

267th Knowledge Seekers Workshop - Thursday, March 14, 2019

(Best way to Nano coat and vacuum is best way ... , M field capture of plastic, , About taking all parts of the body with you into space, Explains the 3 layers manifesting the physicality of the Creator, Don't use CH3 Gans for people with cancer it grows, The soul structure is the interaction of fields, The STM, STP, and the soul of Universal Community 3 layers interact to confirm physicality of the Creator, Which part of the brain you have already thought the whole length of the joke and the end of the discussion before you even open your mouth, Talks about how speech is formed through the brain or the soul, Do we speak to all parts of the body so that we can take them with and not leave them in different parts of the universe, When we die do we take our consciousness with us -- it's part of the knowledge of who we are, Going to space is as natural as being born it's a joyful time, Cu motors are like Cu Gans in muscles holds us to earth, Christianity and Mithraism and the 3 Wiseman from Iran, Is the physical life which is tangible to us actually real, The body lying down with chakras forms spaceship,)

(:06). I hear a lot of people saying, I don't understand this or that. Today we'll answer some questions and go on with the teachings. (:08). John why did you imprison your flying machine. I unchained it so it's not stuck to the ground anymore. Q: A spacecraft big enough to carry 100 people 1 day and then 25 people the next day? It's still possible but you'll still have 100 seats, you have 75 seats free. Q: Can't you shrink it in size? Yes you can do that. KF in space system shortly in the coming time will be ?? space program flights (:10). As I told you I am designing the KF commercial ??, they've been settled now. I'll be totally focused on space developments and flight in conjunction with governments. 21

(:16). .. (:18). (looking for Chinese system pictures.) .. (:20). John show us your ?? reactor, is it flying yet? Q: What's happening is we are getting a lot of vibration like it's ready to do something. It's clear that it needs to build up the fields, because every time we interact with it, like when we go in and measure the strength in the morning, it almost like we have to start over, it needs to be left alone. Ah ... this is what happens at the sunrise and sunset. It's easier not to come close to it, it builds up and then it dies off, in the day time and night. Q: It's like our bodies drain the system. You have to stay away from it. Q: We are definitely getting a lot of build up of energy if we leave it alone. Yeah, but I think you have to increase one of your materials in your outer core and you should see flight, because these vibrations come due to fields trying to balance each other. (:22). Q: In one of the teachings with the Cup of Life you brought up about the N coating process, you said that perhaps some of the people are doing the N coating process to its ultimate capability by doing the 1 caustic bath, is there more that we are missing in the n coating that you would like to expand on? Not really. How you N coat any material, I call it determination and patience, and if you have the patience you achieve a lot. If you don't have the patience and you just want to see something black then you don't achieve much. Many of the KF people are impatient, they have to have it black and then let's go that's it. ... to get a perfect Gans from a N coat needs patience, time. N coating is a black hole, that's why it's black. Do you know how many millions of years it take the U to create 1 black hole. (:24). .. **I explained in the teaching this week, take your time and let it grow, let it grow. And this (coating) becomes like a powder, you can see through the gaps, it's a fluffy thing. And what you do, you wipe this out, and throw it aside, this is no good, this is the first layers. It's like I explained in the teachings, it's like a dirt on the mirror when you cook a meat that**

comes out. These are the beautiful N layers, (? the lower layers), you can work within this section. Even the Gans of the fluffy layer is different then the Gans of the lower layers. To get this fluffiness usually takes me a month or 2. You need to have the patience of God if you want to achieve miracles. A lot of you are happy with something black and I put it there it turns white and I call it a CO2. the color change from black to white has become the fascination of these teachings. You don't listen to the extent of it, you don't understand, what difference does it make. How beautiful it would be to be done this way. (:26). The whole process of N coating is being as patience as God has been, you get beautiful .. you can do miracles. You make a N coating and then you make a Gans, and let's say you need a 100 grams of Gans I can do the same thing with 10 grams (of this kind of Gans). You hardly achieve progress sometimes because your Gans isn't mature Gans, whereas I work and I achieve. Because a lot of people wanted to make money out of it and it didn't work because they don't understand. What do you want to do and what do you expect? I have seen put caustic materials in a pressure cooker. It's a waste of time throw it to the wall. Anyone making N materials using pressure cookers, you see some effect, (:28). but it means you haven't understood, go back to a chef. N coating needs space and time to grow, how can it do it when you put pressure on it in a pressure cooker. Just because it goes black and is shinny, you think it's very good quality. My ofot, the left and the right they don't work. It means 90% of the people who do these things it means that they have not understood. One of the KF research, it looks like a cooking class, they got pots and pots and they don't understand that you can't make N material with a pressure cooker. ... You have a material here which is getting pressurized back on itself, how can you get this (N layers) ?? mess from it. You see the top layer and then you let it cool, you can't do the job, you sealed it, you closed it. ... our people themselves in the KF don't understand these things. I'll show you pictures, it's wrong, but what do you expect to produce from this material. (:30). ... (:32). Shows the Chinese reactor. This belt has 36 or 32 revolving balls each one, as they are rotating on their axis, they are rotating fast around the system too. But inside this system there are other mechanisms set up that will pull this back and forth. By creating these base units to create separation between the earth and the system we have locked this in very nicely, so if I could expand this to say somewhere here, I create a MG field flat, which means the passengers can walk into this space. You control your size. The Iranian space reactors were very hard to control this way. Once we achieved certain parameters we could reduce it or whatever, the Chinese system is much more flexible and it has characteristics that always, it doesn't matter where you put it, the condition is determined here. If we could expand these legs and move it up and down, we just make a dome for hundreds of people in it. (:34). We can expand and contract, and you control it from inside. Q: Is the captain of the SS the one to decide on the size of the SS or can the collective field of the passengers allow for a bigger ship? ... It's the captain. We talked about it last week, if you have a hundred captains in the back can they collectively override the captain in the cockpit. No, they can't do so. You'll see this is part of the parameters set up. (:36). Q: For higher speeds, 10 times the speed of light, since there are a lot of friction between magnetic reactors, would we have a problem with heat, or like with cooling coils you showed in your other reactors? No there is no such a thing. ... That's totally different, that's an old fashioned system, we have gone into non-motor systems. Q: There wouldn't be friction between M fields? The system drains itself. When you have your system there is an up flow chimney effect, and then you have a down flow, with the space systems that you built up to now. You don't have any control. (:38). As they come in they build up. .. now we can control this and expand it. So there is not much field left to interact inside the

system, you blow it out or you capture it in. These interaction in here are a small amount like what we have in our atmosphere. It's not just a wind that you feel. There is a M field flow. We look through the daylight. there are trillions lines of fields between you and the next building, G pull fields, M fields of the earth, the Inertial field forces. But we got use to them, we adapted ourselves to be able to move within it without effecting us as such. The space of this planet is not just the space and the lights, even the lights are on the M fields. Do you think the fields just pass somewhere, you got a G and it goes through us, it is within us. It doesn't create heat, partially it does but (:40). it's very minimal compared to our other parts. The fields are continuously in every direction and every position but they don't create heat as such. I hope to start the research in space with the Iranian government pretty soon, and (cut off) ... (:42). ...

I am getting back involved with the space program, Iran included our aim is to unify the space program. They don't want me to mention that, we are fully monitored. .. These parameters are ?? (:44). We hope to have the Americans on board with us soon and some other nations. Any other questions. ... (:46). Q: One Iranian who researched your work from the beginning, he mentioned that if we know the molecular structure of plastic we can make a magnet for plastic, could we use such magnets to clean our oceans from micro plastics? ... Years ago there is a video where I use 2 magnets to attract plastic. What we call plastic, we can make the M field of it, this is part of the achievements of the KF, in the coming time when I go into space research I will release the M fields for the capture of plastic. (:48). ... You have a C-H bond in plastic, in some cases we have seen Nitrogen, there are a chain of connections. Mainly we work on this. There is a way the same as what you did with the Cu and N coated Zn, in which you created the C here (middle), which you extracted the C from the environment. The C in the plastic has a specific characteristics, in the same way we can produce a field which matches only the C of the C-H bond of the plastic. We will release massive amounts of C and H into space, we'll see a massive increase in water levels. In systems that we developed for this we have seen the water levels rise quite rapidly. .. It's one of the easiest things to do to get rid of the plastics in the oceans. (:50). ... All plastics have a specific strength C with them. In the CO2 box we produced the MG field of the C, we can also do this for the C-H in plastic. All you need to do is to create the Gans of this plastic and you can clean up the planet in no time. You want this plastic to be opened up, eliminated, extracted then make a Gans of it. ... I referred to this before, it can cause other problems. Now I open a Pandora's Box. Go back toe the Coke bottle ... if we have found a way to dissolve the plastic in the Coke bottle, then you already have the answer. But K Seekers don't see it. We have already managed to open the plastic up. (:52). Make a caustic of the plastic that you want, make a Gans of it, then you know what to do with it. ... You make a water bottle and give it 12 months for the water to be drunk, then take the bottle away ??? Dating it, because in this plastic we can embed plastic which we can recall the system. Or in the coming time there is a system ... we throw our plastic in the boxes. We make an opening in the box, then there is nothing left in the box it's just a ?? gas to the atmosphere. We have already shown this, I don't understand how K Seekers don't look. We always said, in the Coke bottle the neck and the little knob in the bottom disappeared, because we take the H to create Deuterium, Tritium and (:54). H atomic. So the C is moved. But how do you open the C, Imack did a test and said the C is ??? here. So it's very easy to understand the process, it's been done. These are things I'll get drastically involved in, in the next few months now that I am handing over everything to the KF management team. There is a lot of agricultural cleanup ... Rick says he discussed about mushrooms to clean up plastics. Mr. Keshe

says you use the P I T the way we have shown it. Rick wants to combine it ... Mr. Keshe says, if you do it properly you can fly over these islands of plastic (:56). and just convert them to H. You'll also capture a lot of CO₂, and Gans' and fish will grow much faster. .. Rick shows Wiki, Polymer Degradation, opens up on a Polymer, large molecules are repeated subunits ... (:58). Anything which stretches has a polymer structure in it, because ?? it can pull itself. If you look at all the polymers, plastic, nylon, or the plastic they use for bottles and bags, it is part of it. I have studied this polymer, plastic business for years, . It all has a C-H bond and the different combinations of this C-H gives you the polymer. If you can make a MG field, which you already know how to do with the Gans' once you disable this one, the whole thing falls apart. We already know the T, we have already produced it, we did the Coke bottle. As K Seekers you have the knowledge to make plasmatic M field of any element in the U. If you go back to some of the teachings, you can remove pieces from your body. If you have a piece of shrapnel in your body you can remove it without any operation, it's been done. You make a MG field of that element. (1:00). Why do we ask in the cancer processes with the space T we don't look at all these little things have gone into your immune system, this is up or down, etc. we don't look for those small things, we go for which material (element) has increased in the body and we see where it sits and what is the cause of the cancer and we can remove it. ... plastic is the easiest conversion after H. ... Caroline chopped 2 kgs of Coke bottles for H for the flight systems. Once you break one of the bonds it's over the whole thing falls apart. (1:02). .. we go back to the basics. You need maybe 50 grams of caustic, get some plastic the one you want to extract, you put some caustic and hot water on it. What are you going to get? Some H and C, it's a technique for breaking down plastic. Now we have a material. A Gans of plastic. (1:04). Now you place your Gans of plastic .. draws 2 reactors, "Bob's your uncle" You put a bottle here, you extract and create the fields of it, and then you can do it. Put a submarine at the bottom of the sea and the plastic on top of it., one up here. ... The problem is we moan about the plastic and people collect it to make money from it. In Africa people search for plastic in every bin because it's money. .. Rick says, tiny Nano plastic is in every drop of ocean water, how to deal with the entire ocean. We have gone too far with it. (1:06). In the 1980's plastic bags appeared in the market in a massive way and until that time everything was paper bags. When it came into the market we saw problems at that time, I used to have a packaging company in England. We could see that this thing doesn't get destroyed, it was good for packaging company like ours, because a paper bag was used, thrown away and there was a next one. With the plastic bag they used them again and again so I couldn't sell more. I looked at how we can get rid of these plastics. When you use specific fields you can open up the C on it. But there is a very big problem with these polymers some of them are at the strength of the protein, the C bond. Q: Alzar interrupts and takes the question in another direction. The N coating video done by Armand, he told to soak the cu in caustic for 24 hours, that's how we learned so what is the kitchen soup? (1:08). Armand you better explain. He is born in 7 months, everything has to be quick. ... **When I do the N coating, I leave it there, the steaming process is a different process for expansion, it's not for making N coating. It's 2 different processes.** We don't put under pressure. Steam processing is very different then what you call pressurized system. When you steam it, you allow it, it grows but you don't steam it in a pressure cooker. Q: Mr. Keshe if you put the Zn in caustic for a month you don't have any Zn left. No, no you don't put it in it for that long. Q: How many days? If you do it properly it just grows. (you were talking about Cu not Zn). Q: how long do you put it in the caustic.... if you put Al in Caustic in 1 minute it's gone. (1:10). Armand says, if you go to the video it says at least 24 hours. Some people

can do it fast, at least you can leave it in the water for 24 hours, then take it out. Shows the pressure cookers, this is wrong but many people do this. Because you destroy, you pressurize back into the layers you made, you want to make it as spongy as possible, open it up. Rick says, but without any air in between the layers, you don't want it too spongy, right, like when it flakes off, like some of the fire coating? It just grows up naturally, layers build up. Rick, says, you say pressure would not be good like what we see with the pressure cooker and that makes sense. So would a partial vacuum condition be more enticing to those N layers? It is one of the absolute best ways to make N coating. I used to do it in Belgium in the lab. It creates a very different structure and I taught this in one of the private teachings and the Russian government scientists understood and they used it. (1:12). It has a specific application. Rick asks, would you have to keep that under vacuum conditions for it to keep its properties, would it collapse under the normal atmospheric ? When we used to do tests in Belgium we had access to one of the most advanced vacuum systems, we used to create vacuum above the vacuum condition in the space, much deeper. We used to test this, I tested the N coating even under the vacuum condition, it's very different. The Gans' you get from it is totally different. Let's put it this way, if you take one of the N structures of your Cu, it gives you the energy of let say 100, and if take the same in a vacuum it gives you a million. Even the space of the fields opens up, that is the reason for it. This kind of vacuum N coating is used in some of the most expensive motor bike glasses, the different shades of glasses, what they do is they put the glass in a vacuum chamber and bombard it with Nitrogen gases which creates a lot of indentations in the glass and then they bombard it with H or different colors that they want to create that shade. We tested this, we took the H from the, (1:14). or what do you call it, N particles from the matter. A lot of research has been done this way, I used to show it, it's in one of the boxes in the lab. We went testing into ceramics, how far we can touch into ceramic, we bombarded with Nitrogen because it's a big atom and then we released Nano materials to settle in it. It creates space colors they're not normal colors you see. ... You need a vacuum. The Russians have taken this further (with vacuum) because I had to go to the authorities to explain how the Russians have used my T to do what they have done. Because they used it to change materials worth pennies into thousands of dollars literally with no cost. They understood my work, I ?? writing with them, I don't disclose, the Russian in the space T N materials are very advanced. The machine we used was made in Ukraine, it was the Russian system. The Americans can't even touch it yet. ?? Q: So N coating is just like raising a baby, you don't stretch its legs and head to get it to grow fast, you just nurture it and feed it and it takes 18 years until it comes 6 foot 5. No, no .. definitely you're a woman and a mother. (1:16). It doesn't take that long. You create a space gap that it can expand into its environment and the higher the strength fields opens up. This is what it means. I always said, that if the space doesn't exist, the fields, the solar system can't expand into it. It can (only) expand as much as the other fields allow it. When you put a gas in a room the shape of the room dictates the shape that the volume of the gas is going to take. In the Pl T the shape of the Pl is dictated by the fields around it, not it's containment. That's why when you have a Gans it passes the wall of the ball. If you put a gas in a ball, the walls, that's its limitation. Whereas with the Pl you pass through it. The only containment of it are others fields that are stronger or weaker from it. It's the lack of understanding of the knowledge. When you create a Nano particle, how much room you give it to expand, that single N particle can become a solar system. If you allow the fields of it to open, in weak fields. It's part of the space T deep space ?? team. I said in one of my teachings, 1 atom of H can cover a solar system or a U. (1:18). There is nothing to hold its fields, there is no boundary to it, whereas the Gas state, the

shape of the container holds it, it can't penetrate beyond it, but the PI penetrates through its containment, that's why we can see flight, that's why we can see day and night because the physical boundary of the earth doesn't trap the MG field of the planet. It's a matter state, it's much weaker, it just goes through it. I always referred to the MG of a PI reduces in strength then it becomes matter state, because if it was higher the MG field of the earth could not pass through it to create its position in the, back to the sun or its rotation. It's very simple, but the knowledge is not understood so it creates mayhem. If you have a N material you can allow it to grow then you create a field for it. Q: I would like to ask about the containment of the field of the Gans of CH₃, from Dr. Rodrigo's presentation that people with growing tumors (1:20). should avoid the fields of CH₃ otherwise it will feed the tumor. So what is the safe way to keep the Gans of CH₃ if we have it our apartment? No, you see you have to understand what it means, the CH₃ is every part of your life. Your body is made of it and functions through it. You have to understand what it means, you don't throw away your CH₃, the CH₃ should not be used inside of a system which is used for cancer. Q: So not to use in patches or reactors? No way, because you provide the C14 and C12 to it. Q: Recently we removed several liters of CH₃ Gans from our apartment? It's totally irrelevant, because these are plasmas but it takes them if it needs them. The CH₃ in a Gans state is the plasmatic state of the U. When you connect it with an AA like in a patch, then yes you locked it in. But we live in it, everything we touch which breaths ?? in it, from the plants to the animals to everything else. If that were the case the spiders in the house should be the size of the dinosaurs. (1:22). You have to understand the totality of the knowledge. The tumor grows for a specific reason, what is feeding it and why the space of the body allows that space for it to grow into. How come it dictates the size and shape of our bones for our life. It doesn't do anything, it doesn't allow it to grow. You have to understand how things grow in the body. ... I seek the knowledge of U matter state is very easy. Somebody once asked where do you go to the school to learn all this, I said I go to the school of the U, I am still a student. The master of the knowledge is the Creator. Any other question. Q: You go to the class of the U, Can I come with you? We don't allow woman. You have to speak to God He is a man. Sorry about that. No it's understanding the work of the U, it's not easy, (1:24). you have to be independent and very open to knowledge. Thank you, I understand. Q: Arnold talks (unclear). Sandor is storing his Gans ?? some kind of way. I store my Gans by connecting them in a ?? rotation. I saw his room I think it is effecting his neck in a bad way. Maybe you can say something about that? No I passed it on to the doctors, I keep myself away from this discussion because the knowledgeable medical people are handling this case. ... (1:26). ... Q: How can we recognize a Gans as M or G what about the Mg Gans? Every Gans is both M and G, it depends on strength in respect to its position and as soon as the K Seekers learn this we have jumped a big hurdle. You can change a flow of the fields towards you from M it depends how, which fields you position. I thought there would be a lot of questions about the soul. Q: What is the structure of the soul? ... The soul structure is the interaction of the fields, (1:28). and what density and what strength they interact with each other. It's not a house, it doesn't have a control or computerized system running. I'll put a very interesting question to you and maybe it will direct you to a certain path. You sit and you start a conversation and you speak, this is a question to the K Seekers and if you find this it's the answer to a lot of things. Let's say you want to tell a joke or to describe something, what makes you, which part of your brain, and in interaction with which part of the fields of the body decides on the words and on the conclusion of the joke, decides on the path, on the words you are going to use, decides on everything in that conversation. And which part of your conversation you decide to

insult, (1:30). or to be cheerful, loveable, or a brute, that in the mind of the man the position, shape, color, sound and the pattern of the voice which comes out of the body transfers all that emotion in a sequential way that makes sense to somebody else. The question is where and which part of the brain you have already thought the whole length of the joke and the end of the discussion before you even open your mouth. Do you actually go and repeat that this is the sentence I want to say before it comes out of your mouth, or does the sequence come out without your even thinking (about it), or do we have a part in our body which puts the whole question together and then it releases it and it comes out of you because you were expecting an answer. If you understand what I am trying to say. How do we make sequential noises with emotions that comes out of our mouth, we have trained it, and then you understand what I am telling you. Or does the brain put, thinks this is what I want and transfers it to the voice box and the voice box puts it in a sequence with the emotion added to it, and you voice good morning, I am very sick, or I am very happy, I want to laugh. Did the brain decide or is there a structure in the voice box which carries emotion with it, which transfers emotion of the soul and the soul of physicality that when it gets (comes out) (1:32). it's tuned to your laugh and shake your hands, or you cry and tears come out. How does the voice, the sequential system of this noise connects itself with the emotion and can connect with the other emotions of the body. This is part of the teaching of last week which I said, if you take the ?? STP inside the STM then you travel with it, but how do you separate these, what do you understand from this point? If I shout with the voice at this level everybody will panic, but did I make the decision of the shouting, the voice I used in my brain or the emotional feeling of the reaction of the people to such a noise is passed to the voice box that it creates that emotional voice that it fits to the other peoples emotion. Do I already read the soul of the other people that the physicality will behave this way and create the noise for it, or do I actually with the emotion of the soul have already created that, the noise is something which comes out for them. How do we decide on the sequence of the voice which comes out of our mouth. Or do we have a section which everything is released it's just a batch work. If man understands this you are 1 step closer to releasing the STP to be part of the STM. As I said, (1:34). you make your voice to be tearful and the emotion of the tear will come with it. But the words have decided this is what this is going to be or is it the emotion has decided on the words. What about when we talk without emotion, is it through the soul of physicality or through the STM. This is important because when the man decides to become the man of space, how and the way he will look will decide and if the shape or say the leg has a fear, you travel with the leg left behind, because the feeling of the fear in the leg doesn't match the joy of the rest to travel with. Suddenly you get the ?? same butterflies in your stomach and the physicality of the stomach stays behind because it did not match the structure of the field transfer. Or would we leave different bits of our body in different parts of the U, as they go through different emotions as compared with the emotion of the STP and the STM. Oh, I left my stomach on planet Zeus and my legs on planet Zed. When they feel the strength of my emotions traveling here, they join me, would they? (1:36). The question is how and where in our physical body or in the STP we dictate on the voices, the noise which comes out of our voice box that creates us the emotion of the feeling, with the noise which is made. This is one of the pitfalls of the man who wants to travel into space. That you can take all parts with you, and can you speak to all parts, to the leg, can you come with me, are you happy with it, Mr. Toe left side would you like to come with me. ... but who decides on it. These are parts of what I call, the remnants of the fear of the man of his own demise. If the man goes 1 step beyond that and he knows that he is controlling everything, in a way he is in charge of totality, man

can separate (1:38). or bring the STM into operation of the STP. The question goes back, how do you make sentences and attach emotion to it, how and why you expect an outcome from emotions in the voice of another person. Or is the soul of you and the soul of the person you are talking to, a need to transfer the knowledge of your STP to the STP of the other one ?? decide to understand, if I shout, you shout. The souls already know the shouting is going to come. Any other question. Q: The button on the end of the bottle, could you please explain? It's the production and failure, compactness. Q: Would it have anything ... okay. It's the end where they inject the plastic in. (1:40). Or it's the side that when they inject in everything comes together. Q: It's not a piece of Cu? No, no. It's a hard piece of plastic and I call it a button. ... that nudge we find is the second place where (the C) opens up. ... Something very interesting if you have ever observed is that N materials cannot be soldered to each other, you can solder 2 materials underneath and ?? N materials on top. It's very hard for many ?? parents to see and understand this, is that when you have a wound, especially on young skin, then the old skin, it heals much faster, why? It's because of the N strong interaction (1:42). creates that, the older we get the field strength goes up, lower and lower strength, and it takes longer to interact. If you understand this then when you get a Coke bottle in your hand and you make a N .. whatever the parachutes you make N coating on it, when you see the tip is gone, when you touch the thickness of the plastic around the bottle in the middle, it's very much different then when you started it. So you already start converting part of the CH3 bond in that direction. When you start with the plastic at 0.8 when you finish with the caustic it's 0.04, but we never paid attention to it. Q: As it deteriorates? It doesn't deteriorate you convert the C, extract the C. .. Armand says, it happens when you put the current on the parachutes. .. it happens in every direction, when you put a current to it you create the flow. I never put a current to it I usually just connect a wire to it. (1:44). it creates its own current. ... if you put a very high current to them you see the molten metal inside floating. But it never leaks out, it stays in. You see through the whole of the N material, you see the molten metal inside. (1:46). Q: Do we take the consciousness with us in space, the good bad experiences the knowingness, awareness? What do you mean the consciousness. Yes we take everything with us. Nothing is left behind. We are a collection of knowledge's which are transferred into its recording, this is what we call RNA, or our body carries that information. .. It's part of what we carry. Q: So when we die is it the same thing? Same what thing? Q: when we die do we take our consciousness with? It's part of the knowledge which we take with us. Q: Part of the knowledge of who I am? Yes. Q: And what if we get afraid up there? The same, sorry too late, it's a one way track, as you decided before. Q: Is there any control machine, like here we have the emotions that tell us where the danger is (1:48). and what to do, is there anything like that? It all depends, you will learn very soon. We all learn from it and we build on it. Q: So it's a natural response for humans to go to space? It is as natural as when you were born from the womb of the mother in the water. Q: So no need to be afraid when the time comes? Why should we be afraid it'll be a joyful time. I have always said I am ashamed to be in the body of the man because it carries too much pain. As I have said, it's a responsibility that we have to fulfill. The journey of a man is the habit of the man ??? transformation. Q: So we are bigger then what we think ?? Good Morning! Thank you. Q: When we are in this body we have this duality, when we receive things like good and bad, when we get fearful there is a part of us that says, don't be afraid, we talk ourselves into not being fearful but being positive. But at the point of death that duality is taken away, so at that point (1:50). if you are in the fear you are going to enter that world with the fear, but if with grace and love you enter with grace and love ... so we have to

be careful when we leave this body, am I correct? Before you get married when you have a girlfriend you never make these kind of mistakes. When you have a partner everything is a mistake. We decide what and how we approach things in respect to our souls, and nobody else can dictate on it, or decide on it. There is a very big question I put it to all of you, is the physical life which is tangible to us, actually real? Or is it a collection of energies in which their interaction creates some flows which we call it emotions and the rest. But in reality is this physical life real or is it just interaction of fields within a given structure? Some time ago I wrote a very simple paragraph about the mankind, 'the mankind is kind enough.' (1:52). or for this kind of man. It's somewhere in the text which answers a lot of questions at this point. If you have some where ... if you read it, it explains a lot in respect to the soul. The STM and STP and respect of the STP and STM and the other souls with ?? us. Do you have it Rick.? We have to know how much we know and how much we ?? share, that by sharing elevates the soul of the others, and in that process of your sharing elevates your understanding ?? you have elevated another soul, so you need more to elevate more. ... A scientist said, I am a specialist in a certain field, (1:54). but when I listen to Mr. Keshe I realized how little I know. 04

(1:56). Reads:

.. it means existence of the others who transforms themselves into the shape of the man then they live above loving. (1:58). The other part tells you a lot, because loving and being mankind is connection of the STM and the physicality. If you read the first and the last it's the connection between the STM and the STP of the universe, the Universal Community. Then we ask ourselves, do we understand this transformation and the connection between the 2 or the 3. The STP, the STM and the soul of the UC and the understanding the totality. Here is the mankind, don't look at it as a woman and a man. .. We speak about the interaction of the 3 layers of the fields which leads to the manifestation of the physicality. .. is this 3 layers of the fields interaction of the physicality, STM and the soul of the UC (2:00). lead to the manifestation of the physicality of the Creator. So are we part of the physical existence of the Creator because with this we create the 3 fields which needs in dimension to lead to creation of the manifestation of the physicality. The question is if it is, then who is belonging of this physicality of the Creator. Why has He manifested Himself in physicality? For whom? Is the Creator part of a lover or is created to love itself, to lead to creation of. We said the skin is made of the 3 layers whose interaction is something similar, so when the STM, STP and soul of the UC of the universe interact, by the same law has to lead to confirmation of the existence of physicality, of what except the dimension of the creation. So we are part of it. We are one of the layers that through it the confirmation of our own soul we confirm the existence of the physicality of the Creator. I made man in the image of Myself. Thus the man is part of it. What is in macro is in micro. (2:02). Q: When we put the fields of our soul into our creations do those creations hold those fields forever or do they dissipate the fields of the soul. And is it like we are creating a child, do we have to put our energy fields in and then nurture it everyday or it wilts on the vine? We forever emit fields and forever lives and interaction of our existence leads to creation of other lives. Q: So for example our Gans when we put the energy fields of our soul into it, they operate in a different way? Of course they do. You see John as I wrote to you before, you locked down your reactor. (2:04). For reasons you understood, you didn't want it to escape. Could it be that if you could understand the field forces within that system, which is existence dynamic, in interaction of the soul and emotion of you which is connected with your soul would you be able to cause it to life off, fly, or would you be able to take from it that it comes down. You have given it a point of

reference with the black reactor, but you haven't actually given it life from the right side, from where it comes, where it's a creator of. Are you afraid of that thing flying, that you are holding it back? Success is too much. No, no, no. Why did you lock it down then? ... ??? you put it on the floor .. that again is another fear, that it might fall. Why not I wish it to fly and hover. It will not fall. The problem with these reactors that you are building is that they have a dimension of physicality restriction, which is that Cu motor. What you were doing some time ago, these balls should float. Very simple, give me 5 seconds I'll make any of these balls that you guys have made fly. (2:06). ... by putting the energy of your soul in it? In one way, but you have to connect it. You don't create the potential difference, or the current flow. ... they are capable to fly but you don't want it because .. you don't believe in what you do, how do you expect it to be. You don't have the trust in yourself to do. The trust of the success leads to failure. ... Listen to the talks of the Iranian reactors, I could dictate the position and direction of the flight of the smaller ball fly any where. (2:08). You have the chain of physicality which is the Cu, and that Cu which is the Gans state, creates a field flow and a connection with your physicality. It's you who have chained it and you want it to fly. It will not do. If you understand that and can make the non-motor system which is getting ?? and still do not get it done because ... the perfection leads to the failure. ... some how it doesn't fit into our structure. Many physicists and theologian walk away from confirmation of existence of the Creator. Why? How many of them we know. If you speak with many scientists when they see people of theology or advanced physics, they say, do you believe in God. No I don't because I see everything as physical. But when you sit and watch the confirmation of physicality leads to confirmation of a system which keeps it together, which has to have a condition of creation. (2:10). The day I can take away the fear of failure from mankind he'll fly. You put a doubt into it because it is ingrained to you. This is how this planet has chained the man to himself. I give you so much that you don't look outside, it's like a lover, I give you everything you want in the house so you don't look outside for anything else. You don't need to go to a restaurant, I am a very good cook, I chain you. The love of the soul of this planet has chained the STM to itself. The planet doesn't ?? It's the man who has to understand that I still love you, but I have to go and see more. I wonder when, if it goes to the planet's demise that it releases the STM, it (the soul of the earth) will say that you are my children, go, you are free, because if I go you go with me and it's not the way it has to be. Would then you all find the freedom to act with your souls in the dimension of physicality. Do we need to get to that point, then it goes what kind of man are you? The last man standing, or chained to the soul of this planet. We find any excuse but we don't find the key to it, or understand the key to it and it's hidden in all sorts of ways. (2:12). It's like in the Christmas story in the books of the Bible it is written that there were 3 Persian Wiseman who brought the gift, because the Catholicism or Christianity was written on the basis of the Iranian Zoroastrian faith. The 3 Wiseman brought the 3 gifts, Zoroastrian is Mithraism, which all the 3 gifts were for the elevation of the STM through the physicality, speak good, do good, think good. These were the 3 gifts, but man has just come with the boxes now, the 3 gifts, which was the STP given to the man. When enter the Zoroastrian temples or schools in Theran on top of the doors there's a bird with the wings and man on one side, it's written Think Good, when you think good you don't ?? and this is a gift of life of the STM ?? STP to the STM, instead of waiting for the 3 wise men to come, they came but you never understood the message. Rick says, the roots of the word good is God as well. ... (2:14). Q: Alzar tells story, ... now we have to find the 7 billion souls. This is part of the work and for us to understand it, it's part of the structure. The process of life is very simple, man separates it and divides it and finds

every excuse for the divisions, then he runs into problems. Any other question. (2:16).

Q: Is there not a phase change in the Cu structure under temperature and pressure? ... We have enough confidence to show our own mistakes and not hide it under the carpet, that shows our strength and not our weakness. ... (2:18). .. we gave the USB stick to the governments and they hid it.

(2:20). ... you pushed from the bottom with the testimonials and everything else and we continued our talks with the governments. The governments know they can't hide the T because grassroots has been taught. For people in grassroots know then the governments have to do something to keep the people in position. That was a beautiful way to do it. 10 years of continuous teaching nonstop... (2:22). This is what sharing of knowledge is. ... This is not Mithraism and Christianity that we have to ?? muzzle it so we can control it. Those of you who are familiar with both understand exactly what I am talking about. The rulers of Rome believed in Mithraism and God and that had no physicality, but people of Rome were worshipping statues but they knew the top guys believe in something else. When they found Christianity they brought it in grassroots they wanted ... now we found something like you lot (the rulers) have, we believe in God, Christ and something else the Holy Ghost. Then they had to find a compromise, they brought Zoroasterism in the name of Christianity, and that is why we have this mess. Or Catholicism. This time we didn't go this way, we taught the grassroots the basic fundamentals of the knowledge, the interaction of the knowledge with the STM and we told the governors, people know, you have a choice, join in because you are part of it, or they take the knowledge to the next step, then you'll have no room to rule. Because all these people you see on top as governments, governors, leaders, they all get sick. They'll have high BP, like you people at the grassroots. (2:24). Who helps, what helps, the knowledge of the T. Then they become a man. Many people have a problem with me interfering and working with the governments, you don't understand, I taught you at the grassroots, they have to come to you, and it becomes a peaceful nation. It's One Nation, because we are touching the soul of both sides. We didn't choose the governments for the man, you chose your own governments, because you need them, your taxes go for when you are sick or your children to be educated, you can't do everything yourself, so you selected people to do the things and pay for the things to be done. But nowadays they have gone a little bit far with different things. .. I have touched the STM at the bottom. ..

(2:26).

(2:28).

(2:30). Any announcements for the KF will be made by the governments. We are out of this scheme. ... Q: What kind of material is to be used for the Cup of Life for the 14 members (Core Team), we didn't find a good answer for it. You mean you don't have one to copy. ... Q: You spoke about pure Cu and Armand spoke about brass, but it has lead in it maybe Mercury. Caroline said she didn't want to use this one and we should ask you. ... The Cup of Life which is made for the Core Team, (2:32). has a structure which has a dimension of physicality, and the physical body which is the red muscle tissues is Cu, that is why we choose Cu. Anything else you take or do you can make Cu wire from anything. We are making Cu wire of a new structure. This new Cup which we asked to be made last week is in a different shape or form, but of a different material, but it's for a certain purpose. It takes a long time to produce it, it's not an overnight job as I explained in the teaching to produce it. The Cup of Life is made for the STM and not the physicality, the ones which are made for the members of the Core Team. The same with everything else which goes around with the work of the KF, people still look at our work (2:34). it's based on the work of the soul and not the

physicality. Q: Is there a relation between Cu and the STM? It's the soul of the physicality of the man. Q: Right, but the STM would it discern between Cu or lead or other elements, it wouldn't be, maybe registering to the soul in that way, it just sees fields. (Jalal says, the STM is the connection, it's the FP. This is also for John). .. I am listening to what has got to be said. We make a Cup of Life in another position in the U, ... for that body in that area or location, that environment has lead to the creation fo life. (2:36). And on this planet our muscle tissues are totally based on Cu. Our physicality is connected to Cu. A deviation, a split in the strength of Cu leads to existence of the man. It's a simple calculation fo the strength of the fields, our Cup of life leads to the life of the STP. It's understanding the simplicity of it. Q: Is Jalal asking how to make a Cup of Life? They asked what it is made of, not how to make it. What is the structure of it. If you understand it in a deeper way the C of Life is the body of the man. It's the cup which carries the life. But man always wants something tangible that he can connect himself with. We are testing new things to be able to bring a new light, a new understanding to many of the KF K Seekers. (2:38). Introduction of new material that you start looking at different dimensions and different aspects. The teaching of today, very little, but if you understand it very powerful. Hopefully, next week I'll introduce a new dimension in teaching. It's more in depth of understanding the soul and more in understanding the relationship between the STM and the physicality. More in line with .. a lot of you are wishing, or dreaming to see a flying saucer, SS. In a way, is that SS the physicality of the man. I'll give you a point, maybe one day I'll come back to it, depending on how much you understand, or how much I can be a good teacher and not teach you much but let you understand (figure it out) it yourself. (2:40). Draws a man, chakras. Draws another lying down. Then which spaceship would you like to fly in. If you remember what I said about the Chinese space reactor, we decide the extent of the opening and which part of the STM of the physicality of the man, decides the expansion of the dimension of your soul. Why do you dream when you sleep? Maybe we opened one of the Pandora's Boxes of the man. (2:42). Q: Can you continue please? No, you need to think. .. This is part of understanding the creation of the man and he hasn't yet understood this. Now we understand how much more man still needs to learn about himself. Happy New to all Iranians across this planet. Hopefully the KF will start working with the governments and we'll bring that peace to all of us. (2:44).
