

## 246th Knowledge Seekers Workshop - October 18, 2018

( , )

(:15). .... The teaching of the last couple of weeks in going into what I call the ring, or the flat cores has caused a lot of problems for a number of active people because they don't see how they can make it. They could handle a motor before, (:18). where they could find a way to just stick a ball on it. Now the problem is how are you going to turn around the sphere. I taught a little bit last week and we'll carry on with the same line of teaching, that you were happy with your motor and now you have to become happy without the motor. As was said, one of the biggest inventions of mankind had been the wheel. Now we fasten the wheel and your lost. This (sphere) you could associate with turning the cart, the planet, but with the flat core you can't associate with turning, but if you turn it this way (top view), you still have the same (circle) you're still home with what you feel comfortable with. This time the rotation is here. In a way if you look at it from the top side there is no spherical shape. In the future when we develop this T further, in the near future I'll teach you, what you have seen in the past what we call the "cigarette" shape in the space (UOF). It has nothing to do with the flat core, it's another mode of traveling, it's very much clearing a different direction and dimension of travel. But even when you look at these cigarette shapes they offlow more or less the same. (:20). there are a number of ways of creating the cigarette shape, what we call a long tube you become like a ray but you create a parallel. In some advanced space T programs you'll see the cigarette breaks in 2 halves. What in fact it is, is 2 systems working in parallel, in tandem. It's usually done in towing system, in what you call carrying forward. The 2 spaceships are locked in that way and you cover yourself. This is done in many cases for creation of fields ?? When you have a field disturbance you cover yourself, you absorb as much energy as you like. This is your shielding, and both SS feed from each other. And you absorb what you need. You choose some systems that use this method for space travel because it suits them, it's the way they came to the knowledge and they developed it, and they stayed that way. It's very much like an electron and a proton, they understood the need for a secondary system and they've locked it. It's very common, you see these systems. There are very few races in the space that have developed this and when they come to earth we see them as cigarette shapes. They have a specific way. And sometimes they split up and you end up with 2 circles. If you go into the archives of videos you might find some of these. But at the end of the day, the new systems that we started talking about 2 weeks ago what we call the ring systems. (:22). These you can't rotate as such anymore. Because in the spherical shapes you managed to create different spheres (inside). In this one (flat) your spheres are internal but once you rotate the system everything else will rotate. You can use a pipe rotation, again go back to mechanical. The most advisable way to do it, and there are a number of KF teams doing this now, is as I said last time, you have to be able to feed the PI through the PI by the energy. The speed of rotation or the speed of MG fields, or physicality comes directly by interface change of the field flow of the PI ?? to reach this. The discs can be stacked up upon each other or as I showed last time in different sequences. These are all that needs to be done. Not many of you will go into this territory because you lack 2 or 3 parts of the knowledge. First how to create the plasma current at a very high level, secondly how to create a disc that you can control the layers of the PI, and thirdly is the field PI when there is no liquid in this, but you have to create conditions that lead to what you need, trusting and knowing that you have the PI you need inside the system. I saw one of the K Seekers going back to coils again, and that means we are not happy with the new teaching, before you were very rapidly

coming up with new systems. (:24). In a very short time I will teach you how to create these very high level PI, 1 watt in electric current flow could be millions of watts in plasma flow. You only see 1 watt of it because the rest don't fit into the bandwidth, but they are there. You can use different bandwidths at the same time. Plasma flow is exactly like the PI itself if you remember it all sits on one (draws the spiral), it depends on where in the flow you lock into, that you can jump into and move across. It's not the strength according to position, but it's strength according to what it has to do and how we see it, and perceive it. You still have 1 megawatt if you go from this point to this one, or from this one to this one, but you have to understand how you create it and in what direction. Go back to the teachings of a couple of years ago, in the PI flow you always have to remember that it doesn't just flow in one direction, your G and M balance usually counts. Are you going towards the G your PI flow, is it stronger in G or in M. I'll keep on covering this until somebody shows the first disc reactor. That's the time one of you sooner or later (:26). will come up with a physical development of this and then we'll start moving. The new understanding will come in and we can show it and you can see it moving. If you have a problem with this go back to your systems where you produced Gans's and you used Gans's and put 2 buckets of Gans's next to each other and see how the fields flow in respect to each other, different layers. And how the speed of rotation changes as you move one box nearer or further from the other one. These are steps we have to add to the knowledge and I keep on touching on it very softly until we see movement from the spherical systems to the ring systems and then we'll see how we can move on. With both systems with the new present knowledge we have passed any (use of) motor, which was eliminated some weeks ago from the operation in the Chinese space program. Now another KF team has moved into this part, you'll see what they have understood very soon, because now it's so simple. You'll see the first non-motorized, very much the way it works in the U, actually commercialized, then they'll be delivered. It will be very hard for Chenlin who worked so hard to get these motors and everything else done, and now we have moved a step up. two KF research centers have moved into (:28). non-motorized PI flow. A third one (KF) is working on it, but the confidence has not been gained.

... The KF research centers are working on this and it is very simple. It will come to you and it's the next step up. (:32). It's not theoretical anymore. As I said, when I go to the research centers I teach and bring the new technologies online and this is what you'll see very soon. It's very much what you saw when you started with the coils, if you remember, maybe a year ago and then we went to the dynamic cores, and now we are into what I call plasma ?? flow. It's very simple, you can even choose a spherical shape or the flat shape. If you go to the spherical shape you can keep the integrity of the cell, but you can target the center of the cancer. You don't touch anything, you just disable the cancer. You can watch it and see as the field flow depletes the cancer cell. Because now you control the field flow, as I said, before of between the two. You sandwich the body, in between, and you want to take the Ca out of the breast tumor, you target the cancer on line and by controlling the power flow you just deplete the Ca within seconds no cancer center, what we call flourish under. We can increase this into further cancer developments in the body itself that the process becomes what I call a natural way. You walk into a space and walk out (cancer free). At the moment they give you huge amounts of radiation. Now you go for a PI flow, (:34). you watch there is no harm done. The rest of the cells stay in tack, because it is targeted only for Ca, wherever it sits. You can take the tumor, understand the composition, Gans of the Tumor, and play

the same game. You can do the same in reverse, let's say you want to build a tissue in the heart, you have a heart ?? , you go through the same process, but you remember you have the polarity, one has to be bigger than the other one, how are you going to work. Now we reverse the system, you bring it in and you make it very much like, do you remember positive and negative, north and south pole, you put 2 north poles together and in that process where they meet, the strength of the tissue, and you can just build that tissue up at that point. It's extremely easy and changes the game in a lot of things, even in the production of the systems. In the very near future if you understand things, you can create constructions of anything you like with what you need at the point you need. You can just build on to it. It's very much like what we call the 3D printers. This is the next step up, with the beauty that now with the KF we'll put into the market. I have seen the prototype a few days ago. As you are producing gold and silver or whatever. Now as you produce you can allow it to create construction if you don't need to hold stuff. I told a few weeks ago, we bring and change industrialization totally, it'll have a different meaning. These (discs) are part of the beginning of the new development. You don't need any current flow from the wall, you can use the PI units which create plasma current, you can control it. (:36). You can't control, as we saw in the Insano, after a certain current the whole thing doesn't work, rotation doesn't come into it. In the tests we have done in the Chinese space development, we can run an AC and a plasma current concurrently on the same line. They don't interfere. They live 2 different lives but the same pattern, you can have an AC motor and your PI reactors on the same line and they just carry on doing what they are set to do. This is the beauty of it, because even the electric current is part of the plasma spectrum strength field. These are the new changes we have to, not we have to, we'll see in the coming weeks, it's on the horizon. We have no choice but to push this out. This gives me another dimension and that is, what do we need to do, if you do the same thing, and you put something in between (the reactors). What would you like to add or take out. Nuclear warheads still sitting in the ship. We know the range of plutonium and uranium. The beauty of it is, while you are watching it, you are dismantling it. This is the power of the new T and you'll see in it in the next week of two. (:38). Because nowhere in the warhead is plutonium except where it sits and we know the ignition system. The hollow ?? blood. Any aircraft carrying warheads, doesn't matter which nation, now we can directly ... the bullet is there but there is nothing in it to fire, you take the elements out. This is fantastic because if you travel as much as I do, all we need to do in the airports and set the parameters of the strength, you don't need to ?? a street ?? Anything that has a weapon or let's say certain chemicals you target with the field strength and it just takes it out while you are passing through. It's the security. We need this in the deep space, because we need to take certain fields out of the way, or we need to carry certain fields into another position, ?/ energy. We can't just absorb energy, anything in the space just because it's a field. We can only absorb from the fields what we need at the strength we need. These are part of the space development, which is translated and back into what we call security. We can change a lot of things. We can bring a lot of advantages with what I call national food resources. You can target people to feed, they just need to pass at the field strength that you create any protein to, you just create a tunnel, as they go from zone to zone they pickup protein, Ca, Na, (:40). whatever they need that they walk out and everything they need has been met. When they are hungry again they make a circle, in a weeks time, 2 days, or in a few hours. This is not something which might happen, KF researchers are on it. It will come out as a product. KF will market, I was hoping to see it today, I don't know if it's done or not, you'll see the first unit where you can produce materials. Where you can produce Ca, Na, silver, whatever you need. We

told you can do, there are a number of researchers deeply involved together ... not only can you produce the material you can make a construction of it. You can decide where you want to put it. As I said, a 3 dimensional printer but no ink and no material in the background. It's creation of the material according to the interaction of the fields. Exactly what happens on earth when the sun and earth and moon fields interact, they leave certain kind of fields that leads to creation of materials. We always look at what field strength absorption or interaction of the fields of the earth and the sun creates. But the same kind on of materials on the weaker or stronger ?? between the moon and earth too. The moon is provider of a lot of energies for materials that are not in the spectrum range of the sun. We produce a spectrum of fields from all directions that come to the planet. It's not always one direction as we always thought. (:42). It's the totality which we have to cover and some fields are too strong and ?? to get to the earth, so the compensation is the moon is used as a filter, or the M field of the earth and moon create the ??? .. what comes from the sky during the night, it's very much different then what falls on the earth during the daytime, light time. I taught this a long tome ago but maybe it's time to refer to it. As we go across the path of the solar system we produce different kinds of materials, as interaction with the other solar systems, stars, what you call planets and moons allows to be created. We receive a spectrum of fields continuously, it's not the sun, if we were always under the direction of the sun continuously we will not receive what we need as a total spectrum of fields. The night time brings its own energy, its own delivery of materials which we need. Partially if you look in very deep space and understand this work you can translate it very easily. Why do they say you absorb more CO2 so don't sleep under a tree, because a tree is ?? CO2. Look at what condition and what material are released by the interaction of the fields of the sun and earth. On the other hand other stars in the galaxy, other moons and planets in the solar systems. We need all the full spectrum of the field forces to be able to be, to survive. (:44). The whole structure ... now we have to open our eyes to everything else, this needs dynamic systems without any rotations using motors. We have come to pass the step when man ?? grows. We grew, we acknowledged, we developed new .. we came to create engines to create rotation. For the first time we have moved in the direction where we create rotation without any motors using plasma currents, which again comes from non-dynamic systems. this is the evolution, the next step in the knowledge of man to step up where we don't rely on rotation at all. Most probably when you develop your system what you'll see ... I brought the static, you don't see any rotation in your fields, in your Gans's, but the energy induction allows the field transfer to occur on the plasmatic level, and what you have is not an electric current but a PI current. You decide if you want to build or take out. The new plasma reactors what we call the generators of the systems which you'll see very soon are in development. (:46). We were told that we can't use the generators, plasma in China. Now we are developing and completing the new generators, outside in the West. Because the new generation of PI reactors don't use any motors, any fuel. It uses the interaction of the fields. It's very much what you want to collect on the other side when I have ?? Brain tumors, building structures, these are all part of the development of the T. If you look, this is in part of the patents, now you can see it can be done. Some of you would like to elevate your soul, how can you do it? Some of you part of your intelligence or part of the brain which needs to be processed from what I call ?? In the next months and years as people like Dr. Rodrigo and the others move and understand the work of the PI, you'll see how fast we go through evolution, in a matter of hours, literally a matter of seconds in the life of man, compared to when we started teaching you we have jumped, leaped frog the whole world of science. A new understanding a new way. What we are looking at in understanding

these things and creating conditions (:48). how we can make cells in the body. The game to secure man in the space has changed, in what we know as the physics has changed. How do we do it? Only a handful or very few of you understand this process now, but in the next few months and weeks as suddenly one of you shows one thing or another, you all will leap frog. The PI system reactors are ?? and it can be shown. But what are you looking for ?? ?? working in the PI condition. Now we have systems that can use systems that we have already developed. Now you start seeing the beauty of the T and what is to come. It's in the patents, that you can use this T to cut, as a laser to cut, to bore holes very easy if you understand the PI. Let me explain, I have to open it so you understand. If you have a PI flow in a system and you have a piece of metal, (:50). ... you change the PI flow, 1000 to 1, what's the field flow and how do you decide to flow it. If it flows at the strength of the melting point of the metal, you bore your hole. But with this process there are no residues because you transfer the field strength of the Al and the Cu, so you receive the energy of it in this part. These are all in the patents ..... to create these kind of things with a spherical reactor was nearly an impossibility. Spherical reactors are good for the creation of MG fields ?? in systems. The ?? ring ?? are needed for the ..(unclear ...) now we look at applications of it. It will inspire someone somewhere and they'll start working on it and we'll see what it brings. (:52). You can see how easily you can create the field strength of the STM. Do we need to imprison, to except guilt, or do we just need to elevate. The time of killing of murders is over. ?? The beauty of it is I teach you something, man with the knowledge has to fully mature, can not deplete another soul. You don't know how. But because of the field strength delivered to it, you can always receive it. I'll explain the reason. I always said that with this T no one will be harmed. Unless they ??? My wish is whatever, it comes through because I wished it, I released fields for it to be done. It can't be taken from you unless I want it to be done. ... Use the system in a very different way. (:54). You beam them up into space, use it in a different way you heal the man with it. If you have a cancer which is psychosomatic you elevate the fields of the strength of that emotion at the point of the cancer. Then there is no cancer because you elevated through the soul. In the coming physical time, as I said, in time we won't have mouths to feed ourselves, we'll feed the STM as man creates the physicality ??? I'll feed it through the soul ??? .. every man can do it. I am hoping that the team that is working with this to deliver the PI probably a new generation for other applications ??? you'll see these systems very soon on the table. Any questions. Q: In the teleportation unit, if I put a stuffed teddy bear in that field and I want to send it from one office to another. (:56). How do I reach that destination, what determines that destination? You have to target the destination. Q: with thoughts? You could do but you have to understand 2 points, how are you going to target grandmas house in Australia when you are in US? There is a process of matching systems and one for targeting systems. 54

(1:06).

(1:16).

Q: How can a SS traveling in space be protected from the rays of the sun or other stars so that it doesn't overheat and burn up? Oh, that's easy, next question. Maybe john can tell us. (1:26). John says, I don't know the answer. Back to school. Rick says, if you don't know the answer John how are you going to make a SS and go to space? Oh, he will don't worry. Rick says, I think he will, he knows the answer but he's not telling us yet. You see, M shielding as part of the defense T is very mature. Depending on what

field you cross you strengthen your shielding. It's the same process, you just increase the PI current flow. It's not that you have a generator. In the space T once you mature enough and understand the process, you understand that you have a field flow, and by the slightest change in flow you create a huge amount of current. You can increase that current into your shielding. You go one level higher. Go back to last week's teaching, physicality is created through the interaction of the fields and through the interaction of the fields it creates energy, it's a plasmatic energy. There is no conversion to the matter state because there is no 3rd state to convert it. The fields of the sun in interaction with fields of the earth create fields of O, but it stays as a field until it interacts with the G field of the earth in the dimension of the Inertia of it, then it converts it into the matter state. The U is full of entities, unless you match to the Inertia of the matter state. (1:28). This is how matters appear on this planet and this is why we only absorb certain materials and not the others in the U, because the Inertia of the planet dictates absorption of certain fields and that converts what is in the space into the matter state. We have taught this before in many teachings. When you come to a very hot sun you create very strong fields at a further distance out, and if it is too hot you create a 2nd or a 3rd layer, or as many layers as you like but you make sure through understanding of the flow of the PI in a reaction of ratio of delivery, this one goes this way and that one goes that way. Any field that comes ?? stilled by friction can be reduced. Part of the layering of the reactors was this, now that you understand that you don't need motors, you just need to know which layer you need to increase the PI field flow. I said, to our friend who was selling a lot of motor for plasma it has come to an end. If a lot of you understand the process. I am sure you can receive the new systems from the research centers, you can purchase as a kit very soon. The time of man's dream of rotation, of motion through mechanical motors is over. Long over. We have finished with industrialized motorization. (1:30). I think when we show the first ... I was hoping to show today but I don't get any answer if they are going to show it. 12

(1:32). Armen Q: When you say to increase and decrease the PI current, how do you do it? You need a PI power source. Q: I understand that but how can you increase and decrease, does it have to be mechanical or a different way? (1:34). No do you see any ... Marco favorite word, gradient. There he answered you. ... a bigger ratio will give you a larger PI flow. Go back to the ratio, remember we said, 20:1 now you go 1,000:1 45

(1:40).

... A lot of you, part of being physical, (1:42). You know that earth has a soul, so does every star have one. How many of you can close your eyes, not trying to say, I close my eyes I don't see. How many of you can see the soul of these planetary soul. Even look at them with the open eye and try to see the soul. Stand in front of your wife and child and see if you can detect and feel their soul. Man has to go that way. This guy is not from earth, he has no feature but exists there. Man has no eye, you don't have a radar system. We lost our trust in our own creator which is our own soul. We are not playing magic anymore, it's not something for fun. Gradually we have to. We have to elevate our own soul. If you look at it this way, he draws a PI spiral, our soul as a human being, we are operating at this strength, we have to step up. Because at this strength our soul is in communication with the rest of the souls. Where do we want to go, with the soul of humanity at this strength, or the soul of bla, bla and the rest. Man will have a hard time in the space if he just tries to look and see what he can see. (1:44). Because some of the souls have no physicality at the strength of the man. It is not very easy, but it is the

beginning of. Would we come up with soul vision, like we have night vision glasses. These are the steps which we go through. A lot of these things which I taught today and the past few weeks and some times. Then you come and say, oh you said that in that teaching one hundred and something. Just remember what I taught in 246 in 2 years time. It's not .. We set the path, as I said, I don't know if I spoke about it in the past times. I wrote to one of the K Seekers, A Messenger, when he tells you there will be such and such a person, in such and such a time, in a thousand years to come. It's not that he has pre-seen. He has set his own soul to be guardian that his work will come, will happen. And it comes through what he said, the way he said it. Because the souls when they commit themselves they achieve it and do it. (1:46). In so many ways, when I wish, it's not a wish, when my soul decides, it will become my wish. Then we understand more about the world of creation. 23

(1:52). Q: You once said, we can succeed or fail according to our beliefs, what are plasma beliefs, how do our perceptions and beliefs work into the plasma point of view? My explanation is very simple, in what you think is right for us to have and to be in and to exist with it. If I am a Moslem and I believe that killing and shooting is my way because Mohammad said, so it becomes my belief but it is not what Mohammad said. Or do I become a Christian in my belief and I do everything wrong and I go on Sunday and I put a pound in and that's it my guilt is washed and I start doing it again. What made us believe or is it the way we accept to be. Our belief comes from what we think is our right to have. (1:54).

(1:56). Rick shows video of sky formations. Mr. Keshe says these are natural air flows .. (2:00).

(2:06).

.. The lady says she wanted to sow that here in Denmark there are a lot (2:08). of trails in the sky, when clear weather no trails and then suddenly lot of trails. The atmospheric condition decides the manifestation of the trails and not the plane, the pressure and the temperature and a lot of other things. It's not that they changed fuel, it just the change in the atmospheric condition. Anybody can tell you this, you don't need to be Einstein to understand this. Somebody Google how many jetliners Boeing put on the line last year. ... the ticket prices we pay covers the costs of parking all these (empty) planes parked at the airports. (2:10).

... (2:12). ... double standards ..

(2:14). .. chem. trails. ...

(2:16). Q: Is there a way to use this T before we start the space travel to clear up some of the pollutions that are in the air? I have the pleasure to say yes, because the Chinese KF has made a system, which is actually sitting in Italy, for the team in Italy to make their move. You connect this unit to your car and according to the governmental test centers, they have reached zero emissions. ... there is a need for it in the car industry they know what to do with it. ... these are 90% ??? The spending of the (airplane) fuel creates these cloud, there is some waste in it, we took it out of the ground and now it's in the tank, where do you want it to go. With the new PI T we can change the composition of it (2:18). as we need we change the energy of it, we don't need to go through a matter state conversion. ...

Q: So we'll have a transition period where we clean up the water and air until we are ready for travel? It's time to do it. ... we saw literally whole trees burnt from the drought in Europe. Old and young trees. (2:20). thousands of trees in Northern Europe. We need that moisture in the chem. trails. ... .

Can we put Gans balls around the trees to change their environment.

(2:22).

... the Kiri trees have started growing spring buds in autumn. We have managed to change conditions. (2:24). ..

.. I am going to be very direct. The AA which has made the oil and we take it out and use it as a fuel came from the upper atmosphere. Now how it is composites together, consider different conditions and how it suits us. We have to look at the cycle of life on this planet and become realistic and not just what and when it suits us. (2:26). We have the sun the source of our energy, life, existence, and we have the earth, what does it do. We create from the interaction of them, fields, then we convert the fields into a condition of matter state for life as we like it. We now have matured enough to convert the matter into Nano and Gans and back into the ?? smaller sun. How many of you have ever considered that when you made your Gans's, is this what you see, all that you made, or have we created some Gans that are the MG fields of the sun and have already ?? Do you remember the story of the orange and the water it's no difference. How many of these Gans (which you made) have already come part of your body. How much of it has gone into the trees and plants. We did an observation in a test in a cornfield, the farmers left a Gans (2:28). container here, and I was there a few weeks ago, and these are all lines of corn, to get the Gans for the other fields they have to go through this field, ??? every thing put together. I picked up some corn from different place and the corn near the tank is fully matured but the corn away from the tank still has a long way to go to mature. Those of you who have Gans containers in your house, you are continuously ?? .... look at your habits before you started the Gans T and look at them today. We ask them to tell us what the emotion of the workers who go and spray these Gans's are. There are happy to be putting Gans on. (2:30).

(2:36). Carrie and problem of ant infestation in trees and house .. (2:38). Pictures. ..

(2:40).

(2:42).

(2:44). The Gans is actually growing the ants. ..

(2:46).

(2:48).

(2:50).

(2:58). ... Dr. Gaotoa says they just apply wood ash to where the ants are and they move away. Apply dry, it burns, it's alkaline, you can make caustic soda out of wood ash. So they just leave. Mr. Keshe says, yeah but wood ash is a Nano particle too. In Kenya farmer use it and it's beneficial to the soils, and it sends the ants away. (3:00). Caroline says, in Ghana we made a corridor to prevent animals, creepy crawlers, we just poured CuO water around the house and they just don't cross the barrier. ... There is enough information of what animals like and dislike. If you can make a Ca Gans to remove a cancer, you can compose a specific Gans for ants that they don't like it. 59

(3:02). Q: I used to do the 4 Gans's for the ?? pavo virus, does a virus carry a soul? Yes. So then we have to find what they don't like, because I used the CuO Gans to literally kill them because they were killing the dogs. No, you don't (kill), you create a new energy condition. A virus is an energy added which has an AA strength, or linked to an AA strength. The viruses are packs of energy which they mutate within the presence of AA or they live within the presence of AA. They have a cycle of life but on the other, you don't kill, you deprive them of the energy which are effective to us. Without viruses we can't live, we all carry different kind of viruses, but at a certain strength they become

dangerous. If you use (how come if you take this it doesn't kill the other things but it kills only this) I said it's the dis-balance. Because when you give a field everybody takes from it what they need and equal, and if the virus has more it has to give to the others to bring up what is depleted. the way this T works in the virus basis, (3:04). or in. We have to understand the science behind these things as a PI T, then we change it in a totally different way. 22

(3:08).

(3:14).

(3:18).

(3:22).

(3:24).

(3:28).

END
