

265th Knowledge Seekers Workshop Thurs Feb 28, 2019

(,)

(:11). ... We have been teaching over 10 years. In the evolution of science man has reached a new point, it will count how man will use this knowledge from now on. How we promote this knowledge and encourage the others to do the same. The knowledge in exchange for peace has been our work and the knowledge should give something that creates that peace. If we think we learn something that gives us betterment or better understanding of our lives then that brings us peace. But if we use that knowledge just for the advancement of ourselves then it is not a knowledge for peace. We have to share and understand that sharing is part of the peace process. Detachment from (? for) sharing is the gain in the whole process of the KF T. When we started 10 years ago a lot of people told me, don't give a knowledge like this freely, you know what they are going to do with it, I said, yes, they'll bring peace with it, because that is my wish, this is what I want from it. (:14). How can this be achieved? Is it by talk or do I transfer the wish, the essence of my being to those who come in touch with the knowledge. Do I need the language or the action, the motion of the STM touches another soul. We have tried to explain a lot of scientific things that science can be understood. We showed a lot of cases, things, a lot of you made Gans', but now we have got to the point where we would like to know more, we would like to see more and the question is, is the mankind ready for more. We have seen that many parts of the T has been tested to (certain) limits, new dimensions, new horizons, new way of thinking is emerging and the interesting part is what is the next step for us. I have received a lot of communications in the background that I am going too fast. One says, it has taken us thousands of years to get here and you want to take us through in hundreds of days. We are not mature yet or ready yet. My answer has been and will be, we are mature, we didn't understand that we are mature enough. (:16). We are at a point of looking at the others to confirm our maturity, but not ourselves to see what we can add and how much we can share. This has brought me to a lot of thinking, people say I am going too fast and my answer is this, today I give you a chance to ask questions to do with our work and the way the teaching has been going, what is the gap in your knowledge. Every few months we do these kind of sessions where you ask questions and it leads to different dimensions, it's an open platform and it's time to consolidate from a few who might know and a few who might not know. ... Yesterday in private teachings I brought up a video of a humming bird, pictures that I think will effect a lot of us if you understand it. ... this will teach us a lot of things .. about all our teachings in the past months. The computers are not fast enough. It will teach us how this bird (:18). shows the life of the man, how we will be, how we'll become, and then I'll take questions. ... it's a very small bird and instantaneously it or she changes the color very fast. I looked at this many times. It shows how man has to become in the dimension of space. Through the soul on this planet we have 2 hands and arms, the condition in other points in the galaxy because of the materials, the ?? of creation doesn't have presence of 4 arms or 10 legs or no need for eyes, and this teaches us a lot. The question I put is, if you look at this bird, you have to see the way it changes its color. (:20). ... looks for hummingbird videos. So what happens, if you look at a man, we go shopping and we buy clothes, there are no shops for the birds, they go through the evolution to fit the environment or what they need to make themselves pretty. When man goes to space there are no supermarkets that he can say today I want to go with this fashion or that fashion. I presume after a few years we'll give up on clothing because they need racks and secondly do we want to get to that space. Or do we train ourselves to be able to adapt, it's the man who decides what

he wants to see and what to close his eyes to, and what he wants to see through the eye of the STM. (:22). .. we are looking at the next steps in development and how this T will effect our daily lives and how we can do it. ... We will perfect everything that we do daily on this planet. .. we see the end of drugs and drug trafficking, addictions. .. (:24).

(:30).

(:40).

... We have to learn the strength of our soul and have trust in its strength to be able to take the plunge (:50). in the open spans of the U. Would the body of the man go through the evolution of the operation of the soul without physicality, or would the STM through the soul of physicality enforce a rapid evolution that everything is here, I can take it. It's like you're jumping off a plane and free falling. Am I going to open a parachute, or is the parachute automatically opened by the STM. In the next few months, maybe a couple of years man will have and have to answer these, because the space T, the spaceship program, now that we turning into space Program between the majority of the, what we call the space nations of the world of today will force that position. And then are we collectively going to lie to each other, or watch one of us opening the door and walking outside. In English they calling it, "walking the plank." In olden days when somebody was sentenced to death on the high seas, there was a piece of wood ending up in the ocean and you had to walk it and jump in. If you managed to (:52). survive and get to an island, it's yours. 02

... what happens to the STM when you have to deal with the existence of the body when you think you might freeze and where would it go, (:54). would he convert it, or work through it and as every cell of the man is dynamic it will go through the emotion of conversion. Let me explain... we all know the emotion of fear and how our heartbeat goes up and our body sweats, we show, we breath different to adjust into what is built up into the body at that moment, but we have never tested the condition of no air, or the existence of the soul, would the soul convert automatically the body to take energy from the space without anything else. Or is there enough energy in space at certain points that it suits us, it's like you can swim in some places and not in other places because it's too dangerous and rough. Would we find environments in space that it just suits the energy of our life to feed our soul and we walk in and it's fantastic, hand in hand, ?? maybe we get the wings, maybe we find MG evolution like the way our soul of physicality ?? STM and find a position. Then this bird teaches us a lot. It actually tells us (:56). how backward the mankind is that such a little thing can convert (itself). If we take this bird with us that it can change its color so fast, would he be the best candidate to take with us, and let's see how ?? it changes. Would it float or start making new colors and noise, or do we need to take the partner with it, with the love of the partner interacting they both stay alive that they feed each other to confirm their existence and their love for each other. It's not like on earth where you write, I love you, and you get no response back. There it's the love of the soul and you know if your partner is in love with you. This, is that simple. The reason I start bringing these things up is because by June of this year the first world collaboration in space T will start, and it will take like fire. It has been set to go, everything has been organized. And then what do we do? This time it's not (just) KF, we are the guilty party in instigating and setting up this organization and the space nations of the world will and have responded to it. (:58). The new space development then becomes the flag bearer of all of us. What we call CIBRIU China,

Iran, Brazil, Russia, India and US space agencies in plasma will work as the first organization to test these things. The structure has been set. Then would it be an American to take the first step or are Iranians more proud to say we are first one, or will we get 6 of the 6 nations walking as 1. And would the love of one hold the others to stay alive in the dimension of the soul. Would we see the change the way we see a child born from the womb of the mother as a swimmer, as a fish, to a walking and breathing man. Is there a hidden system in the physicality of the man which is there for this position, the way we changed with 1 breath from a fish to air breathing, would we change from air to soul breathing. These things are in our reach, one of us or some of us will test it and if we fail the first time would we develop technologies that we can create the condition of the transformation of STM and the PTM into the dimension of the space. (1:00). We can't live the life the way that we do where when we go camping we have to take the oofd, bed and everything else in the space, ?? ?? in the KF we have developed a lot of different ways of energy transfer and other things and we creating new systems to gradually taking you through it, but at that point it's the last man standing. It's you who has to make a decision that this is not committing suicide, this is committing to a new life, detachment from physicality. It's a big difference, when you commit suicide you end, when you become detached you start a new life without the fear to end. The cycle of the STM will go through that transition. I have some good and bad news, many races in space have done it and succeeded, many races out of the fear failed until they gained confidence that I can live through my soul. Many races at this moment are going through the transition. For us to go from a beautiful color of a black skin of Africa to become the beautiful yellow skin of Chinese, to the wonderful color of the Iranian brownish and then to the white has taken us thousands of years of evolution. Would we learn like this bird that we can change color (1:02). instantaneously and with it, it shows our emotion. What does this bird say, 'I am in love I am looking for a partner,' why do you think he does it? And another partner that has the same soul strength says, 'I am here come and catch me, we do it together. Would the color symbolize the soul. Then mankind has to get ready for this transformation, he has no choice we have put mankind in that direction. Americans and Russians are at it and some countries that have some confidence in space T are at it. Now they are testing plasma reactors, why don't we see them fly. Where doesn't it fit, what have we missed. These things have to be sorted through CIRBIU, as many of you know, Russians could have achieved a lot more but they were behind with the Americans and they came up with the excuse that if any American space system crosses over the Russian territory they'll start a Third World War, because they were a few months behind and they were developing their own system and they got ??? Americans were there long before them .. but would we have that threat on us or will the scientists of the space t become the flag bearers of the peace (1:04). because they can go anywhere and when one learns the others learn, like this bird. This is not the only bird (that can do this), all the hummingbirds from this caliber change their color. How do they do it, did it come from genes or have they taught each other. And what made them to change so rapidly. Today's teaching is very simple, we are entering a new phase of the space program and the beauty of it is the lamb and the lion will share the knowledge. ... There is one point, can we trust with the Cups, the plasma, MaGrav systems, with every other system that in the past 5 years taught you to keep you busy to teach you little by little. Like little children who get bored with their toys, I have been like a father who has been running around shopping to keep all of you busy everyday with different toys. ... Gans' this and this, in every way I juggled around to keep you interested and working. Now the game is yours. Now the humanity has to decide who is going shopping and who is going to do the walking of the plank in the

space of the universe. Unfortunately, the gateways (portals) which we are building and progressively getting done, (1:06). will not be a place for man to test, because it's consciously, at the beginning not possible. Remember I said the word, consciously. Consciousness is part of the pitfall of the life of the man in the dimension of existence. We come back to one point and that is, we put the hand of peace to all the nations who are part of the CIBRIU to attend the first conference. You'll be informed the place and position in the coming time. It will not be public, it'll be very much public private. In that process would we take the step to not only share the knowledge of the space T the way we have developed it, but be brave enough to take the first steps into space to see if the way we trusted leaving the womb of the mother with our soul knowing that there was going to be a danger with the new condition. Would this time we are more mature and take that step to leave the womb of breathing into the dimension of the energy of the U and leave for our physical bodies and our soul to absorb the energy of the U with the compression of the magnetosphere of this planet. (1:08).

(1:14).

(1:20). but would all of us leave this planet to become a free soul leaving all these attachments of the pains of life. Or we split into different groups, those who decide to go and those who decide to stay in the village of the earth's physicality. But would we come back home and would our friends and family recognize us if we appear in the light of the STM or would we take the definition of the physicality ?? I see the Iranian space groups very rapidly reaching that (point) and the same for the Chinese, I think the only ones far behind the whole lot will be the Americans. But we have to help each other to get there. There is one condition that we have to decide, when we take the plunge would we come back to live the suffering life of physicality to kill to live, work 8 hours a day for 2 weeks holidays, that we can still suffer with it because we count every penny to save to have these 2 weeks. Are we like English people who go for 2 weeks holiday and the minute they come back they start saving for next year's holiday, they suffer by not buying food because this money is for 50 weeks from now when I will have 2 weeks to spend it. ... (1:22). This is the pattern of life for mankind and how far are we going to come back (into it after being away in space). Some people say there are too many of us on this planet, I say, that we don't have enough because a lot will take the plunge and this planet will be a ghost town. We don't need rivers to live near, we don't need to depend on food, we don't want attachment, no language and no ?? Or we go through the evolution of the spaceships and gradually go through the phase of detachment where we get mental security that I walk in this space I don't need to eat, I don't feel hungry, I don't feel thirsty, I have to do something not to be bored, or I help the others because to keep myself out of boredom. And then realizing that my body still exists and then maybe the transition will be as I am not eating I lose the use of the stomach, kidneys and liver and the rest. (1:24). I take what I need so there is no need for storage. there is no cleaning up to do. And then when it is needed it will come back. ... look at the pig trial with African Swine Fever, this has a huge understanding for many of us. Those of you who have a fear of reversal. This pig, female ... this soul wanted to stay alive because he guaranteed to show the KF T, "I want to be here to confirm the KF T." ... Three months before when this pig had African Flu he was eating everyday and making a lot of excrement's. From the time she went through the disease due to the side effects of the virus, she ate very little, not drink much, she lost half of her weight during the 3 months as she was dying. But the strange thing is, according to the farmer, (1:26). the pig made no excrement, which means the stomach was totally closed. ... Knowing what

I know, when the virus is reversed the pig will start creating excrement. it must have sounded crazy to the farmer ... to drink a water and make excrement after 3 months. This is what is going to happen in the space with your body, there is no oofd you are taking in all by energy. It was important for me to confirm that the body of the man can go back into operation when I bring it back to earth. (1:28). We said to the farmer that the first sign of it's recovery is the creating of excrement. ... After 3 days (treatment) the pig produced the first excrement after 3 months. For me in analyzing this process was a great breakthrough. We could reverse for the animal after 3 months and it showed that the lining of the stomach had not destroy itself, it was still there. Somehow the survival mode has kept it together. So the way I looked at it was, that when we bring man from deep space when he hasn't eaten for years and then he decides to eat. Go to some of the pictures and you'll see. ... (1:30). Shows the pictures of the first excrements .. to the scientific world this has never happened before. Without anything (no oofd) just drinking water (made excrement), creating the condition of life. To life the body responds. .. 7 days later excrement normal. This shows that life can convert back to its normality. This is what the man will do when he comes out of space. If we lost our mouth, would we see the opening of the mouth. If we lost the use of our stomach (1:32). would we see it start to function again. This is a real case it is documented by the farmer and it shows the evolution within 3 days. Would man behave like this when he comes back to earth, or maybe you go to another planet where they make excrement from the top of the head or fingers or whatever because that condition (of that planet) dictates that. These papers that we release have huge fundamental application in the space, they're not just that we solved the African Swine Flu. ... What this picture gives us, is that when man goes to space and has no need for oofd and he can tap into universal energy, and that when he arrives at the point of destination and where there could be the conditions of the use of physicality for oofd, would our system start to be activated. .. this is a perfect test ground for man of space (1:34). This shows a lot to me how the psychology of the animal has changed after 7 days the pig didn't eat anything. It's back to normality. So we can evolve in the dimension of the physicality and in the dimension of the STM. 37

(1:38).

(1:46). .. Any questions.

(1:52).

(2:00).

(2:10).

(2:14).

... Q: Deuterium or everything you see as black in the sky (2:20). is the neutron which is in the middle of the U is the Proton is at the edge of the U is the electron? This doesn't make sense. Rick says I think he is saying that the Deuterium is the center of the galaxy, so the D is everything you see as black in the sky, the neutron is what is in the middle of the U, sorry the proton is in the middle of the U. It doesn't make sense, I read it twice. ... Q: I built a MaGrav system for all 3 phases of the grid and an array of 6 MaGravs in shape of a hexagon, as 1 effect I got a very big field and now I want to make sure (2:22). that the field is rotating Counterclockwise, can you give me a hint on

how I can achieve this please, I think because of the phase shift of the 3 phases will already give me that rotation but I am not sure? There are different ways to do it and this has to come when you are building the MaGrav units, the way you Gans coat it, you have to get the ratio, that you go from the stronger to the weaker, so let's say you start with the strongest at 12 O'clock, then your Gans mixture at the next one at say 9 O'clock has to be let's say 4:1 or 4:2 and then the one at the bottom at 6 O'clock at ?? 1, then you can create a dynamic system, because at the same time they try to feed each other you dictate the condition of the rotation. It's very easy to do, but you have to do it at the time that you are building it, or how you space your gaps you can enforce rotation too. We know this from our MaGrav systems some of them in the KF they say they don't work and we take it back and it works in another countries, it has to do with the M field pressure which the current in that country creates. Originally we didn't understand, someone comes and says it doesn't work, but if we send the unit at a 50 hertz, (2:24).

(2:34).

(2:36).

.. Q: About a Ketone diet .. (2:50). ... I know nothing about it. We are not here to comment or peer review. .. A lot of researchers only look at it through matter point of view and you don't see things, but when you look at it from a plasma point of view you see a lot of things. A lot of people are opposed to chemotherapy, but now through the plasma we have opened it up and we can control most of the damages of Chemo through PI T so the Chemo does its job. (2:52). We do (take care of) the side effects, but it has to be done in a certain way. 07

... You have to understand what epilepsy is. I explained it in the medical teachings. I can explain it. ... (2:54). He draws the brain and the spinal cord. At the point here you have a switch. In the way this switch works it can create coma, epilepsy, can create drowsiness, it can actually put you to sleep when it works in different ways. It's a point where your physicality switches for your soul to operate, if you understand what I am talking about. It cuts off, it's like when you are on 2 engines, this point works, it disconnects from the soul and then the physicality goes to sleep. You know this point very well, for example if you have been a driver and you push yourself to do something and you fall asleep and then wake up, it's this switch that goes to work. It's the size of the tip of a needle. But it has a specific function, let's say it has a capacity of allowing 2 MB of information to go through. It has the size of a pipe. You can only put so much water through a 2" pipe. (2:56). Let's say this can carry so much information to the rest of the body because it goes through the spinal cord. Some of your information goes through the soul with the radiation that it goes instantaneously. But when your neural system is used, your nervous system specifically for muscles tissue, this is what the nerves are, for muscles, because it's Cu it has to be transferred with the Zn and the Cu, match perfect. So when the brain under normal conditions produces 1.5 MB of information, so then this can carry through. But if you keep the brain busy then it now produces 3 MB of information, and most of this information is physical information like to move or to create a repetitive condition. What happens if you go in a switch and you create 12 MB of inof. Some of the people with epilepsy create that condition themselves and I know how to catch. So what happens ... this switch can only allow 2 MB of inof. (2:58). per ?? Because a lot of people have to ... remember that wherever there is G there is also M field. This is a lower level current which can go to .. or it's a higher level current that it can come from. So higher electrical current is going from here that in trying to get to the lower ... and it just travels very fast. It's a plasmatic flow. But on the

reverse it pulls info back up, that's how we have reflexes. So this (switch) has 1 MB of going and 1 MB of coming back, so the 2 MB are used (up). Now you put the body in a 12 MB cycle, it can be physical or a lot of other things, now you have a traffic jam of 12 MB, and 12 more MB coming up as well and they both are trying to go through (the switch), you have 24 MB but only a capacity of 11 (? 2 MB). So what does the body do? It opens up the switch and allows 2 through and it closes the switch until all this (the excess info) is consumed by the body. ?? If you take a switch and turn it on and off, you get darkness and light (flickering). The easiest way I can explain it is with a water hose with a high pressure from the tap and you open and close the nozzle, it will start moving like a snake (shaking or tremors) until you get rid of the pressure. (3:00). So it's the same here when you see the shake of the body in epilepsy (convulsions) it's when it's switched off and it's coming up, and it opens and shuts until all the 12 MB have come and gone, are used up. So what you see as the shake of the body is the switching on and off of this point. If you understand this then you have a number of options as a doctor to handle this. And medicine doesn't work because if you take medicine then you have to get it all the time, or you take a plasmatic condition that the body never allows itself to create 12 MB. You increase the capacity through the plasmatic condition or you settle the soul and once you do they'll never have epileptic attack. Then what you tell me about changing C, this thing is through the conductivity of the body which is connected to CO2 or to C. We do this in all the certified Gans Water Systems. When you buy a system from us we use CO2 which is certified medical equipment. If you interfere with the electric wire or you cut it, then you have a problem where you cut or create the damage. Doctors don't understand, now a days they see the shake of the (3:02). epilepsy and they try to control it. But if you understand the source of the epilepsy the way we do, you're done..09 (3:04).

(3:10). It's us who restricts our intelligence, but if you understand the totality, it's not there. Rick says, I think my mother talks to me more now than when she was alive. You have to find here a husband, I think, your father is not keeping her busy enough. Well I do get messages from her she had wise words of wisdom and a certain way about her, I get like a flash or imprint of her presence you might say, it's like a guiding force from time to time. Fortunately, for me it's not an everyday occurrence, I don't need that at my age. You never know. The reality is that we have to understand what we call the dream now that we have developed the science of man and that's part of our life. We try to, or part of our brain decides to remember, we not. What do we dream in the daytime? It's the same because the soul is in touch and not the physicality. Talking about your mom, I remember I was in Seoul and our team went for lunch ... (3:12). .. as we were coming back up there were birds singing and singing next to me in strength and I turned around and said to them, I know my mother is dead, you don't need to bring me the message, I know her soul is gone. When I walked into the hotel I received a call, your mother has passed away. It could be anything if you understand the emotion. And sometimes it's like you say, the soul .. how you are connected. We do not need the physicality to reach others. It's just like I said to Caroline we come to this planet because physical life is nice we have a lot of ?? we come to experience it. Any other question. (3:14). Rick shows old reactors. The Nano coating stops the interaction with the plastic. The blue one on the left is a cap of an osmosis filter. we took out chickens with to escape the Belgium's who were trying to kill us .. The half sphere reactor took us 18 months to build. The Cu rings are access for different sensors. (3:18). .. This is a single core and it flies in a specific condition. When we ran

this one is created a special light, plasma or space light is different then normal light, Caroline had to sealed the windows. It creates a huge light (3:20). it gives you a beautiful sensation you can walk in it. It's gas filled. It weighs about 6 Kilos. ... (3:22). This core was very important for us to understand the central core of the planet because they said it was made of iron, so we had to understand the proposition, this has a lot that goes half way to the center and the sensors came from different point so we could see the flux flow. Sometime you could this one giving a positive and other one a negative, so we knew that inside it there were multi-cores. (3:24). A room full of reactor, these are all fed through cables to the control panel, each one of the students was responsible for 1 reactor. The one in the back is the twin sister of this one, the Iranian system, etc.. this one was shown in the peace conference as a power generator. This one was made by the guy who poisoned to kill, John, the Belgium assistant. All of them are linked and you see these vacuum pumps. ... (3:26). .. this is where 129 Tesla was set up .. in trying to feed it we built up to 129 Tesla. .. This system on its own cost around 70,000 euro to build. ... (3:28). I tested it in Belgium and we achieved flight ... If you look it's set on a Star Formation (SF). There is a radio here and we could interfere with it, it would go faint. This is how the Iranians captured the American drones. We can interfere with line of communication through PI. ... This radio goes silent when you run it because the M field becomes part of it and it doesn't receive any information. They're still in Italy none of it has been touched. (3:30). Armand shares his photos. .. (3:32). .. The height of the reactors are all considered, everything is considered. The reason they are sitting on pallets is to separate them from the fields of the earth. With the Chinese reactors we have made the same platform with the cores to separate the earth from interacting with the system. If you put it on the ground you get a lot of interference, when you take it off the ground it's easy. ... (3:34). ... we stopped this reactor twice by line of thoughts. It's amazing how much has been done. ... (3:36). (3:38). (3:40). ... Shows video of weight reduction in reactors. ...

.. you se 3 kg weight loss. You can fly at any time at any weight. It's a condition for flight, in this system you won't see anything after 6.1 because it flies. ... (3:50).

... Flight is not a problem, understanding it and controlling it is the problem. This is why we push with different systems and groups, different ways to control it through thoughts, because it's very rapid, one second it's there and the next second it's on the ceiling. (3:52).

... After this the Book #1 was written .. (3:56). ... It's a beautiful machine, it has a lot of knowledge and effects with it, you can control it to fly in any direction, I have done that with it. And it has beautiful characteristics with it, in that it feels you, because it's mainly made of polymers, even the one (core) inside is the same, it has a type of neutral connection, it feels you and you can communicate with it. It's like there is no barrier. When you work with metal cores it's different, when you work with lined cores it's different, you intention, emotion has a very deep connection with it. It's an amazing system. This would have taken me a year or 2 to build the Iranians did it in 7 days. .. everything is balanced perfect. Mr. Keshe would you consider going back to systems like this again? Not really, this system is not with the Gans, it has nuclear source, heavily. (3:58). I have a body which can take radiation and somehow I am built that way, I can work with it. The PI condition with the Gans has M fields and the public can work with it. .. in some cases we go up to 450 source of radioactive material. Some

tests. And you have to place them one by one attaching them to the wall. There is a ?? glue which they use for He balloons, we painted it with that to get a seal from the CO2 polymers, that they don't leak inside, we get a barrier. opening and closing them takes a half a day ... We learned a lot about the behavior of PI with this reactor, how we can ?? dent it. This produces plasma at much higher speed then CERN. And you can drain it, from that window you can drain the PI out. (4:00). When it comes out sometimes it's a bluish color. The worse thing is to keep on looking inside because you receive all the fields. ... When the Belgium's came to my lab they said you need to use a special radioactive detector that only comes from America and you need special intelligence clearance from those who control the nuclear industry have to authorize it that you can use it. And strange enough within 2 to 3 weeks the American government authorized for me to be able to use the detectors. It was very shocking because I thought that ... they were learning with it with us. I still have it, I can't remember they charged me thousands for it. You can't have it, it can only be used in nuclear centers. (4:02). And it's a highly classified system. It's used for military high level radiation ... you're an Iranian boy why did they let you have it? Because they used to get information, I used to go to the American Embassy to teach them, if there was a development I wanted to ??? The American Marine research center is in the UK. Sometimes they used to come out and I ??? I collaborate with any nation that ?? peace, color, race or religion doesn't effect the work. As long as they use it for peace. (4:04). .. 6 years ... We'll see what we learn more. I think today that there is a switch in teaching and now you understand that it is you who is responsible and it's you who has to decide if I am going to become a man of space or not. Nobody can say you didn't teach us, you have to teach yourself and if I take that step there are dimensions to the U. Hopefully next week we'll learn something more. ...
