

262nd Knowledge Seekers Workshop - Thursday, Feb 7, 2019 (Introduce C14, ,)

(:15). The main thing is to unconditionally share the knowledge. ...
(:18). .. Scientists say that we are the rebels of science that we don't care who we teach to or about making a lot of money out of it ... Wishing the Chinese community a Happy New Year (year of Pig)..
(:20). ... We'll continue with our teachings. ... We are starting to fill in the gaps in our knowledge. (:22). Going deeper into how things work in this new knowledge.. .. Has our knowledge developed that we can go to the next step. Someone said, Mr. Keshe you have tickled our interest to all the wonderful things that are to come but you don't take us to it. I said, it's not me who will take you to it, you have to guide yourself to be able to see it. To what extent are we as the human race ready to face the fact. How much are we there to be able to understand the truth, the extent of the truth, understanding what it means to be able to be part of a structure in which we have always been, but we never knew. (:24). Does humanity need to break into new grounds, to understand what he hasn't understood, or we understood but we ignored it because it didn't make sense to us, it wasn't part of us, we were not part of this movie. We thought we were not part of the movie, but in fact we were part of, the acting part of this movie where we are. In the process of knowledge seeking we have come very far, in the process of understanding the knowledge we still have a problem. Many of us have a problem moving into the next level and understanding the extent of the next level, being able to bring in, usher in the new cycle, new era, the new understanding, the totality, the understanding of totality. In understanding it how do we allow for us to extend the knowledge. Does the extension of knowledge mean the acceptance, or does the extension of knowledge bring comprehension, bring us to think. Does it bring maturity? Since we have spoken about the portals and how we can bring new dimensions, many of you (:26). have started think whether you could be part of it, am I part of it, is it part of me, would I see it, would I be part of it. Does the cycle of life of the man have any more meaning. You're talking about a few seconds, which to us is 1 year or 10 years, how many number of cycles around this planet ... but in fact for us to go 1 cycle on the arm of the galaxy, for us to come back to the same point, how many thousands of years would it be. How many millions of years for us to come back to the same point, if you look at the galaxy that is on the screen. ... would the man live long enough to see the full cycle of a galaxy? As we know this galaxy is not standing still, (:28). this is part of the rotations in the fields of the U. does this depend on us on how we educate ourselves to be able to live longer, .. or would we come to the point that we detach ourselves from this physicality and just become part of the cycle of the fields of the U, but with a memory like an RNA that we were put together in totality somewhere on a point in the U called planet earth. But there is no point ... when we get to these portals and we travel would we leave a scent of the STM, that you can retrace back to, when you walk or sleep, you always leave a scent behind, but does our soul have a scent, does it leave a trace that it can come back home. (:30). (break) ... (:32). ... Rick says, Does the soul leave a trace, when your audio is disconnected but your soul isn't, can we still hear you? Very soon as part of the teaching, if you notice now a days in the teachings I take a space gap, you think it is silent, but in fact I take a space gap to see, to reach the soul, then the voice of the man. It's very interesting in how our people will come to understand this, to comprehend that you don't need to hear the voice. I started this some months ago and more and more (:34). in that process we are going through this level of understanding. ... (that's where we are left with) .. (:36). In the coming time we'll come

across part of the teaching where you'll hear silence and the teachings will take a different dimension. Part of the training to understand, to hear the STM, not the voice of the man, we'll come back, and I'll carry on with the teaching, and you'll see that if what you received fits into part of the teaching. This means that, I think about a cup of tea and I explain to you that your soul is brown in color and very sweet and it has some scent in it, and when I ?? stop talking I speak about a nice piece of cake or something with the dinner, then, oh now I understand tea goes with the cake. Establishing a line of communication, many of you might say, oh, I just keep silent, but many of you can come back (and say), (:38). when you were thinking about a cake, what about a tea. And these things are a part about growing into understanding the voice of the STM. The human race knew this very clearly, even knew how to communicate long distances with the soul by thinking, and in the time of ??earth (or us) relying on the energy of the man himself, as now it has gone worse and worse and has gotten to the point where if we don't see it with our own eyes, then we don't believe it or hear it or accept it. A lot of it is the way we have been educated, how we have been brought up and we have caused that problem for ourselves, no one else. The extent of understanding the work of teh STM has been forgotten, we have totally forgotten that we a source, we have a dimension which goes beyond our physicality. We have teh capability but we have ignored it and with it we have brought a lot of problems. Would the mankind ever come to cross this point? We do not know. Would the mankind let this fear to disappear? We do not know. It depends when teh man decides to mature. (:40). It seems that everything is on the standstill in the world of universal work until this child decides, that now I am going to mature, I have decided that I played enough. And this is taking us a long time. We are patient, we wait until mankind matures to his own dimension, how own power, how own strength, and comprehension of existence. It's very much that there is part of teh T of teh science that man has ignored deliberately because maybe it was not time to do, or man could not be taken through this barrier and now that he is ready to go we try to rush up. We are literally rushing everything through as fast as we can to catch up. It comes to the point that it's not philosophy, not the science of understanding the creation but it's the science of understanding ourselves. (:42) The science of being able to work and become aware of our own structure. In the past weeks I started taking about one teh mot fundamental elements in the world of creation. One of the most important elements in the line of communication for the man will be and is Carbon 14. Under the atmospheric pressures of this planet it doesn't exist. In the structure of the life of the man works immensely, but man not having the understanding of knowledge, man has taken it as part of continuous misunderstanding of the knowledge of creation. (:44). And because of the characteristics of the structure, man lives by this miscomprehension. In the process of the science of life, he always makes a mistake between this matter and what we call. We have made a lot of mistakes in the structure of totality. This means that C14 in structure matter state will show itself in the majority of cases in teh body and the work of teh plants as Nitrogen, but in reality the dynamic structure of teh work of teh U, which is similar to the micro in the macro, ?? the communication line of the body. It structures itself into a line of transfer of energy and line of separation of energy, it's very much like plastic or ?? back shielding of teh process (:46). between teh lines of the emotion of the man. It plays very specific characteristics because it behaves very much like insulation, very much like diamond structure, what we call grapheme, but in a dynamic plasmatic form. This is what we need to understand to be able to structure the life of teh man and understand the whole process of creation, in the process of understanding the work of teh physicality. There is a line of work which a lot of scientists have over looked and a lot of misunderstanding

in it has brought us a lot of problems to bring the dimension of physicality into operation of the STM and soul of the physicality and separation of understanding of the line of communication. This process will take time to understand in full. (:48). But what is important for us is how we have seen the structure of the physicality of the man and have we understood the separation of the line in the structure and how everything in that structure comes to be part of the total energy balance of the STM and physicality and the existence, and to what extent can we envision to be able to go further. We have to look at the different structure, the real structure and understand the totality of the physical structure of the man and something that pops up very nicely, but as I said in the world of science, chemistry, biology we have brought this misunderstanding which has now as I said, we have to correct and then it becomes a path, a beginning understanding how and the way things are brought together, are processed together, put together, in the physical structure through the connection of the body with its physicality. (:50). with his soul. We have to go back to the basics and make some small corrections or add to the knowledge to be able to go to the next step. If we look and understand how and in which steps mankind has taken a step and has gone through the process of creation. A lot of mysteries about the operation of the life of the man, the STM and its operation, and operation of the physicality, all can be understood and taken to the next step, added or can be understood to be added. This means ... one of the fundamental problems in the whole cycle of the understanding of the physiology of the man is the construction of the physicality and how everything has been based on one or two elements, and man has calculated everything else but these 1 or 2 elements. This is very much like (:52). we have missed half of the equation, half of the knowledge, part of it that was really there but we didn't see it, or never understood that this is part of totality, part of what we have been missing, in essence the part which will bring us, forces us, we have no choice, but to understand it to be able to continue with it, extract from it the real knowledge, and this C14 as an energy of the PI, of the fields of the PI, has been understood in clarity and man has made, because of his presence, a lot of mistakes in the structure of the AA of the body. It causes cancers and it cures cancers, it creates destruction of the layer of the brain, leads to your age (aging) to your stroke, understanding of the total work. (:54). It effects every operation of the physicality and STM, and every connection between the STM and the soul of the physicality, and most of the time the world of science has never considered it nor understood what this means. What can be created, given, added, amalgamated from the understanding of the work of the C14. One of the problems is that the scientific world has not managed to produce it the way it works in the body, what we call a Gans or plasmatic condition. It has a sequence and repeats itself in different combinations and because of its dynamism, and what you call the separation of the physicality from the neural system, (:56). man has always ignored it. If you look at the dimension of the work of Nitrogen, we look to the work of C14, and the operation of like CH₃, it has and it should have given us a lot of clues. We should have understood a lot of clues. I have spent a lot of time today in trying to explain the work of C14 because it's something, it's so fundamental that it needs the time to be spent on it because now you'll understand the work of the transmutation and how it becomes possible. It comes the work of transportation across the U, it comes from the point of insulation and isolation of the fields of the U. It comes to understanding the totality and the relationship between different parts and structures of the physicality and the STM, and is the pathway of the STM to connect with the U Community in the path of the line of communication. When we spoke about the C in CO₂ when we use it for conductivity (:58). and connection in our medical applications or other fields, C14 is the same, but in the dimension with the connection with the STM and the physicality, is the pathway the

way, as you call it, the wire, the string where the STM leaves the physicality. Is the connection where you go what you call dreamtime but it knows where to connect to, happens to that. It has a fingerprint of the interaction of the soul, and of the U. In so many different ways we have to understand the work of C14 altogether. What is a C14. Rick can you pull up what C14 is in the matter state from the Wikipedia. You have to understand that we look at C14 in a plasmatic and not a matter state, but if we look at C14, (1:00). partially in the present world of science they call it grapheme, it behave that way in some occasions, because it looks as to be the end but at the same time is the beginning of every nerve. One end of the neural system where your nerves stop is the limitation of the C14 which creates the feedback. It's C14 that gives you the isolation at the point of amputation and the release of energy as what you call "phantom pain". It's part of the whole structure of our existence in real life. Rick reads it. .. (1:02). ... (1:04). (1:06). ... It says it's a radioactive isotope of C and can be used to replace C in an organic compound to trace it, and that it decays into N-14. All this is in a matter state. In the condition of the plasma body of the man and in the dimension of the U, what does radioactive mean, it means energetic. And the energetic aspect of this C14 is absolutely amazing because it's not due to the Beta decay, it's being a dynamic plasmatic field which continually travels beyond the speed of light on the matter state. The reason for it which was never understood, but now maybe it can be explained is that neutrons are the source of the energy because they want to decay to create stability. The split into a proton and an electron to create a stable condition for themselves, but in the case of C14 you have 2 neutrons and at the same time busy (1:08). releasing and it that process to do dynamic point centers trying to balance, or create a balance in their field interaction, creates a line of insulation, a line of M field which doesn't accept any more because at the moment it has circled itself. In the term of M insulation and isolation when you have a double neutron base like this it means the matter state of it is within itself, it isolates itself, it has a huge amount of energy to release and that gives a very high dynamic center to its C structure, the 6 other protons and neutrons. It literally catapults this material. A normal C doesn't behave like this, radioactive material, which means it has a huge amount of energy, the plasmatic condition has a huge amount of energy which in balance with having no electron to feed off to, to split into, that it can create a balance of itself to become an atom, it creates what I call, a super bullet out of C14 and that allows the man to travel the depth of the space as a fuel, if you can replicate it. (1:10). It teaches a lot to those of us who want to understand because of this high speed, it creates a line of transportation for the field matter states of it. C14 is a plasmatic radioactive and not matter state radioactive, if we can call it that way. It's a source of energy that is so much that it is like a virus around the nucleus of the C. And because of that ?? energy it gives to it, it just makes a fireball out of the others. It's a free engine, a free energy source for the structure. And when you enter into the structure of the matter state a lot of doctors make a mistake between it and Nitrogen. It's the cause of many cancers. But it can be understood due to its weight compared to the other C, it leads to the combination of matter state interactions. It's a massive ball of fire and this fire doesn't stop, because energy released by 1 neutron to go through what we call splitting, to become nuclear decay is automatically absorbed by the other neutron and in that process, in the dynamic M field, part of the energy is given to other protons and neutrons, (1:12). they become active too. What you call aging by C14 dating should give you a very clear understanding, is the time when you stop the whole process, then you can trace it, when it was stopped by itself or in a process that it went through, a condition that it stopped from a lack of transfer of energy. Interesting enough, if we go to the next step and understand that you have a C and in a way a Tritium, 2 cells

working together, in a way as He or as Tritium and sometimes due to the energy balance they behave as just 2 neutrons. What this will give is the extension of how to understand how we age and how fast, and why when we use the Gans ?? T and the cell of the man we see huge changes, because we interfere with the line of field transfer of energy, (1:14). this is why our CH3 Gans shows a lot of characteristics of C14 and if we understand it we can fully utilize it. When we take measurements on the decay or whatever, we are always making a mistake in the conversion of the energy of the C14 with Nitrogen. It's so common that because of it we have missed many parts of the whole structure of the understanding of the work of the body. I would like to take a step further to understand this process. (1:16). When you have a H, if you look, it's not an atom, it's a half atom because it doesn't carry any neutrons, there is a lack of neutrons in it. the next step here is N or C14 if you can put it. Then you understand the process 0 to 14, now the next 14 comes here, again C14 but it shows itself as silica. In that process of ... (1:18). the next 14, C14 is silica, do you understand? another 14, one of the main components of the life of the man. When you take this another step 28 -- 14, add another 14, dynamic, 42 (can anybody tell us what this 14 is?) ; In transition of the strength of the M field, (the 42 is AA) it's Mr. COHN. If you look at this, again, (1:20). Where does it take this to? You come to something easy. Fe. Now you see how C14 has been the backbone and different combinations of it. Fe is 56, the next one is 70, and then look what 70 does, which element sits with 70, but you have to remember something very strange, here (at 42 AA) we usually don't see as such what takes places with another element, what we know with 42, (draws Mo in box), then you understand how much our scientists of the past have forgotten and have not seen, because they never considered a dynamic structure that (starts with none, then 1, 2 3, 4 of it) (1:22). has created the cycle of life for mankind on this planet. And look at the half balance lines, then you see how the life of the man has gradually taken shape on this planet. This raises a fantastic question, would the body working on a C14 will soon to be traveling the depth of the universe on the lines of teh C14 M fields of the universe. It is absolutely a perfect match. If you look at these zones and every other zone with C12, then you understand how the STM and the physicality (1:24). STM -PTM; STM - PTM, continuously repeat themselves, and this is how we dream. This is how, the 2 are so close to each other, that we have lost sight of our soul, the line of communication of our soul, where through the physicality we communicate energy transfer through C12, but the work of teh U through transfer fo the soul is C14. And we live through C12, our soul lives through the line of communication of C14. This is how we'll travel the space of teh U. Then you understand how easy it should be for mankind to become travelers of the U. Every indication on the transfer of MG fields of the space of the speed of the universe sits within the structure of teh AA and the physicality of the man in the dimension of M fields. You are a perfect match. Now does the man understand that much, that in checking (1:26). the physical dimensions in matter state sees Si, N, AA, and Fe, or is it in reality multiple combinations of C14. Then it comes to us a new dimension in the line of communication for control of the space reactors, understanding the creation of the soul in the dimension of the emotion of the man in the line of physicality and the STM. To understand how to travel, nourish, to multiple in teh depth of the U, or anywhere in teh U. I warned the K Seekers yesterday in teh private teachings what was coming. (1:28). Those of you who work on the dimension of energy transfer, transportation in the dimension of structural conductivity of the physicality and the STM, now you have found a very big answer. If you look at when you look at the Alex Beads, MaGrav systems you use CO2 for communication line for diabetic and everything else, now you can add teh dimension of the transportation of teh

soul to it. Now man has 2 choices, do I want to travel in the dimension of the soul of a C or in the super speed of the soul. Can I use the plasmatic M field of CH₃ which I can produce so easily, (1:30). to become the giver of energy, is C¹⁴. Is there a shortcut to it or does it actually behave like C¹⁴, in the super conductivity of the energy of 1 H atom. Is this why the body of the man evolved so fast on this planet because of the presence of the basic sugar which gives you a C¹⁴, which is itself already very active has an additional way to release the energy or to become a source of energy, or is the additional electron, or additional neutron, or proton, it depends on how you define it, becomes a point that due to interaction of the 2 neutrons in C¹⁴ in a physical ?? collusion (or collision ??) with an additional proton lead to release of energy that man needs to create and dynamism in the AA. (1:32). And it becomes a source of energy. In a way we chose a barrier, when the bullet comes let's absorb the energy of (it), and that energy in that bullet, the energy released continuously is by the double protons, or neutrons as you have an energy confirmation in the plasma condition, which with the interaction of the lighter one ?? equal to 1, that is 2 protons confirming with an electron as a neutron, in a CH₃ with a third one is like putting a barrier or creating in a plasmatic field force very much like you create ?? motion, this is your 2 H and this is your single H, and in that process where you already have a C here you create a release of energy to the AA which is bonded to it, and this AA becomes active, it receives energy it can survive. So if you can increase the binding of CH₃, or the C¹⁴ in the presence of the body you can create a continuous supply to the AA, which means the AA doesn't need to continuously deplete and then replete, gives a life of centuries to man, because there is no dimension. (1:34). There is no continuous depletion in refilling it. This is how you can extend life on this planet. Simple understanding of the transfer of the fields of the U can make a lot of difference for the man if he understands what is going on. So now you understand how you can even extend the life of the man. Through the understanding of the operation of the C¹⁴ and how we can use the operation of the C¹⁴ to create the fast dynamic motion of the protein, or the body and the man, ?? of the soul of it, that's ?? my teaching. Now the science of the theology and the STM ??? Now we can understand much more and act upon it. (1:36). We operate through it and extend the life with it and then we'll not depend on the cycle of the rotation of the one thing we called the day, the year, or anything else that mankind has chosen to call this thing. Now what side of the story do you want me to sing for you? Have the scientists been right to measure the life through the decay of anything on C¹⁴ or did they miss the boat. (1:38). Or can we use the operation of C¹⁴ to create a new dimension for the man of life in the space? Remember last week when I spoke about the separation between the galaxies and I spoke about the C¹⁴. I start putting things out for you to see what you understand until the next time or next teaching, or it might be the time after or after that. The teachings now start to get meaning, we start to have understanding because if you can create the condition for the transfer of energy at the level of C¹⁴, you can tap into the universal transportation line, into the understanding creating life for the others who are the passengers of this line to manifest themselves in the Portal of the life you create. All you do is to create a new bus stop, would anybody like to get off here where I have created a condition, which I can create that replication. If you want to understand maybe we can explain, it's the superconductivity within the conductivity of the Pl itself. Now you can image what the scientists were telling us, (about) superconductive materials, not only do you have them in the form of Nano layering, now you have a superconductive path to transport that, now that you understand that the body of man is made of Gans'. (1:40). It starts adding up. But do you want to invite everybody, or do you want to have a specific length or a specific people. You don't want to invite the

cousins but you'd like the uncles to come. And you don't know if the uncle will be dressed in a suit or come with pajamas. How do you manifest that only the uncles turns up and no cousins, or the cousins come and you don't want the uncles. Go back to your teachings, to the understanding of the fields of the G field with Inertia, which leads to creation of the manifestation of material or matter state. Then you'll understand that you can create the condition for the confirmation of existence by introduction of the third strength in the C14 (that's the AA) and any passengers of the U which match into that will manifest in your Portal. It's very much when you create the matter state the interaction of the fields of your cores, it's you by introduction of the Inertia, dictates what matter from the energy of the atmosphere will manifest itself. In the case of liquids and Fe (1:42). we manifested or produced blood, hemoglobin. In a case in the interaction of the fields we created gold, Zn, Mg and the others ones, we have seen the test results that were done independent to confirm what is correct. Now understanding the transfer or transportation and connection between the STM which now becomes the language of the Universal Community in understanding of this transportation line, now you can invite friends home, and then you dictate what friends. Whose friends, I don't want this, I want to see what it gives me at such and such a strength at the spectrum of Mg with the C14, and see which creatures of God come up, appear. Like the way Inertia leads to creation and manifestation of the energy of the U in the gold and Cu. Now we have learned how to manifest our guests. But you can use the same process to become part of, to join into the link of the superhighway of the U. Until your cousin, son or planet Zeus has created a condition of AA at the strength of your C14 which leads you to land there. Now you understand, because in that dimension you travel through the communication line through high speed, through what we call the soul speed of the man. (1:44). Because still it's a combination of AA but still it's dynamic that it can lead into. Now it's getting tricky isn't it. Those of you who understood, and those who maybe will understand in the future .. I have already understood. I have already entered to produce the Portals. But be careful what you do, what did your mother say when you were young and you went on the street, do not speak with strangers and don't every time you go out come back with a cat and a dog. ... (1:46). Now we open you the portals, who is going to turn up and how good have you made the confirmation and the process of the soul level which you have invited. What does this mean to you, those of you who were hoping that something might pop out of the jackpot? (1:48). Q: When we use the flight system of the STM are we using C14 within ourselves? I don't know, what do you think. Q: So is using C14 within ourselves is a result of our conduct? Rick, I think that is when you mentioned super conductivity. It's a kind of play on words but maybe it's true? What a beautiful day. We don't need guess work, it's understanding the knowledge. Comprehending the totality, this is what it is about. the total existence. (1:50). Q: Lin from China. You bring us today a beautiful teaching, it reminds me of a video I saw of Buddhist meditation, from there I remember it shows a white connection line when the soul comes out of the body and travels in the deep space, and it's always connected with the body, so when you talk about the C14, is that the C14 field inside the body and they find the match of the universal C14 and then the soul just travels outside of the body, is that true? The color of the brain is a strange key to the color of the soul. When we look at the structure of the brain we see (1:52). a very white, cream white color, and different points of the brain has a slightly different cream white color, which is a combination of the Mg and the C and Zn, because if you have made a combination of the Mg, Zn and CO₂ in Gans and you just change the ratio slightly you get a perfect match of the structure of the physicality of the brain in ?? its dimension. Have any of you ever made a Gans of Silica? We have made a lot in AZ. What color is

it? Light Tan. Like what? Like a cream color. Good Morning. How many of you have made Zn Gans? .. White as snow. (1:54). CO₂ and Silica are whitish cream. Mr. COHN (AA) protein is transparent. Zn whitish cream. Isn't the brain which holds the containment of the STM a perfect match for man to become "man of space." Is this or can we consider as many of you, I presume, have made the Ca Gans too. What color is the Ca Gans? Whitish cream. Can I say Good Morning. (I am ?? an isotope 42 which is stable ??) Good morning. Have we found the joint and balanced connection between both, (1:56). the containment and the control of the physicality of the man and of the STM? Has our soul been traveling on the dimension of the physicality and that's why we dream through our soul and it gets registered in the dimension of understanding and memory of the physicality. Is the matter state of the physicality the Cu and the Nano coating of the strength that creates the superconductivity to the dimension of the STM. Have we lived a double life, has the life of physicality superseded, super-covered by the dimension of the superconductor (1:58). on the level of one matter state which is connected to the universal dimension, which is our soul has already been built, developed from the beginning on the direction and in the presence of the soul of totality of the U. Do you know what a Nano material is? It doesn't matter what (material), the space gap is the same, (14 -- 14 -- 14 --) it doesn't matter what material you are using. I space myself because I have a field which can ??? (encouple) doing triple and triple. Now half of the mystery of the life of the man, maybe is sorted, maybe now you can understand, how man has lead a double life. (2:00). Something is a mystery here? This sits at 78 (after Fe). Rick asks, so are speaking of Selenium, it's 78.96 is its weight? And Se is one of the essential elements for the body. (2:02). and is deficient in many soils like in the local area where I live? ??? Pardon me? Explain. I just know that there is a local gardener who says Se is an essential element It's 5.5 times 14 it's an oddity. So should it be 56 plus 14 to go to the next step? Yes, 70. (2:04). But now if you look at 78, ... If you have 56 + 14 gives you 70. but if you go up a half a weight of the atomic mass of O (8) , then you get the combination of the G field forces of this planet which locks into it. Or if you look at it the other way, if you add part of the M field effect of 4 O, in the same combination, you'll end up somewhere around the Cu and Zn. (2:06). If you take the combination of mass elements which attracts and locks man into the physicality of this earth, that ties up the energy of the STM to the physicality of this planet, which MG field forces of the G fields of this planet, we always said is O, you go 4 times 16 (64), then you see how Zn has become part of the structure of physicality of the man, then you see through the C14 how the soul of the physicality has gotten tangled into the G fields of the body and then you can see how the soul of physicality and the STM has gotten locked into each other. If you don't understand let me explain. Here I have a next step, 68, here I have 64 now, (2:08). here I have the Zn connected to the MG field of the O which ties up with the MG field of the element of the ?? non-feral but the gaseous state or plasma state of the 68 of the O, if I add a 14 here to it (78), how the whole structure locks into each other. Here (64), you bring the emotion, the dimension of the control, (draws an arrow to 70 or is it 78 ??), now you understand. How the physicality and STM have a connection between the soul and physicality conductivity have locked into each other, and why when you dream you remember it in the physical dimension, and you remember what the mother said. It only happens in the dimension of the M field of the soul and the common denominator of the ?? (2:10). Now maybe you understand why we remember everything of our dreams because we bring it in and we lock it into the physical dimension. It is very easy to understand, how man has got himself into the whole cycle of creation. The atmosphere of this planet has just created the condition and the availability of the field forces. That

is all that has happened. The combination of the C14 and the C in line of, with connection of the physicality and everything else has continuously played back and forth. If you add 6 or 7 and half C to itself, 6 to 14 (2:12). you get 20. What is 20? If you add half of the weight of Nitrogen to the N mass which is 7 you get 21 / 22, Na, then you see how the structure has picked up, how man has got trapped into the physicality just be accidentally having, creating a condition, 1 to the physical dimension of the M field of this planet irrespective of its matter state, through its gaseous state which is the O, 1 through the dimension of the matter state of this planet which is through its C, and then 1 in the dimension of the strength of the work of the U, communication or transportation line which is C14. man has always walked in all the 3 dimensions. Now you know why you remember your dreams, why the color of the body, the STM contained within the white ?? shade of teh brain. Everything else is matching up to fit in, it is there sitting in the connection of the physicality connection of the STM, connection with the matter state, in a way it's a compromise between the 2 and the MG field of this planet. (2:14). Every half or a C addition to C14 gives you connection with your physical dimension. Then we understand how the both the M, to do with the G field, to hold on to, in the dimension of the existence of the field of the Pl of the body has lead to creation of the same one connection with the universal communication line and M field. One works in teh dimension of the physicality, one in the dimension of the STM, and one in the dimension of the soul of the physicality, but the dimension of the STM and the physicality sits in the dimension of teh soul of physicality which is in the blood. That's how the link has been locked in. This is how the field moves from the physicality dimension, the blood, the Cu, Zn. Now we can see the structure and how we can travel in teh dimension (2:16). of the physicality or we can travel in teh dimension of the STM, if we bring the Inertia condition of the G field of teh gaseous, which we are totally in the Pl condition which is O, then we have the manifestation fo the containment of teh physicality of the STM, which is the Zn, AA, Si, C14 and the C. Now mankind it should be very easy why even mankind dreams and you remember your dreams, where actually it's communication on the line of your soul and you call it a dream. Some of you have enough influence on teh transformation of the C and the C14 that you can even call it a wish, but in fact you have understood how to tap into the STM. Now you understand when we were explaining how you can control the space reactors with thoughts, with a wish, I want to go to the left. Good morning John! (2:18). What made you to make so much Silica? Because right now our bodies are made, are C based and I heard a lot of talk in teachings about going to a crystalline base, which is silica. Now it starts to make sense and I can see where that silica comes in the equation. But can you see how silica controls Mr. COHN? Now I do. Does it mean that in your system you have to consider to always be connected to the use of AA? We always done that, everything we do we connect to AA. ?? can think then your system should fly. We just have to tweak a couple little things and we'll be right there. A little of tweaking to do. (2:20). Now hopefully that we see, that we'll understand why we dream at this level (circles Fe etc), but we live at this level (circles 42 COHN). Now where do you think the line of connection to the strength of the STM sits? (2:22). .. I am still waiting? John says, right now it the Zn at 64 along the pathway of C14 a pathway to ?? (2:24). I am waiting Armand. He says, 14 times 9. Why 9? It's close to iodine. Do you remember that we mentioned Iodine somewhere else, years ago? A long time ago. Those who worked on it, do you remember what it came to? Do you remember what Iodine came to be. I think somebody worked out that it should be the strength of the STM. Yes, you told us. Is it correct? Very much so, but so you understand the position of? (2:26). And the connection of physicality. Now we do. Now

a lot of mysteries come together. You have to understand this if you are going to play with the Portals. Are you moving the soul or the physicality. Because if you take the element of Iodine (46??) M energy fields, it's a fact, 11.5 times, take measurement of the fields conductivity of C is around the interaction of the fields forces of the matter state of the body which is C12. This is where the STM connects to the physicality, in the dimension of the strength. After 2 or 3 years we just come back to the same point again, but now we understand what we need (2:28). So when you make your Portals the random calculation is how many times the strength of the G and the M fields of C14, gives you the speed of the travel in the dimension of the lines of the transportation of the lines of the fields of the U by order of magnitude. The speed of light doesn't come into it any more. It's like you say you have a yacht with an engine that can do 100 km/hr but they don't tell you the river you are traveling on is already moving at 400. When it comes to measuring and understanding the transportation of the Portal or the dimension of the STM, the dimension multiple of C14 fits directly into the STM, so you travel 9 times by speed to the direction of position, and then you can tighten it by order of magnitude. We are not talking about the speed of light ?? which is matter state. (2:30). An entity doesn't go through the phase change, I was explaining that in the teaching yesterday, where somebody said we go through another dimension, and I explained it very simply, .. when you travel with the speed of sound, and you break the sound barrier as you go through it, does the aircraft or the pilot change on the other side of the sound barrier. Does it become a different aircraft or a different man? The sound barrier is again a M field compression, even if you call it an air compression, air is made of M fields. So when the man goes through the speed of light in the matter state, when he does will he come out into a new dimension. Or as you pass every time does the pilot become the donkey and the plane becomes a monkey and everything else changes every time you pass through. You come to understand that you have to find a measuring method, a way to be able to roughly guess what speed you are going to go and where you're going to go, and where have you set the Amino Acid to the strength of the STM to land up where you want to be. You move the man through the strength of his soul. (2:32). (break) ... the dimension of the STM and he moves on. Now we understand the process and we are learning how to make the framework. (2:34). You have to make a common denominator framework that allows, not only respect the soul of physicality if you want to go in the dimension of physicality, but respects the STM too. The strange thing is that not many creatures have this combination to be able to travel the span of U. Now you see the advantage of being a human. very few races come to these conditions. Now you start building a framework, start putting new rules, new dimensions . (break) .. which is actually CH3 ... (2:36). .. then you understand how close man is to being able to become the passengers of the U. Any questions. Q: It's interesting to think about the ratio between those elements, why did you pick up these specific elements are they the ones that encompass the whole human being? I didn't pickup, the MG field forces of this planet has done for billions of years because it has to work in both dimensions. It's very easy you have to understand this, (2:38). I have repeated it 2 or 3 times in the past 48 hours. You travel 24 hours per day with the speed of teh planet, of its own. You travel with teh speed of 10,000 to be the passenger of this solar system, 100,000 to be passenger of teh galaxy, and with teh speed of 1 billion to be passenger of teh U. And every one of them therefore has a field force effect on the creation of the man. This is how at the speed you travel the collusions you create to lead to teh creation of. If the speed of this planet was not 1,600 let's say, km/hour to create the 24 hours and you would have traveled at 2,200 km/hour, then your day was 16 or 15 hours, then that speed dictates (2:40). a different fields creation in respect to the atmosphere of this

solar system and if it creates that speed, which means there should be another field forces exerted by the sun and the earth, or the combination or mixture of the earth itself, or our annual rotation becomes 200 days on the same orbit, which means we are going faster, we create, we produce interactions of different fields and the structure will change on this planet. If you turn up (the speed) of a grinding stone and you hold your knife fixed to the position, does it create the same spark at 1,600 then 2,200? It's totally different. So the environment of this U, the speed of rotation of it, the speed of rotation of the earth, the solar system, now we understand has an effect on the creation elements in the different positions of solar system or this U, or this galaxy, and that combination has the enforcement on the others. Go back to the teachings of the past years, I kept on referring to that we not only get the fields from the radiation of the interaction of the fields of the earth and the sun, but also we get fields and radiation from outside the solar system, (2:42). whose interactions affect our life. As it affects it and comes into it, it dictates part of our structure. So we are not just connected to the 24 hours field strength of this planet because now the field of the sun counts also, so we have a common denominator which at the end of it is C14, which again affects our condition to the speed of the travel of the field strength of the STM. We call it a soul but the packages of energy which has in line accepted to be in conjunction with the fields of this planet. You have to understand a very simple principle and that is, if we have no motors, we don't see any motors rotating this planet, then we have no motors to rotate the galaxies in the spans of the U, how much stronger are the fields of C14 or the winds of the U have to be that it can create such an interaction rotation with and cause the galaxy to rotate. The speed and the fields of the U are many multiple larger than 1 billion. How do you get one of these children's windmill and blow on it, (2:44). it has no motor. The speed you blow, the air dictates how fast it goes and still there is so much surplus energy that the speed of the blade can't catch up with or it's not enough. If the winds of the U can create the galaxies to move at 1 million km/hour, how stronger they are that in slowing down, in interaction, they create matter states, this goes back what I keep on saying that no man has ever managed to measure the speed of the magnetic field, be it in the matter state or in the speed of the universal magnetic field. Then you can travel the speed of the U at any speed depending on what you are locking yourself to what reason. Then it's not 9 times, it's order of magnitude 9 times the speed of the universal magnetic field, because that energy of the extra neutron is dictated and controlled by the energy of the universal field forces. It has no friction, it's purely on the speed of the center, the Principle Matter speeds of itself. (2:46). It's not any more the order of multiplication it's the order of magnitude. Then you understand, that the speed of the C14 must be dictated by a higher speed of order from outside the U, which condition of it, part of it, is connected to the speed of the travel of the soul of the Creator. Then can we create a portal that can attract the travels of different universes? Now I hope you understand. Q: Is this pure spiritual/plasma science extending into the matter state science to help us combine the 2 dimensions? Good morning! (2:48). Q: Can you please give us practical advice and training on how use emotions for communication with our soul? Find a common denominator between the strength of the soul, line of communication and the strength of matter line of communication. It's somewhere around 160, which is 10 times the MG field of the G field of Oxygen, if you multiply 12 x 14 it gives you about 166. And then you have somewhere between that, and (2:50). somewhere between Iodine which is the STM with the dimension of containment of the strength of it, now you know the strength of it. To that can contain it, you have to be higher. If Iodine were a 126 you'd have to give it a stronger cage that you can contain it, which is 166, if you are lower it escapes. And if you find a combination of the elements of the totality of the

structure which is very much the containment of the AA of the man, then it gives you the dimension of the existence, take into consideration the possibilities of all the fields, because if you multiply 40 to 43 by 4 times, it gives you how it comes to be part of the structure of the creation of the matter state of the brain. Now a lot of things fit together, doesn't it. (2:52). Now maybe you understand why we even have a Ca skull. This is how, you understand why we have, they find C14 even in our bones. It comes from the universal field forces and not from the body of the man. And it has such a lapse, a strength that it is easy to travel. It's a foreigner, it's from out of this world, but it is part of the common denominator and it has dictated the structure of the man. It's dynamic but it has a ?? beater effect, as we call it, so it means it interacts with the matter state. So Ca can block it, hold and contain it. When you look you look at the brain you understand the STM and the creation of the physicality of it, it creates a field force full that it becomes part of its cycle. Now I have to teach something very strange, but it's beautiful if you understand it. (2:54). Man will understand how he has come to be created. He draws the 2 lobes of the brain and this is what you have as a beautiful soul. You have to understand that this little chap (soul) is dynamic (draws an clockwise arrow) and now you understand the strength of it, but it creates MG field forces which are equal to the same as if you extract CO2 from the environment. It pulls in and creates your skull, Ca, due to its forces, but as the Ca comes and sits and finds its position like the crust of the earth, now very much like a dynamic lava, it grinds on it, and it continually feeds itself from it that it falls in and it creates the seed of the physicality of the brain. But its pull gets it, continuously extending on it, but inside grinds it to get it to the strength that he needs for his existence. (2:56). We look at the physicality of the brain, but how come it has that shape, there is a M field flow or wind as you call it, here. And what strength it creates and it has, dictates the shape of this wind. This is like when we give a water to somebody and we tell them this is a water, but it is a Gans, it's not normal water, it has a field around it. Excuse me sir, this is Gans too, (meaning the brain) and the soul is contained within the structure of the Gans and it has a wind around it too, so it grinds it, it releases its field forces to it. Now you might understand a little bit more. Don't forget, read Book #1, at what point, or read Book #3 or #4, it explains well how the surface of this planet or any planet has been decided. It's the same with the skull of the man, it's the interaction of the MG fields of teh soul in a different strength of itself, gives teh dimension of the brain with its atmosphere gives teh skull. And where he has lost it, he found a loophole, or a leak on it, that becomes teh spine of the man, and then you get legs and arms. (2:58). And then you get what you have to deal with, with the physical part of this planet. And it beautifully covers teh STM in it through the dimension of physicality, what you call the neural system. We are reaching gradually the point of departure, we are all on the same train and we are getting to the terminal. In this city, the airport, train and bus station, the taxis all go from the same destination, if you are in a hurry and you hae the money you fly, if you have time you get a train, bus or on your own you get a taxi, if you want to travel with the speed of your soul, of teh U, as a sight on a SS, now it's the choice of teh man. I have taught you all of it now, there is still a little bit left. (3:00). With the SS the reactors and cores we showed you if you would like to go with a donkey, as a sightseer you have all the time in the world. It's your choice. If you want to go fast and take a jumbo jet, you can go through the dimension of teh soul, but you have to understand. I told you that when I take man to space, I take him not as subordinate but with total knowledge, then it's his choice. I am not interested in building factories, companies or whatever. I am interested to take the man, but sometimes I have to bribe this little chap with some sweets somewhere, just to get him to the line where he can decide, it's there. There is another

flight system, when I introduce you to C14 dimension, there is a much faster way than this. But in time when man is educated we teach him. But this is good enough, you are traveling million of times by the order of magnitude than the speed of light. That the guy (Einstein) said we can't travel. Now you understand how fast the knowledge is getting transferred, most of it you don't understand because the comprehension of totality is not there, but most of it, as I said, we teach through the voice, but the STM for the others, and in the future man will understand, if you don't forget, (3:02). or just make a pyramid and you just forgot how it works. It's no good having the most advanced wash machine in the house when you lost the manual and you don't know how to operate it. Get the manual, learn the teachings and then you decide. You can wash (your clothes) by hand or put it in high speed washing machine. Just don't lose the manual, ?? or someday you'll say, the guy said that a thousand years ago, I hope that ?? , but I showed you how to extend your life if you want to have a thousand years just to mess around. And if you are like Armand then you want it yesterday. I have a patience beyond patience, I could have taught you this the first year but none of you would have understood. You haven't even managed to make a SS except a couple of governments. Civilians have not managed, but you have more ?? details ..?? a bunch of people with reverse technology, but they still have a problem. Now let's see who builds the Portals, the governments or mankind, free men. Rick says next week we have the first free man or non-government SS launch ... (3:04). ... talks about private company, Space-X going into space. What are they supposed to do? Take people to moon or mars. ... Q: John asks can a rocket go through the Van Allen Radiation Belt? (3:06). The Aluminum hull dissipates the radiation when going through it, they simple don't have radio communication when going through it. The way I understand it. ... Mr. Keshe asks, didn't a NASA guy say that we have never passed it. That was part of the rumors of not going to the moon. A quote from Tesla, "My brain is only a receiver, in the U there is a core from which we obtain knowledge, strength and inspiration, I have not penetrated into the secrets of this core, but I know it exists." Mr. Keshe says, We call it the STM, now we know Tesla darling. Q: Are we then the pilots of our physicality as we are also pilots of the U? If we understand the totality we can pilot anywhere. It's just us who are afraid of the reality. Q: When you talk about the speed of the soul of the Creator, (3:08). is it matching the speed of our soul? In essence, in inner sanctums, yes. Q: 9 CH3 is lymph blood energy. Don't know , try. We are trying to bring understanding of the totality and this is the hardest part and many of you will suffer with this until you even look at it. I was with a bunch of PhD and doctor scientists. (3:10). One said, now I understand this has got M field and nothing to do with the matter state, now I understand why nothing fits into what I have been taught as a PhD. You have to understand it's the limitation of the fields, don't look at it in the matter state. Rick says, As soon as we are outside the fields of this planet then matter won't matter that much. If we can make it on this planet it will matter too. People make those pools to create the pressures of the field forces of the depth of the oceans, experimentally because they can't go that deep, they can replicate it by creating more pressure to less. Now we have the facility to test the space conditions, if you understand how to make the Portals. Other races with less than this are already in space, but you lot you take too long, you're too slow cultures. Armand says, no you take your time. Do you know what the guy says, do not keep your silence. I keep my silence. ... I keep my peace because I am at peace. (3:12). Every opportunity in different dimensions was given to man, if you want a donkey or a motorbike, jumbo jet ... you have all the options. Many of you tested but you never understood, maybe this time I can explain that somehow it can be understood. Why does CH3 work with the body? Q: When we produce CH3 do we also produce

C14? Fields of it if you know what you are doing, you can extract it. But why does CH₃ work with the body and it's so effective. Because the C and the H's doesn't necessarily make 15, does it. In the mixture of it, some of it is 16 like O, it just holds onto it and ?? clings it. When you gravitate something towards yourself it means you give it energy with more to come to you, it's not a tow bar pulling it. (3:14). You have to think in a plasmatic condition where the stronger plasma give to the weaker to make it balanced and bring it to itself. You call it alkaliness. Oh my god, how much more can I teach. Maybe another way we call it is MG field forces of the U, it's round about C14, does that make sense to you. It depends on where you are standing, on the line or is it passing you, are you part of it, or are you in the middle or are you at the end with the legs going out nowhere. But you made that leg ?? that's where you want to stand. If you learn how to interact and create very much. I am going to open a door for those of you who (can) understand, if you don't understand I am sorry the game is checkmate as we call it. Do you remember this, we call it Deuterium, this we call C14, (3:16). another chap who sat here (in between). Do you remember I mentioned to you if you have Deuterium you can make anything in the U. These, have to be understood by the MG field flows of the MG fields of the U, and not the matter state of the U. Now let's play a game, 7 times much stronger by order of magnitude ... and you are sitting in the carousel of the U (draws an Infinity Loop around them). Your reactor is this (D) and the universal is this (C14), the center point is pointed to the center of the U. (3:18). You can imagine what speed you can travel in the speed of the U, in trying to pull you into it. Why do you give energy? Why do you become a lover, you give more then what you take, because inside you, you can add to it, inside you are part of the creator of teh energy. If you are receiving 16 and you are giving 14, where does teh 2 come from? It comes from the inner essence of your existence. It means it is within you, it's within the structure of teh STM, and the soul of the physicality. Read teh front of the KF, "We are here to serve and not to be served." When you serve you give more but where dies it come from as you receive, that you can give more. Why is the North pole of this planet is warmer then teh South pole, because it's more energetic when it interacts with teh fields of the U, so it creates more heat. (3:20). Where does the extra come from, it means ??? it has, it pulls in from the totality of the environment. How much more can we teach and why are you lot so slow. I can hear Armand breathing. Shall we call it a day, I have been teaching 12 hours in last 24. ... But in the teachings we are moving right to the advanced levels we are on the verge of a breakthrough, but we just need a little bit more people to understand. We need to carry the governments with us at this stage and they are boarding. (3:22). .. Alzar. Are you back from teh Amazon?

Thank you for today.

(3:24). (3:26). (3:28). Shows picture. double headed snake and turtle. (3:30). .. You see how even animals have 2 heads, 2 souls. ... (3:32). Presentation by Moldavian. Translation. He did an agriculture experiment. .. (3:36). (3:42). Summary of treatments with CO₂, CH₃, Mg, K and AA. .. Plants turned out very beautiful. (3:44). (3:56).

(4:00). The neighbors grapevine extended itself towards the Gans only. In October when it's very cold outside the cucumbers and plants are still flowering and producing fruits. (4:02). The vegetation extended itself up to the frost time. Below 0 degrees centigrade, -3 to -5 centigrade 26 Fahrenheit. (4:04). Gives summary of results. (4:06).

(4:08). (4:10). These are nice private tests you do, but those of you who do agriculture please bring people from governmental agricultural groups to monitor your work. We have come to the point where we have hundreds of thousands of people testing, we see

this and know it and it's beautiful what you have done, but those of you who do tests try to get your local agricultural committees involved, just to observe. ... I have planned this for this year .. (4:12). ... Mr. Keshe asks, when you grew these and it got cold, did the fruits freeze? (4:14). ... I don't know. How long did the vegetation stay green? They stayed green until the temperature reached -5 centigrade. ... We have seen the growth at -15 centigrade depending on which mixture of Gans you use. No we have, we are growing now in -20. (wow). It's a special mixture I have made. We are growing wheat under the snow. We tested, we watered strawberries and put them outside, they die, they freeze. But some plants maybe they don't do that, or do that. (4:16). ...

(4:18). .. one of the first things that came out was, oh this must be GMO. Everything we achieved suddenly hit a wall because 1 scientist said this is a GMO, so now we put everything on stop and sent all the material to be tested by the lab. And the result of the test was no GMO. (4:20). All the KF supporters have to gather certified evidence by involvement of your government. We have overcome the African pig disease, it's a massive achievement. Russia loses 10% of their pigs every year. ... It's done by them (experiments) and we are talking about a massive number of pigs. There is still a question mark and now we have to do it in a clinical test. No problem. KF has broken through the African pig flu in a very fast way. We have tested it on hundreds of pig. .. (4:22).

(4:26). ... in a few years times they'll try to make anybody who uses the Gans as a criminal offense, but we are working in a direction that this will not work. ...

(4:28).

.. the biggest problem now are the scientists in the governments, it's not that they don't believe, but most of the top scientists who advised the governments are paid by pharmaceuticals and whatever people who supply the pharmacies or the agriculturalist. We are on the vertical system, we teach, have the workshops, the factories, research center and the journal. One thing is that you are not alone over a hundred million people practice have been or have done. We don't need to all the time be involved to do it, we only do it when we need it. You buy a pack of aspirin not to eat, but because one day you might have a headache. (4:30). You have it there that one day you might use it. It's the same with this T, you know how to make the Gans', what effects they have ... it's the knowledge you carry for the rest of your life. 20
