

443rd Knowledge Seekers Workshop; July 28, 2022

(Proofing and Transcription done, need to do - Key Phrases , Words, Quick Index)
(Auto Transcription by Elias)

ENGLISH TRANSCRIPTION

(:20).

K- Good morning, good day to you. As usual, wherever whenever you listen to this series of Knowledge Seekers of Keshe Foundation Spaceship Institute, around the world, and in how we openly share knowledge and show the development. You don't need to wait for patents to be created, and things to be hidden. The way Keshe Foundation as a Spaceship Institute works, we are preparing the whole mankind is, where you want to gather the knowledge, to become the passenger of the universe, as was in the intro. The choice is yours. (:22).

Now we understand the process of the travel. If you travel with the dimension (D) of the energy, what we call, the inner sanctums of the man, the Soul of the Man (STM), you go through a system, that you don't need food, you don't need energies, you don't need light or heat, the Soul of the Man maintains its existence, through the work of the Universe. We don't see a blanket on the Sun to keep it warm. And we don't see a cooling system on it to keep it cool, on the other side. It generates heat, it maintains a constant heat, and we don't see anybody serving food to the Sun or the Earth.

So if you travel with the Soul of the Man with a dimension or energy of the man, that now we understand more of, we use different systems. If we travel and live in a dimension of physicality (P) of the Man, we need to meet the demand of the man in that dimension. He needs food, he needs energy, he needs light, he needs all sorts of things, medication and medicine, and all sorts of mental and psychological pressures.

Today's teaching is more or less, at the beginning some good news about the first way, how the process of the space technology is developing, as you know, and we are carrying out. And then we go to the what we call, the energy unit. In an dimension of the energy of the man, and what they call the soul, the energy, which we hold within and we see the interaction of the physicality of the Man, energy side. Some people call it, the aura of the man. How we can extend the Soul of the Man to cover the physicality, and how we can control it. Then you learn and you control it.

We had interesting cases, as you know, we've been test flying flight simulation in the past weeks, (:24). and yesterday was a huge step for this process. On Tuesday, we introduced more or less, 2 working units for the flight system, which has been developed and changed in past few weeks to be ready for transmutation of the man.

When you travel (in matter state), you carry the physicality. You have to go to the airport, you have to get in the car, you have to get in the rockets, to get from A to B, to carry the mass, the weight. When you transmute, which means, you put the body of the Man instead of putting it in the car, instead of putting it in the plane, you extend the physicality to be where it is. But you extend the energy the Soul of the Man to cover the physicality.

Now the physicality, as those of you who have been in it, they call it, you're in a balloon. In a balloon where you are embedded, you see the physicality, but now you're in an envelope. Going to the airport to take your physicality, costs everything else you've done for years, and we know the method. To go with a transmutation means we use energy of this envelope.

As I've said many times before, doesn't matter what we put in the envelop, cash, check, letters, love letters, hate letters does not matter. When this envelop is posted to get to its destination, then it can be anything in it. When you make a telephone call, it doesn't matter, if it is the noise of the water, if is your voice, the laughing of your child, or crashing of a glass on the floor, the package carries that noise from A to B, (:26). and the person on the other side listens to it. And only he listens. Because you dialed the right number, you connected magnetically, what do you call telephone line, or satellite line, which is a weaker way from M field to the destination point of who it is.

It could be one day in North Europe, next day in Asia, the day after in Africa. We connect to it, because we dial it, we know where it is, the satellites find it. In the world of Creation, there is no satellite, but there's a connection of all the M fields of the universe together. If you dial the right number, if you connect to the right person, you can do that. Which means you can connect to.

This is what you do when you're asleep. The M field pressure of the blood of the man lowers, and then this allows the STM, which is engaged inside, to be free. And it goes to where he wants to, dreams about the mum, dreams about the dad, dreams about what is the concerns of the physicality during the day. Or what is to come, because it's structured as part of the whole movement of the fields.

In the present time, we cannot dictate that tonight I go to sleep, or now I dream of the man, of mother, or father who died years ago, and they'll be present in front of me, because this is unknown to us. But we do it in the dream, we accepted that we dreamt, now we know that there is the work of the soul, how the dream is created by reduction in the fields of the blood flow. Like at Tokomak, the plasma inside is released, so expands, and it meets mom. In the new space technology, that's what we do. In a new systems that you've been, we allow to reduce the fields of the blood, and give that freedom. (:28).

We take the energy M field of the blood into our system. So now the soul expands. Does the whole thing. Most of you who have been in the system, you call it, you feel you are in an envelope, you are in a field. We did this for the past 4 or 5 weeks. Many of you been

here, over 100 people, and they have gone through the system to see the expansion. And it was contained into what we call, Keshe Foundation spaceship simulation center.

We said, we are going to go on the mobile system, which means we bring people from around the world back to Linz, or where they want to go. Or we can control, or connect to them, that they can travel without being here. Yesterday, we announced it weeks ago, that it'll be done in October, November, it will be ready. But our system developed within the past two years has advanced so much, that in that process in developing the new systems. We had opportunity yesterday with the teaching of the Rick, on Wednesday morning his workshop. I happened to be there, and I thought the system is free, because a team of 5 changed the time to another week. So we had five places vacant, nobody turning up. They did the last minute.

So what we did, I said to the people who are with Rick, in his teaching, in his workshop, that I would like to test something, and see. Maybe now we can see how fast we can develop the mobile system and test it. So with some 10 to 15 people, present with Rick, I asked them if they wanted to join a test. Just off the cuff, just in one position. We asked, who's got headphones, who hasn't got headphones. (:30). Who can listen to the what we call, the transmutation on a computer, or whatever.

We did the first test with mass numbers, with more than one or two people. The results were in line, but not amazing, but confirm the correctness. Go back to the teaching of the Rick's workshop and listen to it. We asked first, for people, we leave them for 10 or 15 minutes. We connected our system from here to the communication line, which is the telephone lines connected to Rick. The structure through zoom operation. Then, after 10 or 15 minutes, as we do here.

It's like you go in this 10 or 15 minutes you wait. It's not just waiting, we send energies, we send packages or plasma of information, which your souls recognizes down the line. So we allow the blood structure to what we call, "not to interfere with work of the soul," with work of the energy inside the body. In that process, we allow it to expand. This was done in the first 10 or 15 minutes, while we were waiting for. They thought, what are we waiting for?

It's actually, it's like you go to the airport, as I said many times, you wait, you arrived half an hour early. You wait till they announce, which platform, where you have to go to catch your flight. And then I entered, and I explained to them, now you can go to.

You don't fly with the plasma technology, you go to, because it's instantaneous. Flying means getting into, to move the physicality. I explained to them you can go to your mom, to dad, grandpa, wherever you'd like to go. It's your freedom. Go to the Moon, go to wherever. (:32). We allowed this to take place. After about 10 to 15 minutes, when we allow them to do, I went in, and we asked questions to see if transmutation through mobile phone is a possibility. The results were immediate.

The number of people who wanted to speak, who went through the process, explained what happened to them, Go to the Rick's workshop and listen to it. This brought forward the position of transmutation of the man through new technology. So we foresee in a much, much closer time, that we could test for the first transmutation mobile system, by you as Knowledge Seekers. Please sign in, register and join.

We want to mass travel people around the world. First through the soul, then through the Soul, to manifest the physicality. You got to remember, in the yesterday's teaching of Rick, there were people from all corners of this planet. They were not all in one room like the flight system. There are people in Canada, there are people in South America I think, there are people in Europe, there are people from Asia. So we manage to reach all the souls simultaneously. We didn't ask them to all go together anywhere, that's in the next stages, but it was for them to test. So we are ready to go through the transmutation.

It's a beautiful feeling when, what you set up, what you developed, the Keshe Foundation team have managed to achieve, for man could not think is possible. (:34). We had people who went to see the mother, or they went to see the father, or people who went to the Moon. They described some of it. I had to leave halfway, and I don't know who else came in, and what they explained.

But what it comes to is Keshe Foundation is a space technology, as I said in the intro, we give you, if you want to travel in dimension of the Soul, transmutation, the system is getting ready to go. If you want to go and live in the dimension of the man, which most of you are involved on a daily basis, is where do I get my food? Where do I get my energy? Where do I get my, all other things to be able to maintain the physical life?

We gave you the good news about transmutation. Now, we call this, the Energy Day, because what you see today is very important, especially for North European countries. Germany, Austria, France, Italy, Denmark, Norway is a gas exporter, and other European nations, which rely on a gas for daily life from Russia, between 40 to 60%, some nations 15 - 20%. We heard that the Russian government yesterday, a step down another pipeline to Germany.

So we are running into crisis. This morning, we hear the inflation in United State runs at 9%. Inflation in Europe, is getting into double digits, because of the shortage of gases, and other things, which depends to Belarusian, and Russia, fertilizers, all kinds of food to North Africa and Central West Asia from Ukraine. (:36).

We're here to show two things revolution and evolution in energy. Today, Russia, gas pipes, turbolizes gases as a liquid into Western Europe, through pipeline sets, and paid for by more, and both countries, and different countries to have a guaranteed pipeline energy. Now it's in danger. And this winter, using the national reserves of all the nations of the gases. By March next year, there'll be crisis. But so they're cutting by 10 to 15% to be lower consumptions, the school will close earlier, the lights on the streets will go down much sooner than later in at night. And all sorts of more cuts we see. And it will bring in more inflation, we see. Gas fuel prices goes up, on the rest.

Last week on Monday, we showed you gas. How to make hydrogen from Tehran laboratories and factory. Last Monday in Teheran, we showed an alternative plasma system, you can put in your house and use 20%, maybe 30% of the energy from the government, and the system provides the balance of it. That's a system on its own. It's not a power generator.

Last Thursday, in a second Blueprint Day, we showed you a generator. As a lot of people got confused with this generator. That, what is this? Why is it this so big. And if I bought the Plasma Enhancement Unit, what is this one? Plasma Enhancement Unit is when you still rely on a government for supply, but you reduce your bill. Generator, (:38). it means generating power, and you can use it in conjunction with the (Plasma) Enhancement Unit, or you buy it, you have an independent house, and you put it in, and you don't need any connection (to the government power supply).

This power generator caused a lot of problems for people last week. And the reason for it was that, the light goes on and off and everything else. The light and the fridge going on and off is in fact, to do with the matter state today, current problem. As long as you see this blue light on, you have a guarantee of supply without (you are receiving energy from the universe). So what you see as a light coming, a system going, we had to put it, because otherwise you say, "Oh they've got a battery in there, and supplies, and that's it."

The switch going on and off, the lights going on and off, it shows that the system here, uses energy. When it gets to the point of not having the energy transferred on the what we call, the inverter. It switches off for a few second, the plasma charges up the battery, and then it goes back again (powers the refrigerator). As a generator you don't have this problem, (the power is) continuous.

This is shown, to show the change in technology. When you buy a generator now, for 2 kilowatts, you have to buy diesel for it. You have to buy fuel for it. You might have to buy wood for it to burn it, to boil the water, or bring the what we call, diesel generator to rotate magnetic fields, to produce it (the electricity). You buy a generator today. With many of them years ago, for our businesses around the world. They usually come as the half of a size of a 20 foot container. And you get there, you still have to buy fuel for it. (:40). If you don't put the diesel fuel in the generator, your hotel business is kaput. It doesn't work, you have no electricity.

The beauty with this system is you never need to do anything with it, "Plug and Play" for life, unless something internally goes somewhere within it, which is replaceable. This is a solid state generator. It means once you have it, you're supplied for life. You don't have to worry if the Russians cut the oil, if the Russian cut the gas, if something happens in Middle East, oil prices goes up, you have to pay more for the fuel. As many of you do. You buy diesel in the summer, which is cheaper, then you don't have to pay for the fuel in the winter, 10 cents to 20 cents more.

With this it's what you see, what you get for life. Two years guaranteed internationally, 10 years should nothing go wrong with it, unless critically, something breaks down. So you don't need to feed it, you don't need to do anything with it.

The size of it you see, is not the size of the system you get. This has been built to demonstrate the what we call, the functionality of the plasma. This is done to show you that, we see the system is working, energy is consumed, and when it's too much consumed, system takes a few seconds to charge up, and then it goes.

So the generators you will get, are most probably, half the size of this fridge. And is a practical way to do it. And we try to help people to buy different stages of generator, 0.3, 1 kilowatt, 2 kilowatt. We found that a lot of people complained in the past few days, that they are confused. (:42). So we decided we do one system only for public, which is a 2 kilowatts, and a 10 kilowatt. A 10 kilowatt is for industrial use. A 2 kilowatt unit is put up as a generator. We tried to start the production as fast as we can, but we said, January of 2023. But we're going into production as fast as we can, to do it now, we decided to do it a different way.

We didn't develop this technology for you as a generator. We did this, not to have this, because we don't need this for the power. We need this plasma power what you see as a blue light, for the running of the space simulation system. This is why they are built for. But as we produce energy we said okay, you can have it as well. So, in fact, you look at these lights, in a matter state in your home. We look at this (blue) light, that the plasma power generation is going on in our what we call, spaceflight. You're physically involved in that side, to you it was important the light comes on, and goes off. To us, this is important (blue light). As long as this light stays on, you have power supplied. Even you suddenly surge the power over two kilowatts for a few seconds, you cut off, and then it comes back on again to supply you.

The difference between the knowledge of the man of the past, is this white bulb and white light, gives you confidence. And to the science of today, we look for this (blue plasma light), dimension of interaction of the plasma.

So you get from now on a 2 kilowatt generator, is put in. We go into mass production very soon. And very small units, maybe this size. (:44). So I created this confusion with a lot of you. If you connect this system (generator) with your Plasma Enhancement Unit, which is up for sale for past few weeks, you can increase the power consumption to maybe 4 kilowatts, 6 kilowatts (overall power consumption from both units tied together). You can extend it.

Then you have to realize, most of the time you don't use that amount of energy. Most of the households use about half a kilowatt during the day, because of cooking time, and at night, television. You got to run about two - three kilowatts. So you buy generator independently in a village to light up few things, and maybe have another dimension to use. And you add the Enhancement generator, plug and play to increase the power. It

means you put 2 kilowatt (on the generator, but by adding the Plasma Enhancement Unit) you can use actually 8 kilowatts. Instead of spreading to more numbers.

This is what it is. These generators will not come in this size. There's a lot of things in the background here, it's a prototype showing. You will end up with a system like this, more or less this size gets prototyped. (We show it) for you to see that, it does not matter what I do (unplugs the lights), the blue light, (which shows) the plasma energy (is on), which is needed for you, is needed.

Don't forget, once you start understanding the work of the plasma flight system, Plasma Enhancement Unit, you'll find out the use of these lights becomes obsolete. (:46). The use of heating becomes obsolete. The way you use plasma Gans's in two different materials on the wall of the house, and now bring it to about 20 to 22 degrees balance. This system, used the way we add to it, will do it for you. You don't need to heat (your house) with this (generator). With this new plasma technology, with the additions you can put around the house, the whole house will be warm as you need it. And this is the beauty of it.

That's why we don't think you need more than 2 kilowatts if you want to live a human life. But as long as this is on (the blue light). Now, you're used to central heating, or under the floor heating. Now you have plasma heating, you heat, you .. release energies, which is absorbed by the inner body of the man, and keeps it at a temperature, which you're happy with. The way when you recall yesterday, (some of the) people were happy to go to New York, and some go to see the grandpa who died years ago, and the others.

Somebody likes a heat with a body of let's say room temperature of 25 (Celsius), he feels that 25. If somebody likes to be in the Bahamas at 32 degrees during the winter, you feel that way. The science has changed. The knowledge has changed. Now you are happy with us, I give you this, no problem. This is the light. I can plug it anytime. It still does the same for you. It bleeps a little bit, charges it back. You're happy as humans, usage.

But this peeping has nothing to do with this structure. This is for you to show the system is working. The fridge runs, (:48). the light is on. There is not enough energy at the moment, (so) the plasma is charging the battery. Give it a few second, the battery is charged by the plasma system in the background. And Wallah. Your physical need is done. The fridge comes back.

But in the generator you get, you don't have this. It's a continuous flow. It's a continuous energy. This is here as a demonstration for you to see the production of energy. So the plasma generators are there as put on, and it makes you independent of everything. Because later on when we add the food system, the environmental system, the what we call, the warmth and heating system, then you don't need any of these. You're used to as I said, the latest thing is under the floor heating. Now we heat the body of you, the way you like. The husband and wife sitting on the same sofa, somebody is too hot at 22 degrees. The other one likes to feel to be in the Bahamas feeling 37 degrees. They feel that (individually they feel the different temperatures they like, from the same system).

Change of knowledge, change of technology as we could not if you remember in 1990s, early 90s, when the first mobile phone came, it was a suitcase and a hand phone, we used to carry, and it was very posh to have this. Everybody was shaking, "Oh I'm very good. I'm advanced with technology with a suitcase in my hand and a phone." Even they were not talking to anybody, it was to show to anybody, I can do it. And now it's fashionable with the little microphones, little handheld phones. This (generator) is that, what it is. The evolution of technology. This is that suitcase with the hand phone.

In a few years time, this will be packaged, that it will create food, energy, and everything else. This is the beginning of a revolution in the science of man, and the technology it brings. So we understand fully, (:50). that this is a demonstration unit, the functional plasma 2 kilowatt. It will be a small package, and you won't hear this beeping. This beeping is for you, because you know critics of the Keshe Foundation, "oh, he's got the battery in there, and he's charging, anybody can put a box in there and light up." Now you see it, we know what we have. Our KS, you've seen what it can do.

Now we come in the evolution of the science, the way we never knew before. As we talked about the Russians, as we talked about the gas, all of you are very happy, you're used to. Most of you who don't live in the central line gas pipes, you're used to this (shows a gas cylinder). This is your gas cylinder. The gas in there, most probably liquefied in Siberia, or somewhere else, or in Qatar, or in the gas mines of Iran, comes in two super tankers of gas. If you've seen them on the oceans, they're like big balloons next to each other. Comes to your country. They plug it in, fill it up, you buy it, you take it home, you cook with it, you burn with it. Some of you become a bit modern, because the price of fuel on a gas is cheaper, than a diesel and petrol.

You convert one of these tanks and put it in the back of your car. And you've become hybrid gas - petroleum. The new version is hybrid electric - petroleum. (:52). So you carry huge amounts of liquid gas here, in this container. And when it finishes, you have a switch in the car. You go to the what we call, petroleum and you burn the fuel. Or you switch into electric, now electric motor runs. Or at home, "sorry, darling gas ran out, no food tonight. You forgot to buy gas. Now we have nothing to eat." You forgot about the gas, there is no heating tonight in the bedroom in the winter. This is man, till today's knowledge and technology.

This is what the Russians are playing the roulette game with the Europeans. This is what now Middle East nations with the gas, are playing with everything else. We showed the hydrogen production through what we call, the Iran presentation. Rick, would you like to show us, when the Iranians showed us the production of hydrogen in Tehran, last week. If you have it available, that we all remind ourselves.

In this process, we showed in a simple way, we can produce huge amount of hydrogen. But hydrogen is a different material. Your houses are not used to it. Industry uses it for something else. This is the beautiful lab in Tehran, on the flag of the Iranian nation and the Keshe Foundation. We showed this was the power supply. But how we can use the

plasma technology and we extended the time (of the battery) by three to four times. We have a video of the burning of the gas, which was produced in Tehran. If you can show us that one, we see for the first time, we showed how we can produce gas at will, at any point. Do you have that video, Rick? (:54).

So what we showed in Teheran was that, we can produce atomic hydrogen and convert it into a gas and burn it. But the beauty of it is, that this has never been done. And this can be like what we saw in the generator, everlasting supply of gas We don't need the mines to gas it out, we produce it as we need it, in a simple way, in a simple technology. The hydrogen, you buy it for all sorts of welding, and other purposes. It's not a common use. So the Russian boycott does not affect us, except in construction, and some of the research facilities, or other things we use with, what we call, the production.

In this process, we come to an understanding of the Totality. Can you show the gas the hydrogen in Iran? .. This was done in Tehran, very rapid, to show that we can produce gases, and is a hydrogen, and it creates a flame, that's the only way you can show it. (:56). And this is a breakthrough in science, which means now we don't need mines. We don't need any other alternatives, or other alternatives in the market, they produce hydrogen, but it costs a lot. This is set to cost not much.

But in a way, you don't need heating, you don't need anything else. It's a natural process. This changes the game from that point, last week to this week. This week's game is, we are going directly for the government, directly for you at home. If you understand what you're doing. Most of the gases we use for heating up, or transportation is methane. Because it does what it's supposed to do. In the process of even the gas coming from Russia, we allow this gas in an open space as a liquid to convert into a gas. Burn it. Mainly we use methane in it, but they call it, liquid gas, (called Propane, or Liquid Petroleum Gas LPG). You buy it, but methane is the perfect way for it, without a lot of other problems.

If we can produce methane at petrol stations. Produce methane in these cylinders at home. Because in the house you burn is a methane with some smells add to it, because it's odorless. You can only detect it by certain systems, which detects methane only. When somebody comes to the house, or you go to check, they have a detector with them. Methane has never been produced. Because if we can produce, and mass produce methane, you have changed the energy game. And today we show you. (:58).

Keshe Foundation has achieved this progress. You go to Qatar, you go to the fields of the Russian Siberia, and the rest to get gases. You destroy the environment, you do a lot of damage. From today, this (Gas unit) is your mine, this is the mine, that can be in any house, can be in any petrol station, can be in any what we call, generating rooms.

We have tested the burning. It's too dangerous to burn, because it has a backflow pressure. We have taken the pictures. What the cylinders you see is the conversion cylinders, where the gas comes from the methane gas production, and then comes up in the tank.

We show you with the latest methane system, that detects methane only. We produce as much as we need, where we need it. We do not need to keep huge tanks of liquid, dangerous. We keep water, and we convert it. In this process, today you buy a liter of liquid gas, which gives you so much per kilowatt hour energy, and you pay 1 Euro 30 or about, per liter.

This will cost you nothing. This will cost just maintenance of it. And you can produce as much as you like. Governments in Europe using this technology are free, (1:00). and become free from the control of the oil cartels, the gas cartels. This is what we told you last week, we start negotiating, we start showing it to the government, because industrialization of this will take very rapid process. Industrialization of this is immediate. And European nations do not need to get a gas pipes, do not need to worry about where they're going to reserve it. You keep the present gas tanks you have. We show you how to convert it, you become independent fuel generator, you become "Qatar" in your own country. You produce as much gas as you need.

The drop in energy supply costs will revive the industry. It will bring a new game in, and will change a lot of things. In a way, what we say to you, as the old song says, "goodbye pain and suffering." We are done with and your new gas, new methane supply, plus the hydrogen we gave you. We can give you other gases, because once you understand the technologies, you'll know what to do with it.

I show you the parallel to it, the third gas, which is the CO₂. The third pipe here is producing CO₂. You see the bubbles, and it says we have 656 ppm, I don't know if you can see it, CO₂ particles per million. We put this in the cage and show you how much CO₂ we produce. At the moment, there is a big problem with CO₂, global warming. Thank you very much for Dutch people who created this. But if you go to a farm, a greenhouse, (1:02). they burn gases to create CO₂ for growth of vegetation.

If you want to make your fizzy drinks, you need a CO₂. You want to make a fire extinguisher, you need CO₂ to be added to the water. The beauty with this CO₂ is very much different. We explain later on. The methane gas, if we can produce it, then we don't need the resources anymore of the Earth, and makes governments, like German government in next two years, independent of the fuel supply. You have cracked it.

Those of you heard German, call your televisions, call your people and tell them to watch. Those of you who are Austrians tell them to watch. What we're going to show you. We can show you the burnout we had in the lab. That's why in environment of here, it's not safe to do. But we have brought a meter, which shows you if we produce methane, and how we produce methane. .. We show you that, we connect the international devices, detectors. Klaus is volunteering he is coming to show you. The production of methane gas, which is held in a small amount, in this cylinder. You can see it. ... Klaus you can explain. .. (1:04). .. We'll show you how we create what we call methane gas. And this will be a lifetime production.

... Means if you use gas at home for heating, or if you use diesel, or ?? misut , you call it. You can easily replace it with a gas, which you produce at home. These should be standardized by the government's in a very rapid way, and will be in the house. In a very near future, when you buy a house, they'll tell you, do you have it or not.

KI: In order to measure what we produce, we are using an instrument is So we're using this methane gas detector called, RSGD 36 , it's a standard device to detect methane in gases. And as soon as you see one of these bars in red, it detects methane. If there are more bars lighting up red, then there's a high concentration. We are measuring here in the air, which means as soon as there appears even one bar, we produce methane. And I going to place this detector Now (1:06). it shows 3 bars .. (Means it produces Methane).

K- It depends how much we request from the system. System gives. We are not requesting from it. It's just building up. If you noticed the minute we released the gases, there was a bubble requesting from the system to do. Now constantly it keeps it at three bars. If we change the parameters in the back of the unit, we can go to four and five bars. But this is safe enough for us to show you.

We have achieved a mass continuous production of the methane in the system. So what do you call, the methane production, gas production to release Western Europe from this dilemma is over. Would you like to test it again that it wasn't one off. Because we emptied the tank to one level. We do it again.

KI: You can see here the bars went back to zero, there is no red bar. Because the sensor is away from the source.

We can produce continuously, mega tons of this material by conversion, without needing to liquefy the gas. Call on demand. If we put a burner on this, it will go to four and five. The way you saw in Tehran. (1:08). Once you call a demand on it, that you can burn it, it pulls everything else out. We'll show you again in a few minutes, that you see it's a continuous production. Thank you very much Klaus.

You can see Klaus in a few seconds, a few minutes again, because we do the same thing now with the CO2.

The beauty with this CO2 is that it will be proven in the future. When you have a fire, you usually have CO2 in a small cylinder, releases into the water and then trying to in a way, put the fire out. And it doesn't matter if there is a life in it or not. There is no existence, because you die with it. You suffocate with it, because of the monoxide and everything else.

With this technology it's different. When you spray this, once the right combination understood and applied. If you're in a fire, you spray, the water with this gas, if there is a life in it, it will survive. It does not kill. If there is a plant in it, it will survive. Just what is burnt before, that will be the limitation. When this is sprayed the life (continues to) exist.

To you could be saying, this is impossible. But go back on what you've done, as Keshe Foundation. You see the bubbles of CO₂ coming up from the system. And we can show again as we showed before. At the moment, CO₂ in this environment is what 640 ppm. Now we have a sealed system and we open. CO₂ is safe. (1:10). ... Now, we put this in. You can smell the CO₂. And we close the gap, and we leave it to build up.

We'll see that we are producing. Now we've gone to about.. Can you come in any closer. Can you bring your camera in, because it has to be in a confined environment of it. Can you see the digits, they are building up 686 ppm, 696, 700 it shows that you're producing carbon. Again, a standard tool you can buy it, and it builds up.

This has a huge application. Forest fires, applied with this, you don't need to throw water, and where the water touches, the gas spreads, covers the whole of the fire. It's a different ballgame again, in science and technology. You're releasing gases on a constant basis, that when you have a house on fire, the fire brigade just sprays a small amount, the gases will take over. But the life doesn't die, because of the CO₂ blockage. And you know all why.

You as Knowledge Seekers use the CO₂ for connection for neuro system. You've been using it in different application with zinc, and copper, (1:12). for Corona and the rest.

This is in a physical condition CO₂, but in a plasma condition it's a lifesaver. This is a game changer, again. So we showed hydrogen Tehran, you've seen methane today. You've seen CO₂. So, it shows the Keshe Foundation technology through plasma technology has opened up a new dimension in the world of science and technology.

Independence from the resources, on demand when you need, and you can buy these today, through Keshe Foundation. We try to deliver especially the methane, within next couple of months, as much as we can produce to meet the demand of the European need, and the shortages by Russia, and cutting of your prices, your fuel costs, converting your car from diesel to a gas, which costs you nothing.

In a way, once you buy one system, you can connect one line to the central heating, and one line to fill up the gas for the car. If you understand the next stages of combining this, with this, you have a permanent power generator, we just put a micro generator at the end of the gas, as a flow, not as a burner, and we can continuously power the plasma, and push the power of the system to 4, 6, or 10 kilowatts. So, you see the change in the game of the energy. (1:14). This is delivered to the government as of today.

We will announce in the next few days something again revolutionary with the Keshe Foundation.

What is interesting if you look at that system, we hear the blips, but we don't see the lights to be out. But now you see the blip on this one (of the Gas Units). If you come close, right into it, you see it has gone on red, too much CO₂ in the system. Now if you can read it. It's past 1,000 particles per million, which is dangerous. You've seen the

process versus trying to maintain. We have shown the system in production. .. now we stop the system, and you will see how the CO₂ was produced, unfolds. You see it. Now it's not receiving any more, it's contained. I take the lid off and bring the system out into the atmospheric condition. The bleep stops. Those bubbles you see in the container is the CO₂, and the same bubble in other container is methane. (1:16). Scientific tools and equipment, the standard tools supplied by authorities and the governments, and laboratories, which has been approved, is showing the validity of the knowledge.

So, we can produce any gases. Now, we have the knowledge, if you remember, all goes back to this machine. It's in the background. Material Enhancement Unit. If you can zoom in on this one, you can see it. As it says on the side of it, Material Enhancement Unit, which means we enhance the production of the material. The size of it in the matter state to make gold, zinc, aluminum, whatever you like, is in a way, what we call, gas Enhancement Unit. Which means we're converting the fields into material.

The proof of the concept of conversion, that we can convert energies into matter, the way our earth's atmospheric condition does. You see the two systems. What we told you years ago. We built the system two years ago. Now, you see it for the gas production, hydrogen and helium.

I go back to something, which is very important regarding the hydrogen. (1:18). At the moment the hydrogen as we said before, is used for different usages, for three or four advanced nations, for as weapons, hydrogen bombs, which is supposed to be a lot of control on it by United Nations. It needs a small knowledge to change the hydrogen atomic, the way we showed you, we spoke about the CO₂, will be used on the human body, to monatomic hydrogen as a plasma, and the way the CO₂ become plasmatic, used for the same, not the hydrogen bomb, but the hydrogen plasma explosion. Which is used for example, on certain areas in the space, by mixing hydrogen with an environment, creates the condition of water and life.

Americans used the hydrogen for a bomb, to kill. Iranian scientists use the hydrogen, which can be used for a bomb, to create life, to sustain life. The same thing happens with the methane. If the government's understand, and the Keshe Foundation will release this technology, in the areas of massive fire, massive droughts, the explosion of what we call, methane gas, as an explosion, or the hydrogen, will create rain in a massive scale, and it's natural. It's not like when in the past they used aluminum dust to create rainfalls in dry places, and then create all sorts of mayhem, psychologically.

This process creates natural water, (1:20). which with it carries energies, which can revive life, bring back vegetation. If you don't know, go back to your favorite Wikipedia. When you burn methane, you produce CO₂ plus water. It's a natural process of the conversion of methane. The same thing happens with hydrogen. When you explode the hydrogen in a plasma condition, you create water. Now you understand in the future businesses of the production of the energy through the plasma like this, we can give you water free, clean water, without contamination.

The reason I said you will add this (Gas unit) to that (generator), you thought, "oh, he is using an electric turbine." My dear, I'm giving you water free. This is your water resources, clean water, untouched, nothing can be found in it. I remember, in the 1990s, when the Eastern Bloc opened up, and I used to have an office in Amati, in Kazakhstan. By the order of the government, I was taken to a very remote part of Kazakhstan. Where we arrived at 12 o'clock at night. And they said, we drilled 10,000 meter drills here, to get to oil and gas, and we found this water, it's pure, what can we do with it? And it says that 95 degrees constant. I got, at those times Coca Cola bottles, we had in the car with us, and we filled it up, and we brought it to Europe. I took it to the ?? (lab) in England, and they said, this is so pure, there is nothing in it. It has not been touched for millions of years, (1:22). where did you get it from?

This is the water, which these systems will give. If the way you add a smell to methane, that you know your cooker is on, and you left the gas on. We add a specific materials to methane, that the time of explosion releases life. You don't need to water the farms, to grow materials, to buy fertilizer. A small amount of methane gas mixed with hydrogen, mixed with what is needed for wheat, for corn, (in) your water. You can make one small explosion, literally with a little bit of noise. Every two days over the farm in the middle of the desert of Arizona.

You don't need to do what the Americans did, tap into the base water in Texas, and drain it what was there for millions of years. Now Texas is back to drought, with nothing in it. Because the water is finished. The American government gave me a chance, I'll bring back the desert of Texas, to be as green as the jungles of Africa. With one small adjustment, in what you use as a hydrogen bomb to kill. As Iranian scientists, we put life into it, to bring life back to you.

This is the change of the game. We don't need to say it, because, my dear friends you use this technology in a very simple way for the past four or five years. And you have done this yourselves, not me. It's been done right across the planet. (1:24). And we know up to now you have to water the farm, and add Gans's to it. The farmers get fed up, just to have a growth in harvest. Now you can do it in a more different way, and increase your harvest. Reports from China, growing, increasing the harvest, reports from many of you. For how your vegetation, and vegetables, and other things have grown so much, has been on the internet long enough. What you did with watering your Gans's, now we do with CO2 absorbed, hydrogen absorbed, added to methane and hydrogen, explosive food plasma Technology. Many of you, we know, what has brought to all of us.

You can see on the screen (shows crop yields larger with the use of Gans's). The difference between the two. You can see on the screen from the data. (These are from) you Knowledge Seekers. These are pictures from you. How we change things. How nation's food supply will not depend on the season. You can see the size of the one on the bottom, and the one on the top using this technology.

So, as we've done with the space plasma flight unit, amalgamating all the knowledge together for that purpose. Now we amalgamate all the knowledge with this technology for

nations. (1:26). No need for Russia, to boycott the gas into Europe, that the farmers in Holland don't have gases to grow vegetation, and beautiful flowers of Holland, for all of us to enjoy around the world.

The same will be for African nations. The same will be for the South Americans. The same will be for Australians, and the rest. With this technology, we make Earth a heaven to live in. Where we don't destroy anymore. Where whatever we do is for elevation of the beauty of the planet. And you're part of it.

When you buy the gas unit in the house, when you burn, the things added to it, which does not affect the burning, will bring joy. Transfer the energy into the food, transfer the energy into the house. Now you're scared of leaving the gas on, open. Now you leave the gas open, because it carries elements of the natural basis, that it becomes food, becomes joy.

Methane in this process has the same process, as what you used in CO₂ (Gans). But it has to be done in the correct way. Then we understand the whole process of life changes. We are here to bring that change. The knowledge and technology is for that change. Those of you who would like to still go to the fuel station, and blame the wife for not buying the gas cylinder. You are quite welcome to it.

Those of you who will sit in the cold of winter under the blanket, because you cannot afford it. It's your decision. In a way, as they say, (1:28). the choice is yours. Choose this (gas cylinder) and suffer with the shortage of gases in Europe. Choose this (Plasma gas unit) and bring prosperity and life back to Europe, and the rest of the world. This is why we called it, evolution in science, evolution in energy. Evolution in understanding in a way, no nation can be taken to ransom by another for God given rights of food, energy and light.

This is where the Keshe Foundation stands, and it's the responsibility of you Knowledge Seekers to show this to your governments. Call your newspapers, call your television companies, they can come here and test. They can come here and breathe it. They can come and see, eat it, drink it, whatever they want to do with it.

Something which you have not realized, or go back on the last week, last Thursday, when we showed the system, it's a hidden knowledge. Go back to last week and you see how frequent the lights were coming and going. And this week, there's not that much of it. As I said before, it's like I stand here (under the skylight), the Sun, the light, the love of Creator shines and all equal. How we use it, depends on us. And how we share it depends on us. And the same light as you see on that system (the generator), is here (on the gas units). To you, the reason these lights are not coming on and off, as often as last week, (1:30). is there (with the gas units). To a scientific understanding, all these are a creation of plasma. Now I have a like a Star Formation. These systems (Gas Units) are feeding that system (the generator). These gas producing systems, which are here in front of you, are feeding, sharing energy (points to the generator).

In a way, they are backing the battery up. "I don't let you go down, because you're low, we give you." This is what I told you, in the coming time, when you buy, when you have one of these installed in your house, would you like to have food, wellness, and water system in the house, in another place. You don't need water in the living room. But you install a system, that the water is created in your bathroom. You don't need no pipeline. This is the beauty of understanding, where this technology will take us.

The whole thing is not a game. Those who went out to destroy the Keshe Foundation, destroyed themselves. We have delivered the flight Enhancement Unit, 100 of you came here to go through it. 10 or 15 of you went through it yesterday with Rick in Canada. God knows other parts of the world, together, simultaneously. Now you have the energy system, the gas system, and then you understand the change in the game of living on this planet, is not anymore, Russian gas. Is not anymore, god knows shortage of food. (1:32). It's the point, that now, I have all this given to me, I have it at my fingertip. How can I use my time to serve the others to bring joy, and happiness, and life to others?

Many of you come here and say, my wishes to bring joy to humanity. Now you have the system to bring it. We structured this to be a fast delivery system.

You want to see, I'll bring it to your back. Your CO2 is back again at, 648 ppm. I give this system to the farmer, tomato grower in Holland. It saves him millions of dollars a year, because he pays for this (methane gas) to be burned in a greenhouse, to create a tomato, which has a life of maybe two weeks in the farm, in the shops. And with this (gas units), he creates a tomato, which is joy to eat, and the last six to 10 weeks in the shops. It's the change in economy, changing life. Klaus is very happy to come back, to show something to us. Would you like to measure again your methane gas. So we see why we call it, change in energy, change in what we call, plasma Technology.

We measure this (methane gas). And what we've done, very simply to you, is Keshe Foundation this time, is not in the game just to sell a unit. You buy unit, you contribute for next 10 years, 20 years to the foundation in a small amount, (1:34). that we can keep on expanding, and developing, and creating life for the others, who are not fortunate to have. So on the gas units, on the generator units, we have put a minimum of 100 Euro per year. You pay just to subscribe to use these systems.

And if you feel more generous, you can make 250, 500, or 1000, it doesn't matter, every year for the what saving you make, and what the change brings. So these units are for sale today. We selling it as a household plasma units. And we tried to get this as fast as possible into the market, that we beat the Russian boycott. Then we'll contact your bankers, and your governments, and tell them we don't need to suffer.

There you are, the methane gas line opened up. You see it goes down. It was just like the generation of the power, it stays a constant supply. If you burn it, it goes up, to the third bar, and up. If you don't use it, nature only supplies what is needed. And you can see how clearly it is. The beauty of it is, in the back, the energy system, bleeps into, back in power.

Now, the energy and power is in the hands of the individuals, not governments. It's you who decide how much gas I'm going to have, how much electricity I'm going to have. It goes back to all of you. Because being here for past four or five weeks. (Thank you very much Klaus, your system works.)

When we gave the patents, (1:36). to the governments in 2012, you all called me, betrayer, you betrayed us, you brought the technology, you gave it to the government again, we gave it to you from 2015 - 16, you still couldn't do anything with it. Now we show you what it has done, and what can be done. And the process is very simple. You've seen, we showed you that, again, I show you this, 647 ppm. I'll give you a little bit of gas. It just was too much. You had the bubbles in it. Then we see it again. It will build up. We made for it to shout at us and tell us what it has got to. And you see it 654, 656 ppm,. We are building up the CO2 production, but the natural CO2. The system will carry on the same way. Now we allow the flow in it. And you see the gas production increases and 671, 669 it goes to 1,000, and then you get the alarm going off again.

So the game is in energy, and gas supply for the Russian Government to boycott is finished. But the beauty of this is when we see these gas generators released, used by the government. (1:38). It's not just for this year. These systems will stay for nations, for the life of the nation. It's not a nuclear reactor, that you spend \$30 billion to build it and then you spend \$200 billion to clean it up over 50 to 60 years, on all the nuclear (waste) material. You spend \$30 billion developing, completing these systems, your nation does not need nuclear power stations. Your nation does not need to suffer from shortage of electricity, anywhere in the world.

It's a natural product and has no waste to store it somewhere, and it's on demand. You need the gas, you've seen it, (it gets) created. We saw it in Teheran, the minute they started burning, how fast the gas bubbles came. We show here a rapid bubble expansion. So this is the evolution in science and technology. How we go about it, and how we increase it, and how we add to it, mainly depends on Keshe Foundation Knowledge Seekers and the structure we set around this program.

We go for a break and come back and try to answer some sensible questions. (1:39:30)

<<< **BREAK** >>> 443 KSW July 28 , 2022 .. (1:47).

K- I want to go back on what you just shown for advertising for moving 4 passengers. (1:48). If you understood what we said, at the beginning of today, where we are about to go on the Mobile Transmutation, then you understand the next step in the process of transportation. If you want to ship things around.

The way we expanded the Soul of the Man beyond the physicality of the Man and we moved the envelope, is the next step for transportation of goods. If you go back into this system, the original system, which is here, and I don't know if the camera can be brought here, if you can go on our camera...

When you look inside this system, again, look at the different dimension and not produced as an Enhancement Unit for production of material. Using it as a soul, the same as what we did with you yesterday in your teaching Rick, and extend the field of that center system beyond the physical boundary of this system. Doesn't matter how many tons you put in this container.

You order a burger from Burger King. They put in the envelope of a system which is preset like this. Now you call Uber or you call somebody else to deliver with the bicycle to your house. The food, we deliver down the line to you. (1:50). This is not any more fairytales, we've done, we know and we are there to do.

You have a cargo in China, you don't need to pay, I was told 17 or 18,000 dollars now, to get a container from China into Europe. You increase the center, the container is here, not in eight weeks, the container here is in eight seconds. Because now you can understand the implication of the technology. There you see it as a Sun to create materials, now we create as a soul for the system, and you see a lot of things changes.

What happens to the customs? Who's going pay the taxes for customs? Have you paid your VAT, or we make it "One Nation, One Planet, One Race." Then we tax equal to pay for the expenses of all of us across this planet, not if you're American you have a good time on the burden of the Africans, or if you can bring something from there on the burdens of South America or Asia. This is the change, and the governments have to get used to it very soon.

So, what you sat in the system for your soul to expand and travel where you want, or what we did yesterday. Now, we make the same system here, this is your new envelope. What you want to carry in it? Would we smuggle people the way we do nowadays, or would we bring the joy and what you need at home, and do the same delivery. Do we need huge containers, or we deliver item by item as you need, instantaneously.

Now you see, the change is on and the implication of it comes by the Knowledge Seekers. Governments will not listen till we actually deliver people. We have a problem here, we have to resolve in next few weeks with the Austrian government. (1:52).

Behind these doors, if you turn the camera ... Behind these doors, here, as I turn, is the most advanced Space Technology man ever known. If I open this door, the systems are

running. There is no difference between what's behind this curtain, and what sits in that Enhancement Unit. It's the knowledge applied in two different ways.

There you see a gap. Here we see the knowledge of the Creation and the flight, the way the Universal Community flies. You can't see, it's so beautiful. It's beyond the imagination, how a small system, a small structure has changed the life of man for transport and everything else.

If we go on to the level, go to the understanding of, there is no difference between what sits behind that door, and that door in the Enhancement Unit. Now we solve the knowledge. We have managed to bring the science of theology and physics together. That's why we say, the Messengers of now, as it was said at the beginning, bring the two together, because you cannot have one without the other. We cannot run a system which has the emotion, without understanding how you can use this emotion. (1:54). So, the two knowledge's, have no choice, they have come together out of the beauty of what we call, sharing the knowledge so openly with all of you for the past 20 years.

Do we need to be aliens, to be foreigners? Do we need, as we heard this morning, what the Hungarian president said over the ?? in Romania, about how many Jews you can get in a matchbox. Do we need the rest of it, which came up, and all the rubbish which his nations should be, no others. Now you have not seen how the nations will mix. I like to live in Austria today, next week, I like to be in Beijing, and the week after I like to be in New York, and no government can control where I'll be. It's my decision. I decide, I travel, and I'm there instantly, as many of you have tested in the system.

So, you see, the two sides of the knowledge, the science, and technology and ethos of what we call, theology, the Soul of the Man now sits in this building, we have no choice. Trough understanding of the knowledge in either way, we have brought it together to be one. This goes back in a very simple way. Do we need religions? Do we need Ayatollahs and Popes when everything is in our hand? That bubble of energy is life, as Klaus just said. It's beautiful how you see life is created, bubble with bubble, and you are responsible for it. You don't need no religious man, and no government to tell you anything else, because you decide how the ethos sits, where you want the soul to be, and how you want your physicality to enjoy the presence of the Soul. (1:56).

Now we go back, if there are any questions
It seems there are no questions, it's a good time to say goodbye.

Q: Dr. Guatua ... First is to thank you very much for bringing a revolutionary technology, science and technology to the world. That also brings peace. In fact, I see it as having potential to make our countries self-reliant and developed...

K- You don't need to say. It is there to be doing it. It is doing it, it has no choice, it's upon us. We have no ...

Q: Yes, and I appreciate that very much. But I have a few questions. And the first one is, when there is an outbreak of a virus or something like that, that destroys lives. All

countries of the world go into a frenzy, trying to buy into whatever is on sale from various places. Some of them fake, some of them not effective against such virus, but a lot of money is spent. (1:58). But when this science and technology is brought to the world, it's open, it's everywhere, it's on the Internet. Why are countries so blind? Why don't we hear about it? Why don't we see a frenzy of countries wanting to buy this technology?

K - First question, I think we answered you before. .. I answer you straightaway. The only reason you're not getting it, .. is because of the Kingdom of Belgium. The king of Belgium in making a fake court case and saying we are a fraud, has put a lot of things apart. That the government's go by what he said, we could not defend the case, in Belgium. Dutch people went there, you saw what they did with them. Hitler didn't put armed officers in the court, Belgium's did, they are ruthless. The Belgians are people who killed half of African Congo. One scientist to them, is no difference. We saw it, they put the closest person to me as a spy, informing before, preempting everything.

This technology would not have been out, if it still was a Belgian in our structure. This is the reason it's not there. The biggest spy in the Keshe Foundation, which we didn't know, the biggest pedophile, we didn't know, was sitting inside the Keshe Foundation. We open this very soon for you, with criminal conviction in pedophilia. (2:00). We couldn't, they to hold on the person, with prison sentence for pedophilia. We always said, what happened around Keshe Foundation, why everything was around us? Documents in police stations and courts, documentation in newspapers. We release it when the time is right. The Belgians decided, we take it (the technology), or we destroy it, as I did with Congo. But this time, this technology was much bigger than Congo. It belongs to the Creator, and the king of Belgium, we'll be dust. Never ever remembered. There'll be no nation called Belgium. Because, you know, we all have paid so much for it.

We can talk very openly how Keshe Foundation was brought in, they knew the day of my assassination in Italy, we'll give you documents for it. The day when I was supposed to be assassinated, which Fabio got assassinated. According to all of you, as you know, I'm (Mrs. Keshe is) everywhere, wherever Mr. Keshe is, that day, I'm (she was) home, waiting for a death news. We don't tell you a lot of things. Now we are free, we can do, but we do it in time.

You and I, Rick, six years ago, this time got banned from Youtube. You remember because we brought Sterling up, and he went and claimed names. Eight months later, we got him, in solitary prison for life, for pedophilia. (2:02). The people around us knew how they brought it, because they're benefiting by it. This is the reason we are not in the News. Because pedophiles, the King of Belgium and the people in it, have a lot of things to do. It's the way they keep the other leaders in silence. Because they have pictures of them, or whatever to do with them, with children. When you got somebody by the neck, you can do whatever you like.

So, it's not in the News, but now it's in your hand, that's what it counts. Would it matter if it was a "pigeon time," when you send the message by a pigeon, and we would have discovered this technology and we had no television. Would it have made any difference?

Would it have made any difference, if it was 20 years ago, and we could show it? In a way the time wasn't right, in a way, man had to learn the knowledge, we have learned now. I am very glad, that we are free to teach the way we are teaching, and we are free to be able to share knowledge so freely, and (we'll do) so for years to come.

The whole beauty of it is, we are here, it's now and the knowledge is shared, and the knowledge can be shared still so freely. The beauty of it is, in the city of Linz, you have material life, you have plasma life as you see on the screen, or you have the flight system through the STM behind the wall.

The technology is the technology of the Creator, (2:04). knowledge is knowledge of the Creator. How we change the technology, is in what we need and what demand for it. It's very interesting. .. Klaus, can I have that detector please? We just had the smoke detector, which is for the CO2 detector, and it ran out of energy. ... Bring it without charging it. We had to stop, take it out because it cannot charge itself. We have to charge it through something.

It's going to be charged, you see the cap is open, because I couldn't hear any more bleeping. So, now we put it on the charger. What happens, in a few seconds it runs out again. We can't charge it. What about if, in the near future we add the knowledge of what's inside this box (generator) into this (CO2 detector)? Do you need batteries to charge? Do you need, hoping that your CO2, or monoxide system has a battery, and it runs out of battery, your child is in the room, accident happen with a fire, carbon monoxide kills a child.

Do you rely on the man's technology, which fails? Or do you rely on the knowledge of the Creation, that it works all the time? It's very simple. It's standing right in front of us, you all saw us, we put it in there, suddenly it stopped, ran out of energy. I need to charge it, I need to plug it.

If I stand here, who charges this light in front of me (sunlight from skylight)? Who sends this energy, we call, the energy of the Sun to me. Who charges it? (2:06). What is in there above me, is what it's inside me. It's beautiful when the Sun shines on the, what we call, the ?? "Son of Man."

We created that Sun inside, we haven't moved it. It has chosen we have holes on the roof, on the ceiling, and that's what you get. The energy inside the system does not have the matter state and the failures of the system. You always see, the blue light still on. This is what we give you, not this. You want this, plug it in, you don't have this, you run out of energy, throw it away. When you buy systems, that will not rely on material state energy electron movement, and you work on a plasma Technology, this is what you get.

Very interesting thoughts. We always said, that the bigger field gives to the smaller. Now we have to see the light, the Sun itself. And we have a Sun inside, which is weaker. As the energy of the universe and the Sun, connected to this, and me in the standing in between, receive the energy which is transferred to this planet directly between the two. In a way, I get charged with it. I get <audio unclear> my soul lights up, receiving energy, being in-between the two? The answer is yes.

Now, do you need that battery? (2:08). Or do we need the state of Belgium to decide, nobody should know about it till we get our hands on it (the technology), because we need more children for our pedophile kingdom. The answer is very simple. My name, my technology, we last long, long after the pedophile kingdom of Belgium. And long after Fox is in control of News, which they're controlled by the same people. Now your second question.

Q: The second question is, let's say a country in Africa, let's call it Country X, and a country in South America Y, and Z in Asia, opens their eyes and accepts this technology. Could you please explain briefly, what it will take to transfer this technology to a country that actually spreads it within all its borders, for the benefit of its citizens?

K - Chinese are doing it. The Iranian government is doing it. Why the others hiding from it. The Chinese we've seen. .. I've shown this before. We didn't go to do this. We didn't go out to put these things up. This comes to us from you Knowledge Seekers, which are around the world and you send us pictures from what you've seen, or what has been sent to you. (2:10).

This is what you are blinded with by the Belgians. This is what Chinese do with the Keshe Foundation in China. I have to find it, then I can share it, then you understand, nations are using it the way it suits them, and where it suits them, the way it suits them, and how they can benefit by it. There is a picture, I'm sure the Chinese guys in the background will get to it before I do, but I have it somewhere here. Then you understand, government uses the Keshe Foundation technology as it suits them, where it suits them and what it suits their nationals. It's a beautiful single picture. I have to find it. Usually see it very rapidly. But as usual, it's Keshe Foundation, you need to wait, the Gans's need to grow.

This is how government uses us when it suits them. On a Chinese high street, (Information about KF is written on the) billboards (this is by the Chinese government). That's what it is. (2:12). It suits the Chinese government and Chinese authorities and whatever, to put Mehran Tavakoli Keshe, show how it changes for them, on their streets.

You know the story of the pheasant. Pheasant, when it's a snow time, to find food, puts his head under the snow, and his backside up, and he thinks, that just because my head is under nobody can see me. That's how the man shoots the pheasant, with his backup. Just because he thinks, you can't see him, or he is hidden, doesn't mean the hunter cannot see him. This is exactly what the Belgians done with you. They thought they can bring whatever to hide it, that they can control it. But the Chinese are using it extensively.

As I said, go back on a history, very recent history past. You remember I said that, and the members of the European Community governments are online, they can check, that, if you remember, couple of years ago, Korea, North Korea was very rapidly developing all weapon technology, all. Because the Belgium, Mr. Brackenar ?? was selling European, what we call, systems, rocket systems through the private accounts of the king, to the North Koreans. When we exposed the hand, we see no more from North Korea, because no one gives information to Mr. Brackenar to pass on, to sell.

The biggest nuclear threat to the Chinese government and everything, has stopped. It's the way nations have used the knowledge to create mayhem for each other, by certain people, (2:14) which suits them in their private bank.

So, your governments know. It's just, would, do they want to implement it, or they go back on everything else. Does it matter to you, if you have one of these energy systems, and one of these gas systems in the house, you don't pay any electricity, you don't pay anything for the rest of your life, and you can give the unit back to your children, and your great grandchildren. It's the very first time, and it still works. Does it matter if the Russians boycott the gas, or the American decide not to send food.

The government's know about technology very well, because don't forget, 75% of world population governments collected the Key, and they studied the Key. This is what will come to us in a very near time, in a very near future, in how we apply the technology for ourselves. ...

Any other question?

Q: Thank you very much Mr. Keshe for your excellent responses, and for bringing this wonderful technology, and I wish to call upon governments across the world, and especially those in Africa, or African countries to accept this wonderful technology, that will bring self-reliance, massive development, and save lives across your borders. (2:16). The technology is here, it's cheap. Why are we so afraid of doing that work...

K – We are not afraid, it's not afraid. It's the bank accounts of how it's paid, who gets paid.

We are hoping maybe by close of business today, or before we finish, we put a very special, what I call, the 4th Blueprint to make announcements about the Keshe Foundation and evolution of this technology around the world. We have given the counterparts, which is with us, till today to complete and respond. Then we explain to you exactly where we are, and how we work as One Nation to bring that position, in the right condition. We have given them time till today, by close of business. Otherwise we'll come to you, then you know how and why.

Any other question

Q: ... My question is, when is this planet going to see the end of pedophilia?

K - I don't know. But, it has become a fashion by ?? privileged. You see when one can get away with it, the others do it.

In the holy books, the punishment is not there for you that you're going to get it, it's a deterrent, that you don't do it, to get it. It's not that if you do it, you get punished, it's for you not to do it, to get punished. (2:18).

If United Nation puts the sanctions it has put on Iran, for knowledge and technology, on the states like Belgium for pedophilia, do you think it would have lasted that long? No. Because as I said to one of the European Union (EU) people very recently, are the all the members of European Parliament pedophiles? If it's there, you all know United Nations put it on the head of nations of pedophilia, why you put your headquarters in there? (When the UN declared Belgium a pedophile state, why does EU put their headquarters there?) Is there a kindergarten underneath of the EU headquarters? How come we get punished for knowledge, advanced knowledge which they don't have? But, we don't get punished for abuse of children? This is the question, which is not answered, and cannot be answered.

You as European citizens, write to your members of parliament, and state the fact, this is the United Nations Headquarters report (that Belgium is) one of the most nations involved in child abuse. Why are you going there. (Is it for you to get) your children? How come you don't go to Iran and learn the technology, but you go there (to Brussels) their headquarters, and go there all the time.

Then we have to ?? We have a headquarters in Strasburg. French are safe (according to UN). But this is something, that has to come in line with the governments, and don't forget, the biggest pedophile in the whole structure for over 50 years, unknown to all of us, is the one who has been writing to all the governments, delivering papers from my work, that I am a spy for Israel. (2:20).

Did the Iranian government asked, Madame, can you bring your pedophile cases and prison sentences for pedophilia in the state of Belgium? No. Going to prison, being in custody for years, .. for being part of an active cell ?? and all in the cell, going to prison for years, which none of you knew. We didn't know, we just realized it through the process of investigation. Now you understand how we've been vulnerable to all these things. And you say, why Keshe Foundation is always involved and is around? We didn't get involved. The oldest court case pedophile group was in house. Prison sentences, documents in the police station. There is no allegation. The whole family. We're glad we're rid of the Belgians. At least my children are safe. I don't know about the one I lost.

Go and check the documents in the archives of the courts, in the archives of the police stations in the Belgium, and others. Then you understand why and how we've been targeted without knowing it. Long term prison sentences.

Now, the Iranian government believed in these people, and ?? you can believe the rest. It's for you to investigate not us, we have all the documents, we know what we're talking about. So, it's not going to end unless the humanity, the Soul of the Man changes.

The way you come here and you go through the system and the pains goes. Maybe putting these people through the system, the soul grows from the dimension of physicality of emotion of a child. (2:22).

Then you understand how Belgian King and royal family, which are heavily involved in this job, were so closely tracking the Keshe Foundation, because they had their oldest agent in the system.

I wish for elevation of their Souls. Don't take my word, go and check. There is no allegation, these are the truths sitting within the court of Belgium, within the newspapers of the Belgium, and sentences past, and prison sentence served, and still under cover, monitored, because there are too much involved.

Any other question.

Q: Brazil ... (2:24). .. My first question is, is there is any activity for Brazil to use this technology?

K - Yes, called Rafael and the Brazilian Knowledge Seekers. You've got one of the most active Knowledge Seeker teams on this planet. Because I monitor, we monitor some 32 languages and teams. And by god, every day, sometimes it goes couple of 1,000, a couple thousands communications in one day. You're very active. You have a beautiful team with Rafael, and the rest of the Keshe Foundation KS in Brazil. You have a beautiful country, and you have a beautiful Knowledge Seekers. So what else do you want? It is you to do it.

Q: You were going to show the flying car some time ago. So, there are any forecast for you to show again, this car? (2:26).

K - That's obsolete. We show. You are flying with your souls, why you want a car for? You still want to take two hours to get from one place to another, when you can do it in two seconds? Yes, it will be shown, it'll be done, it's part of the joy of the system, Yes. But we are not in a hurry, because to me, I would like to leave the donkey behind and go with a jumbo jet. ..

There are structures and force, for us to, in a way... We are in a process, which is important for all of us. I explained to you, we are hoping in the next few days, we'll come to some sort of senses between the Americans and the Iranians, and in negotiations, where to fly with a system, to travel with a system. Do you mind, Dean, if you put your camera up there? Can you turn it up that far? This one, on those two reactors... (2:28). Can you see it?... okay.

To have these flight systems, which are, they are part of the Iranian space flight system, in the background, the two, you need nuclear base material, that you can create a rapid, heavy plasma. At the moment if you go into the lift, and that kind of thing, you still need that.

Embedded inside these when they were tested in Iran, there is some 200 nuclear radiation sources, plus the radiation we created inside. As long as, and we are not giving another excuse for what the Belgians (did), to come to the house and to the lab, and confiscate the nuclear sources and put it in a drawer in my lab.

If we don't get a clearance from IAEA that the Keshe Foundation can endeavor to revive this technology, you are grounded with the physicality of travel.

When it comes to feeding you, moving your soul, everything else, creating methane gas, we can use natural radiation sources, which is in the nature. (When it) comes into space flight, you need nuclear plasma Technology. These are called, nuclear reactors. I can produce it anytime, but I don't give an opportunity again to hooligans like Belgians, (2:30). to bring this technology to a halt, once now with the health side, and with the space side.

You're all dying of diseases which are curable, you're dying, you're suffering from the pains in your physicality, which should not be there, and, it's all in my palm. You keep a nation of the hooligans, you pay for it, you suffer with it.

I have given the knowledge free, but I cannot do any more for you. The same your flying car, your UFOs, your flying system from Beijing to Tehran, or whatever, is on hold, till IAEA and Americans, and others accept that, this new plasma Technology nuclear has to come into play.

We have no choice, if you want to go that way. In a way, it's very good because now instead of going the physical matters state, we are going very fast in the plasma and the energy state. So, it's a very good stoppage, that we don't go, because then you get distracted by it.

You go from the city of Brasilia to New York, go to the airport, get from wherever you are to go, to fly and everything. It takes you maybe half a day. John did from Argentina to come to the conference in Brazil, I think two days (by bus). Or use the new knowledge and do it in second.

So, it's good in a way, but if you want to have a flying car, if you want to have a flight system, (2:32). IAEA has to produce a certificate for Keshe Foundation, to be able to use nuclear plasma technology, that it can move physicality, then we are done, you have your car tomorrow.

If we could get to the soul of so many of you yesterday on a telephone line, through our system, which you've never done yourself. You cannot do it, unless you have the remote

control from here. So, you see how hard it is, you have to live with the physicality. Rick, would you like to tell us what happened yesterday after I left? Or would you like to tell us what happened in your workshop?

R: Well, when you came in and directed things to some degree, you sort of interviewed different people in the workshop and got their experience of what you offered, and that was quite revealing. Different people had different responses, of course, but some similarities as well. For example, there is a feeling of fields and a feeling of sort of a bubble around some people, that talked about their experience. After you left, I don't think we carried on too much longer. We got into some of Brigit images and kind of went off on a different tangent, but very appreciative of your intervention there, you could call it. (2:34). It was a beautiful experience. I think we should experiment more in those ways.

Q: Alexandra .. Are the people who have had contact with this new system in a closer way going to experience any physical, emotional, psychological, intellectual and behavioral changes? What transformations can this system bring to people?

K - From the people who've been through the system, we have spoke, we have about nearly 100 people gone through the system up to now. With a few we have spoken, they tell us, yes, they have changes in physicality, they have changes in emotion, they have changes in behavior, they have changes in eating.

As I said, yesterday, and people came here this week. Now that we know what happens, your journey starts, from the time you leave this place. We just, in a way, sell you the ticket, you carry the rest of it.

The changes are fundamental for some of the people. We had a lady here on Tuesday, in a helping wheel frame. She came in with a lot of back pain and everything else, we wanted to see how we can, she wanted, apparently, for what I understood, wanted to see one of her relatives, but when she came out of the system, she said, (2:36). I can move, I can do this, I can change that. We have this a lot. A lot of people report to us changes in their habit, they don't fight with each other anymore, somebody says, I'm more calm, I don't get angry anymore.

These are the things, we bring all these 100 people, also now together the next couple of weeks to assess the after process, what happen then, and then see what happens. Then see what is interesting.

One of the interesting things for me is the lady, which went through the process, after she met Christ, bless his name, in a physical dimension. I want to know what happened to, what was that, what was the next, what contact she has made, what is there that it brings us knowledge. We have a very direct, detailed explanation of his dressing, the color of hair, the eye, as I said, the feature, the voice. The interesting thing is, we didn't have this till this Tuesday. Because these are certain questions. It's like you come out, you see, we look to you very friendly, but it's like a questionnaire, we have to take care of everything.

We said the new systems, we changed the system as of Tuesday. Because last week, we had no work here in presentation, what you call, testing. But the development of the new technology has gone on. This is a question we asked from many people from the beginning. Did you smell anything? Did you have any emotional?

The new system gone in since yesterday or Tuesday, people now tells us they can smell. A lady was telling us she can smell the water of the bath. (2:38). They can smell the environment they are. It means, in the process of perfecting the system, now we have covered the emotion of the smell, which wasn't there till last week. So, as we are progressing, we are adding to the knowledge, now the smell is part of it.

Many people come into the system, they cry. We ask them, they say, we don't know. It's just tears, it's just wet tears that comes out. I sometimes come out and get the tissue paper for them. They don't even know why they're crying. But, I know why. Because the trip is with the Soul, and the Physicality is inside, sees the emotion and it reacts. Physicality reacts within the dimension of the envelope of the soul, and they just are in tears. As the guy said when he came in, he told us this, it's like a fog inside, it's a fog, I can hear you, but it's like a fog. Like being in the water and hearing your voice. I said yes, because your soul has covered you, you still listen to my physicality.

In the time of dream, now, the Soul goes out, and coming and going information, you gather some of it, you call it a dream. Now you're inside it, the soul is doing it without you being involved. So, it looks like you are, in a way, as we said. Many people will say that. We just heard you said something and we did it.

The strangest thing is, it was important for us in the trials. What happened if you move one people, one person from one unit to another and vice versa. We could do this for the first time this week. We switched people from one unit to another because they're a slightly different, and they could carry on with the same dream. So they could carry on with the same, what you call, a dream, but what we call the process of the soul being in work, (2:40). talking to mother. I asked him, can you move. They go to the other (Unit)), and they carry on speaking to mother.

Because the environment of the room is a shell, they are part of it, but it's important for us, because now it shows we can do the transmutation easily. This was a key point for us, to be able to take people, to move chairs from one unit to another, and carry on. So, now we are ready to do the transmutation. Because we keep the environment of the room as it is, we keep the environment of the system as it is. The two systems are connected. It should be a flip of a finger, very soon, to transmute. Put you in Chair number one, system, and take you out of Chair number two, and it won't be a magic.

As I said last week, the people in the lab have started, they are working on this, Dean if you can bring it here, that we can transmute you through a system like this. If you don't want to go anywhere, and you're going alone, you're welcome with your suitcase. As I

said, I put you in one port, side of this port and I'll take you out of the other side of the port.

You're used to go to airports and spend ... 18 hours flight, you go into transmutation port and you're there instantly. Don't forget the gift you're taking with you for mom. You can't say, mom I forgot, it takes a long time to go back. She says, go back home, it takes you two second, bring my gift. No more, "Oh, I forgot to bring you something," because I never bought it to bring it down. (2:42). Now, you go back in there, it takes two seconds. Last time you paid 1,000 Euro to get across, this time it's free.

Q: .. Can you explain a bit more about the meaning of instantaneous when it comes to soul travel? Using the field of plasma does distance not exist? Or is it just so fast?

K - It's so fast, people who've been on it. Are there any Knowledge Seekers online who been to the system and they took a flight, they can tell you, they took actually, what we call, transmutation. How long did it take you from the time you were told you can go till you got there? Do you have any Knowledge Seekers in the background who can tell us? Do you see any hands? They do this instantaneously.

If the people online who's been here and did the trip, they can explain, it's instantaneous. A funny thing is, when you listen to some of them, they go and pick up their mom, or the dad, or the girlfriend, and then together they go somewhere else. It's instantaneous.

Something very interesting, strange, has happened here in some of the tests. (2:44). It's that we had somebody from Nepal, I think, a few weeks ago, two or three weeks ago a guy came and he said, I went to Nepal and it was so nice. I went there with my girlfriend. I said, how did you? He said, my girlfriend is in Nepal, I went there, I picked her up and we went together wherever they went. Strangely enough, because that line with Nepal is open in the system, we had a couple here yesterday who actually were born and raised European, but in Nepal. She said, I could smell the water, which is passing, because the water has a smell in Nepal. So, it's instantaneous. She said. it was there, I was there standing on the bridge with the waters. It's a scenery, that she knew, she lived in Nepal for 30 years. So, it's there, and it's instantaneous. You can go, and do, and see people and go to another position. You don't travel anymore, you go to. This is the beauty of it.

People come here, their only wish to see their father, or mother, or whatever, and they come out with tears and joy, that they have managed to ask, why, and whatever, do you want to go for a dinner and the rest of it. They come here to look for answers. We are not here to answer. We are travelers of the space. And, as always say, we provide the aircraft which is your, what we call, not aircraft, the craft, which is your soul. As you usually get on the aircraft, the pilot doesn't care, he's not concerned if you are sitting in your chair, you're playing with your child, you're hugging your lover, you are planning to go once you arrive at that point of the station to somewhere else. His objective is to get you there. (2:46). So, the dreaming and physically doing things is your job. This is the same as what we do. We are not there to influence your mindset. We are there to create a new transportation system, and we are getting there.

R: Steffania had mentioned in the chat, every time Mr. Keshe talks about the flight system, the feeling of being in the system in my body comes back instantly. So, it's a form of instant communication, I think.

Any other question.

Q: .. Good day, Mr. Keshe, good day everybody else. I'm so happy, that you are showing the team with you, whatever you have always said for years and years. And that is something, as I said in Tuesday, when I listened to your past interviews of 2011, 13, 14 and every time you had the same discourse, you were talking about the same things, the same creations, the same logic. And that's extraordinary. Because sometimes we are septic (skeptical), we are septic people around us. So everything you do is being examined.

That's, wonderful. (2:48). And I congratulate all of us, humanity and above for having you. Now that Knowledge Seekers can develop all that for the betterment of life of everybody. And I thank you for you having a look on the children, which are the weakest of the society these days, which are not realized as their rights for life. And I know that cost you very much, that has cost you all you have had. And you're still there. And we are proud of you, I think a lot of us, and will in future be proud of you. Thank you very much. I have no words to thank you.

What I was going to say that, I wrote on the chat about the technique for firefighters, if there's anything, because there is forest fires in summer with this dryness of the woods in here, everywhere, it soon will start. And I'm as you know, I'm emotional and I feel very sad about these trees, which take very long time to come back, and they cannot save themselves. It's us to save them, and the side effects and future. Is there anything to the point of utilization at this moment? Because we know about the CO2 Gans for fire, but is there anything that we can suggest to others, to anybody, (2:50). around us, or maybe the mayors, or authorities, or anybody who wants to listen to. Is there anything to offer to them at this moment?

K - Yes, but we have to actually deliver it, to show it, and this is part of the future teachings, that we show this, how it's used for fire, and how it will stand the course of, what we call, the annual fires. These fires are needed, we cannot, just because it doesn't suit us, trying to change the course.

Some of the fires, I know it costs heavy, but it's part of the cycle of the life on this planet. It brings new life, it cleans the past, but it brings a new cycle of the motion within the structure of the planet.

Some fires are accidental. But natural fires we see, it's part of the life of this planet. We try to interfere with it, we'll pay heavily for it. We have built our homes in the path of the woods, the woods didn't come to make their homes in our path. The way we get diseases and we die, the way we get earthquakes and happens to our cities. The lifecycle of the plants, trees, grown in certain areas, are there to create conditions or survival for this

planet. This is something we have to accept. Then we see, not all fires are bad, we build our homes, in where they decided to be, and how to regenerate. So, if it comes to a house fire, (2:52). if it comes to other things accident, yes. A system technology is going to be delivered.

We're doing something in the background, that once it takes shape, fundamentally changes everything around the foundation. How the technologies will be delivered, how fast we do things, and speeding up the delivery (of the technology). But just bear with us. As you said, what I said in 2011, 2012, still now shows its validity. Give me a few more days and weeks, till we deliver the other side. It needs to be done. We have invested a lot of time and finance on it. You Knowledge Seekers helped us a little bit in past 2 or 3 months to bring that into, closer to reality. That's what it is.

They will not do it for us. We have to do it for ourselves. To do that for ourselves, I set out a new course for Keshe Foundation about 8 to 9 months ago. I set out to bring a new change, in a way, to set up a new structure for One Nation, One Planet. I have instructed our team to transfer all my assets, which is in my name to the Keshe Foundation. The process of transferring the assets of the Foundation back to, has a started. So, this is part of the same course, Keshe Foundation Austria, share and assets holding in Markray, other assets held in my name on the trust of the Keshe Foundation. Started the process of transferring back to the Foundation, which means I carry no assets, even though I'll stay as a trustee. (2:54). In that process, we have started a process of One Nation

Gradually needs to set up the Universal Council structure as an entity, and the Earth Council as an entity, and bring them to manage. You have the two heads of the Keshe Foundation there, the two beautiful women there, to make sure everything gets through in a slow process. Then you have the backbone for, what I call, national assets of the Keshe Foundation which will be equally responsible by all the Universal Council members to see.

One Universal Council member cannot say, I want this in my country. We want it for the whole planet, how we plan it, what is the best efficient way for all of us to have it. It's not lobbying for factories and research centers, it's lobbying for all of us to benefit by it.

As I said, the transfer of the assets to Keshe Foundation, which I've been the trustee for a long time, has started and it's taking shape. Soon you as Knowledge Seekers have to start taking charge. How you want things to be done, and then, if agrees with what the Foundation has, will be transferred to reality.

All the, what you call, companies, all the factories, all the assets in names of organizations, which I built up through past years, now it's officially getting transferred back to the Foundation. As I said, I'll stay as a trustee, till in the future, I'm sure, the two heads of the Keshe Foundation, the two ladies, will become the trustees hopefully. Then it goes on to the next generation. Then, we have to structure a One Nation government (2:56). through assets of the knowledge, what we get as a knowledge, and what we go to the next step as a knowledge.

I came with nothing, and I go with nothing, because I have everything which I want in the Universe. It's you humans who are attached so much. But, I don't live a life of poverty, and slavery just for others, to be a hermit. I live the life of pleasure, because I have everything I need, I created everything for you to have the same life. So, you better learn from me to live the beautiful life, and not to live the life of the past, to be suffering because you want to serve. With the pleasure you serve much better, than with the slavery.

Q: .. I used to hear about the floods in Bangladesh at the time. And I'm happy we have a good teacher in Bengali language, very proud of. What about these floods...

K – They are needed again. See where the flood is, see how Bangladesh was divided. Bangladesh is in the back end of Central Asia, which all the waters from the top comes and it goes into the Indian Ocean. It was India, and India, when it was India, they had the same problem. It's a cycle, cycle of the life. You hear about the what you call it, the floods in Bangladesh nowadays.

I remember in 1990s, we were in our business working heavily with Bangladesh, because it was mainly cheap labor, more than anything else, and it was easier to do things there. I remember, there was this massive flood, go and check it on the News. After the flood we got our containers back. I never seen so many cockroaches of different colors and shapes and sizes in our containers. (2:58). Which the containers were in the port when the flood came, and it was there, and it cooked, it literally cooked everything. Whatever was seized in the clothing, with the cottons we bought, it became an animal, in that container with the temperature and the moisture. These floods have been there for years. I saw it firsthand, the results we had when we received our goods.

So, it's needed. It brings life to that part of the world. Mankind should move from these places. Or would we come to the time, as our friend says, I want a floating car. Can we make floating houses, that in time of these things, dangers, and they move somewhere else. And when it's finished come back in. They go to North Africa. They go up to 300 kilometers further up. With the new system, maybe we don't need to become refugees and flood up. We just go to somewhere nice and new, and when the flood is over, we go back home. It is going to be a lot of changes with new technology, I can see. The life of the man by mid this century will not be the way we know it today, with this technology. No way. It cannot be.

Q: .. (3:00). Can I speak in German please? (3:02). <Speak in German, difficult understanding >

Translation: .. Is there a possibility that the Foundation has a device .. Is there a possibility of the foundation to protect nuclear plants, and Mr. Keshe already said that we have the possibility of a generator, which builds a plasma field around atomic plant. So, even if a nuclear explosion comes away like in Fukushima, or Chernobyl, the plant will be protected, and no radiation will come out?

K – This technology exists. I developed it in the 1980s. The structure of, (3:04). a thought to do it came early at that time, and it is part of the development, which over the years I have brought into, what we call, being able to do so. It can be done. I know Germany made the decision to move out of nuclear industry in some ways. But yes, knowledge is there, and technology is there to do it.

You've got to remember, I've got to explain. I don't know if you remember, I'll explain. In Queen Mary College, University of London has been one of the very few universities with its own nuclear reactor. But at the beginning of nuclear industry, there was not much knowledge about the dangers of the nuclear reactors. If you go to Myland (a street in London), where Queen Mary College is, there used to be a building on the corner of the street, off Myland, and the side road, which goes right through Queen Mary, and that was a nuclear engineering department.

In the basement, there was a whole, the whole building was built on a hole of about 12 meter deep. (3:06). We had a floor on the ground, then we had a huge basement, where the first prototype nuclear reactors for research, more or less in the western world, was built. Then they realized that this nuclear reactor is literally in the center of London, but nobody knew, except the university people, graduates like us, and the government. So what happened was that, this is Myland Road, where the university is, you have a road which comes off it, and in this corner you will have the nuclear reactor. Here you have the union's of the university, and then the rest of the buildings. This was here in the basement of the nuclear center.

This was moved a year, two years before I became a student. What they did, they moved it up the road. Those of you who know London call it, the ?? Bowl. They say, if you hear the bells off the Bowl, you're a real Londoner, because it goes back to the Thymes. Here just by Bowl, there is a very small river which comes into Thymes river. The university and the government decided to move the reactor to this side. So, we used to have a minibus going in and coming on a regular basis. This was my second home as a nuclear, becoming a nuclear reactor scientist, as well as the only ones in Queen Mary College for some years. I had a lot of freedom. (3:08).

My final thesis was, about the radiation leakage out of this site. I proved in my thesis, that if this is the nuclear reactor site, the fields, what they thought when the reactor was centered here, will be contained in this dome (inside the building of the reactor itself). With testing, changing nuclear fuel rods, and proving, we showed, actually, the peak (of the radiation fields) was sitting outside the nuclear reactor building. People outside the reactor building were receiving more radiation, than actually the scientists inside the building.

I submitted this in June 1981, and immediately with the same instruction, immediately by beginning of 1982, the site was closed down. During this test, one of my main concerns was at that time, that, what happens if this reactor exploded, and how we can hold it in?

In that time, the conclusion of the research, which was submitted to Queen Mary College and it was submitted to British nuclear government authorities was, that the explosion will reach beyond, into central of London, and passing West Ham and the other side, and it goes Liverpool Street, the banking system, the stock exchange, and it was decided rapidly they cannot take a risk.

That critical test to show, that the peak of the nuclear radiation was outside the building, rather than inside, was critical. I decided at that time what happens, how we do it if it happens. (3:10). It was no use putting, as we did in Chernobyl, blankets on it, it was, (to) holding it in.

I set out to develop the technology, that pulls the radiation inside/. The easy way of it is, the technology we know now, is embedding below the housing of the nuclear reactors, a massive gravity system, which has radiation capability spectrum, which means, anything which does (leak), will go back inside. This, due to the transfer of number of other reactors around the site, will be spread and controlled. (They would put other reactors around the site to pull the radiation in, besides the main Gravity reactor under the Nuclear Reactor). This is the only way we know at the moment, we can contain nuclear reactors explosions. Where we centralize it (the radiation fields), and pull them in. As we have, like the way, the stronger (fields) feeds the (weaker) .. , we spread it (the radiation fields) around, and they literally become a satellite system. This is available, it costs not much, it's just that you drill a bigger hole in the ground, when you're digging (the original hole for the nuclear reactor), you go a few meter deeper. You'll find, if this is your nuclear reactor, you go somewhere deeper, and then you set your (plasma) reactor inside it (the hole).

Any explosion like Chernobyl, the (nuclear) radiation will go inside. You get debris (flying out of the reactor), no problem. But nuclear field radiation, even as debris's, will be centralized (and pulled back into the reactor site). Then if you look at it, another angle of it, this is your basement, you create number of (plasma) reactors around the site, so you spread the energy (of the nuclear radiation) and you control it (nuclear fallout). Because in growing and spreading, the (nuclear radiation) fields will be given to the environment within the ground floor below, which (the plasma reactors are) already buried, you'll have no contamination.

We know this technology. If you if you were in the oil business, before Iraq and Kuwait war, (3:12). a lot of you know that there were two or three very rich American companies, if you had an oil explosion on an oil well. What they used to do, if you had an oil well here, and you had a fire, that you couldn't control. The Americans come, sit back 500 meters away, drill a hole (horizontally to the oil well) and then close the tap of the oil well to it. Then they used to control it.

Now we can do the same thing. Even the present nuclear reactors, (you can) go underneath the concrete base (of the nuclear reactor), and build this (plasma reactor under the base) do it.

You know what happened with this (capping the oil wells American style). Nowadays this is obsolete, it's a joke, what the Americans do. Because when Saddam Hussein came, and he blew all the oil wells of Kuwait, the Americans (were) invited everywhere, because (there were) about 400 or 500 oil wells burning, they couldn't control it. It would have taken six months for each one of these to be done.

A beautiful Iranian company came with two jet engines. The whole thing was to stop the fire. They put the reverse of the jet engine on it (the fire coming out of the oil well). They started literally cleaning up, by just blowing the fire out (with the jet engine), and the rest was just capping it. They were paying millions to the Americans to do this. They collected all the millions, and went back to Romania.

So, it's in the same basis, we dig even the present nuclear reactors, we go to, below concrete base, where the reactor is, and establish (a central gravitational plasma reactor), drill holes (for other plasma reactors) around the (nuclear) reactor, and do the job.

Any other question?

Q: I want to give some knowledge for all the Knowledge Seekers, (3:14). for the seed of the problems, of the mess on this planet right now. I know you speak in Farsi, so in English there is one extremely important word missing, and in Farsi it's called, "mafeck" But not ???. Do you know "mafeck" Mr. Keshe?

K- What?

Q: "mafeck" in Farsi, as far as I understood.

K – "mafeck" means succeed.

Q: Yeah, in English, it's succeed or well done. But it's a big difference, "mafeck" to do it well or to succeed.

K- To succeed? It is achievement. If the word ??? has been .. translated.

Q: You think a word, then you say it, then you do it. When this word is missing, you cannot do it. This is the reason why so much mess is going on, on this planet. First by the Englishman, and then by the Americans on this planet right now. That's what I want to give knowledge to all the Knowledge Seekers.

K – Yeah, but it's been all of us in different times, in different countries, different rulers have brought different mess, and we all live as part of the results of centuries of abuse of each other.

Any other question?

The beauty about today was the introduction of the methane gas and the control of what we call, plasma technology for energy. This is why we came here today. That's why I called it, a Blueprint. Other things we talk about is a sideline to what is actually a blueprint today, this machine. (3:16). This machine in its simplicity will change the structure of the energy, energy construction, energy use, supply, control of nations by the others.

I think we still can show. Klaus would you like to measure again for the third time, that the thing is still works. We can increase the .. gas production, but it's too dangerous, it's methane. We can show you the test, we had a fire, a backfire into the tank. .. Am I allowed to show that, Klaus, you don't mind? The burning. (Klaus says,) I can show anything. Okay, we show you.

This is why we don't want to put the ignition on this, because on a test during the weekend we had the backfiring of the methane into the system. For that reason we preferred not to. Because it left the marks in our system. ... You can see, the pipe is totally black. We don't want to have these incidents here, because it's critical to understand what we do. (3:18). You can see the pipe totally black inside.

We have tested it, it burns, and it's just to be safe we do not open it here. In the background, if you can see, another Horizontal Enhancement Unit is getting assembled, it's on the table of production. This is our lab in Austria. So, this system actually burns, it does do what it says. Would you like to...

You see it is no gas, no methane. Oh, you saw the blow. It goes even up to 4 bars. But give it time, it goes up to 3 bars. It just calls on demand. If we leave it, it'll become a massive production. It can produce, this is a continuous production. So it's not one off, or false.

Q: ... (3:20). How long will it take to fill a normal size gas bottle in a car?

K – You don't need to fill up, that's the old fashion. Now your system, is your gas bottle. The system is set, you call upon it as you need it. You saw it with the test in Tehran. When they started burning, the bubbles became faster. If you can pick that picture frame from Tehran you'll see it.

We can increase the production, but we are in a confined space in the exhibition, and as part of our lease agreement, we cannot do anything with the fire here, it is against the regulation. But we've showed you the burnout in the lab over the weekend.

Q: I just wanted to announce that I just started a website called, ???.org, which means ?? which directly points to the gas enhancement generator, so that everybody can read it in German, English, Italian and French.

K - Thank you very much, any other question?

About receiving donations in Brazil

Q: Jefferson ... (3:22). Here in Brazil, we have difficulty making donations to the Keshe Foundation, because Paypal doesn't accept the use of our currency for international transactions. And many Knowledge Seekers do not have an international credit card. Could the Keshe Foundation open a bank account here in Brazil?

K - We have a bank account. Keshe Foundation is a company registered in Brazil. Keshe Foundation is the majority shareholder, it's with Rafael. You can make donations to the bank account of Keshe Foundation, and the funds will be used by Keshe Foundation Brazil for Brazil. The accounts are reported annually to us, just like the Australian Keshe Foundation, and others. If you cannot send money out of the country, Keshe Foundation Brazil is a registered company of the Keshe Foundation, and is nearly over two years.

It has an active work, donate to your own country bank account. It's no problem, because we get the report from Brazil, and you have a trusted man as a trustee of the Keshe Foundation, Rafael in Brazil. You should have no problem in Brazil to make a donation to the Foundation to the, what we call, subsidiary of the Keshe Foundation which is Keshe Foundation Brazil. Rafael, what is the name of the company, and can you say it in Brazilian, in Portuguese, and release the bank account. Are you there Rafael? (You are translating.)

Could you explain to where they can make donations and the bank account of the Keshe Foundation in Brazil, please? (3:24).

Ra: Yes, we are arranging with our accounts regarding this, because they tell us that since we are a company, it's a limited company here. We need to resolve some issues regarding this, to receive donations. We are dealing with this, but once we settle this, we will release our bank account. So, all the Brazilian community can donate to our company.

K- Let me explain to you what we can do. It's a very easy way to get around it. You sell a pen for a donation, for one cent. People can pay you a 1,000 euro to buy a pen from Keshe Foundation. You are a company. You understand? So, if you cannot get resolved the matter to receive a donation, you sell a pen for a price. People can pay the price of the pen as they like, do you understand?

Ra: Thank you Mr. Keshe, for this. We have even a Knowledge Seeker here in Brazil that she deals with this part of selling shirts also, and this was the idea that came in our community here, to sell a shirt and people can, by buying a shirt...

K- .. The easiest way is a pen. (With) the shirt they can say, the color is wrong, it's not my size, or whatever. But, if you make a donation, this is the price you pay so much for the pen.

Ra: .. we are going to organize ourselves.

K- You can trade and just put in there donation. Just put one item for sale, and that item is a pen. (3:26).

Ra: Okay, thank you very much Mr. Keshe, we're going to organize ourselves for this. It's much easier really, because we're having a lot of problems with this part of the donation here, for our company.

K - You actually are a trade company, you can sell things. And say, if you need it to be delivered, please state, you (the buyer) pays for the shipping. So, a lot of people just pay for a pen, they don't want it to be shipped. Do you understand?

So, you can pay, or a Paypal account into, and then your annual account shows what you received through donation, so you are sorted.

You have to remember, that you put in there, "I buy this pen for the price I want to pay."

Any other question? (3:28).

...

K - Thank you very much for being with us this Thursday, 440 something, and hopefully next week we try to give you something new. Keshe Foundation is working on a technology, which creates a clean water drinking water system. Once it's completed, it'll be addition to perfection, with a producing water and food from the same water. (3:30).

That bubble (on the screen) is a methane. It was a myth, that the animals have to die, that their body and the gases, create oil and gas, from the composition (referring to that the oil companies said the oil comes from dinosaurs). We can see how easily methane is produced in a natural conversion of the plasma fields of the Sun into matter state of the gas. Look, (another bubble), another life.

Next week, we go back to normal teaching, unless there is something, which is about to happen in the Keshe Foundation, we are expecting it. If completed, as expected, we'll let you know. (Probably referring to millions spent with an organization to bring the technology out).

Please understand, this one I want to clarify, especially in the Italian community, it has caused a lot of misunderstanding with this generator. This generator is, what is in public here, is for demonstration to show that the system produces energy. The generator you buy is for a 2 kilowatts energy system. It's different than a plasma system, which is supporting to reduce your electricity bill. You can buy both systems and interconnect them (together). Or you just buy the generator and insert the generator. Because I know a lot of Italians had a lot of problems with it.

It will be a very small size, smaller than this refrigerator. It's a 2 kilowatt generation power system, that will be delivered. The big box is just a demonstration to show that they produce this power, it's a continuous power production.

I think it's been put at 10,000 Euro, you have the gas production system, which is now on, and you can order it and purchase it. We'll try to get this out as fast as we can. (3:32). The same with the CO₂. CO₂ is not for this presentation of today. (Today's presentation) is primarily for the governments, for the change of the course, in the Russian gas boycotts. We use this presentation for government officials to view, to test and to expand as fast as we can, in the coming days.

Thank you very much for today. Thanks Rick for being there. And you never know I'd have another surprise for you for the next Workshop (Plasma reactor Group).

R: We look forward to surprises Mr. Keshe. Thank you very much. Thank you for continuing to surprise us even though even now, a dozen years later and many, many hundreds of workshops. And we still get some beautiful surprises. Thank you.

K - Thank you very much. I hope you enjoy it. I think the best thing is for you knowledge seekers, to purchase the Energy Gas Units as fast as you can, that we can put it in. Then the governments and can see the change. Then you can invite the press to your house, you can invite other people to you to see it. That will bring the whole thing quickly to an end, from the hands of the boycotts from the Press.

When you use it, it will go by the word of the mouth.

Thank you very much for today. Hopefully we'll see you next week or if something happen interesting we'll tell you beforehand.

Proofing complete.

443 KSW July 28, 2022

END
