

## 245th Knowledge Seekers Workshop - October 11, 2018

( , )

(:17).

(:22).

(:30).

(:42).

(:50).

(:54). Shows pictures of empty green box of 6 years ago. A green plastic box with many electrodes on top and Mr. Keshe is showing the electric potential inside. This is what is called the empty box of the universe. You look at what is inside the box. (:56). When we get the box I'll show you how the box was set. As you know a lot of scientists hide their knowledge in a way that people can't see because it's beyond their intelligence to understand at the time. Maybe I'll open this box and you'll see something amazing. There are a number of these boxes that I played with. There are a lot of the old Kodak film tubes, I created the condition of the U in them. Some of you must have seen some of them. In the construction you look for the energy, but I look for the fields. But because the knowledge at the time, and even now it's not understood, it becomes very different. When the box opens up have a look at something very strange. When I open it you'll see what I call parachutes. And each one when it's in this box is fit in. You looked at the energy conversion, (:58). what I used and what was the purpose of this system. In reality it's the universal field flows. So if I induce different fields, for example in this one, this and this one, I create a condition of the 3 layers of the skin of the man. And the fields coming from it is what I play with, not the fields which is inside it. You looked for the current flow, but I used and created the condition for the flow of M fields. very much the same as what you are trying to do with Gans's. When you understand the knowledge in totality you can play any game. It's not the magic or what we call, hiding the knowledge, but rather it's to show the knowledge in totality. (1:00). ... What is important is that when you look at the empty box of the universe, is that these electrodes are literally creating different conditions and different life forms. Because if you look at it, between these 3, you have the bottom and top layer and the middle, so here you create different life. Then when you take a different set of 3, because this one now becomes the outer layer, inner and center layers, and this creates dynamic flow. You can create any condition. If you remember we showed in the same system in the ball, in the conference. Again it's the same principle because if you look at it, it's spherical with some 32 electrodes in different heights and depths so I can create the condition of a galaxy here, and another galaxy here. I showed it (that way) because that was the time of showing the energy, (1:02). but when I used to put current into it, you (would) see creates of life in here. When you use it against the ground flow, it's beautiful what you create. Now the knowledge is open and we can discuss a lot of things which have been shown, and explain it, in reality what it was doing. In the space, life and existence is understanding of the position, and nothing else. If you don't understand the field strength and the position you are, you grow beyond or you're doomed. But how do we do it? We don't have a tool to measure. What is the tool of measurement for us? The U has a common denominator life strength field and our soul locks into it. Our soul lives into it, and doesn't need different measurement tools to carry (with) so that this fits to

my soul or not, but as it links up, it fills itself, if it matches to the strength it carries. Because the STM doesn't carry the full spectrum of everything of the same strength for one position. (1:04). It carries a spectrum and each environment allows to show itself in that dimension of the strength. We see this, created, when we look at the STM and then the brain, the field of the soul as it travels, in strength, it develops and manifests itself, emotion of happiness, sandess, the control of the physicality and of the extremity of the body. So in fact, the field strength is the same, but our environment dictates different things. Venus, Saturn, in one place, Earth, Jupiter and the others. We call Earth happiness, Venus joy, Jupiter arm and leg, there is no difference. The Sun according to the strength of the rays and interaction in that environment dictates what it manifests. So it is with the STM. When you build the new systems if you understand it in more depth becomes very simple. And that is, (1:06). you have a system which has the strength of the soul, very small and you can carry it, and then you create the environment where the soul is to manifest itself. You'll what shape you'll manifest yourself in this planet ?? . You do this. A lot of you have a problem with, what am I going to do with the soul, or what am I going to get the soul. Your soul at any time even as you listen now, is doing other things, because part of it is busy with the physicality strength and the other part of it is busy with the strength of the other souls, but you only see this box which is the physicality of the man. If you understand this you can create a box here where your soul is, and see who your soul is talking with, what they are ?? To you it's a stranger, but what do you think happens to you when you are asleep. Where does the STM go, or does it stay within the embodiment of the physicality, but now that the strength of the physicality due to the strength of whatever condition of sleep is in the physical dimension, expands the dimension of the soul to reach in the different dimensions. But in physicality we manifest ourselves this way. But our soul is constantly in all directions interacting ?? its own life. Now we have the T and understanding that we can create systems which fit to the strength of the STM (1:08). There is no magic as we have understood up to now, in the STM, it's just another state of the strength of the fields of the U. Just because it happens to be the source of the energy for confirmation of our physicality and this planet, it is unique. When we start being prejudice in the line of the creation of the Creator then we see the whole truth of the creation. The limitation is our own prejudices to confirm our own existence. Many people tell me I am atheist, I am not, I am most probably closer to the Creator than anything else, and not be part of it. All of us have the same ?? gift, it's just how we perceive and how much of the truth we accept. The time when we are proud to be one thing, it stops us from growing to another, to be more ?? in our own existence. We have to move in the direction in the understanding of the interaction of the fields of the U, that may be part of it, is the STM. That may be part of it, become the physicality of the man. Man thought the Earth is the center of the U, then when he found out that actually he is a speck of dust in the U, (1:10). he understood how feeble he is. What you have to understand is that the STM is the speck of the dust of that speck of dust, and we think it is everything and the totality. Now if we put our prejudices away about our own existence then the knowledge of U opens up very rapidly. Then it is possibly to create any condition in the U within the STM, you don't need any reactors. You see the soul of your child, your partner, the child which you give life to, the soul of the dog, and you see the soul of the totality of the existence. But you still live within the dimension of the physicality. I am ashamed to be in the body of a man because it brings too much limitation to understand the totality of the creation. It brings limitations that restrict the intelligence of the Creator, to the feeble understanding of the man himself. Build these boxes. (1:12). AZ is very far ahead and heading this way. In understanding it and creating a dynamic soul through

structure of containment, not within the core but within what I call, the rings, then you should be able to control and create anything. Some of you might have a problem thinking, how am I going to put the Gans's together, how am I going to create that I can create the rings with different fields. There are different options. There are many different ways you can take to create. When you create the Gans's, at the bottom of your pot, ?? water, drain the water and make it to a paste, then you make your pot with different pastes. Then the containment which you made for your disc PI you place it inside. You can do a lot of things even in this position, you can charge, discharge or add energy, there are different strengths of the same PI, exists. Then when you take this off (out of the Gans's) you have an empty box, but fields homogeneously controlled. (1:14). Two of them gives you the containment and then everything else is inside. When we draws this in a square shape, never forget that it is in fact a ring. So your rings sit like this. You create an envelop, confirm the condition of the energy, you create an energy field of the envelop and you download into it. Many times you'll make the problem with the interface, you'll find out that you break a few bones because the outside environment has adjusted to the inside, the strength of the field. This knowledge is so simple, you don't need any motors, because the interaction of the fields create that motion that you have been looking for, and the interaction of the 2 sides (top and bottom) gives you the dynamism of the life, you create your SS in the middle. You start the seed of the SS in a small system, then when you collapse it you can give it ?? If you go more advance you don't even need the containment of the PI ?? the plasmas will hold onto themselves. It's how you can ?? move it and how you can contain it. Always work on the ratio difference. (1:16). Do you remember 24:1 and the rest, the fields carry the same but the strength the fields, because when you put 24 you have more fields higher strength then 1, and you always have to create a condition of misbalance, that the interaction between the 2 misbalanced is trying to bring balance gives it dynamism. If you put the top layer the same as the bottom layer nothing will happen. You have to make one 2 times more, then this will be 2 times the speed of light, if you make it 4 and 6 times more you go higher in the speed of light. Don't forget that when you go from 2 to 4, it's not 2 times 2 is 4, it is 2 to the power of (10 x 10). It's the order of magnitude that ?? expansion. It's not 10 to the power of 2. It's very much different. This is why, what I keep on saying, in electric current you get 4 watts, in the order of magnitude you get 100, and now you play this one, 2 x 2 100 times. This is the power of PI in that dimension. (1:18). Remember as I said, the king and the grain of rice .... You need this kind of understanding to be able to create the energy of the PI of the U. And it can be done within the MaGrav System. I will teach a lot and bring a lot together in the next few weeks to bring and enforce peace, because we know that military people are in the background listening. I welcome the Chinese military in the space in the background and the Russians, the same with the Iranians, where you are all sitting listening and developing the T in different ways and you have done for years. One of the secrets I showed and explained 2 years ago was ?? system. None of you went to the next step. Two inner and outer rings. The inner layer of, middle layer of, the outer layer of, the 2 on the top and the bottom, the interaction of the fields, (1:20). create dynamism with, in here creates the condition of life, energy. Your MaGrav system if you look is the skin of the man. Why did you put 2, why did you put 1? It's repetition of the same understanding. You use your MaGrav system in a specific way, you lot were happy with 50%, I was happy in the PI state (2 to the power of 6 x 10). But this you don't see because you can't interact with it, it's of the higher order, which has very little dimension of physicality electronic current in it. But it has a huge PI power in it, where

if you connect this to your ring, if you remember the layers. Now you understand how you connect and control your Pl. But by the order of magnitude. 49

.. we control the dial of the microwave. (1:36). But the strength, is it going to defrost, cook, or roast. The U field strength is the same, is it going to be 2 legged, 4 arms and no physicality but the dimension of the STM. Now we need to understand this if we are going into the next step of the space T. When you put a field inside an oven, depending on the environment ?? to the energy which you give and take from it, the material shows itself as a gold, silver, plutonium or H. The words of Bahaulah are complete, the maturity of the man comes when man understands the transmutation of the elements. And today man is mature. But we have gone a step further, where the understanding of the man completes about the creation, when he understands the transportation of the fields of the U. Because that leads to creation of the matter and if you can control that you can make gold out of water. Bahaula taught the understanding of physicality, we teach the knowledge of the universe and the Creator. It's very easy for you to create the box of creation and then you decide what you want in it. (1:38). You can take and add, you can subtract, and divide, you can do anything you like as long as you understand what you are subtracting and adding and what is the reason for it. The people who work on the medical systems, you have to understand this, if you take that long to create systems that patients like Dr. Rodrigo can walk into the space and a few seconds walk out of it, and nothing. No cancer, sugar (diabetes) or high BP, because whole body works on the strength of the field of the soul which wants to exist in a perfect life. It doesn't work by the transfer of the energy from the body, but it works in balance of the physicality with the measure of the soul strength itself, perfection. Any questions. Q: John, when we build our starship formations we have plasma in the central area of our reactors, (1:40). if we were to when we capture that the energies of that field Pl and hold them or move them, then do we do that from our soul and wish and carry it to another environment. Yes. I am going to tell you something John because it's bring to you something very direct. It goes back to some teachings a very long time ago and then you might understand. I spoke a long time ago about using the headphones to find the position of your soul. You can hear the music but not through your ears but inside your soul. Now you made the SS and you have the position of that FP, move the brain of the man into that position, then you'll see what happens to the STM. Would you imprint the same as the orange and the water, your imprint of thought to the system, and move away and now you can control the reactor by your thoughts, the whole structure. Or would the structure transfer its wish into your soul that you can create the SS? What are your thoughts? (1:42). The STM, the soul of the system is where all of the energies of the whole system are related to, that becomes the center. That's where all are in balance with. When you put the position of the balance with your reactor of the SS, in a balanced position of the physicality which is the STM, you put 2 stars together that in that position if you get it precisely right, you become the captain. The physicality becomes the physicality of the ship and the physicality of the ship becomes the physicality of the man. Now you can think and the SS will offlow because it is part of you. You called it arms and legs you move, now it becomes part of you. This T is very far for man. Very far. But as I said, we have to teach it that man will soon come to it and understand how to do it. Levitation through electromagnetic field is the state of ?? Levitation of the soul through the interaction of the Gans's or N material, is more advanced. But levitation through the fields of the U planetary ?? system with life in it is the knowledge of the Creator that you have been taught. (1:44). Now you can ask

yourself, what does the soul of this planet think of what its physicality is doing to itself. Have I enlightened you, do you understand John? .. You helped me out a lot, I think I understand more now. You are very advanced on that side and the others are advanced in another part, somewhere in between I have to bring you together. I have started bringing the genius of the KF together in the recent past. Moving them in certain positions that gradually, what I call the elite of scientists of the knowledge of the U come together. In singularity they don't carry much in strength but collectively with what they know they'll bring the knowledge of the U within the reach of the man, then the rest will offlow and come. In the past few months I have moved a number of scientists of the KF in a different position, even in their own position, by teaching them to be able to do. Because now we need these kind of scientists to be understood that people see the physicality and they can understand them. It's no use being able to create a machine that can float but it has no soul, but if the team that knows how to create the soul for that machine that can float, it will come to understand itself in the dimension of physicality. And the another team that understands how to interact can create the matters for it to be able to create (1:46). the body out of gold, silver or water, but it still lives and has life and makes decisions. Are we clearer John? We are waiting for you to show us how to fly. Everyday we try and we are getting closer ... Remember the MaGrav System and remember very simply that your MaGrav system has an orange water inside. It is you who are looking for the fields but in fact, their transmutation and transportation sits within the layers. The MaGrav systems are the most completed flight system we have ever taught in the U, but you don't see it. Any other question. (1:48).

Klaus of Austria. Q: The last month I developed a very small system that we can come closer to this process of peace .. Gans's from a paste. Whenever I go near the system I get a good feeling that this system locks into other systems .. I see ?? to bring more freedom when we use a mobile phone, PC or Tablet ... we have a new way to link our MaGrav systems for peace when we use some electronic devices. Thank you very much. I have to announce the Core Team of the KF will meet next Friday ... this meeting as always happens when the core team meets will bring new changes. (1:50). We'll see the changes that will be discussed in the meeting. Whenever the C Team has met in the past years has set the condition for the change. The meeting of next Friday is to change the course of humanity for peace. We did it before and have seen the result. The C team will receive new members to keep the position of what has been set. Possibly 3 new members will be brought in to keep the balance as it has been set. If you are called to become a member of the C team of the KF which is the universal core, please consider in what you have been asked to become. There is a lot of miscomprehension sits within the U Council of the KF. .. It needs a deeper understanding of its own work. Many people come in with emotional attachment to the physicality and dimension of process, (1:52). and many within the Council have taken a position to think they are there to decide. The members of the UC have to learn one thing, and I'll repeat it until it sinks in somewhere, there is no head for the UC you are all equal, and collectively you have to take humanity in the direction that it becomes peaceful. The Earth Council at the moment has an idle position, as we say to sit in the coffee room and have a coffee until the time comes that we can move. The course and time and place of the 19th of October, 2018, will bring that pivotal core change. The balance comes within the structure of the C team and the new member who will be asked to join. In the next few weeks we'll enter into a new challenge for the whole of the KF, and it is to catch up with what we have done because we sat back and waited for the others to do things while we were not there to do. In the coming weeks the KF will be pushed into a new horizon, into new dimensions internationally. And that is the ?? for

the C Team is to make sure everything is in position for that transition in time to come. (1:54). The UC still needs many members who are there to serve with their soul and don't get bothered with the word of the others. We have reached the point of conversion, and with these teachings that we started in the past few days we have reached the point of the maturity. Now it is time to teach heavily and at the same time the application of the T. A lot of pressure goes on the Chinese KF and it will bring a lot of pressure outwards onto the rest of the KF sections of the world. It's not going to be easy, but the opposition to the work of the KF will strengthen in a positive direction and not in a negative direction. I wanted to share this for some time but for some reason or another we were not ready to do. With the teachings of the past couple of weeks we have entered into that phase. We need to understand to create conditions for peace through what we call collective operation of the STM, for this we ask for 10 CET on the 19th October, 2018. (1:56). The Core Team will sit and through them every soul on this planet will be reached and be with us that with it we can change. It doesn't matter where and how you join us with the soul of humanity and the light will bring the change as it is going to be. It will be important and the C Team has not met at this level in nearly 3 or 4 years. We meet and we change, and we'll bring the change. Someone told me this is the call of duty, but this is the call of duty for the STM. Any questions. Q: I am making this MaGrav (unclear what he is saying ..) ... (1:58). ... I don't understand at all. I put 1 MaGrav below my feet, and another MaGrav above my head, in each MaGrav, in the middle layer like a skin I put in a Gans of my soul. ... (2:00). does it need CH3 .. What are you trying to tell or teach us. Many times you say control with the strength of your emotion and soul, and hemoglobin ... it's already in the middle or my soul in the middle? I am still trying to understand. Don't worry Mr. Keshe I am supporting your work. (2:02). Yes but what do you see, what do you achieve? For peace and harmony and everything. ... Now I understand, thank you very much. There is a very fundamental question to ask to man, with the history of man. How the wishes and thoughts of one man becomes the wishes and thoughts of the group, then a nation and then a planet. (2:04) Is it that the wish or the strength of the soul of person who starts it is strong enough or is it a specific strength that interacts with those who have the same strength, that they can enforce over the others. One of these in the recent history is the conduct of Hitler. How one man set out and poured so much changes. The thoughts of, the doing of, was confirmation of the existence, and with it a lot of covering of weaknesses for ones, what I call oneself and not for under the cover of the nation. We see the emergence of another person like this at this moment in time, of the present time. Their wish and the strength of the wish to create peace and be homogenizing the humanity on an equal balance, not by destruction (2:06). but by building and construction. Amongst us there is a leader who has set out and we see his work in the background, a lot of people don't understand, that he has set out to create peace, and most of it comes through the strength of his soul. It's not something that you do, Hitler gathered people to destroy. This man is gathering people to build but in a very specific way and target and with the collective harmony. We have not seen such a leadership for thousands of years on this planet. Somebody who unites to build and doesn't kill to divide. It's internal structure is set not only to bring balance in the nation but the structure is set to bring balance on this planet. As you said, do we need to make a machine, or is it the meeting of the C Team to support the STM. This will not happen if we do not take man through this transition. As I said in the introduction recording that we heard, the time is now and the ground and everything is ready for it. It needs scientific support (2:08). of sharing the knowledge and equality with the structure of ones soul to kick start, to bring the world peace. The man is president Zhi of China. The position in wanting peace and

equality for the human race is part of the work of this man, this is what we see with the STM which is why the KF is putting so much effort into China. The test of time has shown and the sincerity of the man has shown the time is there. We see world leaders who shout and cry for equality just to kill. We see leadership which is trying to bring and correct and balance the wrongs of the past irrespective of culture, race, and religion. This is what is needed and where the time is. We will see the changes very rapidly because the cycle has started. The cycle of correctness and conduct in the correct way (2:10). in the structure of the nations, very soon will overflow what we see in China. In correcting those who have done wrong by the structure set to correct itself. We've seen diplomacy living within the politic and with it sitting within the political structure. Those of you who understand geopolitics .. understand this clearly, the situation that is coming out of China and the structure we see in China will create that push for world peace very rapidly. It's not that everything is perfect in its structure, but through that process and adding the new knowledge into it will reach somewhere near perfection. It'll reach somewhere that the human race will go through the transition of peace. We'll reach in a position that the knowledge and the science (2:12). hand in hand with diplomacy and politic, geopolitics, and understanding of One Nation One Race will bring us to that point. I have released the knowledge into China in a very different way. In the next few weeks you'll see. We have unleashed it because when we see a soul which is committed to equality and at the same time the transition time of equality to be achieved in a peaceful way needs that support. 50

(2:26).

(2:38).

(2:42).

.. The members of the Core Team, because that is where it all started, You see members that sit on the platform, you have Rick, Vince (2:44). Shandor, Manual, Armen, and as you see the others who are there with joy from China, you have Lisa, and one of the dearest member who has done a lot and is always in the background. The CT has announced that they'll be present. We have 2 Chinese, 3 Canadians, Armenian, Iranian, black American. They come from all races and backgrounds. The way you see the KF is today is very much in the effort put by the CT. We have Bret from USA. Three new members that will come in. Dr. Eliya Kostova has stepped down. We have 2 more members Marco and Wolf, (2:46). and one person from Portugal. There are 14 members of the CT sits at its 12 capacity. We will bring the change as we have brought the KF where it is today. A lot of work was done by the initial team and now we built it up. We will structure it in a way that every world leader will receive every person, on the Internet we'll see the KF Health application, just an ?? audio we don't show anything else. Case by case. The one who has a coma patient is not interested in diabetic so we have to concentrate. ... (2:48).

... 28 million farmers in poverty and we'll walk them out ..

... we have shown the highest level of protein that has ever been produced in wheat. New data will come in. .. Food security in China and they'll support KF with the rest. .. (2:50).

(2:52). Dr. Klaus presents more on his work with the PI Ball Unit and wants to show different combinations of the balls. ... Shows a table of the possible Gans's you can purchase. ... (2:54). ... shows where to find Gans balls on Keshe Foundation Store on

web .. (2:56). ... Mr. Keshe asks, do you sell the Gans of soul as well? Yes, it's done, it's been uploaded, you can download it (laughs). (2:58). John says, what Mr. Keshe was talking about earlier with the starship formation (SF) ?? we put our self in the middle of the SF unit. You can see where that Unit (your ball unit) can come in very handy in creating our box. Yes, definitely. It's exactly like you said, it has several possibilities, you can even use it for matter production. It's flexible. You are giving your secret away there. I think now that you speak about it, you better explain it. ... You said it can be used in matter production. In the near future KF will deliver or offer systems that you can produce matter and materials. This is on the back of Peter's work a couple of years ago. Am I correct? Yes. It's an experimental kit you can set up and fill up the cores to see what materials you can produce. I saw it very recently. (3:00). It's a small unit and it gives amateurs a chance to start producing Ca from fresh air, or how adventuress you become to produce metals and other things from the interaction of the fields from the environment of the lab or home where you work. It's literally a new magic box as I call it, you can put ... change a ball and you can create a metal. It will be on sale soon. This gives correctness of the T. You can't create materials out of fresh air if you don't create the conditions (for it). It's a small circular disc and then you have to play with it and see what you can produce, there'll be a manual with it. It's very expensive because maybe it produces gold and then we sell it. The tests from the lab in Germany shows Chromium was produced... The experimental unit I think is a couple of thousand Euros. We want 30% of the profits of what you make (jokes). So you'll see a new unit coming out from KF. (3:02). ...

Part of the food security for industrial countries has been the raw materials. This is what we are coming to very soon in the next few months and couple of years. Where industrial development has been taken to ransom by some nations to control the minerals and metals. This is the beginning of entering that market to show that every nation can become industrial and produce what they need from the same way the earth produced its gold from the interaction of the earth and sun and the atmosphere of this solar system. Now you see a commercial unit which can do it, then you can increase it to produce tons of Cu and Zn as you need. This will not change much for African nations who have been robbed for centuries by Europeans. They never received anything from it except slavery of the man. But this way it allows African nations and the others to produce materials that they can bring an industrial revolution to their own country, through their own process. As I said we are coming in very slowly but effectively. (3:04). And this little unit will be a game changer for the industrial revolution, a new revolution that no factory needs to haul tons of materials, and can produce as they need it from interaction of the fields which they create themselves. It won't cost tens of thousands of dollars a ton, but a few cents, but you produce what you need. This brings a new cycle of work, new conditions of work. Hopefully we'll see this next week. I have seen this machine a few times. As you put testimonials on how you change your health and how you grew this and that. Please put testimonials on what you made and get it certified to be tested. Now we have the machine for it. It's the brain child of Peter. Even we're trying to help his brain move out of its childishness. This is another ?? that will come. New commercial units for agriculture will come out of the KF where we'll change the whole thing for antibiotics and the rest of it. KF AZ will offer a new product to governments where we convert the rubbish into energy and whatever is in the landfills. We are talking to a group that will work with us, very little of it, this T is complete .... (3:06). It literally is that every ton produces 700 kilowatts. ... governments are spending 1 to 3 million dollars per day in holding rubbish in less than

6 months the system is payable ... plus the energy ?? With no environmental waste, the knowledge is complete. ...

(3:08). ... Q: How can we use our systems to bring peace and transmute elements used in nuclear facilities? We have a dilemma with the nuclear power. We saw this at the end of the Cold War and it has got to the point that nobody can solve it. We don't know what to do with it. (3:10). The condition of nuclear weapons worldwide is very strange. Most of our problems in nuclear comes with Americans and worst of our problems when it comes to nuclear with the Russians. As a nuclear physicist I never had much interest in weapons T, but as part of the industrial development in this T we have a lot of waste. As I advised the Japanese in Fukushima to convert Tritium to gold and we saw them change it to the white gold which is very easy to be done. The conversion of nuclear materials to safe material isotopes is very easy especially with the new T. It's the cheapest option to clean up the mess. I have done this, you can contain nuclear materials and then convert them. If we reach the point when these stupid governments walk away from nuclear as a weapon, even as energy, nuclear energy is not safe, it has huge problems with it. (3:12). It's brushed under the carpet. Then we can change the nuclear materials very easily. I developed a T for it as part of my work over years, this is how it looks in the Iranian space reactors we convert nuclear material ?? to different strength, as we need. I change through my T Alpha to Gamma and Gamma to Alpha, and I have changed Gamma to the light rays which become totally harmless. It's understanding the process of the creation of radioactive material. If we come to a point of discussion and peace security with the Americans. Chinese and Russians, it will not cost that much, not to dismantle, we don't need to dismantle anything. All we need to do is conversion of the warheads within the containment of the warhead into a safe product. We have shown that in Fukushima. It means we don't need to dismantle, this is the biggest problem at the moment in the relationship between Russia and America is that they are paying for the Russians to dismantle their nuclear warheads in what has been agreed to reduce numbers. All it is, is you take it off, it costs a lot of processes to take it off. But now you have a radioactive material to hold and that is the biggest problem. We can use the new T to literally solidify everything in the nuclear warhead into a safe material which is non-radioactive. (3:14). ?? don't need to do, very little. I have developed a T, it's there if somewhere in the future somebody decides to use it. It's hidden in one part of the patent. To me even the nuclear power stations, all the nuclear materials can be made safe very easily. We have shown it and all these hundred of thousands of warheads ... would you like a nuclear material to fall on your head or a gold dust. We can make into gold dust the way we did in Fukushima. ... It's just that, taking the fear of nuclear weapons out of the line of the thought of the world leaders for an excuse to use that to do it, which is going on with Iran. ... It's part of the T for converting rubbish, the same kind of T can be used to convert nuclear weapons or nuclear waste into safe waste with very little input. It cost a few thousand dollars, not billions what the Americans are paying the Russians to dismantle. ... burying it thousands of meters underground doesn't help because sooner or later (3:16). ??? but we can put the nuclear material through like a microwave machine and make it safe. ..

I have developed a system for sterilizing all the cutting instruments for hospitals in Africa. ...

(3:18).

.. Nuclear power stations are full of rare earth materials worth fortunes. They have space dust and we don't even know how to use these materials. (3:20). If you open a nuclear fuel rod in the power stations, oh my god it's not just radioactive material, it's some of

the things the Chinese will give their arms for it, as part of their rare earth materials, and you can convert a whole lot of it into rare earth materials. What we call rare earth material is space dust, our planet doesn't absorb it because we don't have the MG field for absorption. In a nuclear reactor we produce it. Some of the Nano properties are unbelievable. I would love to get involved in decontamination of power stations. I have developed a T for it and it doesn't cost much but it makes a lot of beautiful things with it. We don't even know some of the materials that we get out of it. We haven't even seen them, we haven't made (a place) for it in our Periodic Tables. Some of them shine and some have various colors that we don't usually see. It's beautiful to do. Give me all the nuclear warheads and I'll give you back a beautiful toy. Any other question. (3:22). Q: Is there a transcription site and about the 243rd workshop whether that has gotten transcribed. A transcription site is under public teachings in KFWiki.org ... In how many languages do we get the transcription now? We need a lot of transcribers and translators. The team of transcribers, there are 47 of them, yeah? (3:24). That's in the Zoom chat but not all of them are active in there. Our English group has dwindled, 6 or 7 that are doing the English subs. Then there is a French and German team and Polish. ... We need a lot of transcribers because a lot of work that has been done in the past has not been transcribed. It's a very laborious job and a lot of translators give up after awhile. One of the longest transcribers is Dr. G? in New Zealand and he has done it for a long time. They are sold on Amazon as a package. Q: Is there an update on the KF space program? We are working, (3:26). I was with the Chinese system a couple of weeks ago. We have literally depleted the whole reactor system. We have no energy left. We shut it down last week. I was there when we shut it down. It's getting reloaded. What happened is what I explained some time ago, we have a surge on the 22nd of July, in which we blew out the, what happened to Rick, they blew up the sub-station in the area. We informed the government that it would happen, I already told you. So they couldn't do much damage to us, but there was some damage done. What has happened is the reactors in the space center. I have videos but we prefer not to show it because there are a lot of details with it. We have a twin system, one system more or less, all the reactors are ?? wired up ?? any fuel. Literally, very small. The second reactor, which gives like an electron and proton, we see massive amounts of Gans's in this area (towards the other reactor), the other Gans's in the background are all depleted. Being depleted it, for example if you use a material which is orange and you (now) see it as a total white, there is nothing in it. This is why I decided to step up the teaching to plasma Gans which is the fields. (3:28). You run the reactors, the PI production is very heavy. So let's say you have a Gans with this color in your tubes, what you have left is just a white water. I have picture of it I can show you. We opened one, it is totally white clear. Rick I sent you a picture of it. This shows the effectiveness of the conversion of the matter into energy, It's very interesting to see. You see in the picture how energy has changed into some material, and how there is nothing left in it. The reactors were loaded. ... It's totally depleted. I washed the bottom of the cores. There are hundreds of these in this setup. Shows the picture. (3:30). This is near enough the color of the original loading and this is what happens after depletion. Energy transfer, huge amount of it. All the cores in one system are totally white clear also. We videoed it. What has happened in that surge is the back energy has given energy, different system loaded, and the front system has loaded up into space and created that huge surge of energy. We see the conversion of material to energy. Matter to energy in the PI condition. Some of this what you see that is black is Deuterium. Whereas here (in this one) we are totally on Tritium and D3 plasma. We don't call it Tritium but D3 and this is D2, and partially H. This conversion has been so much, the energy release that created ??? spherical ??

under conversion. Into energy. This system was dismantled, I was there we switched it off last Tuesday morning. It's getting reconstructed, a lot of things need to get changed to free .. free engines ??(no motors), rotational dimension with the PI. (3:32). And no liquid in the systems. I think it will be ready in the 3 or 4 weeks until we can get it reassembled. We ran (it) for 1 or 2 months to see what is the outcome. We did a live test on it last week for 2 days when it was obvious that there was nothing left in it, we couldn't create anymore for the plasmas. We videoed everything, I have them but I prefer not to show. You can listen to part of the videos. It's totally white, clear, there is nothing left in these cores. All together there are a huge number of reactors involved. ... (plays the audio ..). ... there are Gans's left in system 2 but #1 is totally empty. We have consumed all the plasma. All the Gans, the energy of it is gone. It created as we know the surge in the electric power. It will be a month or 2 before the system gets operating (again). But the storm late that night created a havoc in the system. It was repaired but there is no energy left, we tried to see if we could revive it but we couldn't. (3:34). So we are going to setup 2 of the reactor load. And so ?? we are still trying to move the soul, and 2 other KF teams who are working on it are very successful and they are still going on. Anything else. There was a detailed question on Glysonate. .. (3:36). Caroline asks we are facing on the One Nation platform, a dilemma in one of the Commandments, if you could give us a head start. What is the dilemma? The Commandment is, Thy shall not rape ... we'll talk about it there, not here. Would you be so kind as to join us on our platform? Maybe. ... As a member of UC I would like to bring attention to a lot of mayhem going on because of hurricanes ... That we give from our soul to help those going through all those changes. (3:38). If we could create a moment of silence for all those going through , that would be kind. SILENCE... ... thank you for the wonderful teachings of the discs. (3:40). Have you managed to do the tests on the discs? I did pickup a good sheet of Cu ... Can I give you an insight. If you use discs, what we call Gans containers .. run them opposite to each other, you will see very strange results here (between them), much more effective then cores. If you are very observant you'll see a float of lights, the lines of interaction. Putting the fields on top of each other is different then putting them across from each other. You should see a twist of lights if you can choose it. It depends on what PI current you apply to this that it create what speed of rotation. This is part of what will be as part of material production of the KF systems. You can create a lot of conditions but you need that plasma unit, which comes from the energy of the plasma itself when it is done properly. (3:42). Instead of running the discs in front like Tesla did, or whatever guys have done, to run Nano material, you can run PI rotation, even in that way you see the fields in between. The levitation or lift through Gans plasma technology it will be very different and much more powerful. Don't forget to join us on the 19th, it's a private meeting but we need your support. (3:44).  
END
