

## 47th Knowledge Seekers Workshop Jan 29 2015

Running the 6 reactors inside a dome that started a couple workshops ago. Checking for light when switch off the motors. The measuring instruments can't measure MagGrav of plasma, but electron flow when the fields reduce enough for electrons to flow. Breathing in Nano dust by accident contains huge energy. If you touch Gans or Nano energy transfers immediately because of fields. Superconductors with this technology. Gans sings, hear it. Tele-transport done inside free plasma (the bubble in side the reactors seen some workshop ago). "Beam me up Scotty" coming in a real sense. Those who have purified enough, become humble enough can hear the sound of the soul. (1:12). When meet aliens you meet at a common denominator in the soul. If they understand, we are talking about whole new dimension of materials. The jump to computers was small in comparison. They cannot stop the development. CO2 kits \$13 + shipping \$5, Pain Pads \$39 + shipping. Profit margin means 50% goes back to Foundation and free unit to poor. Working on an energy unit in China. Power Charger for mobile phones. Working on MagGrav detector units. Production is starting. Any Problems contact [info@keshefoundation.com](mailto:info@keshefoundation.com). (1:43). Neural system sends voltage to tissue, information transfer is not the only job, it sends MagGrav plasmatic info for production of matter. A cell is made in the Kidney in conjunction with blood and neural flows (info for reproduction of cells a certain current produces specific cell). Falsity about brain only using 5%. Actually brain is constantly providing current of plasmatic MagGrav conditions for maintaining conditions to produce needed matter/cells. Through the RNA it changes the DNA. No need for stem cells or transplants.

Plasma detectors, do we need to translate it to electronic system, could do it with color change of Gans. Each color means a strength or position in Universe. Dry the Gans quickly with light bulb. Dry Gans filled with energy. Patents open, will not be needed in future, Tesla Electric car opened patents to public. University will teach everything at once, specializing later. There are exams but you can't fail, you study what you like to do. Mike Nashif, started growing seeds with Gans. Can reverse genetic modifications of Masanto's to seeds. The guy (deferescence) wrote the patent in such a way the it made public the new technology. Mike came on to explain his experiment, Keshe told him not to limit his mind about himself. (work on these systems in the Dark). He will achieve lift with his experiment. (break up of voice).

Seeds in cups (3:05), plant some seeds in regular way to compare. Gans field absorption grows different in Natural environment. Mike is creating different Gans with electrodes. Sharing the knowledge worldwide.
