diplomats always effect the whole condition. It is upon us to change it. remember whatever we do we are responsible for the outcome at the end of the whatever is done. the responsibility for the change, maybe lies on all of us, because in solving the situation between Iran and the US will solve the situation in Syria, it solves a lot of problems from families that are suffering from being refugees, because then the forces will come together to force and change for what has been done wrong and then find a solution for it. One of the things you'll understand very shortly if the talk between Iran and America takes place and we lead to the same as "5 plus 1" cause of peace. The situation in Palestine will be resolved in a very rapid way. (3:38). These are the last conflicts left. But these are hinged between what we call the Shia and Sunni section of Islam, using superpowers to get to their position to destroy as many Shia as possible that they have the domination in one way or another. If we see the situation in Iran, is a Shia country, so is Syria, Palestine majority, and this has a very clear indication that even the soul of Mohammad is not at peace. It's the responsibility of those who sit in the name of Mohammad to see that it is one house. It's the responsibility of the UC member to see that it is solved in the Arabic speaking and Iranian Farsi speaking, these are the things that you have to resolve through the soul of the human race, and you understand the work which needs to be done. You do not need to be taught because your souls knows what you have to do. In one word to the world leaders we have uttered the word of creation and it's for them to understand. If you look in the letters in a simple way I have explained it says, "on behalf of my government". My government doesn't sit with Iran or US, my government sits with One Nation and you are the governing body. Maybe those of you who don't understand diplomacy, now understand how the letter is written. We have to learn the language of diplomacy and the true sense of it, and that's for them not to interpret it in the wrong way. (3:40). Thank you for today and hopefully we learn more in the space development. We are in one of the final phases of the understanding of the knowledge of the creation. If you can create to go from neutron into field interaction, and then you can produce the matter state from it, you have encircled the complete cycle of the creation, from energy to fields, fields to matter to ?? the creation.

END
