

## 249th Knowledge Seekers Workshop - Nov 8, 2018

(Change to pure PLASMA REACTORS without motors, In agriculture using reactors to change the environment for huge areas at one time instead of Gans watering, When they create the condition for COHN or Amino Acid for the plants then irrigation won't be needed, Grow crops in places they normally don't grow, Harvest is 2 to 5 times more means national food security and freedom, Food energy medicine delivered through satellites, The lighted ball that was shown last week is not like the lights we know bulbs, fluorescence, laser it's a new phenomena a natural light energized from inside from the soul if you remove the ball it stays lit like a sun, It's plasmatic he discusses how the light and the fields rotate in the ball to form a vortex of energies that lead to the creation of the soul or Principle Matter and once created you don't need the ball, You need 2 directional motions for this to happen vertical and horizontal, Interaction of your own soul with the reactor to create light, materials, A single man can reproduce himself to create a partner, It's the will to create that leads to creation, In space you have to feed the soul give and receive, The plasma light is also a mirror there's a dynamic plasma in the background like silver spaceship, The 3 layers of the skin creates the bone structure, internal organs and the brain, Up to now the motors were the limitation through copper and magnets, After lighting plasma ball you can pull the plastic ball apart and it will remain lit, Massive fields above the MaGrav Unit, Create both vertical and horizontal rotation and you'll get bright light then don't need containment or reactors anymore, Foretelling civil war in America need to stop and elevate Trump's soul, In China we created the maximum amount of protein in rice plants, Nobody has ever measured the speed of a magnetic field, I am the Creator and I can teach you as much as you can understand, We need to elevate the soul of the man to that level that there shall be no religion, When you get pain in places it means something was wrong and the plasma mended it elevated the soul, This technology will bring a new type of man on this planet, Claudia talks about Brazil conference, , , )

(:19). ... After last weeks workshop many of you said you understood more and began testing the new systems. Claudia's conference was successful in Brazil and the following day the Minister asked to meet with her. There is **a massive progress coming in Brazil** and we'll let you know as it develops. (:22). The government has taken a direction in regards the KF in the health application and we have seen this in other countries. We keep silent and we hope they succeed in there work. ... (:24). .. with the change in the American elections it helps the KF in there work for peace ... **From now until after Christmas into the new year the majority of our work will be the space T. The Space T is the backbone and is what this T was built on.** We can develop and expand every aspect of the T. (:26). ... **What is the new development. Up to now you put the Gans in bottles and Gans Waters for agriculture.** When we deal with governments, the farmer can't go and water the plants everyday, he sows the seed and it's the mercy of god if it rains, that is all he has. If it rains he has a good year otherwise he'll suffer. We are a space T based, Earth has its space, a hectare is too big to be watering by hand. .. (:28). .. you'd have to get a bucket and water everything. Now we come to the real application of the T, space and energy development. What does this mean? We use the space over the land to cultivate. If it's a rainy year the farmer gets a harvest, but what does it need. The rain brings the water which the majority is used to evaporate and the majority is back on the same position, but in that process some of the Nitrogen and whatever comes in gets converted back as much as possible to a protein, or whatever that plant is doing. **With the new space T,**

we call it a space, which means we change the space. The land and above, this way we don't need to irrigate or create the condition that you have to water. You take the job off of what is, the process of creation. We know that all plants need protein (COHN), so one of your main condition is to create abundance of "Mr. CONH", in that process what you actually do is to create a new environment. There are different ways to do it. As you have seen in the tests you have done, you hung bottles around. How many bottle can you hang when you do a hectare of land. Or you create the new systems of using satellites, in which you just deliver the Gans (:30). and you allow for the change of conversion. These systems to our estimate can cover 10 kilometer distances. Very much like the ?? masts, you ?? the land across, in a way that allows you to bring in .. you cover everything that is vegetation, **but this time you make the availability of the Amino Acid (AA or CONH). This is what the plant needs and it absorbs it and in that process in interaction with the O and H it creates its own water, moisture. And N and C add to the strength of the growth and partially in that process AA is absorbed. That is why you don't need much water.** The next step in agriculture is very much the change of the environment over the land at the time of the harvest. The beauty of the new T is when harvesting over the land you can change nothing to go from one seed to another. If you harvest wheat and then next time cabbage they all need the AA, nothing else, it's the same rain. In that process part of what is the ground will come into play because the **minerals on the ground decide what can grow best. But that is not a problem anymore because you decide (about) this environment,** whatever is in the land then you decide what you need (to add). Then you find out that it grows perfectly. So you make it and attach to your AA what the land in that area produces (what the land needs). (:32). With this new T you can change the condition. **So you can grow wheat in a place that has never grown wheat before, the same with seeds and roots. Some of you have a problem in that it is only for plants above the ground. What about the roots that grow underground, potatoes, onions and the rest? There is no problem. All you need to do is to bore holes in the ground, (for the reactors), it doesn't matter the distance,** the fields will interact. Your potatoes ... very small number of reactors will create the condition. In the past you sowed the seeds, in the present way you don't need to wait for anything else, you can still use the above ground systems but to bore holes is one of the most effective ways. It depends on where you put the containers and their depth, to cover the area. **This has been done and it's amazingly effective. It changes the harvest up to 2 to 5 times, what you harvest underneath.** These are new ways in which we will change the conditions. ... (:34). If you go a step further, what we see at this moment in time, in time of trouble, earthquakes, natural disasters, hurricanes like what we saw in the Caribbean's where people had to wait for the food and medicines to arrive. Again if you understand the process, it can be put on space satellites very easily. The KF will have these ready for the coming time in emergency cases. By positioning satellites with reactors, we can feed people, and deliver medicine **according to what is needed. We can target delivery of energy. We are trying to show you the new developments that have come out of the KF China cooperation with official channels.** All the latest developments will be delivered to the Chinese channels, where in the time of disaster we don't need to wait and everyone in the valleys, hills, rivers, and seas will be covered instantaneously. **Again the human being is exactly like a tree, how we created an environment, that it created a protein, that it could absorb, we can do the same.** Injuries, infections, all can be covered, this is what in the next 12 months the KF will endeavor to deliver to proper channels and distribution of knowledge, now that we have moved into the Pl as a space T development. (:36). There are a number of solutions

which will come through the new space T of the KF. **One of the biggest problems for nations is feeding their nationals. If you need for example, 1000 tons of grain to feed say 10,000 people, when we can put national space conditions in an environment, 1000 tons will feed 1 million people, because the surplus will come from the space position. Because now the food isn't a essentiality it becomes a pleasure. We can deliver medicine the same way. In a way we take the control through food out of the hands of nations. This is part of One Nation program.** Very soon we'll announce cooperation with nations in these kind of technologies which will cover immediately. **It's not a T to come, but one that is already completed and we'll deliver it. You have seen examples of this in a very different way, when on the 5th of May the Russians took the American ship by just flying over it (in the Black Sea). This time we don't fly over to disable, this time we position to feed.** The T belongs to the KF and we'll use it, extremely effectively to change the course (of humanity). (:38). **The eradication of hunger is one of the main priority of the KF because this where the nations will talk.** We are setting up One Nation, but through collaboration with the nations. Those in the KF research teams extend your research to see **when you run a new reactor without a motor, because the motors were a problem you were limited to the M field of the motor, with the new systems as we have shown it, with the dynamic fluid,** grow plants in your garden and see how they grow, extend the fishermen, and animal husbandry. **You do not need to rely on feeding the man the food as you can transfer the energy. This is how you are going to be fed in the space.** We take a few kilos of potatoes just in case near Christmas the British boycott the roast, but the knowledge is there and we can create and replicate the potato exactly as it is. But we will not ?? this process, because **by delivering the energy directly to the STM, to the physical position of the ?? the total mass of the body, you'll feed and feed.** (:40). Would we have any mouth to enjoy the potato, or do we have the emotion of it the way it is. ?? In the coming weeks the space development has taken a new course and we do it, or you do it, nothing has changed, nothing in the direction of the knowledge has changed, now we are going a step further. Test these systems, non-(motor) dynamic. **The motors have a problem, we always knew, but you were not ready to go into the next step.** Now the T has been shown last Thursday. **Rick if you can put the lighted ball from last week, if you look at the shape of this light, the pattern of it, the way it shines, it should give you a lot of information about it. We don't see these kind of performances from the light bulbs we have in our houses, nor from fluorescence lights, or laser beams. If you look at this light you understand it's a new ball game, a new phenomenon, a new understanding of the T. If what you have not noticed, in the ball and the light of it, the size is dictated by the ball, if you can move this ball, the light shall be there like a sun. We have always energized to stop, but this time we energize from inside, from the environment to dictate. Reversing and going to the center, to the soul, (:42). the way we fed the soul, would allow what the light dictates. This is a natural light.** In interaction with the body of the man or the plants would give whatever the plant needs, the conversion is already done, there is no heat, except transformation and transition of the M fields. For this technology, those of you who understand, with this T, a new cycle, a new knowledge is released. Now you have enough confidence to take it over. **Understand how you create, not the rotation of the liquid, but the rotation of the liquid of the plasma. It's the same thing. You have enough confidence, when you sit between 2 balls and you see that it helps with my pain or cancer, so these fields must be going somewhere. So these fields are the same in a reactor rotating somewhere.** What you have to do, especially the research centers is using these

dynamic systems with no Gans, liquid Gans, and putting them in front of each other and see what you collect here (between them). **If you are looking for confirmation of existence.** Water, vitamins, minerals, we have a long way to go, **none of you up to now has managed to confirm the production of vitamins, or transfer of energy equal to vitamins** as we have. (:44). **Now we need to build confidence in all of us, by those who are ahead how this energy can be transferred and absorbed.** Would you stand in between the reactors and see how much fatter you get, or stand over here and loose some weight. Gaining and loosing weight in this system is very easy, because you only take what you need, and the body in that process since it has taken whatever it doesn't need, it burns into itself (the extra). We have entered a new understanding, and what are the opportunities and possibilities, beyond your imagination, because now we have seen with the reactors, what we called the Cup of Life and the orange, now this orange is dynamic and it carries everything, and this water is the body of the man, be it his emotion or physicality. We saw our Chinese friend drinking water for 7 months and not needing food, that's gone, it's old fashioned, the new PI T can feed you for hundreds of years in space, would it change our character, behavior, would the elevation of the STM change the color of your eyes. (:46). All are possibilities. **Would we eradicate genetic diseases and inherited defects, all can be done, because we can put in order the basis of the structure of the man's DNA and RNA because we have a system in balance that can feed both. RNA carries the electromagnetic fields, what we call electromagnetic field on the matter state, but on the plasma condition of plasmatic fields of all information of everything which the ?? particles and the cells of the body need to produce,** we can correct it, add to it and it will change. We showed you last week new reactors, we are holding back, maybe next week or the one after. We'll release more information. We are waiting for a couple groups who are testing to catch up. ... in that process we need to understand, this needs time to digest, no need running so fast. We have known this all the time, for thousands of years. Now research centers are working to start creating the conditions. We need that time, gap for you to setup and then we go. We allow more expansion in the knowledge but we have to be able to see it to gain the confidence that it works and is there. (:48). Any questions up to now. **Q: You mentioned 2 reactors that can change us in whatever way we want, instead can I use 1 reactor and my soul or my emotion.** Between the 2 the same thing should be possible as well? Who said not. Do you want to feed the reactor or get fed by it. Or do you want to find a balance in respect to what is in the reactor. **How far is the reactor from you? How close are you to it, because positioning changes the ratio.** Q: Can I use my soul to interact with the reactor and adjust the fields at different locations? Of course you can. You can carry a reactor in your pocket, when you feel hungry you use your soul to feed your body. It will be done, these things are not theory anymore. **But be careful what you put in your reactor as a mixture.** (:50). **Shows video of reactor lighting up** last week. A number of people are testing these reactors, dynamic systems, balls, and they developing it, I have seen a number of people who have achieved what we showed last week. You see this light (in the ball) if you freeze it somewhere please, **it's a strange light, it doesn't light up its surrounding as such, the boundary stays within the Gans,** within the ball and it covers to the edge of the ball. Look at the shadows on the table, they don't change that much. Where with a normal light we get a different proposition. **You have to reach a point of saturation.** People are using different ways, some are sticking 2 wires in the middle, some with a distance between the wires and they are trying to create a jump inside. Everybody is doing it, but now you have seen what it is. **The shape and color of the light, these are all different properties of M fields.** (:52). It's a very unusual picture, **it's a plasmatic (light).** You

see these fields, now **if our people use their understanding of rotation. now it's a different game. At the moment they see the light as coming from this way and that, but if you can make a system where the light rotates, the field rotates, then you create interaction.** Those of you who are in this game I explained how you can do it with development. You have to be able to rotate your plasma. At the moment this PI rotates in this way, we need to get a dynamic system PI that is very simple. I'll explain to you where the new game comes in. The new game changes to this, which is something you never considered. **He draws rotation lines for sideways and up and down.** With the dynamic reactors the rotation of the motors enforced rotation in that direction. (:54). In the new PI T in which you have no motor but you enhance the motion of the fields, the game is much different, and if you manage to create such a condition you'll find out that something very interesting will happen. **You will enforce the creation of the soul. You enforce the creation of Principle Matter, and at that point when you do, the Principle Matter will take over and it goes beyond the boundary of the light. Then this thing has to interact with the interaction of the fields of the base, which is the earth.** The way you see this light, it's a small rotation but the interaction of the field charges. Now you understand. **It's very much like a tornado which tries to find its center, which absorbs enough energy from all the plasmas that it breaks open. It opens its skin and you achieve long beyond the boundary, you achieve lift and motion. Then you dictate how much of this energy you allow to come out, to what distance to create.** You saw last week the dynamic flow (can you switch pictures to the dynamic flow ball from last week), if you look the condition of the fluid, now you are sure the PI field (:56). is dynamic. Now you have 2 choices, fill up the whole container with liquid or find a way to create a dynamic PI fields without liquid and then **you have to find a way to create 2 directional motion.** Why 2 directional motion? Because it's very simple, in the U, opposite to what you lot have taught, you see motion here is in this direction, if you fill it up, this one might go here, and what you might see is, you need this one, (a field goes perpendicular) to create that. Go back to the knowledge we had, this is what you call, (our eyes fool us in a way). If you look, the fields are in 2 ways, in every direction. Now you understand. This will match up with this (M to G), etc. and in some part the same light and in some parts opposite. **Then you understand the creation of MG field, (:58). why the earth has G balance more or less everywhere.** Even though it's not balanced, if you look at the MG field daily report you'll understand that a lot of these things change very rapidly, but with your T you can achieve because you have predetermined all the characteristics. You see the rotation when you take the liquid away it will still be the same rotation but how you rotate it dictates the span it's going to come. **You need the 2 to be able to create motion and lift and protection.** As you don't have anymore motors and you can control this in a very simple way by the fields from the other systems. ... you can do what you like. **Creation of this motion without a motor is one of the biggest achievements of the U.** In a way, what is going to happen if you understand, if you explain this scientifically. This is what happens, **compactness of energy creates ratio. (1:00). And in that way this will turn in .. so it creates a vortex of fields inside,** very simple. In the next few weeks those of you who are trying this, you'll find that you can control it. You haven't reached a point of testing that something very strange is going to happen to some of you. **It will be interesting to see how far any of you can take it when it happens to you. In the creation of the envelope of fields accidentally you find yourself to be in the center of the fields. I wonder how would you react.** Even though you are standing outside, but the fields are so strong that you become part of its center core, center line. But what is going to happen to those of you who get to this

point, you will see with the vision of the STM and not with the vision of the eye. **Everything changes. Because the physicality instead of being at the boundary of you now has move the boundary of ?? outside, you are part of its outside, you are part of the fields.** (1:02). Confirmation of physicality of existence doesn't exist because it creates a lot of confusion. The reason I teach you these things is that some of you, I have seen some videos, are about to get there but you don't know what you are walking into. Those of you who work on these dynamic systems or at home, you bought yourself a ping pong ball because they think they can do it, it's fantastic what you are doing, you can do some simple works. Some people say that I need a spherical ball, but you don't need, absolutely not. Walk to a hardware store buy a ping pong ball and syringe, **fill in a cup with Gans's, extract some and inject into the ball and then empty the ball. Then you have to understand how to create a condition of dynamic flow in these balls,** very simple. Don't forget you are still finished with the matter state. You move into Nano state. **Connect yourself to some small battery (1:04). but try to create a boost in the battery and then you'll see the light come out slowly,** slowly, but bring the battery as close as possible to the ball because the ball will feed the battery, not by the connection but by the fields which are coming out of it. There you are, you got yourself a dynamic ball. It cost a few cents. Then you can **start testing. Put them in the house and see if the obesity of the child goes away because he takes what he needs and doesn't feel hungry. The whole structure of the physicality of man depends on different strengths of AA.** Very simple, create that condition of AA, go back to the principles, and create a dynamic field flow, the availability of the energy at the point of conversion. In a way you become the center of the energy yourself and you take what you need. **A dynamic system with a gradient of strength in the key to the operation of the motion in the U.** So it should be easy for man.

Any other question. (1:06). Q: Can this T be used for food and peace in Palestine? Bernie says, it can be used anywhere. ... You got to understand a simple thing, that this T doesn't know race, color or religion. You feed the wheat and the same T feeds the apple and the orange. Do you think man is any different with respect to race, color or religion. The situation with Palestine needs a little more growing up by a small nation called Israel, and what we saw in the elections of this week they lost a very big support. (1:08). The same with other places, political wars in the name of religion and race will soon be over. I wonder if we can make any systems that won't allow any Jew to become intelligent anymore, which is very easy. They are not very intelligent people, they pretend to be and the bigger baffle they make the bigger bluff they make. ?? what we call Einstein, the biggest rubbish ever in the world of science written by a ?? because he was a Jew they made him a hero and he is actually a zero from science point of view. Do not worry about Palestine or other places, I am more worried about what the man will do in the space. In a very short time man will be forced to be united, you will see, we see the pattern coming up. As many of you start testing then many others will start testing. The KF T soon, a lot sooner than you think will be part of national governments strategies, feeding, health, energy, space, and everything else. **The biggest problem will be how to keep people busy. When you don't feel hungry or aren't sick and have learned what you see in front of you, how to make a safe shelter. I wonder how many of you are going to be slave to imaginary money.** (1:10). We are uprooting this condition that man has created for himself, valuing everything, and it is coming up very rapidly. You K Seekers have done jobs without your knowing it and it has changed the course of humanity. You are working at it very nicely. Just keep at it, develop it, move from ... you are like a bunch of opposition that we have to win the vote of, like the left wing and right wing and we have to bring you to the middle ground so

that you are all happy with what you got and what you get. **We had to push you from dynamic nuclear into Gans's, then the cores and cores and everything else, and every time moved a lot of you kicked and shouted. I promise you after this we are not moving anymore**, this is as much as the intelligence of man can understand, more or less from the work of the U. There is much more beyond it. I promise you for the next few weeks I will not change anything. But if you can go through this process of what you believed, you took a water and it changed your headache, or you cleaned some dirty water with it or got some energy or whatever, **now believe in the dimension of your own soul and then interact with it** and see what comes up. (1:12). I'll go back to what Mosrac said, I taught this before but maybe now you'll understand. This will be interesting for Mosrac. **This is done by many races in the space.** You'll understand very soon why I am bringing it up. **He speaks about the STM and a single reactor. I said to him it depends on how near or far away from it you are.** This is the soul of Mosrac ... then you have this dynamic reactor, again plasmatic (shows arrows going top and sideways). He puts his hands here or here. Remember I said a long time ago that **you can put your hand out and take what you like.** Now you understand, this is the earth (Mosrac's soul) and **this is the sun (reactor), interaction of the field of the man creates different conditions.** If you understand this, (1:14). if you want water you'll have it. **Because you get the emotion of it, if you want gold, you collect gold, and you (get) emotionally rich too.** Now you understand where the T is going. Very simple. We are reaching a point for man to be ready to go into space and I always said, how are you going to feed yourself if you are the last man standing. **Are you a solitary animal, do you want to be on your own or do you understand the process of what is said in Torah, would you like to have a spare rib. Would the dimension of the STM lead to creation of another for him not to be lonely in the space** and would you ever become the last man in space. Or would you choose some religions that you have many spare ribs. **It's the will of creation that leads to creation.** If you wish to die with ILS, you dismantle it (physicality), and if you wish to create, it shall be created. (1:16). And it will not be illusion but separation and creation of another dimension and when it takes shape and form, then you disconnect. Now you have your ?? Madonna. **This is how life starts in many parts of the U. In the history of the man, he has moved from one village to another and he started a new tribe. One man and one woman they started a village and it becomes a city. Now if man understands that the STM is the creator of them both.** The name of the village is any spot in the U. Start with Mosrac game and try to make your Cups, and try to see if what you feel on your hands is what you feel on your body, your taste, feeling and emotions too. **Don't push too much on your soul because you haven't found it, you still don't know how to react with it.**  
Q: **Why do we have to feed the soul when going into space, I thought food is for the physicality and not the soul, going into space we go as the soul without the physicality? What do you think your soul can operate without receiving.** My god you have to go to class one, go to the first teaching and come back up. (1:18). **The process is what we call a MG field, the soul has to share, and this soul is already sharing with another one, and this one with another one, whatever it doesn't need comes and this one takes from it, what do you call it, feeding, or absorbing. You still need to feed.** You know that song that says, goodbye loneliness, that's when you can become the creator. Then it becomes hello happiness. **If man's understanding of the dimension of the T becomes deep enough, but allowing the understanding, you can change everyone to the level of the peace. And this is what is happening now.** If you leave one nation out of the equation and put them back in their place, isolate them, the rest of humanity will gradually reach the peace point. **Wherever we see a problem,**

amazingly the superman is there to create more war to rescue. At the moment the earth has a superman called America. (1:20). But the problem is the superman creates his own problem to be able to come and rescue to confirm his own existence. **The knowledge (given today) ... what I am trying to do today is to inspire you to take a step.** Part of the teaching of today and from now on, we have taught you enough, you have seen a lot of things, motion and everything. Now it's time to inspire you to move into the next step, to test, to move into total understanding of the T. Because as I said, **I stopped making things for people because you copy**, now I teach and inspire you to try because you have to gain enough confidence. Any other question. Q: **Plasma light is this similar to polar lights?** I don't know you have seen it, what do you think. Do you see a mirror in the polar light, if you look at some of these lights you see in the ?? it's like a mirror, why. **Why does a light become a mirror of itself? What do we know about mirrors? If you look at this ball like the ball you have there (plasma lit ball), not only do you see light, (1:22). but in seconds you see the mirror of the light, the mirror reflection.** That should have given you a lot of knowledge and insight, **that within this there is another dynamic system, which is like a mercury in the back of a glass, but in a dynamic system. This is how when some of you extend into the space you'll get your silver SS** because of the reflection of the lights in the back creates the illusion of the physicality on the front. **This is something I think you missed in all my teachings** and I was thinking, shall I teach them or not. then I thought maybe they understood, but they never understand. Let's see where we go. He draws 3 layers, this is the skin of the man, now what happens the interaction of the fields **in 3 (layers) leads to manifestation of what we call physicality, but there is a problem. Man's skin and all the problem of the structure of the man, which man has never realized, has a big problem. This surrounds itself. In that structure of surrounding itself (1:24) creates a special characteristics, which means centralization of the Ca.** Now if you go a step in a different direction **something very strange happens this becomes the first layer, second and third layer here, but the physicality has to appear in here. The containment of the skin of the man is the creator of the internal organs. This skin on the stomach level is not the same skin as on the arm level. The skin on the stomach dictates not much ribs but a lot of liquid condition in the stomach. The condition of the skin of the arm creates a center bone and the rest of it. So the skin in its 3 layers just doesn't create the skin. This skin now has to create something in here, the 3 layers have the other way as well M and G. But in one case something very strange happens where now the bone structure goes out and the other parts come in. (1:26). You call it the brain.** But at the same time allows for the Ca which is the ?? center of the ?? cell to be existing in the ?? spread. But if you look there is a very strange animal here called the skin of the man. **This skin through its interaction dictates creation of the Ca outside. But this skin through the interaction of its 3 layers dictates creation of Ca inside. So even though it looks like a skin it has different MG fields where it holds the Ca out and when it can no longer hold it in it rains in and become the ?? brain** of the man. If man understands this it should be very easy **for you to decide if you are going to have a SS outside or one inside**, you are going to have a solid ball outside or a soft interaction. This is something that you could not do up to now because if you go back and listen to most of my teaching when I spoke about dynamic reactors with the motors, **I always said that the problem with the motor run reactors is the Cu, it's the M field on the Cu or the brush or brushless motors, on the magnets. You had the limitation and none of you could understand. There was a mutation and a creation because that magnet, that dynamic motor which was rotating you, was dictating second, third, forth layers**

**outside away down the wire of the system.** (1:28). Now you have gone to a dynamic and that doesn't exist. The game has changed, now everything goes centralized. Now those of you who work on the new dynamic systems with a power supply, you have to move away from this gradually in a very simple way. I know 1 or 2 people who are working on that. Create the parallel system that they feed each other. Go back to the understanding of **my teachings. RATIO! GRADIENT!** Many of you working on this system .. they were saying, that they went through the video frame by frame, and they said, oh there is a white clip there, and someone says, oh look there is a wire hanging. But did you see what is hanging on this end? Did you **make this a ratio of 1:2000?** Or is this in fact, this wire is here and this one there. You haven't gained confidence, you still need these little power generators and sparklers. You don't see it but you have it there, but we keep on teaching it. (1:30). What about if you put your sparker here and see what happens in this one. But (you say), I put it there but it doesn't show anything. It means the field is too far. Bring it a little bit closer until you see it lighting up. **This is Mosrac and this is the system, Mosrac moves or the system moves. You have Cu, gold, food and everything else, and if you get it right you create the field of the emotion of happiness, satisfaction, anger and everything else.** Where would you like to move from happiness, anger, food, orange and everything else ?? Now we can play this game because we have moved the biggest obstacle, but you had to go through it to see it. The biggest obstacle which I keep on saying were **these beautiful motors that you kept on hanging. This was your demise, the biggest stop to your progress, but nobody listened to the teaching.** Many times I said the brush with your motors is the problem, now you understand. Now that you have seen the dynamic rotation without the motors. **This (the motor) was your filtering, where the energy loss came into. You continuously created (energy) but you couldn't see anything because this motor was the cause of your energy to disappear.** You couldn't build it up, you were feeding it, the motor was your other channel. Now you understood the science, you take away. (Like an) electron and proton, they both happily run, bring it a little closer (to the other one) and it runs faster, move it further away it goes less. (1:32). Now there is no limitation and you work on the principle of the U and not the man's little motor. Sorry Chan lin even I love you so much but find a new system, sell motor less reactors, you're intelligent enough. Now you can understand how **the game has changed because it's as simple as A, B, C. Look at the work, this is your reactor #1 and #2, even though it's here, small, but this needs to get a feedback on its fields otherwise you have a waste of it. The sun, the earth, Mosrac and reactors. The STM and the physicality. There is no difference,** now that you understand.

The sun and the earth have no motors rotating it. Now it's the STM and ?? If you put Saturn, smaller fields, weaker strength and you get He and H, come closer earth dynamic fields you get H and N, and if you go closer you get heavier elements. There is no difference, it's just that up to now we had a leakage in the system where you could not hold on to it. (1:34). Motors ?? The other leakage you had is your cable into the wall. Now with this system, if you understand, this is gone too. **You become a universal independent system. This is the change and the development** we have brought in the past 2 - 3 weeks and now you have seen it, you have seen the light. If you go a step further and understand the work of the soul, and I just explained it in a very simple way. What did we see in Einhooven **when I showed you the light, he draws ball with both directions of fields and a person next to it. In the field interaction of the STM and the physicality, which strength you choose in the path of the energies, you call them different chakras. I call it, H, N, C, O and whatever, or is it the reverse. Now that we have come to independent reactors, life is cheap.** Now there is

**nothing to stop man to replicate the work of the U. My teaching is complete.** You had a problem, you had to gain the trust, to see the fields, (1:36). you made the cores, and now the reactors. What I said last time, **I choose my words very carefully in my teachings, then I go back to it,** oh, he said that. Listen to the teaching of last week when we were showing the PI ball, I said, that **if you pulled the ball apart the PI should hold. If you have created a dynamic system in your system you don't need the cup (plastic ball), you have created the light itself and it will feed itself. You need the light shining without a container, this is your next step of development, but you will not achieve it until you create both dynamisms (vertical and horizontal),** which is very easy to create. If you look we have done this in the coils. **In the creation of the coils I created this in a hidden way. The same fields as it goes, the same fields as it returns, in this position it becomes different and it creates a vortex.** How many of you ever tried to **measure fields above your MaGrav systems?** None of you, not many of you, because you never understood it. There is massive energy (above it). This is the energy we are looking for, not in here. This is what we call the antennae. Now you can work. Many of you were puzzled last week with the hand and the paper. (1:38). A ?? friend ?? hand ?? . Now you understand the progress of the T. **Maybe some of you will become very clever, you put a MaGrav system here and one here, and see, this creates a rotation here and this one here, and see if it shines. But does it have to shine to confirm existence of rotational fields? I keep on saying we are pushing the space T beyond the understanding of the man,** but the K Seekers have been educated enough that they can see the next step. It's time for you to move and move very rapidly. Have enough confidence in what you have done, and that what you do is correct. Create a motion. If you have to confine to see it, that's your problem, but if you understand the average in the law of physics of MG fields, then this field should be much stronger than here. Do you need a container. Or like when you go camping, (1:40). you take 2 pieces of wood and some metal and you rub it against each other and there are **sparks and the fire starts and then you take it away when the fire starts. Are these 2 pieces of metal, like the 2 MaGrav's? The answer is yes. You can create 1 and when it becomes independent then position it there, and make another one there, etc, and then you'll see that your spaceship SF is complete. That's why when you see the SS in the sky you see the bright lights but you don't see any containment.** Because this is how this started. And they link up, and according to the strength you decide if you ?? I told you I will take you into the space T beyond your imagination and now you don't need to imagine, because you have it on your plate. Will it work if you mix, which you will be happy to do. If you create this and then this. You'll have both and then you'll get your light. Then you strengthen it enough that you can just guide it, move the lamp, the light will shine. Armen Golan do you need anymore teaching? Are you flying yet? I am in the lab. (1:42). Now you see how the interaction of the fields work. If you can create a dynamic rotation, this you can create a plasmatic rotation in the flat. **A combination of the teachings of the past, this creates fields in dimensions here and this one here. You get your space reactor (in center) without containment.** Oh, I forgot something, you might get some gold, water and other matters around here like we did in China, there you have your food. **There is no need for physicality, but if you increase the pressure, the field reaction will take over and you'll get physicality too. I can't teach you any more, it's in your hands. And if you go and do it the right way, what you loaded up here, please change the soul of Mr. Trump, don't take away from it because it gets worse, just elevate it and it moves up. The biggest nation on earth has divided between color and race for the first time in elections this year. And the poor and rich have separated,**

**Democrat and the other side. And that they have seen that it is separated internal war in America is guaranteed in the coming time. And this is what we have to stop. These guys all have guns at home, nobody will be left alive. (1:44).** Any other question. Q: (hard to understand ..) (1:46). I am from Holland ... **I can't see the fields with my eyes but I know they are there, when I was a child I got hit very hard ... (1:48).** with your knowledge all the new people don't have to suffer, you bring a treasure of knowledge for us, I am very grateful. As you know we are a Dutch structure ... I feel very close, I have been in your dreams with the equinox reactor, when I worked on the future in my dream. **The position will be in the coming time, many of you will see new dimensions and new ways, because working with these reactors elevates, you'll receive energies, fields what we call, from the systems and the environment. We change the environment, there is no difference between a man and a plant.** What we did in China (the tree grew within weeks), we changed the environment. **In China in the tests** which will be released soon, (1:50). you will see (results) not by us but independent labs in China. The average protein in Chinese rice is 11 - 13g/100grams. **The highest ever achieved worldwide is 20g/100 grams because the seed doesn't have any more room to accept the protein. Each section has its own capacity. By creating a new environment in agricultural lands in China, we have created 20 grams, the maximum amount the plant can absorb, no Nitrogen, nothing has been given. China has never produced 20%, only in the best labs in the world have produced this. Just watered it for 27 days, (and got ) 20 grams. This means the energy in the environment has transferred back into the plant, it has taken as much as it needs to take, its maximum to guarantee survival. Now here we watered, here we used the new space reactors and the STM is no different then the grain of wheat. You receive energy and you elevate, and that elevation gives you a new insight into understanding, and seeing the strength to be fulfilled. The wars will finish. An emotionally satisfied man through the strength of his soul doesn't see war as a solution.** Because he doesn't need to, (1:52). he has, he has reached the point of maturity. If we have managed to do this in China, then (to do it with) man is not that big of a problem. But up to now you have had the limitation of the dynamic reactors (with motors). Now you don't have and **you are exactly like that plant, ready to be elevated to reach the maximum capacity of the STM in interaction with the environment of this planet, which creates a peaceful condition. I have walked you into the path of peace, you have no way to escape, just watch.** Do you remember the orange and the man, the orange is too powerful and tasty for man not to taste. **You have to understand the structure of the brain. This is the STM , the closer the fields are to the brain, to the soul, there is less interaction, the less interaction creates a more peaceful man. The anger comes at this location, animal behavior sits here (farthest out), when you elevate the soul, see what it covers, even the anger of the animal becomes peaceful. (1:54).** Because this receives more ?? (the inner brain). Very simple. But up to now as I said, **that thing hanging (motor), was your demise, now this thing (reactor) is free to feed** (the man). ... Now you understand how we have come to where we are. People like Dr. Rodrigo, you don't need to change the child understand elevating the soul of the child. In that process somewhere the strength of the field will interact with dimension of the RNA and DNA and what is wrong, will convert itself, it needs time. **When you correct the strength of the RNA the DNA will change the ?? because if you look at it RNA and DNA are same thing, one is much stronger and if you strengthen this one this other one will strengthen and it puts everything in order.** Now you understand where we are going, you came from the reactor and made the Gans', (1:56). then you had the cores and motors, now you have the dynamic square

ones, you make your PI without the containment, you energize it as much as you like, and let the sun shine. If you can do this you have your space reactor. I go back to one of the teachings in Barletta, remember the hands and the light in between, now you understand 2 or 3 years later down the line how the light is created. The dynamic system is the heart, the emotion is ?? ?? . There is everything to feed, you don't need to feed the child. ?? Now you know how to make non-tangible, non-physical, PI which you can control to feed not only yourself but ?? in any dimension in the U. In the space reactors travels of teh future we go a step further, because if you understood how to create these things then it's very simple to go to the next step. (1:58). De you remember, stronger but tighter you create in your SS one which is stronger moves further and in the space reactor you move into it ??? How much you made this system tighter, stronger, the further it goes and then you might move into it. And you can continuously feed this to be ahead of you, trying to follow it ?? moves you, speed of light. **Nobody has ever measured the strength of the magnetic field.** This is what the future stands, and this is weeks away. You learned about the 2 cores. Somebody should have asked, why is he teaching us this. This creates motion ?? if you know how to use this it creates motion this way. The interaction would create light and it grows ?? speed of limitation. But if you know how to pull one in and one out, you create your ?? plasma, no containment. (2:00). Any other question. Q: **When you elevate the STM is it that experience that man become so peaceful that at that moment man can travel to different places, I say travel because you can witness a different place while your body is still in the physical, is this the same thing as the planets, let's say earth you have N, O and the closer we get to the sun it's heavier elements, When there is elevation of the soul does this mean that the physicality also exist in a different manner, in that perspective, in that level of existence? Very much so.** Q: Yes, this is how I see it also. **This is how our soul finds the dimension of its existence. (2:02). Interesting thing is in the near future some of you will do a test, and it will bring you a lot of shocks, when you see it for the first time some of you will deny existence, and some of you will go mentally demented with what you see, but this is part of the process of the knowledge. Some of you will deny existence, and some will elevate to the dimension of existence. Some of you will do a test which will test you, not for you to see the test. In elevating your soul through the process of creation, in creating other dimensions of the soul that you release what is released, you will come to understand something new.** What will shock you is this, in respect to this you'll see yourself as a man, in respect to this you'll see yourself as a new creature. Many of you will go through this because when you enter the dimension of the space the STM doesn't change, it's the environment that has changed. (2:04). Then you'll wonder am I Either or am I Or. And how come I exist in both dimensions. This is what I have been teaching you for a long time, man will change in the dimension of the environment. Now that today I have taught you the FP condition of the containment, and you understand it, it's in front of you. **Would you see yourself as a man or as a new creature? The soul is the same, it's the interaction with the environment that creates the new dimension.** This time you don't need to go to planet Zeus to see how you look, you create the dimension of planet Zeus in front of you. Many of you in the labs, once you go into non-dimensional, non-tangible systems, if you achieve it, you'll be faced with it. Is what you see the reality and not an image. Then would you be animal behavior here or peaceful here, or would it be visa versa, or would you feed the STM to be its maximum that he finds peace in all dimensions. (2:06). I told you, **I am the Creator and I can teach you as much as you can understand. It's time for man to mature.** You have to understand what is about to come and to be and you have to taste it here so that when

you go outside it doesn't become a problem. **Minimal strength has to be at peacefulness, so we need to elevate the STM to be all the time at a minimum which is a maximum at the point of peace** as I explained just a minute ago. It doesn't matter what you manifest yourself as. The process has started to make One Nation out of this planet and this is how we'll do it. It was the biggest regret to see the election results of the US in the past 2 days, the color of the man put man in different position. **Now the race has taken the color of the politics in a direct way. This has to stop. (2:08). If we don't stop this very fast we'll see the same process as Nazism in the 1930's and 40's.** But the teaching has to be there and you have to understand how it will effect you. How you can handle it. **Can we elevate the STM to that level that there shall be no religion because man because wise enough to understand the process of the creation and doesn't need any false intermediaries. I promised that I will take the stones of Vatican back to the coliseum.** The most important part of the teaching in the past 5 years was to bring you to this point, freedom. **Freedom of the soul as it is without the condition of tangibility and now you have it. (2:10).** I could have taught this over another 5 years, but the time is right and the men of peace are in position to deliver it. Man will accept this T out of fear of his demise and not out if its beauty, but I am making it so beautiful that man will not even think about his demise. **Some of you who are Jews go and listen to One Nation, One race number 56 you'll understand who has lead you.** Some of you who follow the others will understand that you can give your soul but not your physicality because you can change your physicality. **Man in the space will not wear suits and jackets, etc. he'll create the cover of the skin of the man through the STM that he needs no covers. ... there will be no exports in the space. (2:12).** Any other question. It's fairly quiet on the front here. .. they have surrendered .. Q: **How can I capture the energy** (that is given off)? But you did show bringing in another reactor and it sprinkled gold and matter all over the place, deliver light and heat and everything else. So why would you want to capture the things .. **You are still in the world of physicality, so we have a long way to go. You have to go and educate yourself. The position is, when you reach the maturity of the soul and what I have taught here even in the past 2 minutes, move the reactor closer** and you get yourself gold, and come closer. Do you remember that old song it says, come closer darling somehow I can break away. ... Come closer and see. (2:14). "Come closer I like to taste your smile". See if you can taste the smile in your reactor. Will it be the soul of the reactor or its physicality. And if you touch the physicality it means you have a long way to learn. You're still physical. Q: **Does the soul need to capture energy** or does it just go with the flow that's happening at the time? No it's a hippy. Q: It's not into capitalizing it's just into going with the flow. **What it needs, what it gives and what it takes .. mankind from last week has entered a new position. And we teach very direct. I don't think any teaching has been so direct as today and last week.** You have to understand that the team of **the KF research teams are part of what we call, pure souls and physicality in any dimension does not really matter and they are devoted to change. A lot of research is done by them,** they come up with, try, test it, and stand all of it. One of them writes to me, I put these things on my head, I am getting headache, I am afraid I might change my soul or something happened inside. **But I thought, the soul has already been elevated. You might get a lot of pain in places you don't know and think something, it means there was something wrong, (2:16). It's mended. The PI T, the beauty of it is the purification of the STM, which means we elevate it, it stands all the bandwidth. And that in turn will change the soul of the physicality as it gives it more, It does not find a solution. We'll find a new type of man on this planet with this T, we'll find new behaviors.** Can we create new suns

to shine across every land that it feeds and makes man peaceful. On the other hand when we all become peaceful, would we cultivate for our hunger or for purity of just doing something, which means we don't need and nobody can pressurize or boycott us, but we do it just because we have to keep busy. **We'll grow the food and we leave it on the streets for people to have if they want to have the pleasure of it.** This is not a fairytale, you'll see. We set out to do in the past 3 - 4 months an amazing amount of work has been done for the confirmation of the T and governments have started seeing it. The biggest problem we have had was to show governments. **A lot of us did a lot of research with small pieces here and there, and now these small pieces are being taken to governments and they are prepared to invest everything to change the conditions of their nations. And when all the nations change to one direction, then we are One Nation. I am ruling with love and not with gun policy. (2:18). The rule of the U is no conflict.** And we created the ground for it, and man now rules himself. If you start making these non-tangible or non-containment reactors and you will see the change on the human race in no time. I will be interested to see how many of you shine when you are walking down the street. Would it be radiation or as the guy said once, would it be "soul-ization". The soul will shine like, if you go back to the teaching I said, the **members of the EC and UC will be recognized by their soul**, now you understand. These containers, these cores and balls had a filter that was just below the strength of the elevation of the man. Now you don't have any limitation. Should we call it a day. You have a lot to think about and a lot to change. (2:20). I hope you understand what has been taught today and I hope you don't do it for the sake just to see what it is, but for the sake of changing the man. ..

... About the KF Wiki ... and Journal available. .. (2:22).

... I am using my position as head of the KF to push for something. (2:24). Now that we have opened 02

(2:26). .. They'll publish Mr. Keshe's paper on Black Holes. ...

... but remember one thing you need a pulse, the variation gradient (2:28). and the fields to ?? even within your plasmas, there's ?? gradient, you'll achieve. I taught you how to make the flat rings, but ?? ?? that's the key to your success ?? Gans's. That's why we'll achieve it, not by ?? one ?? each one of the gradients creates the wind of the Pl. ?? I think those of you who understood the last 2 sentences ?? ?? Thank you very much for today, and these kind of teachings take a lot of strength out of me. Thank you ?? ??? hopefully somebody will show a flight system for a soul. **Claudia to say something about Brazil.** (2:30). Good morning Claudia. Would like to tell us what damage you did last week in your teaching? Can I ask you a question Claudia, what was all that shouting and dancing? Rui translates. The dance was a call for the soul, because people aren't aware it's like they are sleeping. ... Our way of showing was that the physical body has to be present with our soul. (2:32). What I couldn't understand was why she was clapping her hands and shouting? It was an exercise ... make your MaGrav fields reach your soul in the moment ?? What does "shaman" mean, she said that and clapped and everyone said "shaman". It means a "call". To call your soul. She said, it means I am here, I am present. Have you noticed I have a new name in Portuguese, it's called ?? .. (2:34). ... Would you like to tell us what happened in the conference. We had a big chance to be seen, even from ministers of government in areas for Health. And they found it very interesting. ??? ... And that we are in a new movement of life and new ways to reach the people in health. We are linked through energy. (2:36). The state of the M fields around changed and the public felt it, and in that way we managed to prove the fields. After the meeting one of the members of the Health department, called me for a meeting, ... (2:38). They showed interest in the results that I showed. We got an

invitation for the KF to participate, **the program is called Project for People Organization. To test plasma therapy. (2:40). ... they will try to make the PI therapies official, we are organizing it, we are coming through the front door.** We are going to show the PI T and what it can do . ... (2:42). ... I didn't expect so big an acceptance in the Congress. I have been invited to collaborate for the Congress next year. .. (2:44). (2:46). ... Claudia could you submit your report in the next publication in Portuguese ... (2:48).

... in the coming weeks a number of papers will come out of the KF China. ... (2:50). It will show the full data so that you can use it for your government ... increasing the harvest more then double. ... (2:52). **In rice production in China we have increased the harvest by 2.2 times. Partially some of the harvest was lost due to pest. You'll see in the corn section that the seeds were somehow different, the weights are different.** Next season when we plant these seeds we see if things changes, do we get better growth and harvest in the next cycle. In the northern most part of the country they are testing to see if they can create 2 harvests. It's the same in other parts of the world. I think we should have people submit papers in sections like agriculture, health and the rest of it. It's very nice how the whole thing is getting structured. It's in the hands of all of us and not just medical applications. In the next few weeks, very soon, KF is going for a full trial in medical applications of one of the major countries in the world for it to be commercialized in public domain. (2:54). This is a major breakthrough for us to start these trials in a couple of weeks. And it's done by the pharmaceutical side, they have seen and they want to test it and very rapidly we'll change the course ... the topics covered are diabetic which is epidemic, high BP, weight, and old age recovery. In countries like Japan looking after old aged people is breaking the back of the nation. They don't have enough young to look after the old and they have to bring people from Philippines, Vietnam and Thailand and they don't understand the culture of Japan and they are causing problems for themselves. With this way we try to alleviate the pain of the old and that they become more mobile, more energetic. .. (2:56). .. we are concentrating heavily to change the course in China. ... this will extend into may fields, now that I have taught you how to make the free plasma you understand that freedom is absolutely free from now on. You see many stars on the screen, none of them has a core made of plastic, none of them rotates on motors, they are free and now I have given the same knowledge to mankind. It's time for you to make the ?? ?? **Thank you for such a beautiful day. I think I have taught 5 years to reach such a day as today and I think it's a beautiful day to understand the freedom.** It depends on how man will use this knowledge from now on. (2:58).

END
