

261st Knowledge Seekers Workshop - Thursday, January 31, 2019

(,)

(:11). ...

(:22). .. We'll start where we left of last week and that has to do with connection and understanding what we explained about holographic pictures and the T that is taking over. It's important to understand how this thing will effect us, there are some problems in this T. (:24). Sometimes in science we learn from systems that were built for one purpose but if you think of it, it can be used for other purposes as well and this what is known as the hologram of the U, what the scientists are trying to explain is that what we see as the U is ?? , and it's a reflection of a flat surface. If you look at the U as we know it, is oval shaped like this with a center line to it. ??? the center line has these kind of shapes and it goes back that way. This shows us that our U is in a motion in this direction, because this is where the essence of the original U, where it split from has lead it to. The thinner line in front shows us it is trying to go in that direction, the tail of it has shown where the tail of it, the M field has expanded into and it's pushing. In its process, what the holographic people tell us, (:26). if we consider this to be the center line of the other picture, is that nothing we see is real and it's a reflection of what is on the surface. In fact it is the other way around. When you stand on the top of a lake, what do you see, the fish. The picture of the fish on the top (surface of lake) is not confirmation of the existence of the fish because the fish is here (deeper). This is how this technology is upside down in what they are trying to tell us. So as I said last time, the flat surface doesn't exist, but if you stand from a distance we see a flat surface. We see everything flat, but these people are telling in their understanding of their knowledge, it back to front and telling us the actual picture is here and we see the reflection. The fish is here, we are standing here, we see the fish on top of the water, an image of it. But there is a beautiful thing which will come out of this research even though they are trying to confirm the reverse of the actual existence, so they have something to do and millions of dollars are getting spent on this T. what it will bring us, what I call new technologies that will appear because of the PI T. (:28). Do you remember what we said when we have the earth and we put satellites around it and start creating GPS, now the amount of mapping that they are doing on this scale, we are GPS mapping the whole of the U, this is just the beginning of it. They started with hundreds of thousands of galaxies and in this process they'll map up, in trying to confirm the existence of flat surface, they are doing a great job for the future space program in mapping out the U. ... explains how they used the old military satellites for creating the GPS .. Now we'll do the same thing, this waste of knowledge that they have created about this, (:30). what we call directional mapping, it will become extremely useful for all of us in mapping globally the U. ... We will be able to use this knowledge which is being gathered now to be able to find direction, position, and map out for the SS program. ... We can now literally map out the MG fields of every point, and this will give a huge advantage in that we can decide for example, in this galaxy what MG fields do we need, what can we use and to what extent we can use this space for what we need and how we can from the position in the U to decide the position of the map and the place where we want to go. (:32). This will bring us a lot of joy and understanding for space scientists that we can now map the G and M field forces of the space gap. In that process we'll see how we can change, and add to positions, how we can change the speed of the travel, because the speed of the travel from now on is not going by how much fuel we have, but it's but what the strength of the MG field we decide to travel within. If we decide to take the weaker M and stronger G, then we'll

achieve it, then we'll see how simple and far we can move simply by changing the M and slightly G, then you slow down on approach. By recording exactly the position of M and G you arrive exactly in that position with speeds of M or with repulsion of G, because what you do is reverse your M position with the G position, and in that process you literally break your speed. That's why I brought it up last week first to show the fallacy about the flat surface, that if you are at a distance you'll see flat. (:34). but when you come to it, it has a shape ... they're gathering so much knowledge that it will be one of the biggest gifts given to the SS program if you understand how and the way to use it, and how and what shape or form to apply it. Would it be to our advantage to open up this T in a very soft way and allow it to be extended, or do we allow it to go the way they are planning to and just to satisfy some misguided understanding of the whole thing. It's very interesting how they are adding and adding to this T, to this understanding of the space of the U. On the other hand these things will bring a lot of medical application for the science of the PI T. If this knowledge is knowledge is transferred (:36). to the body then we can pinpoint with accuracy a cell. Understanding the strength of the cell to drain a cell or to remove a cell. Build on it if you have a ?? cell in the body using this holographic condition of the body, we can do a lot of things. The expansion on this level, at this moment is just at its infancy, but gradually we will understand more how to use this holographic T to be able to transfer energy to cells or to remove cells, and to remove energy from certain cells which are viruses in the space that are attracting certain fields and this will be developed in the coming time. I will start teaching on this because it needs to be understood and we go into the space of understanding the totality of the knowledge, because this will bring us a lot of insight into not only the working of the U but also the body of the man. If we understand the process we can map up the inside of planets, we can map them up the way we holographically map up the U, then we can map up the body and the inside of any structure in the U, literally by learning about its fields of MG field effects ?? nothing else. In the structure of the present time, (:38). we say there are so many forces of ?? of adding another force will ?? adapt. With this T by looking at the magnetosphere, what we call the aura of the planet or a system we can measure what materials (are inside the planet) of what's inside, what is the behavior of MG field inside. At the moment in space T they burn the materials or they guess by what color it is or could be, but with this T we can literally map out the whole structure of the M field effects and not the matter effects. 45

(:40). mining

(:48). You look at what is inside the planet earth, if you understand what is there and how we create the magnetosphere of this planet, we can do the same, if you put a powerful satellite above a certain limit and just create a field source, weaker, of the order of say, gold, this area of the planet continuously produces gold through the interaction of the fields of the earth and the sun. We do not need to extract material from inside the planet, where these materials originally came from outside through MG fields of. This gives what we call national materials security. Nations like in the western who extract so much from Africa or South America, with the understanding of the new T we change the whole course for the production of materials. What we need, we have to understand that the new space T gives us a different opportunity, different dimension. ... (:50). We have no choice but to start developing new ways and understanding, new processes. There are something like 20,000 different ways that this T can be applied for new products, nothing else. ... Tesla did this some years ago, but we only looked at the energy transfer of the work of Tesla. If you ?? extend the strength of the matter

condition that now we have managed to convert the matter into its Pl, capturing materials from the U in their MG field strength and converting them to the matter state of what we need, at a given strength, it becomes very easy. We saw Peter show how he could create conditions to create matter. (:52). The earth's MG field dictates what field we can absorb and collect. This has become possible as now we have moved into the dynamic reactors without motors where the materials created is dictated by the strength of the matter and not by the limitation of the Cu winding and other elements in the motors. In the same process we have to understand the totality of the structure of the human body and how we can apply this T on the human race, on every aspect of this application, how we can create or add materials, or increase production and the use of. Some time ago we looked at the transfer of energy, and understanding the work of different systems. With the new dynamic systems a new horizon of knowledge for K Seekers has come and many of you will switch into it very rapidly. (:54). ... and now we see the creation of new systems that have no energy but works through frequency of matter state, a lot of positions will become clear for a lot of our K Seekers. ... (:56). What are the implications of the new systems? We do not need to create food, to mass produce medicines, extract and hold... ?? man's knowledge as K Seekers is at the level of the thymus ... as we said the man at the North Pole doesn't get vegetables or milk or Ca or any of the things we are told are the best way and the ratio that we have to eat to help the people, and he has been surviving on the seals and other things ??? at the N Pole. The only reason he can survive in that region is that his Thalamus together convert material at the M field energy level (:58). not as ??? and with the present knowledge and what we have gathered as what we call dynamic systems creation of plasma, man's knowledge is now at that stage, or will start developing in that direction ?? In space we don't need to carry the screw drivers and bolts and nuts, Cu, Zn, wooden, because if you understand the process and the work of hte body of the man, then freely we can produce any material from one basic understanding of the work. ... (1:00). (1:02).

(1:08).

(1:14).

(1:30). Any questions. Q: Is a refinement of spices, fruits and vegetables desirable regarding the essences, in the sense of star cook's which combine subtle flavors to create a special taste? Would we be able to create special flavors and combinations of tastes? That's what is on the cards. Do we have KF Austria online to show you the machine they're testing. ... yes I can show it. (1:32). ... Shows field replication unit. They've had to play with the composition of the Gans' to get the taste of an orange or an apple, before shipping out. Now this is done. (1:34). ... (1:36). (1:38). (1:40). (1:46). experienced smoke off of his hands thought it was hot but not, it was the compressed fields .. (1:48).

(1:50). .. open houses in German speaking area .. (1:52). We'll show the food units next week. Thank you very much. I think the food units you'll show next week will be a revolution in the food industry. We don't need to have people going hungry on the street, you can open feeding rooms across the cities where people with no money can be feed and in disaster areas. I have tested this and it works, but now that we have come to this stage. It's nice to see that this knowledge is taking a new course. (1:54). ... Any questions for Klaus. Q: Is the field reactor ball vacuum sealed and what is the long clear tip on the top of the ball? (That's his brain..) .. it's a free floating antennae it has AA on it M fields to the organism, it's a crucial part of this system ... and the whole system tries

to balance and it increases the M and by having the antennae we have the possibility to more easily deliver the fields. (1:56). Q: Can Klaus show how the coils are configured inside the reactors? No thank you very much we are not releasing top secret information. We have patents and these are patent applied for, am I correct? Maybe there will be a time when we can show it. When we make it obsolete with the new systems next week then we can show it. Most of it has been shown already. The biggest problem with KF is we can't keep any secrets. That is why certain governments lock you down, you don't go there because we give too much open information. We don't have any secrets but the thing has to be done the way they are doing it. It is very interesting where we'll go with this T and how we'll develop it further. ... next week we'll enter something new, we'll become groceries and restaurants from now on. (1:58) . You can preorder your food for life and can be delivered, if you decide to have a curry today you just put the ball on the machine and you just sit inside (the room) and it doesn't matter how many people are in the room, you can have a party in there. You can invite anybody for any food. This is interesting what is coming up and how it will effect the future ?? of humanity where we literally become independent from having to eat as part of the process of teaching ... It will be interesting to see if we can taste each other without actually eating each other or other entities. And we can bring peace through it. Klaus says, people are calling these miracle rooms and he thinks it better we don't concentrate on praying to them rather than as tools to release all our barriers and seeing ourselves and others as the center and not praying to it or seeing it as a miracle. This is just what came to my mind when I saw the chat room. (2:00). Q: In the first step I found the position of my soul with the help of the (stereo) speakers in my ears, the question is in the second step how do I see the light of the soul from the localized point? There is something called the hospital and they have different machines like MRI and CT scans you can ask them to do a scan of your brain in very small gaps then you'll see it. Or like me roll on the floor ?? take a picture and they show it to you. The amazing thing is medicine has seen this but they don't know what it is so they leave it as it is just there. It's not something new.... (2:02). ... So you found your position with the headsets and now you can go and see it and how big it is, by the size of it you know the state of your own existence, it's very strange. Q: Would the ofcal point be the point that is found through the speakers? Yes. Q: Do you see the light of the soul from that point or do you have to be beside that point? When they do the CT scan you see it very clear. This is part of the work, I don't know if we can explain it. Let's explain it another way, maybe with this new system that is getting developed, that you just seen with Klaus, then they come and they put ?? You can literally feel it. The way you found the position of the soul in your head with the stereo, when you sit in these systems (Klaus's reactors), you'll go through emotions, because it's not just feeding, then at a certain point you feel detachment. (2:04). You sit outside and watch the totality, even though the sense of the soul still sits within the physicality. You will find that you'll feel it. I didn't want to discuss this for the time being but now the question is on the table. You'll understand. When in the coming time when our researchers manage to find the right combination where the soul of physicality finds satisfaction in existence and reflects the reflection of the STM, you'll feel it and understand exactly where it is. Listen to the Universal Council teaching of this last Tuesday, I explained a lot of things in that parameters, then you'll understand more of. This new system because it has no motors, the limitation of the field of the matter state, above Cu and Zn, (2:06). has passed, you reach at a given strength, the level of the strength of the STM in condition of physicality, the soul of physicality and the STM itself. In the future time, the way you load up these 2 (top 2 reactors), will interact with the STM, and the way you load the bottom 2 or the other

sets, you'll interact with the physicality, the soul of physicality of the man. In the coming time in the ?? or whenever man matures, you create a condition of the planet, or whatever space you are going to, by controlling and creating conditions of the soul you'll see the manifestation of how you're going to look, because then it dictates the position of the physicality. If you change the position of the STM and the position of the soul of the physicality of the man, man in no time can behave like a fish in the ocean, you don't need to wear clothing to be like a fish. This MG field of the earth, attachment to the false information of its own existence. This is a progressive development and in the coming time I am sure when the Austrian KF (2:08). releases the dynamic reactors without motors, where in a way the position of the condition of the fields of the systems will interact with the body ?? just totally like the earth and the sun, then when the man is in there, what do you want to ?? The essence of the STM came from the rays of the sun. Then you understand that the physicality become irrelevant. 45

(2:12). John of AZ shows video showing the fields generated from MaGravs that are not plugged into the wall. (2:18). ... What I am trying to explain is the transfer of PI energy, and if at the same time convert energy to feed back into the zapper. Do you understand. .. you have the Gans' which can be used as transfer, dumping energy into. (2:20). you are just measuring energy with your zapper by the bed, but it is absorbed by these coils as well. ... You can convert this energy into power. This becomes the earth's G Inertia, when the field hits it, it creates heat transfer. ?? you'll understand in the coming time, you should be able to produce such a system. Thank you. ... any other question. ... (2:22). What is important is the interaction of the fields and of the plasmatic fields 13

(2:26).

(3:06).

(3:08). Lady tries to share video... show it next week. ... (3:10). Ella shows KF Plasma journal for February 2019, 8th edition. -- Position of the soul and what are our dreams, Eyes doorway to the soul, The soul of the man never sleeps, Freedom from physicality, Unified Field Theory, Carbon -14, Earth's Polarity Change, CIBRIU the new space agency of 6 nations, Opening a Portal. , Thanks to Alzar all the 260 K Seekers will be transcribed in English and Farsi. (3:16). .. (3:18).

(3:20). A surprise article one of the first experiments we have been faced with ... Universe in a bottle. We encourage everyone to try this experiment. This brings back a lot of memories. I have made many of these bottles and the cause of all the problems for the KF and why we were put as a terrorist organization by the Belgium's, was that they were trying to steal this T. All the problems I faced in Belgium is because of this bottle, because if you look at what is hanging in the bottle, inside it looks like a parachute. When a Belgium company approached us and wanted to test it, we gave them 1 parachute to test. They took the N coating of one of the parachutes to test it and see

what it was and they found on this layer grapheme, which at that moment in time was a miracle to produce, even now it's not easy to produce. What the stupid scientists at Imack wrote because of their ignorance, grapheme can only be produced using Gamma radiation and this guy is a nuclear physicist using nuclear material. (3:22). Then they put us on the list that we produce ... and they found out that we produce grapheme, and Imack is a nano industry and we were far ahead of them with our Cola bottle, and that's when the assassination with Derek and the cheating and the rest of it started. That's where they brought the assassin Florescence in, from this parachute in the bottle. It's a huge breakthrough in the world of science as now you can see it, we can produce grapheme ... A lot of people called it the magic liquid, the Keshe liquid, every name but nobody ever called it caustic soda. The beauty with it is you are still following what is in that bottle, it's a beautiful message in that bottle. At the bottom are Gans' and at the top N material, each stand is a different height and position creating a wind which leads to creation of H and Deuterium and Tritium. The message in this bottle is so strong and I look at it and it brings back so much pain with that stupid nation. The assassin Florescence was brought in as a patent writer. (3:24). It brings back a lot of painful memories but it is good to see it. The whole structure of it has a beauty, if you test it may times, don't look at the electrodes, look at the red cap on the top, when you take the cap off you'll find that there are hardly any threads left, due to the pressure on this condition on this end and there is a little button on the end of the bottle, you create atomic H, the C gets absorbed in the layers of the Cu and releases atomic H, which is part of the space T, this is how we fuel the space reactors. ... I was hoping only to bring good memories back. No, but this is how we got involved with this stupid nation. Rick says, in the description is says, this starts the H ionization process where it replicates the working of an entire spiral arm of a galaxy, which is exactly what you have been talking about today. It's there. It's very interesting about the height you can put on it, these are Cu nails from the roofing, we call them parachutes, and the extension of this is what we call the, Empty Box of the Universe, and the sphere where you see the electrodes hanging, we could dictate the position of it. (3:26). The field flow of it. There is a lot of ... I have many, many of these just to study the pattern of the field flow, extraction of materials. Current flow in these electrodes are very interesting, for example, if you put your electrodes, here and here (front and back) and monitor it you see it goes up and down, and positive to negative, and then you just change it to the other one, and you bring it here, you'll see the flow pattern of the fields, how the pressures are created. When you test them and dip one electrode in the liquid it becomes like a system which has a matter state then you see a different pattern. Usually you'll see 1.2 volts and only very little milliamps. It's very interesting with this cap, there's a button at the bottom of it, (I forgot the name of the plastic PTU), at a given pressure due to the condition of the cap, this opens up inside, when you open it up there are no threads. This CO₂ CH₃ combination here due to the caustic and the Cu, and now you understand that the structure releases the C and you have totally H, pure atomic H. It's never been done in the world of science. (3:28). If you take these electrodes, we released this in 2005, and after it was claimed, and then there was a Nobel Prize won because of this by a University in England. Just go and check, they were forever on our site, but soon it will come out. the story of British stealing T like Steven Hawkins and University of Manchester is a lot. I'll release it one day. You see these parachutes are here at different heights, this creates a vortex of fields, winds, and with it, due to the shape of the Cola bottle, it pulls in the C and it gets absorbed in the layers of the Cu and it becomes grapheme. That's where we know the grapheme sits, it comes through and with it, it releases atomic H. .. So the C as the M field pressure balances, when you make the CO₂

systems ... when you make CO₂ now you understand that you absorb C from the atmosphere and it becomes CO₂ at the bottom, you see some of it here, but this C gets pulled out and goes between the N layers of the electrodes (1:30). the Cu as it's creating Nano, they tested it and said it's grapheme, it's nuclear, ?? Shame on the nation of Belgium, carry on with the KF Journal please. Next effects of Gans on Tomatoes and cucumbers. "Visual confirmation of dynamic field flow in Gans'. "Ofot-dipping for Coma". (3:32). .. (3:34). food security for the nations. (3:36).
