

## 239th Knowledge Seekers Workshop - August 30, 2018

( , )

(:06). ... As we are developing more and more knowledge in Space T, a number of new teachings have to be brought in that it allows K Seekers to be able to put together the riddles of the knowledge in how to expand and explore the possibilities and different avenues of the PI T science. One of the major points in our teachings, in the balance of the whole knowledge is to understand the positioning and the flow of the fields. In many of the teachings now a days, the K Seekers can't find their way in what is next, what is about to be explored and how the T has to be used. Last week we spoke about the plants and saw the growth of a plant, (:08). this creation of the conditions doesn't apply only to the plants, but to us, where we might be, where and how, and that we can see the influence of the knowledge of the T. One of the biggest problems with the present new ... or lack of understanding of it, has come through, as we have gone into the production of the neutrons. As we said, different neutrons have different strengths, and how you apply these neutrons gives you a flux flow. In the depth of the space, in parts we'll come to understand, that achievement of transmutation of elements, even in the body of the man, it comes from the interaction of the fields which have no origin. What does this mean? The origin has and is part of the totality of the structure of the U. When we see for example, the creation of some materials in certain part of the galaxy where the earth passes, it has nothing to do, or partially to do with creation of fields from the sun and the earth, and the moon most probably, but a majority of the material produced at given sections, like what we said, it's like meteorites we see in certain areas, what we call, the solar system we passed through, there are field areas which a specific elements are produced. (:10). This means if I can expand on it. This goes back to space level research, this is important and direct for you and some of you already work on this one and understand it. What we assume and have taught is that the MG fields of the earth and sun, their interaction leads to creation of certain products. This is okay as long as the solar system is in this position, but the sun and earth moves, and we come not only in a new position in the solar system but also the galaxies position in respect to the planet, or our solar system moves too. So the same environment here is not producing anymore, let's say H, now it produces O or maybe Deuterium. Creation of the new environment in totality, partially influenced by the galaxy, partially influenced by the field strength within the structure of the solar system. This in the space development becomes part of what we see production of diseases, and eradication of diseases. What you'll see in many of your tests and results, you'll see this frequently, I was making something and it happened (worked) and now it doesn't happen. As we said before, look at your environment, what have you moved, you had a Gans jar here, and now it's there. In one of our tests that we carried out recently we saw something strange and some of you might see this in your systems. (:12). We have a bench with CH<sub>3</sub>, ZnO, CO<sub>2</sub>, CuO (sitting next to each other), and we are talking about 10's of liters and not a small amount. Then we measured the PH, and don't be surprised if you find the PI of this one (CH<sub>3</sub>)<sub>7</sub> plus PH, the next one nearly the same 7+, and the next 7+, not far from each other. We usually see the PH of CH<sub>3</sub> around 4 to 6. And we are talking about massive amounts of Gans's. Then if you try to use these (Gans's) for specific purposes you get the same PH, but not necessarily the same plasma strength or the ?? condition. So you try to understand the influence of conditions and the environments you make. You made the ZnO and you left it next to the CO<sub>2</sub> and now you don't have that huge difference (in strength), you have somewhere in the balance between the 2. And both PH's behave the same. This you might be able to understand especially those of you who work in the

field of medicine (:14). or medical application and you are making these systems for yourselves, or trying to commercialized part of these things, you have to understand why when you deliver your systems they don't work effectively, but before it did. Because before you did not place them in the same position. Distance gaps in your labs, in your works is essential. If you don't want to get into different strength differences, but you can also do it by the mass ratio difference. Recently it was very interesting to see this because it will effect the KF manufacturing section. So when you set up the factories and you see the production lines, what Gans's you produce and their proximity will bring everything in balance, even though you think you are producing different ones. This is very crucial for the manufacturing teams (to understand), this, then shows the effectiveness of the materials we put in. As some of you have been asking how do you change certain (contaminated) waters, how can it be done, then you might understand that if you are using ZnO in one water and are getting a very good result, but then you might use the same ZnO in another water but you don't get the same good result. You have to understand what the content of water your are using is, and what kind of water filtration you need. Not every CO2 will clean every water. This is one of the questions raised by Rick before we started, some of you have been asking. (:16). Water filtration is dependent on what is the content of the water you want to filter. Are you filtering minerals, bacteria, parasites, heavy elements, then you have to design a filter for each one specifically. Are you filtering contaminated waters, radioactive waters, and what is the radioactivity and what can you use. How do you create radioactive radiation, in the space you can't go and buy an x-ray machine and you can't develop that kind of thing. How do you produce systems that it allows you to have the effect of x-ray. The strength of what you use can create it. In the coming time when the K Seekers understanding becomes much deeper, you'll understand that every process has a certain amount of field interaction, which in that zone (between the 2 reactors) you can work very safe. This is where you pick up your products, where you create conditions to transmute, these are the conditions when it comes to transportation, man will understand the usage of space, the environment it creates. You can go back into the process of understanding when you want to transmute or transport entities, anything, a glass of water, or yourself, how you create an envelop environment. (:18). You don't go like the present world of science that wants to transmute a man, what do they do, they try to get every cell and that sometimes fails. I have seen it. But you can transmute an envelop, and that envelop has to be kept from one point to the point of delivery. Because it doesn't matter what you do with it, how you shake the box, what speed you travel it, the contents inside doesn't change. The only difference with the new transportation is that your envelop is always spherical. Which means you keep the integrity of the elements within it. It's a dynamic PI, we don't have square or rectangular planets. We can envelop any entity within the structure of the PI and transmute it, and when it gets to the (destination) point we take the PI off and the material will appear. When it appears it takes the position and shape of the environment which it has been given to. two legs and 2 arms here, and maybe 4 arms and maybe more legs, because this condition fits what is there and if you can't match it, you will not manifest. You say I can't go because it's too hto for me, or you say the field strength is not there, half of my arm will not be there. These are the things which are coming up very soon. In a very short time, ?? October, (:20). we'll show a new defense technology, defense in space. Because we need to defend ourselves from every element in the space at high speed. What we call layering of reactors in the space T will become very fast into operation in the next few weeks. We are moving into non-motor reactors, which means dynamic systems which have no motors, the flux-flow highest speed, but at the same time control

of the whole dynamic system SF. the environmental positioning becomes part of the full understanding of the work of the PI. You have to remember that a PI can only manifest itself, within itself, if the condition of the environment within it has changed within the strength of its fields. In the past teachings we said, the solar system is allowed to be created in the galaxy and to have its span according to the MG field which it carries and it can interact with the environmental conditions of the galaxy. If within this solar system the star is weak, and the extensions of the fields of the galaxy (:22). are higher the size of the solar system will not be the size drawn here, but will be smaller. Again depending on the extraction of the fields from the system it could be even smaller, or it can be allowed to increase (larger than the original). These are important within the new space T which is taking shape. Deep space T needs new understanding, it doesn't matter how we flavor it. Many of you have gone in the process of trying different neutrons, some of you might have started to see the effects of the neutrons on each other and creation of new dimensions. You can't maintain these fields if you have not got stable neutron systems, because somewhere you are expecting the fields here (in the center) but they are actually happening outside your range. You run and you see nothing, ratio loading, space gap, natural speed of rotation all dictates where you might see the system (the interaction), and not necessarily where you are looking for it (in the center). These are the loose ends which needs to be tightened up, (:24). before we can start to travel, moving and interacting. One of the biggest problems with mankind in the space will be very simple, and this is the conversion of the space of the STM. In respect to the environment which it appears even the soul is still the same. You can end up in the soul dimension on planet X and you still have connection with the soul of your mother on planet Y, as they say, hundreds of thousands of light years away. The dimension of the expansion of the soul in the reality of the environment it appears, will be one of the main factors in how the life or existence will be guaranteed for that soul in the space. It's very much like the winding clocks (draws a spiral) how fast you let it go that it unwinds. Deep space needs deep understanding of the position and the reality of the interaction of the fields. It doesn't matter if you put it in the condition of the water, a Gans, a FP, or any space in the U. Those who are in the medical application, doctors and scientists who work on this kind of machineries should very soon be able to interact, (:26). react and deliver knowledge and information to any point in the body or anywhere in the space. This means if you have a body for example you have found a shrapnel here (arm), by creating the right condition in the fields of the neutrons you allow this (shrapnel) to be moved out without any attachment. Plasma new technology is getting to the point that we decide the fields of the plasmas according to the position, and then the energy of the PI itself dictates where you wants to move out to, and then you can dictate it, where to move. The field forces if you look at the galaxies in a universe, or the stars in a galaxy, the spacing of it is all predetermined by the totality of the fields. They are not there on a random basis. Every star, solar system, galaxy and every cell of the body, is predetermined by the effect of its environment and not by its own. This is why when you look into the skies at night you see the stars that have been there for millions of years, they don't determine it, the environment has decided that this is the position they take. Now with the knowledge we have (:28). we can change its environment that the matters move closer or further from each other then this dictates the speed of the motion that you travel in the space, where you want to go and how you create the MG field, that in the process of the travel that you keep and maintain the SS shape, but you create the motion of it. Don't forget there are no motor and no jet engines as we have today. It's the free flow PI keeping the position the same while certain parameters you create capability or possibility of producing matter and motion in a

given direction. Man soon in the space will find out that there are no computers in any of the spaceships in the U. Computers are man made. I started the discussion today on this basis because we see one of the research centers is soon reaching this position, then the knowledge has to be shared to all. The Chinese will combine all of these technologies. (:30). It's a space dimension. It's understanding our position within the space of the fields, and not enforcing the dimension of the existence by framework. When we build the reactors for space travel, we just build them and load them and leave them next to each other, they will make their own SF. And this is the space we give them. The way we have made the frameworks and put the SF on it, and we start rotating it, is over. This is what in the teaching of last week I emphasized on, understanding what the PI of the space will create, as you wrote more, it expands to a new position, because the new free, rotating plasmas are not put together in a framework, they are literally like magnets put on a table, they find their own position. You thought you made the MG field systems SS of 2 meters, but sorry, half of it sits behind the wall in the garage or in the next door neighbor. Coming to this we started because we see the next steps for the development of the Chinese KF space development reaching that point. Which means no more motors, but no more framework as we had to put things in. We have to understand (32). the loading system that we put the reactor together and they have to find their own position and in that process they become dynamic themselves. Because to create and position, dynamic position dictated by the MG field forces. The only thing to do is to make sure it's free floating and it can keep to that frame. We are not building anymore frames, platforms, because if we add 2 more people and bring 10 cows in, sorry this needs more space. I am taking my cattle from Africa to South America because they get higher prices, and I have this SF in my home, but now 10 cattle require bigger fields, I need this (spread out SF) to travel. The reactors decide themselves (the size). In the very near future the boundaries of the governments and nations will come to an end, because every man carries his own transportation as we do the key in our pocket. the box is with us, you open the box, the FP and because it's controlled by you, today I am going to Washington on my own I need this (smaller) size, tomorrow I am carrying cattle from Africa to Texas, I need a bigger size. And it decides itself. don't forget every soul has its own field strength. (:34). So the interaction of it and the MG field of the physicality pushes the whole thing apart until it finds comfort for all. We passed the point of theory, we entered the ?? term of physicality, and this is what is on the horizon, what is coming in the very near future, because having and creating dynamic systems which are free floating we will dictate through only one thing, through our soul with the interaction of the total soul of the system. then what we call the cars, automobiles of today of different brands will have no meaning, because each one of us has his own brand of car because it's all the same. Go back to the time of Henry Ford, he said, you can have any color car you like as long as it's black. You can have any color SS you like as long as it fits the environment. So we all look the same. The loading of the SS reactor with the free floating has to be calculated on the mass ratio of the neutrons plasmatic fields interaction, which means we have to understand to what extent we enforce field forces within the dimension of the reactors. As many of us have seen SS that don't (:36). change their direction, but they change their speeds. the size stays the same. The change of direction comes from the thought of the man who is in charge of the totality of the SS, because he doesn't interfere with the size, but with the field forces within the structure. I see a lot of developments getting done, testing different things, but as we understand it's what I call a game of magnetic marbles. You throw the marbles on the table and where they find a balance this is the shape you get. You can predetermine the size of it, but one interesting thing that will come up in the very near future, the reactor

size for the SS for every individual will not be any bigger than the size of a marble. You carry it in your pocket. This is something which is carried in the U. We just opened your eyes to what is about to come. This is where the SS development will take all of us. Maybe we are 1 or 2 years ahead, but those who are working in this environment know where they are heading. We have designed and planned the new space reactors for the Chinese space development on this design, this pattern. (:38). How the Chinese will load up their reactors will decide how close they come to this. It's a balloon which itself dictates its size, shape, and position. Can I with my thought reduce the size of these balloons to fit into a box, and when I open the box my understanding of the fields needed will adjust to the size needed. If I am going shopping with my boy so I need a bigger space, so where to manifest myself, and when you are inside how to reduce the system that you can manifest yourself in the environment. You don't want to appear on a truck running at 200 kmh down the road. You want to be in a safe place and understand where you land, you understand the environment, you are aware of it, and then you manifest yourself. You think you are on the land you don't want to appear in the center of the ocean. This is all to be learned, to come into position, and the way we are supporting and instructing and developing the space systems in China we are heading in that direction. Do we need to hang our reactor on a framework and then try and get it to run, or do we go directly understanding how to load and we allow it to take shape. In a way the accident we had some 3 or 4 weeks ago in China was a blessing that allowed us to jump by tens of years forward in teaching. (:40). Because there are too many limitations, too much waster of materials, but a lot has been learned that it allows the next step. But many of you will still go through running your little motors reactors and seeing the SF, trying to lift and you still can do it in that way as well. As I said, everyone of us will develop this T according to our intelligence and understanding. Then whatever happens in a very short time, if you are stranded on the oceans of this planet on a little boat, we can reach you, lift you, and bring you home. The way it will work is the soul that shouts or calls for help, and in understanding the help of the soul, this man is there with part of his soul to do. You will understand very soon. But on the other hand if it is used as part of the defense technology it's easy. The intention of the soldier is destruction, and the soul of the spaceman with the soul of clear consciousness is peace ... I wonder if you can guess what might happen here. What I see in the coming time, shortly. I wrote to one of the K Seekers today, maybe I read it .. (:42). In a very simple way I explained my dilemma. 'I am so close to achieving it', this is talking about the world peace that it stresses me beyond, and I know what needs to be done. I just do not know if the human race is ready for this. If I release the true knowledge the structure of mankind's society will collapse, as we know it, within hours. So what is to be done in my dilemma? Mankind as a whole has to go in the direction of the peace, otherwise we will enforce peace. And in so many ways, today's teaching is a 'peace' talk teaching. When you have a massive aircraft carrier with hundreds of soldiers and planes rockets and missiles, if I interact with the soul of the peace of the soldiers, no soldier is prepared to fire. We don't need to paralyze the material state, we can touch the strength of the soul. This is part of what I call the true blueprint soul teaching. It seems that we have to implement this condition, it seems that we have to enforce this condition in the coming time. (:44). And this is exactly what we didn't want to do. A few years ago Caroline and I were walking in Belgium through a gate and the old man took us to see the house and he said, he was in his 80's most probably, he showed us a hook on top of a frame on the barn. He said, you know that pin there, when I was a young boy I watched the Germans hanging a German soldier on that hook killing him because he was not prepared to go to war, to shoto and fight. I wonder if the governments who are

planning wars, how many of their soldiers are they going to hang on the wall, because the soldiers will not touch, will not fight. I don't need to stop the nuclear weapons T, I don't need to stop the boycotting, I just need to change the soul that no one stands the boycott. There are many games we can play. And let this be a warning to those who listen on the line. Then the whole structure of human society will change because the man and nation who thought they were in power, now is powerless, and when the others realize they will play their game. The invitation for peace on the table between Iran and America is a warning to the American government on this level. (:46). Go back on the table of peace or we'll enforce peace through your soldiers not be able and not wanting to fight, they take the path of peace. At the moment people are afraid of America because of its power, but when its soldiers are not there to fight it's no use to have the guns. The teachings of last week, I built it up to this week and it goes further on, is the teaching of peace. We said, that when the STM changes then the behavior of the man changes. It seems we have to go for that target today and we are building in that direction. You can have the most advanced fighter planes to fight but when you don't have a pilot who is there to kill, it's no use. I don't need to dismantle the aircraft, I elevate the STM. The Chinese space development is heading that way because it's in the hands of a very peaceful man. From the last communications with the American government, we advise you to open the talks and discuss because of the embarrassment of when the soldiers do not fight. They choose the path of peace. Many people are worried about what's going to happen the first of November, maybe we have to show it before. (:48). Or after what we can deliver, there will be soldiers who will not fire a single gun. There is nothing governments can do. How many of your soldiers will you put in prison the way you did in the Vietnam time. Do we disable the systems, boats, missiles, or do we change the man who sits behind it and walks away from doing it because it's not in his level, he doesn't understand what he is abused to kill. When we develop free dimension reactors, which is now the obligation of every KF followers to do so. To change the course you have to establish the development of the new reactors which I have taken you through to do. This will change the humanity in elevation and elevation of the STM, if need be I'll do it in China. The peace process has to come from the peace in the STM and now with this T when we satisfy every need, destruction doesn't sit within the structure of the STM, it sits within the physicality of the man, and when the soul elevates the physicality can't find that strength. (:50). Those of you work and the development of the space level and those who have understood, especially AZ they are walking away from what they were set up to do, go for development of the FP, because when it comes from America, Americans can't do much about it. People in the 60's and 70's marched against the Vietnam war, this time people will walk against having any war because it doesn't exist in their vocabulary. If need be we can show it on the high seas. A couple of years ago on the high seas 27 Americans realized the feebleness of their battleship. We don't touch anymore, we elevate. And the new systems can do so. If you understood how the Iranians captured the American drone, now we need the same systems just to elevate the souls. We invite the American government on the table with Iran for the peaceful talks. We are still waiting, we have seen the reports and the message from the American embassy to us. The message has to be made more clear and direct, we do not wait. (:52). the same goes with the Iranian authorities, the message is clear we want to talk peace. As we do everything in the open, my message to the American ambassador is, Washington needs to respond positive. The whole thing costs less than \$10. It is very clear the T can be used in the direction of peace in a very effective way. There is something that is very interesting and most of our physicians have not seen, if you managed to remove a tumor from the

brain, or remove a cancer from the breast of a woman, you have already gained the knowledge how to elevate the STM. Go on the Internet and study about the brain where it chooses conflict and war and where it chooses peace, and understanding that position from the position of the soul, will give you exactly what kind of systems you need to make (:54). to effect the whole of the American army and the rest of the world. Those who are planning wars they thought they found a new way by boycott. But boycott of the soul to not fight is more effective than a few boys who can't even fight. We have seen many u-turns, this time don't let it be a shameful one, because when it is done by shame the world loses its respect for a nation. And those who sit in the anarchist part will try to influence their position and time. The space T has entered a new era, very quietly within the Chinese structure, I have pushed and developed and it is getting there to be done. Maybe in sometime in early October we put a blueprint day for peace, for spaceship and see how fast you all can reach it. Make sure you have enough Cu, Al, Zn at home, maybe a couple of sheets, and make sure you have made enough neutrons. And maybe you might need a few Alek Beads, and if you have already made a coil, you are already there. You were all sitting and waiting for a generator, (:56). but in the blueprint day of the MaGrav I showed you the generator, but all of you were so eager to see and do something that you missed it. And I thought humanity is not ready yet. Go back to the teaching of the week of the Blueprint Day and the clue to make PI generators is there, if you want the proof of knowledge it sits there. If you understand the use and application of it, you'll understand how to make the FP spaceships which effects you and allows you to touch the soul of every man who is violent on this planet. I don't fight, I choose the path of peace and because I have the knowledge I can enforce peace. Any questions? (:58). Q: If you have a physical structure (SS) which field effects can lead to an increase in weight and which to decrease, if the physical structure stays the same. .. The physical structure stays the same, there are different techniques used in the space. One of them is which way you want to lift and by how much, if you are looking for levitation this system will be very easy to handle by literally, you just need to increase the control systems to increase M fields. When you want to take away from the surface, (1:00). you don't reduce your G, which is your point of reference. It's your M that has to be changed that it allows you to take to space. You don't change everything together, if you change everything at the same time, together, it is a death trap, because a lot of things can't stand. Where you create the G reference point everything in the structure has accepted that point of reference as gravity. So you hold on to it. What you do is very much like 2 magnets, you make the field stronger so you move away. When you want to land it goes by the same proposition, or you fix the M and then change the G. Some other space developments which are used is, you take a point of reference, you create that point of reference yourself and then in respect to that point of reference you create a space gap. You can't find the G forces of a huge planet, but you'll find this (the reference point) as a zero reference point and you create space in distance, which becomes your reference point. And this is a neutron center, you can create it very easily. So now you (have) create(d) a point of reference, you can go deeper in the ocean, but still be there (?) because you don't know what it will be inside. In the space T for example when you are traveling in the depth of space you can't find stars to move on, (1:02). you set up an advanced point of the MG ?? force, which is a higher order neutron interactions in the space of a distance, then you move into it. You increase the G by pull or you reduce M by reduction. The Iranian space agency uses a traditional way they use the moon as a point of reference, because to go from Theran to Washingotn it is very easy, it's always constant. It has to be understood what is and how things set, here we use the moon as a reference to attract to and come back, but

somewhere in between (earth and moon) you do the same, you don't go all the way to the moon. There is a discussion on the table at the Iranian space agency it has been there for years is, Iran has a problem explaining to its people that it has the T to go to the moon and back, because the Islamic nations can't touch the moon. As I said to one of my colleagues some time ago, I wonder who can tell who has been to the moon and really been around it and back again and landed. And as one of my friends said, we have seen no flags. (1:04). As I said as a joke, we can see the Great Wall of China from a distance, a flag is too small to see and this we give them a shadow of a doubt. You create the position and you always keep one point of reference, because the whole of your SS has been locked into the 2 points of reference of the M and G field of the position. If you do it right you can even tilt yourself at the same position. It's very easy. The Chinese present space reactor has got this built into it. We can tilt the system very easily the way it's been built with reactors. In the coming time when we expand the reactors in the dimension, by increasing the number of reactors in it, but the present reactors in tests in China, have this facility, on flight they can move and turn into ??.

When you have a SS, you just don't take into it, the light you see is the end where it's targeted at. If this is the atmosphere you always move ... it's very hard sometimes at high speed to stop beyond or within (the atmosphere). And in the space of the knowledge we have, the atmospheric conditions are irrelevant anyway. (1:06). I was sitting in the office today and I said, my god nobody can see it, I see a SS cloud. You can see them, they create it (the cloud) and they sit in it. It's the abnormality of the shape, if you don't see it, because even the color is slightly different than the rest of the cloud. It has a tint of silver to it, it says, I don't belong here, I have created it but you get a reflection of what I call the ship into it. It looks more grayish. I hope I answered you. Try to understand at the point of reference. Landing with no wheels, with no buffers is very difficult, you have to learn how to approach and always keep a distance, never physically interact (with the planet), because now you have interact with the whole of the system (the planet) MG field. When you enter deep waters you create a shield that you never interact (with the water), the fields interact with your matter state. And when you create the fields, it is not so hard as one piece, it's as a cushion, it's a space gap. I will explain this in the very near future how you can come out of the waters, and out of the solid land. Many of you must have noticed something, (1:08). but you thought it was impossible. You can literally go through solid earth. If you understand the working of the plasma field. Matter state is weaker. In a way it doesn't exist when you go through and understand the work of the SS. If you advance enough in the science of the space, you'll find out nothing is in the matter state in the universe, or anything. It's just how you position yourself in the strength compared to what you are reaching. Any other question? Q: Jalal. hello Jalal have you made your SS? I have my SS myself. I have understanding and from your teaching I have a new understanding. Peace can be achieved very easy. (1:10). only we need understanding. What you said just now about illness and how the doctors can take it out from the body. Why is the body ill, it is already in a good shape and the illness is coming to it, because it changed position and environment. So peace is already there but it's the environment that makes it not visible for humanity, everyone. So we are not going to make humans good, because they are already good, but the environment they put themselves in makes them away from peace. So we only need to bring back the true environment that humans were in before. Mr. Keshe says, what do you suggest? Okay, what make a person not good in condition, like when they are ill, if we know what makes a person ill we can achieve peace in days because it's the same condition only on a bigger scale or smaller scale. (1:12). Fulfill the needs of a person, AA I think plays a very big role. to take out the barriers of why

the human beings don't observe these fields of energy, because the man learned in the past how to make barriers to this energy. Someone somehow put barriers. We only need to take these barriers out... How we are making Gans's, we are not making Gans's, we are making the environment to see the Gans's. The Gans's are already there, but we are awakening them to see them. We are making magnets not just to pull maybe to push away. ... we are only taking away what holds us from seeing, or knowing these fields. really this is a different understanding.... (1:14). ... like with the illness you are only taking out 10% you are not adding 90%. This is the understanding.... Thank you very much. Any other question.

(Go over again and again this part, Creation of the Cell in CO2 Box)

Q: Bernie reads one about Gans CO2 and CH4 .. (1:16). First of all how do you produce CH4? Do we know how he produces CH4? there is a lot of theoretical writing but you have to put it down physically how you produce CH4. A lot of you tried to create T, D, H and some of you managed to do T and D; then you say how do I produce H. Excuse me have you understood the world of the plasma. If you look at the matter level. ... you have the energy of the interaction of 1 neutron here. If you leave this neutron here, you'll have a neutron, but if you don't hold onto the condition, this little boy (neutron) will become a H, because all he needs to do is to split his natural environment. When you speak about H4 what is H4, then if you take some of the plasma physics and some of the material physics, then say oh, (1:18). I had a H4, and CO2, these two give me H2O and I have a C left. But where is this C, or is it a field plasma of C or would you see at the bottom of your box some more Gans's? Which is this C extracting more, as you saw in your CO2 box, created more CO2's. Do you think you released the O2 and it was left on its own. Or would it convert into the gas state and it stays there and maybe you'll find some black spots on the bottom and say it's a C. How do you create CH4. In the process of the development we know how to create CH3. ... in the presence of creating CH3, we create blood. Why does CH3 have the color it has, isn't it a mixture of ?? hemoglobin, because don't forget to make blood all you needed to do was to put an iron crossing the AA. (1:20). with the CH3 you had the presence of the AA, with the Fe, we achieved hemoglobin. But do you need this or is the Fe within the galvanized material with the fields of the Zn on it, still gives you the orange colored, what you call CH3. But this CH3 has the strength of the Fe to it. Is it the CH3, as you call it, isotopes of Fe with a connection to Zn. If you understand this in the world of science of medicine, in biology, you can literally change and create any material inside the body of the man and convert one to another. If you go a step further, and if some of you understand the next step in it, if you manage to create energy, MG field of the plasma of the neutron, and you manage to change the diversion and conversion of the Pl of this neutron to the AA. Maybe some of you understand where we are heading for. And if you haven't understood I'll give you a very (good) direction. You are heading toward the direction of the energy of the STM. (1:22). But that needs a lot of understanding. As you use the Fe to create the blood of the man which carries the emotion of the man, if you use the same blood condition, the same hemoglobin, understanding the structure of the fields of the Cu N coated, you create a field in the strength of the STM that can be attached to the physicality of the man through the AA. In a way you create the RNA. Attachment to the physicality which is the level of the strength of the AA. That AA on top of your water is not a physicality, it's the interaction of the fields of the Pl of the Gans of the materials. Then you can create any cell anywhere in the universe. If you look this AA carries the DNA. And if you look, the free energy plasma which is connected to the AA itself, as it's a field it has no choice,

it's nothing else but the soul of the plasma of the AA which carries itself. And would you like to start creating creation out of it. As I said the depth of the knowledge is all there if you want me to teach you. But how many of you would understand. (1:24). How many of you have made these buckets with blood rolling, and you made the hemoglobin, and you could understand the effect of the creation of the Free Plasma, which is connected though the same hemoglobin to the body of the man, to the AA, and the Cu (?Nano) plate, don't forget you have your Zn here too. You can control in totality the physicality and the emotion of the man in one stroke. But none of you understands because you are so ofocused on little things and you let the others go. It's a full human body cell operation. I said to myself some years ago, if man finds out what I have given them that they can replicate themselves, man will shoto himself. Now you have it on the plate. But I am sure that 99% of you don't understand. Then you want a heart, a cell of a bone ... you have breakage or a blockage, how easily, not only that, you can touch the soul, the soul of physicality at the strength of it, and do the whole thing in one go. I am sure the doctors team will scratch their heads a long time to understand exactly what has been said in the past 2 minutes. This is where the Technology meets the STM. It has no dimension and it has the strength of itself. (1:26). And through the creation of itself dictates the existence of itself. The body is structured on a very narrow band field of the universal energy and it all sits here. If you understand part of this you can create Ca, K, Mg, and every other element, which is within this structure you can create the life of the man on this planet. Do we need a womb of the mother? Or is this the recipe for a "virgin birth". It will take you thousands of years to unravel this secret. The Zn is the connection to the brain and the conversion of the energy of the soul. In conversion the Cu allows the physicality of it. We all know where Ca sits, to give you the bone structure. Q: John of AZ, what you just brought forward begs the question of, (1:28). are we able to elevate our soul and our RNA structure by consuming the waters of the CH3? How did you make it? Q: By drinking the waters of the CH3. No, it doesn't. But I asked you how you made it? You have not brought in the element of the soul of physicality. Many of you have done this. 51

## HEER

(1:32). those of you who think you can just use the hemoglobin if you haven't created a soul for it, how do you expect it to work. Now from today the world of medicine has a different meaning, if you understood. Do I need to load it with the fields of a Cu to heal up torn tissue rapidly, or do I need to feed it, extend it with the fields of the Zn to improve psychological condition. There it goes, American soldiers walking off the job. The whole process of the understanding of the creation of life has to be understood, that you can't just create the physicality dimension of DNA. We have to create the dimension of the transfer of the knowledge, information, that the DNA through this (forms hemoglobin) dictates and interacts, not by itself, it has no dimension to create that condition, it needs a soul (the fields between the plates). The soul of the tip of your finger changes according to the soul of your totality, then you can give the message, you are not walking, not shooting, and are peaceful. You need the little one to transfer to the big one, there it goes the American navy. (1:34). No soldier will fire a single bullet, ttoal cost, \$5. If you want I can show it to you tomorrow. We have to understand the totality of the knowledge. Nothing has been kept secret from you lot. There is, I have seen Dr. Klaus, he has built a box with the blood, hemoglobin. Dr. Klaus if you are online can you put it up. Yes I can. .. I have put the knowledge so in front of you, that you don't even see it, because it is there, you got used to it. It doesn't exist. It's like you

don't understand how beautiful your wife is until you go somewhere and end up with god knows a disaster and you come back and say I didn't see that. Or visa versa. I put the knowledge so openly right in front of you that you don't even understand it. There it is, hemoglobin, on the screen. You put it in a box where it creates hemoglobin with CH<sub>3</sub> at the same time, with a condition of understanding that the creation of the neutron and proton in one box. Wait there a few seconds, minutes, if you get it right, you see the life taking shape. (1:36). It becomes the womb of the mother. Because you add the free energy which stands as the STM to the dimension of physicality of man's DNA. Then you have the transfer of energy ?? through the blood of the man, and you have the feeder which is the CH<sub>3</sub>. A box. If you go back to Holland, I said, the empty box of the universe. Now it's in front of you. How much did it cost. Then you doctors who work on these fields so hard to get something done, give me 2 minutes, I'll walk man from any disease. But if I do it, they say I am a magician. I was in a meeting very recently, and the guy said, I will believe you if you change this alcohol into drinking water. I said, what a stupid man, I am leaving the room. The structure of life is in front of you. I have never taught this. We emphasized on this. We taught it years and years ago. In one point in the earlier teachings, Dr. Kostova touched it but she never understood it, and walked away from it. And I thought at that point maybe mankind is mature, but he never understood. Now it has taken us 4 years down the line. You have seen that FP we talked about between the neutron, you are looking to make a H out of it, (1:38). or are you looking to be connected to the blood of the man, to the STM, to ?? what you call the RNA. One drop will change all the soldiers in any navy anywhere on this planet. I told you if I have to force peace I can with knowledge, not with talk. And it is in front of you. Go back again. American government sit at the table of discussion otherwise we'll bring you to nothing, through no one being prepared to fight. There should be no more war with this knowledge today. I made my soul to the level of the STM so I can touch the man if I wish to. How do you want to play the game. Send this tape to any laboratory and tell them to watch within hours if they have understood, they can see creation of life. And because you control the nourishment and the creation of the AA and the FP, you saw the tree go up in 6 weeks, I can grow that tree in 1 hour. All I need to do is another piece which you most probably haven't understood, ?? in the teaching. I showed this in 2008 and 09. (1:40). Ten years, I am a very patient man. If I was there to show and to become Houdini, I would have made man and everything else. I have enough to ?? enough, but I have to walk man out of the present dilemma of his own destruction. You want to talk peace? Let's see how many of you can produce these, as you produced the H ?? and neutrons, and AA, and Ch<sub>3</sub>, and blood, let's see what you'll show us next week, how many new creatures will appear. And that creature will be a peaceful creature because it takes what it needs. Now let it grow in the soul, how many ?? will kill another man. But the whole mankind has to mature. Not very far is it. If you have the DNA and understand that blood is the supplier of physicality, has anybody seen any blood in DNA, but how does it keep its structure, and it dictates everything in the dimension of physicality. Now maybe you understand. (1:42). Study this and understand how you created it and how you can change it. Armen put a box of it which we created it a few years ago, in KF, where we used to sell the CO<sub>2</sub> box. Look at that kind of structure where you can create ?? forced condition, and step by step like a honey comb, bring it in, that in the center there you have the blood, and the Pl, of the FP of the neutron, and then you'll see what the creation will be. It's like a finger prick, it bleeds in one point, it's not the CO<sub>2</sub> that it appears anywhere, does it. You can control the position of it. Put this in the middle of the Gans's where the CO<sub>2</sub> sits. I am going to take it a step further. I told you I will enforce peace and I am getting into that position to do

it. And I'll walk the king of Belgium into prison if I have to, because that way so many people would have had this knowledge years ago. (1:44). It shows monarchies should not be there to suffer people. They ?? so long, this knowledge could have been shared years and years ago. As some of you know we have our appeal in the courts in Belgium, and then we'll be heard. We are there to give evidence in the courts ?? live, ?? because we see protection ?? And those who set it up will have to answer it. Mr. Delenois we'll see you in prison, you inside and us outside. He draws a Box with red line in middle. You always put your pins in different positions, but you put your pin in the center. You created the Zn and the Cu. You created the condition of the neutron energy. You created the condition with direct positioning of CH<sub>3</sub>, now you see the position with the continuous creation of the AA. In the whole structure of the condition (1:46). if you get it right in positioning. Phosphorus will itself appear as a MG field, and AA in the shape of what you call DNA will take shape. You have the presence of the fields which in its freedom will follow the process of interaction, will carry the soul of the AA in the form of DNA. You have created a creation. Now you control the soul, the condition of the strength of the ?? soul. if you go back to most of my teaching, I always said that there is something wrong in the structure of the physicality of this planet and it needs fixing. In a way, it's the lack of Zn in the totality of the structure. When you don't have Zn you die. A few years ago, one of the major corporations in toothpaste decided to introduce Zn into toothpaste. Then they withdrew it very rapidly because many people died. Anyone who used that toothpaste within a matter of a few months we saw high mortality. We don't want to mention the name of the company, you can find them on the Internet. They are responsible for many deaths but they didn't know what happened, exactly. What they did, the mistaken process of the toothpaste as we know, it is very simple. (1:48). If you swallow a material you increase the intake. When you use a toothpaste with a Zn you spit it out, you get rid of the Zn. The STM in reduction in the blood created the death. Not through the physicality. Go on the Internet and find the company and you'll see which one it was. .. but they panicked, they didn't understand that it wasn't the introduction of Zn. It was by spitting out the Zn, which is part of this whole connection with STM was taken out. So you have a physicality without a soul. Death wasn't through the heart failure, it was through the lack of existence of the field in the strength of the STM. You have a bunch of cars without any battery, nobody could play with the toy. Now if you understood this, and you carry within your soul the position of the soul of peace, which is non-destruction, you don't wish anybody harm, you can expand it. Goodbye wars, ?? to humanity and the rest of it. If you fly a few SS like this in the next few weeks over this planet, (1:50). nobody will want a war. Elevating the STM through the physicality condition of... don't forget animosity, war comes to us as part of the lack of Zn in the body of the brain of the man confirmation, transformation. We see it. Scientific papers confirms it. Now you have learned how to do it, increase the production, strengthen by 2 plates of Zn instead of 1, then you'll see what you achieve more. A very peaceful man, because he satisfies the need of it. None of you would dare to do it because you don't have the confidence in you that you can handle it. This becomes pages on the screen, in the future mankind might understand. None of you dares to go that strength to change, because the first thing that will change is you, and then ?? you the others will change. But the thing is are you man of peace that you want the change. Or is it just talk. Now you understand, what will take me to create the condition of. (1:52). Because that neutron which you create as a free energy in this condition will carry the field strength of the plasma of the Zn, which means it will interact with any soul, and then because it has to bring balance, it satisfies the peacefulness of the man because killing is against the nature of the man. War is against

because he knows that at the same time he is vulnerable ?? going to be the winner. Now you understand the teaching. I said we'll go very fast, but we'll create this condition. This knowledge will be passed on to those who are the peace makers. And those who don't understand will never touch it, because they are not sure of their own true essence of creation. Any other question. Q: I have a glass jar containing only the Gans Water of CuO, in a couple days was born a fluffy cloud that we translucent and it was growing in size from one week to another. This happened to me twice. I didn't know what to do. (1:54). I didn't understand and I threw it away. What did I create? I can't tell you I wasn't there. Many of you have created things. I saw a picture from AZ and they have created something at the bottom of the tray and they don't know what it is. ... John can you show that picture. Yeah. ... it happened only in the water not in the Gans. To you it's only a water, but did you clean it, was there AA in it. When you washed it you left something behind. For a lot of us, what was sitting near to it, other Gans's. What's in the same position, what did you carry with the Gans? (1:56). It was in a very small jar near jars of CO<sub>2</sub> and ZnO Gans's. Showing John's picture ... . Do you have Mg near it. This was created with H, T, D, and AA on the top, and various stuff. So we don't want it is. Have you created a dog or a frog. Why is it in that position, what is there. ... (1:58). .. it moved toward the T reactor. H and D was on the opposite side. Let me explain this. You come into it and I'll explain. We have a dilemma here, not a dilemma it's knowledge to understand. You put Deuterium here and Tritium on this side, then you have a salt water here. If you stand still and observe the process, something strange happens that you are not used to. Somewhere here and here, because you are in saltwater, you have created neutrons. (2:00). And somewhere in the middle you have a plasma of a neutron. 29

(2:10). Q: What is the difference between the neutron Pl of the H and the neutron of the gold or plutonium? The big difference is the energy transformation, each neutron has its own strength according to the population that it has chosen to be part of. In the teachings we speak about the ratio, and in the nuclear technology the same ratio exists according to the mass. So you understand that the neutron of gold is not the same as H. As I always said, just because he has a mustache he is not your uncle. It carries a specific strength which balances with all the other neutrons, protons and electrons in that set. It's very much you see the Gans of CO<sub>2</sub>, (he draws a Pl spiral) if you look at it as a Pl, it carries both (2:12). O and C, but O<sub>2</sub> is 2 different O plasmas, not the same. It depends on the interaction that you want to do, you match this O or this one. Or does the system match with this (C) or with the balance of the 3 somewhere here. In present chemistry this is not understood and it creates a lot of problems. If we understood it from the beginning it would have been very easy. When you speak about H<sub>2</sub>O, O is single and you have these 2 H which are isotopes, in MG fields they are not the same. That's why they take different positions. It's not that they just take position against the O but also against each other, so they can't be the same. And as they give and take from each other the dimension ?? fluidity gives the water to be liquid, because this circle is very simple, this applies to all the liquids in the universe. Because the field is so rapid this continuously opens up (he draws a circle going from H to O to H back to H and this fields is so rapidly rotating). Liquid states which is totally in the U, made of 1 element, you don't find any ?? in the ocean. Because of the isotopes of that in MG fields, and not because of the mixture of elements. (2:14). There is a galaxy which is made, its center point by this in the universe. It's a mono-element center, it's not the normal, what we call, Principle Matter. It has been there from the beginning because it continuously mutates itself and its fields. They call it the ancient galaxy because it has been there

from the beginning, it doesn't .. somehow it finds its position in respect to other galaxies, it always escapes from any interaction. It's not a single star, it's a full galaxy it ?? controls ?? with all its stars in it. In the center of it there is a liquid. It's not a Principle Matter that is just a field. Any other questions. Q: Jalal wants to ask another question. Can I go for cup of tea while you are doing it? ... You told us something it's like a virus we need to search, I am doing that for a long time I came across (2:16). This rocket scientists speaks about himself.... he was using magnets and Deuterium, ... there's a video on Youtube, and the audience asked him if he knows about you Mr. Keshe, he said, no. The audience encouraged him to get in touch with you... (2;18). ... He said the Gamma ray is different then the other .. .. this Gamma ray if it come close to sperm and egg at right time it will make this person very intelligent in the knowledge of the universe. My question is if this Gamma ray is real from your knowledge that you were exposed to this ray before when you are a child. (2:20). and maybe before you were born and that's why you have this specific knowledge? Did you have your tea? Yeah, I have been listening to this, I have to go find my Mom and see were she was. Q: Is there something different with the Gamma ray? You see ... what do you call a Gamma ray. I have done a lot of teaching on this, what you call fields, Alpha, Beta, Gamma, whatever. There are many rays stronger than this and beyond, but man hasn't got the knowledge to understand part of the structure of what we call the neutron balance energy or the plasma of the neutron, man will understand more of. But what is Gamma ray, what do we call a Gamma ray, a bandwidth,.. you see it's a mono-energetic, it has no ?? to attract or interact, but it takes more out than it puts in. That's the definition of a ray. Then the process has to be .. let me read something I received... The understanding of the totality (2:22). is to distinguish between a field, ray and a plasma. Depending on, not the speed but by the ray to give so much, to become part of 19

(2:30).

(2:32). Q: Stella asks

(2;38). There should be no limitation in the knowledge of creation. The minute we put restriction on the knowledge then we have created a problem for ourselves. Q: Maybe in the past there was this knowledge and somehow we used it wrongly and the planet got polluted and distorted. Like you said, there are certain proportions of the fields that we don't have in the physicality ... You see we see this pattern in all the creatures on this planet, being is a plant that destroys another one, being it a fish, tiger or whatever. It's part of the deficiency of taking energy from the U and going for what the planet creates to be. There are a few planets like this in the U, not many, very, very few. The intellect and understanding of the creation has passed that point, that you are talking to universal energy. This planet has that characteristic, it's not that somebody happened .. and we are back on it. No, this is a good story, but you can create animals with the same process. If you lack something that connects to the emotional part you get this behavior of killing and destruction. And the system in what we call universal communication, time, when we look at these things, we look at the lack and what was not there when it was done (created), if it were there it wouldn't have been done. (2:40). If the planet earth at the time if inception of the man had enough fields of what we call Zn and relevant connections to the Mg, we wouldn't have seen this kind of behavior for any creatures on this planet. 15

(2:46).

.. Very few people have given donations without wanting something back, (2:50). be it knowledge, shares, buildings, everything has been taken ?? So if you give me a million, it goes into the KF and I am sure within a month or 2, the team of the KF and all the wages we pay will consume it and it won't be there. Because then more people will have been taught and in the process of teaching somebody gained the knowledge, saved his wife or whatever. We had this discussion around the KF recently, all the knowledge given freely but nobody ever paid a single penny back to the KF, and they see this as their god given right to be given free and they do. 42

(2:58).

(3:02).

(3:06).

END
