

## 241st Knowledge Seekers Workshop - Thursday, Sept 13, 2018

( , )

(:05).

(:12).

(:18). (Red circle and Belgium's and court case. )

(:24).

(:30).

(:36).

(:40). What is interesting is where do we take this T from now on. We have brought the plasma T to a new dimension. In the coming days and weeks we take a new turn, and you have to follow us, I say you have to because you'll see it, not us. You have to follow to free your nation, it doesn't matter where you are from food control. One of the biggest controls that the Americans and Europeans have on the world at the moment is food security. We'll release official data's very soon and governmental data's that the proper use of Gans T allows the harvest to grow 2 to 3 times more, and doesn't hopefully show us any genetic defect or changes. This has huge implications on African nations who live on the hand out of the Americans. Because a farmer can't produce enough food and the Americans flood the market with cheaper food and prices go down. Now the farmer can produce 3 to 4 times more rice, that he can challenge the American import. I have lived and worked in Africa for years. The biggest problem in Africa is the American food donation in rice bags. They bring the nation to poverty. What we need to do is to teach like the beautiful job Dr. Gotoa is doing in Kenya and the work the KF will announce in the coming time in another part of Africa is to teach the African nations in a very open way channel how to produce Gans and how to use it in farming. It's the job of the KF and especially the UC to start mass teaching programs. (:42). We don't need to have millions, you have to ask, setup, position, condition, that members of the UC become actively involved in teaching the T. This is how we will bring the freedom of man. How to bring things out. We put the factories up, we'll support because not everybody can do, but people have to be able to help themselves. The knowledge has to be taught freely, as we have opened everything else with it. We have to, it's our job to buy the freedom for the human race. This is the job of the KF. If you have One Nation, you can't bring separation. The data that will come from the research by governments in the next few weeks will allow the KF to join one of the biggest programs in the world, that we can spread the knowledge freely through that process. We have put our requests. Our requests to the governments are well known and when it gets achieved in the next months to come then we'll with the knowledge of a government to be able to have. We don't go to create slavery as the Europeans have done by taking Africa, we go with the governments to bring the nations out of slavery to the freedom of themselves through the new knowledge. In the coming time I will release new technologies for mining, which has never been disclosed but is in the patents. There are ways to mine without damaging geology, the economy of the country, or destroying forests. The knowledge is within us. Many of you have practiced it but you have no understanding of how to apply it. We don't need to dig mines to destroy a city, or strip a nation from its assets, and then sell it for more outside. The new mining section which will be developed, (:44). will be without destruction, it means we can't destroy anything of the environment. It will be direct, the same as how the material

was (originally) produced, be it gold, diamond, Cu, Zn or Fe. The old traditional mining with mankind is finished. Now as part of the process I start teaching it. It needs collaboration in a totally different way across the KF scientists and workers. The new way of mining through the KF T is so touching and beautiful that it gives the humanity 2 choices, do we mine or do we convert. You have seen the conversion, the way we have shown the Kiri tree in Austria, we didn't touch the ground we used the environment to bring the energy to the plant. We can do the same as was shown by our research centers in different places, where they produced materials from the interaction of the fields of the universe as we will do in the space. What we do now is not to show a new T, these are tests to perfect the T so that when we go to space we have a full system that we know how to convert the fields of the U to Cu, Zn or whatever we need. This is what I said from the beginning, when we go to space we don't need to take any medicine or material with us, because as we have seen from the research centers, when you want Cu you create the field strength of the Cu that the PI of the Cu converts into Gans or to a material condition, creation of environment allows us to do this. We saw the first time this was done by Peter in Austria, some 2 years ago and then he took his material to be tested because he thought he created gold, (:46), but he created Zn and everything else. Now that we have learned how to produce Gans's, now we have to understand the process of the conversion is the same. We produced Gans's in the salt condition of this planet. Life comes through 2 processes. There is a big misunderstanding in the supporters of the KF, when you use an acidic condition you work within the matter state, when you use a salt condition you work within the PI condition. In the muscles of the man there is no acid it's all work on the salt level, so it gives life, continuity, and conductivity. It gives interaction of fields, whereas when you work with acids you create the link of the matter state in molecular. We have to learn the science the way it is, because I asked a simple question very recently, how do you lot make a Gans of sugar. I asked many people and somebody has come up with HCl acid and sugar and you get the Gans of sugar, and the evidence is that, it still has M fields so it must be the Gans. To produce Gans you are not to go through the acid way, you have to go through the salt way. And the same is with NaOH, understand how you produce it and then understand how you create it in the Gans state, then you can use it in the space. There seems to be a lot of gaps in the knowledge or in the teachings the knowledge has disappeared or it was not understood fully. Those of you who have been creating the Gans of sugar, (:48). using NCl or Nitro chloride acid or whatever, you have gone the matter way. Go the way we established the program. You will get something, but it is not in the Gans state, because if I put it under certain condition you'll see it will not perform. You make a very high acidic, you can even go to negative (PH), but it doesn't mean, as I have said, whoever has a mustache is not your uncle. ... I love Farsi stories because they tell you exactly what they mean. IN this process we have to learn how we produce these materials, because in the space we need to follow the process of life. Those of you who go into production of materials you have to understand that your water has to have a matter condition for it to become matter. If you are using the fields to convert to the plasma to become the matter you need the salt conversion in your environment. Those of you who created a Gans of salt you need it to be able to achieve a fast conversion, it's part of the work. Today's teaching I have tried to cover little bits and pieces that have been left behind, and not understood, because these little, what I call nitty gritty's are important to the whole structure and puts everything back on the same position. I remember in the 1990's when the Eastern Block opened, I went to a factory in Romania, and there was a guy there in a shoe factory with millions of shoes and this guy was sitting there arguing with another guy for the

position of the little tiny holes on the shoe. The next day they were still arguing (:50). how they not putting it where he wants it. I said to him, you have millions of shoes why are arguing for those little holes? He said, when the hole is here I can sell thousands of them, but when it is here it doesn't look (right) I can sell any, I'll go bankrupt and these people don't understand the position of the little holes on the shoe. So little things count, and these little things have been missed in the teachings, maybe we are going too fast, maybe we gathered the information in different ways and we didn't discuss it, or ... (connection ..) (:52) ... the little things. What I was trying to say is that we missed the little nick knacks of the knowledge and a lot of people have infiltrated their own knowledge and what they thought was the correct way, and a lot of people have followed it. I have a problem with the Gans of sugar, and to me it's not a Gans of sugar. And if I am supposed to create a CH<sub>3</sub> in the space and I don't have it, or I take a wrong field with it I am sure I am not doing what I am supposed to do. People say the sugar is acidic and it goes to minus 1 (PH) minus, zero, wherever it goes, but does it actually go that way. There is another problem in the whole structure of the teaching which you have to understand and it comes to haunt our K Seekers and some of them will get lost in the maze of the knowledge, is what we call alkalinity. (:54). How do you interact with the alkalinity to change it to acidic, or to how to change the acidic to alkalinity. In most of it we just change the names, if you look at it, what we said in the other teachings, alkalinity is G. Scientists have tried to find another way or name for it, and what you call acidic is M, it's giving, and if you work on this basis it's very easy to find out what it is. When you are connected to the H, which is a Free Plasma you are in a position to give, you have a free electron trying to find a match, everything it can that it can develop itself, it can give to sustain connections. Then you are M, you call it acidic. If you look why it becomes alkaline is because you carry the majority of the time connection with the O, which is a G pull like a magnet of energies in an atmospheric condition of the earth. We talked about this before in the teachings and apparently the knowledge isn't getting through. If you understand this process it should be very easy to understand the next steps that when you create a condition you understand the difference between the different terminologies we have used in the world of science. If those of you who have been producing Gans of sugar, through acidic condition, it's a different direction, what we work as a Gans, a M field, (:56). then in the space of what we call MG field spectrum doesn't create a condition of a FP. They will have effect, they are all the same, but the way the M fields will perform is totally different then when it is done through the salt condition of this planet. In the space we don't have salt or acid. In the space we use the FP of the neutron to create these conditions. This is part of the teaching I went though the last couple of weeks and many people are trying to test it and see if it goes. The knowledge of the space has to be unconditional on the matter state (? what does it mean?). In the space you have to be able to use field strength in respect to what is coming to you, or to what you are taking that you can produce or retract what you need. In the coming teachings especially on the space side I will show you, and it is part of what will come up, what we call space travel. Space travel in the dimension of what you think at the moment, as we said, communication we use the mobile phone. In a very simple way you can transfer packages of information. At the moment you send a package to go through the post you can create conditions without any costs, that you can post your systems through the MaGrav systems you have at home and deliver it to anywhere you like at zero time delivery. I see this to be with the man in the next 6 to 12 months, because when we speak about it, we incite the knowledge, which will bring others to start working (:58). and in the process they develop it. This means you'll be able to package energies. You have done this already.

You call it Nano technology. If you go back and understand how you created the Nano materials you have already been through this and now you have to extend the knowledge. It means, those of you who work on these extend your knowledge in a very simple way. Let me go back to the basics of the knowledge. Look at what you know and extend the knowledge in that process. .. If you remember, this was a Cu, if I put this as the molecular structure of the Cu (draws small circles across) bar. (1:00). If I number them 1,2,3, .. 10 ... This is the molecular structure every molecule is locked into each other by the magnetic field forces of the planet we call earth. Now we go through the process of caustic. We get these (locked in) layers coming up like this. ... What we get is that the layers have become G and M field positioned that allows a space gap to be between them. this is what the Nano layer is, (this is an enlargement of this). Now you have these layers, when you see the dark material, like the black Cu, you have created, according to our research between 30 to 50,000 layers of this (N layers). Don't forget each row is 1 layer, so you have a sandwich of 30,000 on top of each other. The reason you see it as black (1:02). is because any radiation from anywhere in the U comes in, the layers are so packed and open that ?? the 30,000 layers, but when it gets here (inside the layers) it gets trapped here, and another one comes and it gets trapped over here, etc. And we go by layers. If you extend the knowledge from this here, it is that we have created an energy trap. In the world of electronic science we call it capacitors. If you understand this, this dimension has a field force (draws a box around 4 molecules with the energy trapped inside). These are dynamic systems so they create their own in respect to the ?? If you understood this you can transfer it into the knowledge of the larger dimension, then you'll see what you have. (draws 4 circles as a box0, if you put anything in this box it stays as it is. It's an envelop you can put money in it, letter, razor, a kiss in it. The envelop does not see. If you match the MG field of your envelop to the system which your brother holds, you can transfer it to him. Now a days we scan our images, in the near future we'll scan our (1:04). M field strength. And this is it. I can send you everything, even myself because this takes position as it is loose according to what you put in it. As we spoke about this T the week before. These are the new developments that you as K Seekers have to understand and develop. Do not patent it because it is already here in the patent that we published. What you need to understand is to go from micro to macro, and then go from micro, develop systems from micro. This is the beauty of the T, of what sits there. This is part of the structure of new Pl T. Because you match my system in MG field, you remember, zero time transportation. I feel that with what I have taught you with the neutron and the plasma of the neutron some of you will move in this direction very soon, because you are bored with making Gans's everyday, and bored with that dynamic system and nothing to do. So I have to give you a new toy to play with, a new way to understand to be able to extend your knowledge and life will become more exciting and more bearable because now you have something else to do. If you can send a text to your friend every few seconds via SMS, (1:06). now you can send yourself to your friend, I am there can I come. I'll be there as they say in English, in a jiffy, in a package delivered. Now you understand that we go back to the very first teachings of explaining Nano technology, but now we take you to the scale of communication, transportation. These kind of systems will become essential for many of you in the time to come. They'll become everyday use for the T and you'll never ever know where it came from, but at this moment it is your job as KF scientists to start developing this. To understand it. There are other more advanced ways to do it, where you just need one of these (a single molecule), if you understood the totality of the dynamic core field layer. You'll be standing here (in center of the field core), you match the M and G with your mother's house's M and G, and you are

transported directly. These are not fairy tales anymore. At this moment in time it is reachable by many who have understood the whole process of Pl T. I am trying to bring you out of the world of Gans making and making little things. We had a friend in Canada, he came into the KF and many of you know him, he went very fast in teaching, but he didn't know what he was doing. You can make yourself a lot of new gadgets if you understand the process. (1:08). This might take man thousands of years to understand but I'll (anyway) that one day he might understand. As I showed you, this is the space that you protect (draws 3 circles inside each other), and if you remember a few seconds ago I put a man there. Now that you understood the creation of the STM, I only need the STM and not the man anymore (in the center). In this transportation system I can carry many souls. This is how in the U some creatures travel. In time man will reach to understand this. I have taught 2 or 3 groups at the KF how to create the soul of themselves, and they are busy with it. Those are the ones who are involved with the space T development and have already been taught. They will become the commanders of the spaceships, and will understand the next generation of the science and T. As I said, when I teach one I teach all. We spread the knowledge and we don't need to patent it or to classify it, but people have to understand it to gradually come to this position. When you make neutron Gans's, which neutron makes G, (1:10). and which neutron create M fields, where do you position each, or what do you have in your hand that you can switch one to the other. Don't forget you know this already, now you have to practice and understand it. What is the M or North Pole of one becomes the G of the South Pole of the other, this is the next step in the understanding of the universal work. Transportation system, communication system and then you understand that you only need one fuel to travel the span of the U, and this fuel because of its characteristic that it locks into every energy can go and recharge itself, you never run out of neutron energy if you know how to handle it. The neutron is a singularity of the plasma, even an electron is a neutron, because in time when it splits in energy it will force it to split itself. When you speak in the dimension of the plasma of the neutron, means singularity of the Pl. How do you create it. It can even be a CuO, ZnO, even CH, because this singularity has its own characteristics. You have to find the singularity of its strength in either way. Those of you who have been busy around the KF for quite some time, now you have a new toy, You have a new way of understand the T, to be able (1:12). to spread the knowledge, to practice and understand it. We understand where we sit, how we work, how the things will develop. Are there any questions. Q: I made the hemoglobin using a rusty iron nail in the Gans production process of CH<sub>3</sub> (can you draw it) ... (1:14). ... (1:16). .. through this the CH<sub>3</sub> becomes the strength of the Fe, what I understood that the isotopes of Fe all connect to the Zn ... so we are able to connect the physicality which is the AA, with the emotions which is our blood. When we go to the next step and would like to introduce (1:18). here the FP of the neutron, then we have the possibility to connect the FP with the AA to the emotions, and the N coated Cu plate, but from here my knowledge stops, what is available, we have the neutrons produced out of the process of H<sub>2</sub> and H<sub>3</sub> and this hemoglobin. It's more or less separate and I don't know how to link the fields of the neutron with the AA, CH<sub>3</sub>, Zn and Cu ... They are already connected. The problem is that in the world of magnetic fields the connections are already made. They take from it if they need it. You don't need to see it for it to be there, if you wait there after awhile you might see the color change. Something else might be added, you might see new creatures on the AA top. The process is already there. (1:20). Q: There is no need to add some drops of the water of the neutrons to the saltwater of this production process? Yes you can do, but you have to extend it to understand the process. The problem with us is that we have to

physically see it with our eyes or feel it on our skin or taste or smell to believe it works. Do we smell the fields of the sun coming to earth, touch it, hold etc. If you have set the conditions for the fields of the neutron for it to be there, and have created the conditions, and you know you are correct, the only thing is to just take your time and see how that red and orange changes. And if anything appears. there are a lot of things which you have not learned, maybe I can explain. ... (1:22).

(1:24). .... Is it time to teach this? .... if I explain this to you, you'll understand a lot of things in life. you speak about the interaction (1:26). of these things, of H and N, these are dynamic things, not just a spot, even that blood that is dripping is in dynamic form. You have to ask yourself 2 questions, first where does the color come from, why do I see it as red, the other one comes, why do I see the CO<sub>2</sub> as white. the other point comes, what happens when the CO<sub>2</sub> and Hemoglobin and neutron, there is a field interaction. What we have not considered up to now is one thing, we spoke about the fields, these are dynamic entities, we see them. In being dynamic entities they create their own light spectrum. The light spectrum of each one will be what man will use to identify the materials. We get the bright light of the sun, the white, and if you look at the sun at dawn or dusk you get different colors, but it's the same sun and earth. We have to start learning, I touched on this last week very softly about it, it is the spectrum of light which these entities create and (1:28). we can use this as a fingerprint for molecular structure of Gans's. We can use these for ?? stabilization. So now if you have 2 dynamic cores running and you put the Gans of this and that and are waiting to collect material from, what is the field radiation of the light do you create? Now this is the new addition to the knowledge that we have to learn. We call this the aura, this is the body with its own M field and this one is the MG field of the planet, the interaction gives us the aura. Now we have to look for this light. In the coming time, those of you who work on the space T will rely on these colors. Manifestations to the eye of the man, and you'll find out that when it comes to plasmatic colors in the matter state we see a spectrum of ... I see orange #2 and you see orange #4 which matches my orange #2. But in the plasmatic condition my orange #2 is also your orange #2 and not your orange #4. As you know in the matter state we all see different colors, I see the dark blue, but you'll see a slightly different blue. If I give you a color chart and I ask you what blue color do you see, you will never mark the same color that I mark, very rarely, because the spectrum of what you see converted to the information of the matter state is different then when you see the color of the plasma. But when you work in the color of plasma my #2 is also your #2. There is no error. There is a painting called the Last Supper and it has over (1:30). 35,000, if I remember, strands of wool which is silk, which has been woven and colored also. It's only about 70 cm by 40 cm, made in Iran worth millions of dollars. I held this thing in my hands some time ago and I thought, does the line, every strand of the beard of the Christ, has been dyed specifically to fit him. It's the genius work of an artisan. It has taken thousands of people years to produce this small piece of carpet. But when I look is that strand of grey to me the same to you in the matter state? No. But in the plasma state the strand of the light is always the same. ... So what we have to start looking is to bring more precise dimensions into the work of the plasma, are the lights which we have ignored up to now, because the light has and will effect what will be released on the PI layers. By changing the light, increasing the conditioning of the light, we can dictate the emission of the G and the M, this is part of the teaching which gradually those who work in the space T will understand. When you look at these things, and you can create a condition (1:32). for the light, and then if you see the light, there is a connection, then you see it is getting fed. There is no need for guesses. The emission of light through PI is the cornerstone of creation in the dimension of transfer,

and an indication of the fields. ... Arman is in Mexico ... (1:34). What we should look for are these lights and the use of lights, because when you start running your dynamic systems to create gold you have to look for this light, because certain light gives us the strength of gold. You see the light first and then you convert it. It's important. I do quite a lot of this when we had the lab in Belgium, I used to work on this principle. I used to make the lab dark and I can see the fields of the PI and interaction of the fields of the plasmas. It's a natural process and some of you will be talented to see it. Some of you can see the aura of some people, you should be able to see in a minute way, and we should develop technologies that we can detect the lights. And then you will see all these bloods and the neutrons that are there if they are interacting, they all become a certainty because you see the interaction. Plasma light is one of the ways in the universe that we find passages of passage. It's very much, like tunnels of fields, there are millions, hundreds of millions of kilometers long, billions of km, and some are hundreds of millions of km in diameter. It's very much like the air tunnels we have, in the space we rely on these to take us, these are highways and motor ways of the space. Because they are established, strong, and they hold onto, they are safe and there is no possibility of interaction with anything else. (1:36). They are delivers of passage and we only see them through lights, there is nothing tangible in them, as long as we stay within the color range we are safe, we can travel. And each color ends up in one place or the other, which gradually man will map out. When the man joins the U Community these maps will be handed over freely. You'll be taught and then you'll understand. These are very advanced stages of teaching. As I said, we teach then in thousands of years man can understand when he comes to it. You can use the same thing, if you can create a tunnel of light in 2 sets, whatever you produce in there is enveloped, it has the same strength energy. Plasma is a different game but you have to understand the interaction between the two. You have to be able to follow the process of not only the PI but the interaction of the fields, because some of these lights indicate, if the system is M working, is it taking from the other one or is it giving to someone, then if you want to change it, how you change it. In so many transfers of energy you need to have these lights. You have to understand the transfer of the fields of these lights, how these lights in the progressive development of the T can be used towards different applications. (1:38). Q; does this mean the lights in the process CH3, CO2, AA, if they are connected we see the light of our soul? Your soul has more complicated matters in it, then just this, but your soul is in the dynamic state, there is a static state, there progress and transfer of process of the STM into the plasma condition has been taught in the past 2 weeks to the teams of KF scientists. They are capable and understand and in time we'll share the knowledge. There are teams that have been taught that they are going through this process, they have to understand it themselves. Transfer of the STM through the dimension of the PI fields is the cornerstone of deep space travel, where you allow more souls to attached and to be a part of. You don't carry the physicality but the STM, ?? in space, time space becomes meaningless. When man matures in this dimension then we can travel the ?? spaces of the U, not the U. This is one of the reasons I started to teach in the past couple weeks and a few teams who are working on it understood what was explained. (1:40). It's not so mechanical, it's so much the understanding of the transfer of the energy in the free dimension that you create. If you understand it, the FP becomes the vessel and not the soul. It's the system that you embed the soul in it, and then it can lead to the creation of the entity at the point of arrival. When the soul is happy and it sees no danger to its existence. .. video from Mexico .. (1:42). KF Mexico shows video. .. (1:44). ... different Miguel. (1:46). now shows video... this looks like an eye. (1:48). ... have you put them in tube form ... (1:50).

(1:51). This brings another topic of the teachings now that you showed this. If you look in the eye of a man, I have spoken about this before, we see different colors of the eye. The interaction of the fields creates a light and very much, the color of the eye, in the future man will understand, is representative of the STM, because it is so close to the soul, (1:52). and it's so interactive due to its field strength, as you see it here. We see people with blue eyes, black, with different colors, it's very much, partially the interaction of the fields of the brain which reflects the STM. We see characteristics from different colors. .. You see the change of the color of the eye, as you showed here, with the "beautiful people", what you call schizophrenic, sometimes by the change of the color of the iris you can say who is speaking, because it's a different soul that interacts and it creates that condition and interaction. In watching you can see which one is there, I have seen it for years. When we say the eye is the point of the channel for the way to the STM, it is very true. If you ever come across people .. and the soul is of totally different characteristics and dimensions within the structure of the physicality you will see different colored eyes. They change instantaneously, as one speaks to the other it might change slightly in the shades of the brown, they might change into some sort of greenish brown. (1:54). It can change to greenish and sometimes even to blue. They say that sometimes when man reaches the point of death the eye sometimes turns blue. It's because of these, it's a reflection of the STM. You might see a person today with one color of eyes and tomorrow it changes to another, then you know it carries souls. The stability of one soul gives one color, then the frequency or strength of the light tells you what it is, always that interaction. The certain color of eyes which is a reflection of the soul which means that soul has that ? foundation. Not all the black eyes are exactly black there is a tint, but it shows in foundation what it is, aggression, peaceful, different mentality and you want to understand a person but the reflection of the STM through the color of his eyes, if you have more understanding you can have a better idea what to expect from them, because that color of eye absorbs certain fields from the U that it reflects back this way. It's part of the structure of the manifestation. I taught this to some doctors in Manchester years ago, (1:56). and they looked at me and they said, we never noticed it. I said, pay attention. The shape of the eye changes. You see John has a different shape and you see Mark in the same body has a slightly different shape. Because it absorbs different lights even it has the same ?? encounter, base color, but it's slightly different when you speak to John then when you speak to Mark. Many people who suffer from this injustice, what we call schizophrenic, they hide in dark rooms because they don't stand the change in color, they have a problem, because sometimes Mark is on duty and the light of the soul is much stronger from John and he can't absorb it. You'll find a lot of people with schizophrenic become solitude. They stay in locked rooms. Partially it's form not being accepted by society and they don't want anybody to see them, but partially it's the light. You see change of color and emotion with the color and you understand that you are in the presence of a different person. Voice, shape, and emotion changes. (1:58). I want to show you another video. ...

(2:00). .... I am going to take this to another dimension. When we ran the Iranian nuclear reactors for testing, as you were aware before I even went to Iran, you saw the Iranian space program. We have a dome, with reactors, and many nuclear materials from smoke detectors and an internal reactor. One of the interesting things is we always vacuumed this to minus 13. (2:02). Which is better than the space which is 11 or 12. When we reached plasma we could see different lights in the Pl, in the vicinity of each reactor, it gave indication, because I used to have a portal looking into it. It gave me an indication to which M fields are balanced. 28

(2:08).

(2:10).

(2:12).

.. There is a lot going on in the background and a lot of responsibility for the KF is getting handed over to the U Council and the members are gradually taking shape in the ways with the other arms of the KF. They need a lot of support if you are in any of the speaking languages. (2:14). they need a lot of help to be able to reach and spread the knowledge in the languages which they are in. We request for help. ... (2:14). ... if you think your soul can serve the humanity you can apply for the UC. Spanish speaking in Spain is totally different then that of Mexico. If you think your soul can serve the members of the council of Mexico there is room on the UC, because the environment changes the STM. (2:16). .. This is accommodated in the original plan of the KF drawn in Dubai. ... 30

... Q: How does the free flowing system like CH3 and (2:42). and Hemoglobin interact with the human body to bring to balance without needing a big dynamic motor or health units? If you don't have a dynamic system or if you do, to be able to interact you have to introduce. ... This means, you have to expand the knowledge, if you for example have your arm and have a pain in the middle of it and you put a dynamic system on both sides of it, they still have to go through this (Infinity Loop connection). They work fast because the transfer of energy is very fast, because you dynamically mix up and take. If you don't have that it's not a problem, because you again ... (He draws the arm with the pain) make a patch with 2 times more Gans in it on one side and a regular patch on the other side. It still does the work but it is slower paced. If you want a rapid result, then go 20 to 1, because all these 20 are trying to bring it to the 1, so the transformation and transportation of energy is very rapid. (2:44). The dynamic systems are a different characteristic, the static PI has different characteristics and field transfer then the dynamic because it creates a bigger environment and brings in more absorption and dispersion of the fields. Dispersion is much easier. That's all you don't need multi-million (\$) systems. There is something interesting coming in. The gentleman Anjo is asking and complains that PBU is too expensive and that KF only serves people with money. If we serve for money we wouldn't teach it here. Silence is a good thing not to come out. God created the mouth to praise, not to come out with rubbish. If we are here you can do it yourself. Don't blame your incompetence on the KF, we share knowledge so freely and rapidly that I am ashamed to see these kind of questions to come up. Yes we serve people with money, that's why we have 100 million in our bank account, and people are suffering so much, what a rubbish. Thank you for your clarity on that Mr. Keshe. (2:46). This one costs \$200 and this one \$0.20. ... Money, if there is a soul to create it will come. Whatever we give is not enough. I always remember what Dr. Eliya Kostova said, how come when it comes to KF everything has to be free and given unconditionally. Why don't they put their assets and say this is mine, I give it unconditionally for you to use it. How come all my patents and teachings are free, I

don't charge anything. As always I don't teach and do enough. You show me anyone in the history of mankind that has done such a thing. Q: Alzar asks about when the sperm and egg come together, the initial divisions, say about 8 of them. The feeding happens through the soul itself because it gets energy from the womb of the mother. Then it gets to the umbilical cord that the leeching starts to happen. (2:48). and that's when we forget how to feed ourselves. Can we go over this, please. Say I am getting created, a sperm and egg comes. I can't imagine, you already have been created, you are here. I mean hypothetical. Two situations, one I am created and these divisions are happening and without any umbilical cord I go all the way to the end without any connection to the mother and I get free and the soul comes out. The other way is the umbilical cord. Then there is a third situation that my grandparents were praying for me for 20 years. What is the difference between the soul in these 3 situations. First is without an umbilical cord, the second is with umbilical cord, and the third my grandparents prayed for me for 20 years? In the writing of Bahaula he says, pray for your children 20 years before they are born. A lot of Bahai's get married at the age of 20 - 22, so how many years did they start praying from the womb of the mother. So your grandfather praying for 22 years will find its destination when the child comes because he had no address and now the address has been created. The other thing, with or without the umbilical cord, we see that with the chickens and some animals that don't have umbilical cords and are born out of an egg. Because of the structure of the womb in what we call human beings or any other animals which have this process. We are connected for the fast transfer of growth. (2:50). In the animals that don't have that all the growth has been put in a package like an egg in the birds. In the U we see many creatures they don't have this, they just created out of the soul. Man will have a wonderful time to see these things. But when you have an umbilical cord with the mother is because you have established a source of ?? to grow fast. To convert the energies into a Gans of physical matter condition and we see this in certain animals, not in all of them. Those who have and create certain kinds of intelligence. It's just a reserve, an umbilical cord is a connection to a bigger reserve tank. Q: What I am talking about is ??? not to eat anymore, so that we can feed our soul ... Put it this way, if you look at a bigger scale, you can't feed yourself. You change the umbilical cord to the placenta, the placenta now becomes the universe. You change it to an invisible line of feeding. There is more in the matter state that you can convert to the matter condition of the Pl of the state you ?? born as a Gans. Any process of development and growth, even if you are born without a umbilical cord, there has to be energy to be gathered that becomes you. So where does it come from? It comes from the universal pto. (2:52). Now if you don't have a placenta then you have connected through the fields to the universal pto. It's not that you just on your own (feed yourself), it doesn't exist, you can't grow. It's not there to begin with. 20 Q

(2:58).

(3:02). (3:04). An English writer. William says, I think women are foolish to pretend that they are equal to men. They are far superior and always happy, whatever you give a woman she will make it greater. If you give her a sperm, she will give you a body and life. If you give her a house she will give you a home. If you give her groceries she will give you a meal. 05 13
