

247th Knowledge Seekers Workshop - October 25, 2018

(Meeting of the Core Team about November 1st peace, Wife of the presidents, Teachings start :47min, We need to know what a plasma is and be able to explain it to men of science, A plasma is like the skin of a sheep turned inside out and the hairs are like all the fields being freed, Why is light sometimes a particle and sometimes a ray, The difference between Rays and Fields we need rays to make a field and the rays within the field can become rays themselves, A ray has only M and singularity of direction, A field has both M and G, both a ray and field can become a plasma, At a given point of the MG field there are barriers that require different strengths to go through which are similar to the sound barrier in matter state, This also applies to the soul of the man, At this point in time we are pushing for man to reach the first plasma point of interaction which will elevate the soul and then there will be no need for physicality, The totality of the knowledge under the banner of the KF is the knowledge of the Creator and not of man, You have gotten stuck with your reactors you have fields going out and also fields coming in the balance of the 2 is the direction of the plasma, A plasma is dynamic in every direction, The process of interaction of the fields and compression of the plasma is the secret to man's access to the universe, The interaction of the plasma of the 3 layers of the skin create other fields and matter states this is a model for the spaceship, You have managed to understand how fields change to energy and energy changes to fields and in that interaction they create the matter state or the plasma state depending where we are, You have inner and outer skin which leads to creation of the bone and muscle this is how the floors and walls of the spaceship will be made, Because if you understand the rotation of the plasma in the perpetual condition then you don't need a turbine or a magnetic field or copper windings to create or release energy it becomes the same as the rotation of the plasma of the sun and the earth which leads to creation of everything, Our body is totally plasmatic but it manifests itself in the illusion of matter, the fields of the environment and the fields of the plasma in interaction slows enough that to you and me it becomes a matter state and if we increase it and feed it from inside it becomes a plasma state, The body is always spontaneously pulsating between the plasma and matter state, When asked if this is what is called the subtle body he doesn't directly answer (as these are someone else's concepts), Instead he says, RNA is created by the STM in interaction with the soul of the physicality of the man. Whereas the DNA is created by the interaction of the physicality of the man in the dimension of the plasma, One day I'll teach how to make RNA, Explains why light behaves as a particle and a ray, Explains why gets warmer closer to the planet and why we have seasons from interaction with the Inertia mass of the planet, The RNA of the man is the collection of all the interaction of the fields of the past times of the same fields, If you actually make Gans's of different ratios and put them on the disk you'll find out they hold their position, and they create their own gradient and their own motion, Explains that when 2 magnets fly together that this is space flight and that even iron magnets have their own M and G fields interacting on each other this changed NASA space program, Armen shows current flow on new disks that are fields, We are trying to push you away from current flow and work only in the plasma, We don't work around resonance in the plasma, Shows silicone balls soaked in Gans, Man is institutionalized with the work and rotation of this planet, How to ease the fear people have of going into space a way to temporarily experience it, You do it in your sleep, Mr. Keshe tells about his own experiences with detachment from the body and how as a child he started separating himself from his body and seeing it from outside, That's why we dream it is a connection between the world of physicality and real no dimension and

the creation of the work of the soul, Detachment from physicality is the key, Does the soul have gradations or levels of understanding? -- It's us who decides what to open the physicality to, the soul has all of it, when you reach the point of maturity of physicality you find that the soul you carry doesn't fit because the soul hasn't upgraded itself, , The prophets became profiteers for what they could have, You have to realize the STM has to be aware of physicality and the physicality has to be aware of the soul, He talks about how he refused his mission at 18 and 28 because he wasn't mature enough to handle it, It goes better when the prophet has matured with age, Christ was too young,)

(:17). ... (:20).

... Last week the Core Team met ... and we asked many of you to support us, (:22). was to see how we could use what we call, the calling of the CT to support the wishes of the KF. The wishes of the KF is more or less sacrosanct. We sit there without expectations and we are there to serve. Most of us have been there from the beginning. We do not count on the physicality, we count on the soul of the presence. ... what we have discussed and considered is the creation of peace and (due) to the situation we see a number of points have been raised. .. we tried to concentrate on what is needed to be done. The CT is well known to be established this way and they get what they wish. They have always achieved in their endeavor to attain perfection and reach most of what they wish to do, ?? a second time. ... one wish we all have is peace. We see establishing peace major in the coming week from the 1st of November, when relentless efforts are put by one nation, actually 2 nations, 1 is US and the other is the State of Israel, the 52nd state of US, to create mayhem in the Middle East by sanctions on Iran. Whatever reason they see it as their right, (:24). but the reason that the KF and the CT sees is to elevate the soul of the world leaders who are involved in this endeavor. To elevate their souls and what we came to understand is that the world leaders have reached where they are on the shoulders of those who support them from even ?? , in a way, no one knows them. But there is a backbone into the success of these people, and it's called the wives of the presidents. Some of them endeavor to be part of the whole establishment and some are pushed to the front and been put there. What the CT has asked to the supporters of the KF is to elevate the souls of the presidents and their wives, especially their wives, that by elevating them there are those who whisper to the ear of the presidents and most of us as men we know that when it comes to what we call wife we are absolutely powerless. And we always listen and in so many ways we obey. .. to listen to the message of peace and elevate each others soul. ... we'll achieve peace in a correct way. ... one of the key players in this process is president Zhi of China. He has brought a lot of balance and with it he has become a key player for world peace. The end of wars come if China would not have taken its past position that it did. (:26). The Chinese government has decided to be involved in development rather than in warring and conflicts. The American president Trump has chosen a path of war, the same as is embedded in the Whitehouse through his son-in-law, the State of Israel, as we know Trump has married his daughter to a Cohen of the state of Israel, one of the richest families, and they are dictating most of the terms in the Whitehouse. We pray for both ...

(:28).

(:30).

... As the Core Team has advised that we take a minute of silence for the world leaders and their wives that we achieve world peace. (:32). I think all of them needs elevation. When the Core Team meets we usually take one leader at a time and each member supports the soul of one leader. **The CT decided that this time we collectively support the 10.** And hopefully we'll see the result. .. to elevate the soul you will not loose much, you'll gain much more. This is what we need, and what is to stand. The main player in this game is president Zhi of China without a shadow of a doubt. One of the worst things we can do is to take one without the others. To elevate all shows that we have matured. We have reached the point of maturity and have understood and reached the strength of our own soul. Thank you very much. (:34). Rick says that as a member of the CT that he is present with this ... and may we reach their souls. I have an idea, why don't we invite all their wives to eat and forget about the world leaders and then we'll achieve what we like. ... There is a club called, world leaders wives club and they meet sometimes on a regular basis. I know a couple of presidents wives who are very proud to be a part of this organization. (:36). They have access to ?? and some of them work in the background. 09

UC members say they are present ... (:44). ... peace talks between nations is not easy. ... how they push the human boundary to accept pain and suffering for no reason. There is no reason for war nor for tools of war, but somehow man for centuries has chosen this path and it's now time to switch over and move away from it. It's time to mature and the science of man has reached a point that goes beyond this planet and there is no war in space, and the time man matures and walks away from war is the time that man can walk into the Universal Community. The universe will be open to the man. Do we choose the path of suffering or that of elevation of physicality and the STM. Gradually we'll move away from the world leaders and be in the hands of every soul. Many world leaders decide to play games to show they have power but in so many ways many of them are still children in the knowledge of man. (:46). They need to be elevated to be educated more then anything else. 09 ...

Going back to education, the science of knowledge goes back to the basics of the teachings, have far we can reach in understanding the fundamental principles of the T. In the past few weeks we were talking about the PI, fields, rays, how, what and what becomes a ray, and what is a field, and what is a PI in its own structure. (:48). **Most of us when we are asked what is a plasma, we say, it's a bunch of fields. But maybe in the language of the science of man we have to explain it differently. What is the difference between a Gans and an atom? The matter clothes the presidents and the Gans can create the presidents.** The matter is what the man puts on himself to manifest the weakness in the structure of his physicality, where what we call the Gans or the plasma is the creator of man. **One is fields, and one is fields in a matter of tangibility of its stability.** What does this mean, how do we explain the difference between the matter and the PI. What creates a PI and what becomes a matter? The PI makes the president and the matter makes the clothes of the president. (:50). Many of you have a problem in explaining what a plasma is when a man of science asks you, you say it's a bunch of fields. But it's more then that. It is so energetic that **PI can manifest itself in the size and shape that can be seen by the eye of the man, whereas an atom needs collection.** When you can see an entity in the size of itself it means it has more energy and more fields to show. If I ask you again what is the difference. Can any of you try to explain what the difference between a matter and a PI or a Gans as we call it. How do we describe it. .. the easiest way that it can be understood, **it's a jacket inside out. This is the atom, if you turn this jacket of it to give the freedom of its fields,**

now this is your jacket, (:52). where the jacket sits inside and the inside is opened up outside. The easiest and simplest way to explain it. **It's like having a skin of a sheep and you turn it inside out. All those hairs on the outside are like the rays and when you turn it in, they become like solid, and it just becomes the skin. It's the same thing. Where in the matter state we see the skin, where in the PI state we see the fields. We literally turn the structure of the fields interaction, in the dimension of the environment or in the dimension of the field strength of the inner self of the atom.** There is no easier way to explain. When you turn the skin out you have a bigger dimension, you have all the hairs, the wool has to be everywhere, when you turn it in, you can squeeze it and you have a toughness, you have a physicality. Where you have the hair, you can move your fingers through the wool, it's soft and goes everywhere. For those of you who have a problem in explaining the difference between a PI and a matter, (:54). **a PI is when you get into a matter atom and you turn it to open, and it releases its fields.** This is the easy and beautiful way of explaining such a beautiful knowledge. We become more and more knowledgeable so we should be able to explain the knowledge in a simpler way. With the matter state which is the skin, everything is inside, all the strands of the wool hair, all in, but it comes out. When you turn the skin inside out, all the wool, every single hair is one ray, radiates, short, long. One goes one way and another goes another way. In this way we can understand and explain the true meaning of PI, in a simple way, where a child can understand. And this is the reality between the matter and the PI. An atom inside out, we call it a PI, it shows all its fields, what it is made of. But still the skin sits inside to hold the PI together, where now the skin inside becomes the Principle, becomes the holder of everything together. Those of you who can understand and explain the PI in this way, it can guide many people to **understand the principle of the Gans. What it is, Gas in A Nano State we call it, (:56). but in fact it's a PI opened up, it shows its beauty, that's why it shines, why it's white and it shows itself. In many ways the present science has chosen itself 2 point of reference, we call it the white shift or the red shift, does it come to us or is it going away from us.** Why is it white when it comes to us and red when it goes away from us? How do we explain this in the world of PI. There is one thing important to all of us and that is to **understand what is the creator of what we call a field and a ray.** Where is the line, how do we explain the ray and the field. **Why is light sometimes a particle and sometimes a ray. We need rays to make a field, where we have many rays within the field which can become rays themselves.** What makes a ray to move or any entity to move? **Can a ray become a PI or a field become a PI. The possibility for a ray to become a PI is as much as for a field, (:58). which can become a PI, because a field or a ray as we know now needs a point of reference that is stronger than itself.** When a field moves it needs in giving, to reach, it has to be stronger that it can move to a weaker. But **it doesn't hold G, it doesn't have the reverse fields with it. Rays are singularity of the direction** of the motion. In the process of reaching and receiving they become fields. Where the fields possess the 2 (M & G), in so many shape as a plasma. When the M field of the planet like earth and the M field of, let's say, the sun, **both M and G interact with each other, what do we get? A mesh mash of both rays and fields, where the balance between the 4 field forces (1:00). creates a particle behavior, where the residue which one of these left on its own becomes a ray. All the M fields are not exactly of the same strength, and in some point on the other they become separated, they have no matching opposite with them, then they become a ray.** The M field doesn't have the G field at that point due to interruption or whatever, of the strength of itself to manifest itself to become a ?? ray In the teaching of the past 2 weeks I referred to this knowledge because it's important to be understood.

It seems that many of you have not understood. When you have a field you have to have both the G and the M. But there is another point to the whole of this discussion, as you are a M or if you are G, you have a different position. If we take .. (break ..) .. the (M) field comes out and it spreads. (1:02). the same fields, that's the mother field of a higher strength, and it opens up. But **for the G field it's a different story, it has to get through to be able to join, it's got a hard task and it needs a higher strength.** Where the M field opens to the space, but G has to get in-between the space. **The order of magnitude is 4 times the ?? . Then it builds up, the higher strength you go in the curvature of the PI the order increases to the 40th, and 400th and plus if you can ?? ??** **And at every point of increase there is a new dimension of understanding and new knowledge. Because the characteristics of the element changes according to the strength of the MF field. At every point G and the M fields have to match and then one increases inwards while the other one decreases the other. This you will not understand at the moment but in the coming time you will understand the gravity of this knowledge, how important it is. (1:04). In the common language if you understand it, you call it a sound barrier in the matter state. At a given point of MG field, there is a continuation and the strength needs to go through, what we call different barriers of the MaGrav strength of the PI. You can't see the one behind if you have not reached the point of conversion, for you it doesn't exist. This is very much the way, even if you listen to the introduction part of this session today, applies to the STM. When the totality of the STM become peaceful man will pass the threshold of receiving more in the higher strength then giving to the lower. Because what is important at this junction is that you are receiving equally from 4 sides, again the same, the planets, and the earth and the sun interacted. It's a point of balance, and when it reaches a MG field point that it moves inwards, because it gains more as it is coming in, plus itself which is ?? mutated, and man's interest, next elevation of understanding. You will understand different, you comprehend totally new dimensions. (1:06). At this moment we are trying to push man to reach the first, what we call, the plasma point of interaction that elevates the STM that the man sees more and that that elevation of the soul elevates the physicality of the man, then would there be a need for man to take physicality. The totality of the knowledge of the PI T on the banner of the KF is the knowledge of the Creator and not the knowledge of man. Once the man understands and comprehends the depth of the knowledge of the creation, man will become wise to have his eyes open to elevate his own soul. To see through the eye of the STM which is comprehension of the totality and not singularity of the existence of one physicality. Then it becomes, when you understand more, why and how you create fields and how you come to divide the fields and interact the fields at any point reach the point of material state in that strength. Look at book #3 you'll see it. (1:08). The fields of the 2 (M and G) come and interact and create a new matter state and this is where we are going. Today's teaching is going in depth of the basics of the T, because many of you have not grasped this, and many of you who are practicing it and trying to develop different systems have gotten stuck, which means you can't go to the next step because it has not been fully understood, so you are stuck. And then there is something wrong with the teaching. The only thing wrong with the teaching is that you have not understood. Try to step up in understanding the simple part of the teaching, and then the complicated parts become simple. It's easy to teach but it is very hard to understand, it depends on the point of the understanding of the teacher of the man. Are there any questions up to this point. (1:10). We lost part of the critical teaching on the M fields, could you go back and describe that again. ... You were drawing the M tentacles on the right. The M direction is the free flow, and the G is**

compression. As the fields flow out as the M, they are ?? freed, they become, they push. But where they become G you get pushed on, you have to enforce, whereas the other one (M) is the freedom. As M (means G) **fields, as we flow in, we need more energy to get through, whereas with the M we have the freedom to go where we like.** **There is less resistance here (at the top) then here (lower in). (1:12). The choice of the word is very hard, but the explanation of the understanding of the totality of the knowledge is very easy.** And many of you have gotten lost in this pattern. With what is on the screen many of you have gotten lost. And that's why you can't move into the next step. Part of the teaching I was trying to explain last week was very simple. **You have fields in your basic reactors (draws 3 arrows outward), but what you forget is that you also have fields (draws arrows coming in) in your reactors too. The balance between the 2 gives you the direction of the field.** And this is part of the teaching, especially those involved in the space T have not understood for months, years. **You are dealing with PI which means it's dynamic in both ways. And it's dynamic in every direction. (1:14). The process of interaction of the fields and compression of the PI is the secret to man's access to the U.** Until you understand this you will have a lot of problems. When you **look at the skin of the man, you have the fields of the layers where the interaction of the fields gives the PI of the layer, but in fact, it gives physicality of the existence of the fields, you need one to be able to create the other, while the others creation depends on the existence of the first for the order of itself. What we see is not that difficult, we see the ease that the fields and matter intermingle and they change.** As it was said today in the KF it was achieved, **you have managed to understand how fields change to energy and energy changes to fields and in that interaction they create the matter state or the PI state, depending where we are. (1:16).** This is important for us to take the next step to understand. **The top layer of the skin leads to creation of the middle layer, by the existence of the middle layer we give the confirmation to the other 2. But the skin has 2 sides, you have arm, inside and outside, so now this has to interact with the other side. So your skin is not just on one side, it has interaction with the other side and the balance between the 2 dictates what sits between and where the bone and muscles shall be.** When we look at the skin on one side we think it's on its own, but the position, shape, color and size and thickness of the skin dictates this too. **If you work in the space T and you ignore this, you'll always have a problem. But at the same the confirmation to exist of this, it needs to create that PI field of its own that it can lead to the manifestation of the physicality.** When you look at the skin, and man matures enough to understand further in the structure, **the skin of your hand is totally different (1:18). structural wise then the skin of your upper arm, this supports longer strength fields, and this one shorter strength fields. The skin dictates the position and thickness of the bone, ?? You have to remember that the brain was grown first and it is part of the skin, and that is what leads to positioning of the bone structure.** This is the same in your space T. When you understand this **then you'll understand how you create the floor and walls of your SS. How is it created? By the strength and condition of the skin, it dictates the size and strength of the floor, and the dimension and diameter of the whole SS. There is no difference between the skin of the man and that of the SS, it's exactly the same. With the difference that with the skin we don't see that kind of motion, but with the SS due to the dynamism we'll see what we call the skin of the SS. When man matures and travels the depth of the U you'll see spaceships that have no physicality or ones that look like a jelly to you, but it confirms the existence of what it needs to be inside. (1:20).** The human body needs bone, **but not every creature in the U has bones, where the MG field of the**

skin dictates what shape it's going to be. Why some reptiles and some animals have no bone. **Because the skin can't support and create the condition of the solid state and then for it to be able to give structure to its physicality.** These are parallel **knowledge we have to learn if we want to create a SS or to create anything that we want to be a part of the space of the U.** The knowledge has to be understood in its totality and not with the prejudice of the present knowledge and man's ego and lack of understanding of totality. **The world of science has to be in balance with the world and understanding of the STM and through it what we call the condition that the soul creates for it to exist, what we call the conscience of the soul. One can't exist without the other.** If man has a conscience or a feeling, where did that come from, if the STM does not have that. These are what you have to learn, then in the space of the U (1:22). you see the consciousness, the behavior of entity through his soul. You have not seen, but you have to live with it. But you have to understand it. The chap has no bones because in the structure of his skin from one side to another doesn't support solid state. **Why don't some animals in the sea have any bone, or in a worm, because of the state of the strength of the layers of the skin, and no other (reason).** So the same applies to the skin of your SS. Can a SS which you create the fields strength, support the bone structure of the man and physicality, or will it change the man that the bone and the strength of the matter state of the bone cannot support it. **It doesn't mean that you will die or that it's the end, it means now another state of the strength of the skin is needed to support the motion or the physicality of the confirmation of the existence.** You will come across all of these. Your offspring's in the coming time, traveling the depth of the space will experience this. (1:24). We have to be prepared and understand how the physicality is dictated exactly as I said, the skin of the ship inside out. **Do you want to be the PI which dictates the skin or do you want the skin to dictate the physicality.** The understanding of the totality of the knowledge and not to be prejudiced to one because you learned the other will be a key point for man to understand the operation of the U. **You have to stay open minded and very impartial that you can educate yourself with all the knowledge of the U. The minute you take position and side is the point that you have reached the point of stagnation.** You will not go any further **and this is what has happened to man he can't go any step further because he has dictated that position to confirm his own existence.** The teachings have become very fined tuned because a lot of you will start moving, a lot of people are searching and developing ... those huge metal reactors we created at the beginning and having come to little reactors and now we need no dimensional reactors. **Very soon you'll see PI rotation without physicality. (1:26). Then you can create any SS.** What I am trying to teach you with my teachings .. a lot of pain and development over millions and millions of years. **We are pushing mankind, some of those who understand to the next level, the present level becomes worthless to be because we are already one level higher,** that's why we are doing the disks. Those who have to understand that you were in this position before and people tolerated it, so we have to understand that the point of maturity of the knowledge has reach the turning point. When soon you will once see this transformation, the KF research teams have already achieved this then you'll understand that the time of the motors and engines is over. Then you'll understand how the next generation of the science through the plasma T comes into play. I encouraged this a few weeks ago and now some of the KF research teams have achieved it. **Rotation of the PI without any motor at the speed they dictate, they still need to mature.** In the coming weeks we'll show this, that we have past the point of the maturity of the man in the next step in the creation and control of the PI (1:28). and with it through the emotion and STM .. by a motor, but it is very easy

when the reactor is made of the same fields as your emotion. We have reached a breakthrough point a few weeks ago and now more people are understanding how to do it and as the knowledge is shared through the STM others will be enlightened and we'll achieve. As the old song says, good-bye generators and turbines, everything else the wheels, carts, and the rest of it.

Because if you understand the rotation of the PI in the perpetual condition, then you don't need a turbine or a magnetic field or Cu windings to create or release energy, it becomes the same as the ROTATION OF THE PLASMA OF THE SUN AND THE EARTH which leads to CREATION OF EVERYTHING.

KF research teams are in their infancy and they have achieved it and 2 teams have passed this point and very soon we'll see it, that in interaction of the fields without physicality you'll start seeing creation of matters and everything else. We are reaching that point in the future. I can show you 2 videos of it and through it we understand more and more, the creation of the rhythm and everything else. You have to go to the level of the reality, (1:30). that as **earth has no containment for its fields, and the fields pass its boundary of its physicality, the same should be, from now on, for the reactors of the KF research.** Any questions. Q: You spoke of the fields and energy and in respect of the relationship of them, can be either PI or matter, but our body is both PI and matter, so how does that work? **Our body is totally PI but it manifests itself in the illusion of matter.** Q: **So the relationship of the fields to the energy, so it carries both of them? Of course, in one of the space reactors in China, we transferred the PI energy and current as I said before, the matter current states, what you call voltage or whatever, on the same platform.** They both exist and some of the energy of the PI converts into the matter state, and some of the energy of the matter in being released becomes part of the PI. Q: But when we said, what is the relationship, you can have either PI or matter? It's what I just explained in the teaching, **it's the point of balance, the barrier, the point of conversion. (1:32). You reach a point that the fields of the environment and the fields of the PI in interaction, slows enough that to you and me becomes a matter state, and if we increase it and feed it from inside it becomes a plasma state.** Q: So am I correct to say **the body is spontaneously pulsating between the plasma and matter state? Always! That's why you have a heartbeat.** Q: **Is it the same thing if I call it the subtle and physical bodies?** You see if you can call ... If you can go back to something. I wrote this to Dr. Rodrigo the day before. And you have brought it up, with the permission of Dr. Rodrigo I read it for you, maybe you'll understand. Because once we teach one, it is for everyone the same (we teach everyone so they are the same). ... I'll read it to you because it will have a meaning for those who understand this. This is part of the medical teachings, but those who are ready to elevate their soul **will understand that this is the next step between the soul and matter, interaction. "Correction of genetic is a different ballgame, you need correction and imprinting DNA. You use patches, but dynamic systems is more advisable to change DNA. You should allow slow genetic correction, otherwise you get it back, (1:34). which means even genetic into RNA can revert back into DNA if you don't get it right because they interfere. But what it is, it is this part that is important. If you can make RNA of the man then you achieve it faster in being able to support the man, physicality, or the DNA. RNA is created by the STM and soul of the physicality of the man, so if you can create that, this will be one second jump, but you have not reached that level of understanding of it. I'll teach you how to make RNA one day, it is too soon. Or maybe if you'll contemplate**

on my teachings you'll understand and you'll be able to do it." What it means if you go back to it. It says RNA is created by the STM in interaction with the soul of the physicality of the man. Whereas the DNA is created by the interaction of the physicality of the man in the dimension of the plasma." It's the first time we open this channel up in the teaching. Because what is important to understand is that the non-dimensional, non-tangible condition what we call RNA, (1:36). is created by the interaction of the fields of the creation of the physicality of the man in interaction with the STM. The water is created by the interaction of the fields of the earth and the sun and what they produce and then they come together. If you look at the creation of the H, N, O, C which leads to the creation of AA, where in respect to earth H is created closer to or further away from the earth, and where is the N created closer to the earth than H, or away from the H. And what the light you see is the composition of the left over of the strength of the whole lot of the O, C, N, and the rest. **All the rays of the sun which come to us is not from just the interaction of the fields of just the O, some is from N and some from other matters. It's a composite and it's in the ray form, which means it doesn't have gravity, it has only the attributes of M, which means it's one direction which the G of the earth can attract it and it's given to it, that's why they say sometimes light is particle and what we call ray.** When it is particle it has absorbed, or it has been attracted or interacted with the MG field of the earth, (1:38). which is weaker, and as the stronger feeds the weaker it passes through, and in that condition you have a PI which becomes with interaction with the fields of the earth, the light, the fields which shows itself as light. Where if it is from the interaction of the balance of the fields you get rays, but because again, it is of the higher order it tries to feed the earth, and in that process and in most of the time, as it is going through the atmosphere it slows down and creates the matter condition in interaction with the Inertia of the field of the earth. And it converts. The change of the temperature on the surface of the earth, as you go up in reduction, is the clear understanding of the science of the PI, and nobody understands this. **Why are you colder at higher altitudes but you are closer to the sun. You should be warmer.** Where does the heat go? Or are the heat and temperature attributes of the fields which arrive to the planet earth in interaction with the Inertia of the planet, not with the MG field of the PI of the solar system. The Inertia has a space gap very short. The PI of the soul of the planet, what we call its MG field from the center reaches further out. That is why you create, you feel temperature when you reach near the surface of the planet, because now the fields which have traveled the space in interaction of the fields of the earth and the sun, (1:40). now they have to interact with the fields of the mass of the Inertia, matter state of the planet. In the depth of the space the MG fields in the open spans of the U hardly interact because it's open space, it can travel in any direction. It's not zero, but it has zero PI temperature in respect to the U. **The temperature of the U across the PI of this U is constant across it, unless you have conditions of interaction of the fields. It's very much when you call sea level zero.** The whole PI of the U is at zero level MG field unless there is interaction of the fields of different entities in a given position. **If you understand why it gets warm as you come close to the surface of the planet, it's to do with the MG field of the mass of the Inertia of the matter state of the planet and nothing else. And why you have seasons is due totally in respect to that** and nothing else. Because when you tilt a little bit away the field MG field of the earth have lower interaction. It's not what they said, that we go further from the sun, we go now further from the sun, totality is left to the Inertia of the planet to interact, (1:42). and it's not that much. **It's the completion of the fields of the sun which pushes in the G, which allows the creation of the heat. That's why in the summer it's hot,**

because the Inertia of M fields can spread up, even though the MG field has, what interaction is of ?? that. **Understand the principle and concepts of the creation, because that's why you have a temperature on your skin, it's the same and nothing else. And if you can embed that constantly, you create what you call RNA. And that RNA dictates the creation of the physicality, what we call DNA.** Creation is very simple, maintaining it at a given condition is not that hard, it's just that you have to understand the whole structure and not ofcus on one thing. Q: Talking about RNA, I am counting the memories of all of my ancestors, I don't know how far back it goes. If I carry all those memories, am I connected on RNA ... but these memories are playing out, if I can erase it, the memory, I go back to the original, totality. Am I correct to say (1:44). **that the memory that I have is the same as RNA? What you call the RNA of the man is the collection of all the interaction of the fields of the past times of the same fields. It's the positioning of the fields which (it) obtains, it's so fine, it's so strong that it can last, and it does carry on to exist. What your great grandfather saw is on the disk, but now the disk is gone but the noise is still there.** And in the interaction of the fields of your mother and father which lead to your creation that disk has just been copied down. You carry the same copy as your brother and sister and everybody else. And whatever you have added, you add more, **it's a lone disk which keeps on adding up on it, but because it's PI has no limitation. But on the other hand, does it expire or diminish? Not really, because it is continuously kept at the same position. If doctors and scientists understand this position of RNA and understand that it is the interaction of the fields of the STM and soul of the physicality at a given point in the direction and position, then most of the diseases become solvable in seconds**, but we are reaching there. The scientists will reach there very quick. **The point of the change of the course for mankind has arrived.** (1:46). In time we need to understand that how, without prejudice of course, we have been created and what has lead to our creation. **Do we carry part of the soul of the U imprinted in our RNA that when we come to that part of the U we say it's a dejavu, I have been here.** Of course it is, it's part of us, it's within us, it's the structure of us. And if we think we only carry the memory of this planet, the mother, father, great grandfather, by god we have a long way to come yet. **In the imprint of the RNA of the man lives and exists the imprint of the life of the U.** But man doesn't understand until we get to that point. A long way to go. Q: **What I realized is that everything that man has created on this planet is something that we have it inside**, for example, if I have a heater in the house, I have the ability to create heat in my body, and if I have an AC then I have the ability to make myself cool, and if I create a plane then I have the ability to fly, if I create anything, then it comes from inside the intelligent mind, in regard to physicality ... (1:48). **We can manifest everything in this body why do we need to make a SS in physicality, why can't you teach us how to press what button in this body? I already taught you.** You are not listening. Q: I am listening. I mean humanity. **In time we'll understand.** I was in a meeting yesterday and they brought a material on the table **I put my hand in this matter, and as I was touching it, I was tasting it. Because I carry within the structure, I have always done, I taste things through touch. When I touch radioactive material or Nano or matter I taste it, I know what it creates in my mouth. I said, this is a N material and secondly it carries a radiation with it. They told me it's radioactive or so much of it creates radiation, I said, can you tell me more. It's us, we don't need to buy an expensive detector to say if it is this or that, we have blocked this as part of our own knowledge. It's the ability to be able to touch and (1:50). to be able to say if it is good for me, or what does it do to me, what does it bring to me.** When I touch radioactive materials, I have done it for

years as part of my work, I taste it and I know if it is the Gamma or what kind of radiation this material has. When I used to work with diamonds by touching the stone I can tell which river and part of the world it comes from. What conditions have created it. **Because to me the barrier of the physicality is not there, so I feel the energies.** When somebody lies to me, does it lie to them, but I listen to their lie and I feel the lie. When somebody tells me a good story, **I feel but I still have to play the ignorant that I don't see. It needs a lot of tolerance, patience, understanding of the interaction of your own body to be able to reach that point.** Q: I understand this, I can feel a lot of changes, if I close my eyes the fields of my hands go about 1 meter ahead, but I don't know what is this or what should I do with it ... You learn, let it go 10 meters and see if you can feel it. See if you can tickle somebody. I do that quite often and Caroline gets fed up with me. (1:52). I do things. ... I walked into an office ... My mom said, how did you do this? I said, because my soul liked her and liked being with her. .. **It's us who has to reach physicality and go beyond it, it's we who have put a limitation on ourselves.** You always could do, but now you become aware of it because you are trying to find the strength of your own soul and beyond your boundary of physicality. ... **As you mature and start understanding, as you enter the SS of the dimension of the physicality then you see the other dimensions. Many people will change once they enter and they feel the condition of the flight in a SS. (1:54). Instantaneously they mature in what they have not understood about their own creation.** And when you board an aircraft it's the physicality that changes, but when you enter a SS it's the STM that matures and changes. The soul of this SS we call earth has created this condition that we all go through the same motion. When you enter into the SS which you'll travel in you will understand very rapidly the change in, change in physicality, because it's created and controlled by the STM, **so it elevates your soul to a peace point and then you find evolution of the STM. A lot of you will feel this.** A lot of you who listen to these teachings will say, how did he know. **I have been there for thousands of years in ?? Those who plan to do wrong, we are aware of, we just close our eyes but we change the course because it's our position, the way we do, we reach their soul. But you don't need to, you just create a condition that they are all on a catch up basis. Man has a lot of power it's for him to realize the strength of his power and understand that his power can only create positive move and not negative.** (1:56). Sometimes we think negative, but that is the point of maturity that allows us to see further on, it's the wisdom of the STM. Any other question. Q: (Dan is not very clear and difficult to understand)

(2:00). You see as you ... **if you use a pipe you have this problem, but if you actually make Gans's of different ratios and put them in the disk you'll find out they hold their position, then they create their own gradient, their own motion. You can create a condition that different layers move in different directions and speeds of the same thing. You have to understand what ratio is.** In one of the KF research Centers they are testing it. They haven't understood the other part of it but at least they are one step forward and that is, they have a jar like this and the flow is this direction, you can actually see it in Gans state, but this is the limitation they have. If they understand more they'll **create the same Gans (below it) moving the other way, in different layers,** but that is still in the maturity of time. If you turn (this jar) sideways it is the same as your disks. **You can create different strengths and layers that different layers move in different directions. And this creates for yourself, life and motion. (2:02). Dynamic disks can fly, can find position in respect to each other.** Many of you who have watched my teaching in the past, you have seen sometimes, and

Rick does the same, you put this magnet here and hold this one there, and then you see this one jumping to the other one. Just watch how it goes, **how the fields balance each other (draws a wavy line), that this flies. Holding this magnet in the hand and having it fly to the other one, changed the space flight for NASA.** When we at the KF, the directors, we went to the University at Salzburg to meet top scientists from Europeans Space Agency and NASA where they had a meeting. Just to meet them their. They wanted to understand what we discovered and what was the KF space flight. And I thought these guys don't understand a thing and that we had better show them something very simple that these simple minded scientists could understand it. I kept 2 magnets in the hand and I said, they both have the same properties. Put them together and they repel to a distance or they attract and come together. (2:04). **The difference is if I put this small magnet here in my hand and I hold the other one up (it flies up to it). Have I spent any energy to fly? And I explained the principle behind it, where both have G and M in respect to the other one. The top guy stood up and said, the game of space has changed. This guy has discovered the gravity.** I can give you the dates and point of meeting, very rapidly NASA closed their jet propulsion. But they have not matured to understand the work of the PI. It's not just his guy that pulls, it's also this guy who pushes. At the same time this guy is pushing and that guy is pulling. **The magnet doesn't fly, plop (straight there), but it flies with balancing itself, he draws a wavy line.** When you speak about solid state magnets you have that but when you work with disk "magnets" or disk plasmas, you can create MG fields in respect to each other and then you can control the flight. You can control the remove of PI or Gans inside it. Which means it allows you to create life. **If you watch and understand in future the incubator that creates life, it doesn't need much just the RNA (2:06). and if you can find 2 RNA's of different strengths in one dimension or the other, you create life.** And you can control it. Many races in space do this. (Dan starts talking again ...) Any other question. Can we allow other people to ask questions. (2:08). (Dan starts up again ..) ... (2:10). Q: (difficult to understand ..). Draws a 3 discs new reactor Couldn't complete it. New question. ... (2:12). Q: Armen asks, **when you say make a gradient of Gans's on the disc. On the disc you don't have any Gans's you have only fields of Gans's, you don't need to layer they layer themselves? Very much so.** But they are all at different stages of learning. What you were explaining to me today about Iran and what you set up. **Each one of us gets to understand more so it's better to work with the physical tangibility.** Rick asks, how did your empty disc obtain the fields Armen? ... Come on Armen explain you're a master in this. (2:14). ... What I have noticed that if I have 3 electrodes and I scratch a little bit over here on the N coating, you create a motion, each field is different, different mille-volts, but if I connect this to this, it doubles up to 4 to 500 mille-volts. ... (2:16). (2:18). ... Mr. Keshe says, can you make a video of this and show it next week, because I can't annotate because you are coming from a different program. ... If you could take the gap between the 2 discs. (bad connection) .. (2:20). .. (2:22). .. I was trying to tell Armen, in the gap between the 2 discs is the same, he's still working on the current flow, where if he works on the PI flow he would get much more response. (2:24). Yeah, I know Mr. Keshe. **I am trying to push you away from matter world and current and to work on the PI. Okay, I'll do that then.** Because we have passed that point, we have to move into the flow of the PI and that way we can go much faster in the structure of what we call space T. **You need that energy to create flow.** Are you going to show us. (2:26). Armen shows his reactor. **Shows voltage change. Do you remember that empty space of U? It's nearly 1 volt. Yeah you should reach 1.2 volts, it usually depends on what is the depth of the electrode in the liquid, or the space**

empty space. This is what we showed in the Coke bottle 10 or 15 years ago. ... (2:28). What happened this is what we achieved in the Coke bottle it goes to 1.2 volts. But now we are looking for, if you have this box inside a box or in respect to another box, you can use the energy in between, which is plasmatic. ... **At least it is moving (the new disc development), at least you can see it. If you take this voltage and current which you take from this bottle and connect it to different Gans layers in that disc and see what happens to the Gans layers, then in the trust you have you can move the Gans liquid, then you'll see the PI of the Gans itself. If you position the right way, then this will fly.** Q; Here? Yes, just leave it, you have to connect, now you see what we are trying to explain (2:30). to take further is the introduction of the plasma field into the Gans or a PI liquid, but you go a step further where you can create a PI, you control the flow of PI through the PI itself to create field motion and tangibility. You don't ... **you are creating a plasmatic field in a battery and you are trying to connect it to a liquid or a meter to show it. So if you connect it to a Gans or to a PI of the Gans in that disk, and you can add different voltages and different layers of that disk, you'll find out that this will start shivering and shaking and moving.** It's understanding what you have created. **Cold plasma technology what we develop here, is what we call room temperature PI and something which is not known, we create a massive heat and lights in these things.** But if you can do that and understand what you have there, you should be able to do magic with this. And thank you for the knowledge Mr. Keshe. **Now try to put another bottle next to this one with a gap in between and put N material and take the path (2:32). or field of it into that disk and you'll see wonders.** In that bottle you have you are still dealing with matter state, because there are some fields you have inside, you have moisture or whatever. **But make another bottle and put a space gap between and put a N layer electrode into a Gans in 2 or 3 different positions from the Gans and see how it will change, how the things will move.** This is the step we are going towards, that we are trying to develop to get there. Meaning if I have 2 containers (he shows it puts finger between the empty space), the fields (here). Yeah. **But you have to create motion in both at the same time that there is a flow flying between the 2 disks, then in fact, you go into plasmatic condition and no more matter state condition.** Q: **But each N layer pin has its own field creation?** Yes, but now you can take those fields but use them to create motion in the disk and then connect it back, it has to be, a control conversion on it. Then you'll see if you have a Gans or PI in that disk and how they behave. **You have to leave these disks free for them to be able to find position.** (2:34). And further on one should learn this so you understand interaction of the fields of the disc, **then you create spherical dynamic systems.** The 2 plates you have there, if you can create the right conditions, **in-between them you should be able to see a sphere. That's the skin of the man. And then that will decide the speed of rotation on the top and the bottom.** Some KF research teams have already achieved this level of motion. We achieved it weeks ago in China. Q: Try with sound ??, raise the frequency and voltage by adding sound. Test it with the physical sound and then the plasmatic sound. Resonators will produce change that will manifest energy in different ways? **What is sound? It's another part of M field interaction.** Q: **What about the concept of resonance in this setup, is that relevant to it Mr. Keshe? You mentioned that we don't use frequencies, that the U doesn't have frequencies? (2:36). No it doesn't have a frequency so how can you have ?? ...** Q: What about resonance or some sort of interconnection? **When you speak about the plasma you only connect, the interaction, connection is profound, it will do, but how do you do it? How do you create that balance within. You have to have that exchange in the field strength.** Q:

What is the difference between a disk N coated inside, outside, of both sides? Not much difference. (Armen says when you have a Gans it's already plasma condition). Q: So you can capture the field of the Gans very easily if you understand .. **You see, yes, but then you have created a bandwidth filter. You create a bandwidth of MG field plasma at a given strength.** Q: In this way you can do ... to the N coated? **Maybe.** It's one way I know. (2:38). You have to understand that when you N coat, especially like these Cu wires. We ?? setup the Cu wires even if you decide to take your point of reference or anything from ... can make a lot of difference. Q: Can we use the method of the Pain Pen to transfer energies? Why not .. if you can transfer ... you can do it ??? with any means ??? matter state as an end use. Any other questions. ... (2:40). It's **good to see some of you are moving into the disk testing, it means we are progressing,** moving into the right direction. Q: From Jedhi, (pushing his own ideas) Resonance is in fact a MG electric etheric state of vibration of all the fields, heat will show up, light as well, by controlling this plasmatic sound, etheric resonance, all the elements will interact, fire, water, earth, and air will mix and configure themselves. It's not frequency in the sense of a singular value, it's a ratio of a very high dimensional order, has to do with orders of magnitude. **We don't speak or work around resonance in the plasma, but everyone has his own translation of the knowledge and interpretation of the knowledge.** (2:42). Q: Shandor wants to ask about when he **explained the basics of MG fields. He draws a graph of strength versus distance.** We have a G component which is exponentially going towards the center and it goes weaker and weaker exponentially as we get closer to the center. At the same time we have a M component which goes in the opposite way it becomes stronger as we go away from the center point. Is that correct? I said, it depends on the strength of the point of the observation on the B side (of the graph). (2:44). Let's say at the point where these 2 are matching in strength we can have a manifestation of a barrier? **Very much so, but it's in the plasmatic field strength.** You can do a lot with it. Sometimes in the space T we call these points, zero point references, because it's the only place that we can compare ?? on either side both for M and G. Q: So in order to change the strength of manifestation can we manipulate A's G, or the M in such a way to make the matching point .. **You see if I were you I would draw it maybe the wrong or the right way. You reach the point here, this way where here you go that way.** When you reach a point here you have another cycle. (we didn't see the here and there points). Yeah, you don't go through the zero point but at the same time it turns back up ... this you see with the battery Armen was showing, if you hold it you have a point of energy conversion, (2:46). and then it just drops again, many of you have seen the positive and negative ?? The drop and the rise here, you'll will switch in Pl. It depends what is the source of reference. **In Pl T you don't have point of singularity and point of start where there is nothing else, there is always something somewhere.** Q: So we would need to have 2 points in space in order to have M and G? **Because those 2 point themselves have G and M. It's like a man swimming in a water, you are just in the middle every direction is the same.** Q: We have **distance without direction? More or less.** Q: One directional space I mean? When we define distance from only 1 point of direction of the angle? **Yeap, You have to look at the strength on either side, both M and G. If you can lay the G against M and M against G, you achieve the point of perpetual rotation.** Q: So we can change (2:48). can we compare that with a balloon as in the Kids Workshop, pressure inside with pressure outside. ... **You see in the Pl T we don't have this, there is no. What I am trying to push you is to think in the Pl condition. Don't go back between matter and trying to confirm something in a plasma.** Q: I am trying to find a model that people can understand. Yes, I understand

that, but you have to realize that when you try to make these definitions of understanding, try to put both sides on, G and M, and the dimension of the field of tangibility. (2:50). Q: I understood that we never have a field alone, there are always other fields relative to it, it's an environment which both interact. Q: Caroline asks. Isn't it ?? when you are holding the magnets and showing they're attracting. ?? didn't you explain that the magnets have their own field frame of fields pulling in and out .. let alone when they are reacting towards one another. Can you repeat. (2:52). What I am trying to do is to show it, as the 2 magnets are going towards one another as you are showing whether they are repelling or attracting. ... **even the magnets on their own have a full flow of energy flow both in and out**, as we have shown in the small videos, and at the same time you are trying to move 2 which are individually beaming out **That's the whole principle about magnets we can't attract or interact with all, at the same time what interacts with you is what is the stronger towards your position that it comes to you. So when you look at a magnet that is interacting with another magnet each magnet has their own fields which confirms their existence.** That's understood. We deal, interact with part of the fields of the same (2:54). in the strength that's what is approached. And there are still other fields which possess and continue to possess, put different magnets and different sizes of magnets, they interact with all of them, because it continuously has that field. **Has anyone ever measured the speed of the motion of the magnetic field in magnets. In some point in the MG field structure, even the matter state, you pass the speed of light.** Any other questions. Q: Armen shows, **I came with these silicon balls, each ball we can soak in different Gans liquid, of different strength, if I put it in the syringe in different strengths it will increase the interactions. I tried it and it works perfect.** Can you explain it for others to understand. This one is soaked in CO₂. Rick says you have to tell that they come really small like little pebbles and expand out with the liquid. You can layer the different Gans more easily. Q: Are these **the jelly's they are using to put in the plants? (No). Rick says, yes they use it for that. Yes. You can buy these in the plant shops as well or online.** (2:58). Q: If I put these different balls, can I get different energies out of it, different interactions? Why not. ... **But as a Pain Pen it works perfect.** Q: Armen have you seen that when you make the plates, that things change in your environment? What do you mean? That time changes? For me time doesn't exist. .. (3:00). I mean it's an awareness when you are around SF, reactors or Gans, it's like when you go out of the lab it's like you are in a different time zone. Sometimes I don't even notice how the time passes. ... Mr. Keshe you made us all addicted to knowledge, thank you for it. The point is a lot of us have been told that we don't understand or we don't see, we could not be, and now we see how simple and beautiful science is. **Knowledge is not just ?? all these biology, chemistry, and the rest is a manmade knowledge. Now ?? creation is a plasmatic** and once we understand we say, oh my god, I can understand this. I was told I could never understand Chemistry, physics, etc. and couldn't do much with science in school, but **this is the science of creation, it is us. Without us it is powerless, we ?? are born with it. It's so logical** that you don't need much to worry about. The only thing ?? this science man won't have to think, .. time and space, The life of the man is connected to both of them and that's why man has problems to understand this T and be able to use it. (3:02). **In the depth of the U there is no time and space. But everything on this planet is connected to time and to space.** What time of the morning it is, how many centuries it is, but in the space you are where you are according to the strength of the need and want of the STM. **So you can never be somewhere out of time and you are always in a position where the soul is in balance, so it has no position.** And this is the biggest problem for humanity as a

whole. Space and time and both do not exist. Q: **Where can we start making the change** in that to adjust because it's something that if we don't use it. You see the only time man will do it is when he goes into space, there is no sun, sunrise, no evening, no hungry, I haven't slept enough. In English language when prisoner are released we say they are institutionalized, so they do more crime to go back in, because in there everything is there and they don't have to do anything. **Man is institutionalized with the work and rotation of this planet.** One of the biggest fear for man and why he always finds a way not to understand this knowledge because he knows when he goes out, that time and space (3:04). **This is one of the biggest stumbling blocks for humanity, time and space.** ... Man is institutionalized with the dimension of this planet. **Once you go into space and you don't have that 24 hour rotation, annual rotation and dependence on the food that you have to have it so you can move the physicality, it's a different life. There was a man on the road showing where the car can go on the road, what a waste of soul to do that day after day. He's as intelligent as anybody else, but we have conditioned him that to be able to sustain the physicality for his presence on this planet,** if you do this (guide traffic) then we'll give you something that you can confirm you exist. In the space we don't have this. And man can't comprehend this and this is the biggest problem for humanity, understanding the truth of the reality of the creation. **You are institutionalized, this planet has institutionalized to kill, (3:06). destroy, to be dependent on when the sun comes and goes,** what happened, how many of these stars in the sky you see sunrise and sunset. Or when you into the depth of the galaxy and you have hundred of thousands of the suns rotating, which one are you going to make your day according to and which one the night according to. We had some very early offlowers of the KF, they're still around from Saudi Arabia, the Turks, they received the first books, very knowledgeable people, they went to the professors in Jedi University, ... the scholars had to ask me questions, I says to **them in the space we don't have direction to Mecca because the earth is rotating millions of kilometers away** and you're going in a different direction, where is the Mecca, where do you bend to. If you are Jewish which wall are you going to go and bang your head against. When you understand that the temple of belief has to be in the STM, then there is no time, no position. The institution you call the prison is not there to go back to, you call it the prison of earth. Then **you become detached. You don't have to worry from where the food will come, it's there and your body takes what it needs, and if you take the food of a higher order then you feed your soul, (3:08). then reality has no baggage.** It's what I said at the beginning, **when you turn the physicality inside out, when the STM takes over then you'll see the real existence. At the moment we are stuck with the skin out.** So we have to turn it back out (in), when the fur comes out it has every direction to go to. This is the problem for a lot of people, they'll go to that barrier point of understanding and knowing their soul, **they'll come back to be with physicality because they're scared, literally scared about what is going to happen to them, because now I am at the mercy of the soul of myself,** and where you understand, I mad man in the image of myself. If you have intelligence, insight, or emotion, where do you think it came from. ?? that fear of physicality will come. Then you open yourself to understanding the totality of ??? creation. Q: ... **to ease that kind of fear for a lot of people,** can that be created while still being on this planet, that they can go and feel and experience, elevate and **taste that kind of change without have actually to go into space? You do it in your sleep. (3:10). ... When you go to sleep. You can yes..** Q; To remove the fear that they are not going or leaving to space, that they'll still be on this planet, but go into, like going to university to learn, to grow understand, to sense, can we create that condition first on

the planet before they have to (go out), their own free choice to go out. Is that possible? **A lot of us can do it, and sometimes we do it, but the fear of that point brings us back to the dimension of physicality. That's why we dream. Dream is a connection between the world of physicality and real no dimension and the creation of the work of the soul.** We all do it but we are ignorant to it. And **you can stay in that dimension, and you can move out of, and look at your physicality,** it's there, what am I going to do with this thing here. **I have managed to do this since I was very young. I sit outside my physicality and I say, what am I going to do with this guy, I have to go back in it. The detachment comes knowing that part of your, what we call the soul of physicality which pulls you into it. When the soul of physicality is not there, (3:12). what we call the point of death. We become that.** But you can do it. **A lot of people can do it. Many times if you become aware of it you see it outside, and you sit with souls and they see the physicality of people who are out, and you still sit with the soul. It's very easy to do. It comes from detachment.** I don't want to do with this (body), but I have, I am connected (to it), I made a commitment to look after it until a point of whatever, it decides to separate from me, not me from it. If you become detached, you decide to do it, **many prophets of the past have done it.** You sit outside, this physicality is too cumbersome. I did this from when I was very young, I could sit outside the physicality, I have got no attachment to it, but it is there and by law you can't .. **your soul cannot separate from physicality. Physicality itself has to separate itself from the soul.** When you see it, it is there, it sleeps, it rolls .. but it has nothing to do with me. It's the leech that has anchored me to it until it decides, **even though in part, I reach, I receive from it.** Detachment from physicality is very easy when you are totally detached from knowing that this just a space gap. **The first times that it happens it is frightening,** you think is it possible, but as you become a master in it you understand it, it's part of it. At the age of 6, 7 or 8 I could do that. (3:14). Not could do, it was something to me that was natural, even at this age I see my physicality in bed or whatever, I have not got (nothing to do with it), but I have to be around it to make sure it's safe or whatever. That's why, 24 hours a day I am there, just there, you have to handle it. It's very easy if you become (detached). That's why (some people) ask why did you give this T, because I have no attachment, it's just knowledge with me and I have to pass it on, and whenever the physicality decides that's it, you have had enough abuse of this institution what we call planet earth, then it gives up and I can go. Many times, it's just too cumbersome to be here, there's no attachment. Things come to be there and you see things happen to exist. Any other question. Q: What about the voice which is talking to us every millisecond and tries to bring us to elevation, (3:16). like you said the prophets have received revelations by being infused with that plasmatic voice let's say. That's way of communication of the Creator. Is it getting closer to this source by cleaning, like you said, the dirt of the window and letting the light of the sun enter, so you light more bulbs, that will make us fly? You see, understanding, **any of us can make that conversion from the skin to the wool, by turning inside out, but what you want to see or achieve, it's very much different then what you have already achieved.** Q: What does the intent have to do with it, you referred one day to your friend blessing the soul of the rat in his experiments to get the results he needed to achieve? I think you mentioned about intention? You see the condition of ... **we decide on how our destiny is set and how to make the destiny in acceptance with the other souls.** (3:18). Maybe a lot of you who go into the dimension of space T in operation and control of the systems through your own emotions and the STM because computers are too slow, then you'll understand a lot in what has been taught. **It's a natural progressive evolution of the soul. The soul gets educated as much as the**

physicality. We are very ignorant of it because we choose to become ignorant. Q: Would it be correct to say that the soul has gradations of understanding, levels of understanding perhaps? It's us who decides what to open the physicality to, the soul has all of it. It's hard to .. When you reach the point of maturity of physicality you find that the soul you carry doesn't fit, because the soul hasn't upgraded itself, they call it, it's not there. It's partially stuck where it was, it needs to be more so that it can master itself. A lot of people will go through that, now with this technology. **The spectrum of the fields which you create for different applications, somebody enlightens you, some of it will mature you. It's not that you came to the wisdom, it's the fields that you receive (3:20). has opened the next level of the strength of understanding of the STM.** To a lot of you it means nothing, but if you sit where I sit you understand exactly what I am talking about. **We are creating such a condition, it's just with it today. We put a few pictures and we elevate their souls.** We used to see a beggar and cross the road to put money in their pocket for them. Now we see the corruption of the world leaders, we used to give money, **now we give from our soul from the essence of creation for them to become as rich as us to understand what peace means.** Why do we elevate these presidents and their wives, because we have reached from us ... but many of you have wished for but if you haven't reached that peace, you can't give something from lower, which you don't understand. Those of you who become detached and give from their souls will reach these presidents, because then they receive part of what they don't have, and with that the soul elevation creates the physicality elevation. It's extremely simple and doesn't need for you to be, god knows, a prophet to understand it. I said in one of my talks, and it offended a religious man, I said, the prophets of the past had been there for the profit of themselves. They changed things, **the prophets became profiteers for what they could have. (3:22).** The understanding of it is **when you elevate your soul, by being able to elevate your soul of physicality is a strange development, but you go through it and see that the soul of physicality has reached a maturity that the STM has not opened that door yet** to go further up with. It's not that it doesn't have it, it can get it, it's just that you have to go (to) a higher level and we can reach that point. All of us can reach that point. **And they brainwash people to think they are doing this and that, they reach something and then they go through this level and that level.** (He could be referring to the belief that you can reach enlightenment through spiritual practice.) We see it in fanaticism in respect to some religions. Planning destruction and murder of someone because he doesn't fit into their way of being taught that the god is. You just need to elevate their soul and they walk out of it. The guy who straps himself with bombs that he can go to heaven or hell, where that key has set. We call them crusaders in Christianity they did the same, they went through that phase. They robbed and they stole, and we see where they are. We see the new way, different names, it became fashionable to people to start understanding. (3:24). **You have to realize the STM has to be aware of physicality and the physicality has to be aware of the soul. Anyone of you can elevate their own soul, but you have to understand does the physicality fit that it can carry that elevation.** Those who were around me know, that **when I received the message when I was 18 or 19, I refused to accept. I flatly refused. Because I said, I am not mature enough I can't carry, it will not be done correct. When I received the message for the second time in my late 20's or early 30's I refused to accept because I was not mature, I could not do what I have done today. When I accepted the message in my early 40's, it was clear I carried enough, and this is why I can carry what I do.** The knowledge of physicality matches the soul, the strength that the soul carries it. **Young prophets make mistakes out of lack of**

experience. Old prophets who accept what we call the message to carry, always comes out of maturity of age, so that they understand how to handle it. (3:26). (interruption again by Stephanie) I think she is shopping to go to a graveyard. This is what each one can come to the maturity of the totality of their own. **Christ was too young, he could not understand how to handle it, so he got carried away with the time. Look at the life of Bahaula, in his old age he set up a structure for it from the experience he had had. Look at the life of Buddha or others, they came out of the maturity of time,** then you become detached from physicality. You just open the soul to a higher level, of the same soul, but in that level it has received the maturity. **Your soul just because you don't see it, it doesn't mean the higher levels don't exist. They coexist along with, it's like when you draw that circle of Pl, the inner stronger still exists and have their own lives, so your soul, (3:28) at a higher level still communicates with the souls of the higher, but you are not aware of it,** it's not accessible because you don't see it, you are not aware, you are not mature enough to be. It's like when a child goes into a room with adults sitting and talking about something, it means nothing, what does he do, he plays with his computer because what they are talking about, politics or world economy doesn't mean anything to him. that gadget he is playing with. The same with the STM. Man is that little child playing, it doesn't mean that the adults sitting there .. they have already done (their work) with what they have developed and are at the end of it and it makes the economy for a better place. **The STM is that little child, the rest of the soul operation of the U carries on within the structure of the soul.** Any other question. ... we might have a wonderful news for you next week, it's the 1st of November, we'll see it may be the beginning of a new cycle for many of us. Don't forget to elevate the soul of these world leaders. One needs to be elevated and one needs to elevate the others. (3:30). And this is a very strange position that man has found himself. We elevate the soul of president Zhi of China as he has to deal with what I call unruly children. We pray for the president of the US this unruly child that he understand the balance of the soul. One needs to be supported in how to handle the unruly child.

(3:31).

END
