

5th Knowledge Seekers Workshop – April 3 2014

(:04) Talk about the decontamination of Fukushima waters with Gans and Nano materials. (:08) Talk about the construction of reactors. (:11) Being careful about the reactors, because they did not put any reactor to work yet. (:14) Come back to talk about Fukushima decontamination. (:16) Marek make a Summary about the Fukushima decontamination. (:37) Armen talks about the control of reactors. They did not test yet, and when they do this they will share pictures. (:44). **Keshe comes in.** Mr. Keshe explains about the whole structures (of Gans and Nano Materials). Do to different layers which is produced in the sphere you get layering of the same material, but do to Gans being independent MaGrav Fields Spheres you create different MaGrav Spheres in different layers within the sphere. Originally now the main field strength will sit on the bottom. When the material is fully filled in then the control move to the center of the sphere. So the whole Plasma of all the Gans materials becomes Plasma of a bigger structure in one unit. For the time being the Gravitational field of the Earth which is below is affecting the Spheres slightly, but as this core was built this morning, the water was separate from the material and at certain point when we manage to fill it up all with the same material the Plasma center moves to the center of the sphere and the materials becomes <audio break>. Each Gans material is a sphere of balance of MaGrav, so each Gans material is a sphere of its own (?). The connection with the next Gans is not through electronic but through MaGrav of the same strength. So what happens is, a person who makes the contact with this sphere because it is made of CuO₂ and CuO₂ is part of the structure our body, when you touch the material the material the sphere the protein of your fingerprint makes the contact and connection with the sphere, with the material in the sphere. You make a link with this sphere, whoever touch this sphere makes a connection. So this how in the future we can have different operators running systems. (:47). The reason I built this reactor, or computer system, this is exactly copy of the structure of the Brain. There is no wires in it, but in time different parts of the system will start to accept different responsibilities. If you cut the Brain in half you will see that there are not different materials, but different densities of the same material, this structure will go through the same process. So as the structures changes in different densities, different responsibilities is accepted. In our Brain, as a Human Being ... Because of the weight of our body, where the main Brain sits, our Emotional part sits in the main Brain section, very small part. Then the rest of the Brain is Physical and connected with the Emotional and the Physical. With this system the Emotional Part will move to the center, and the P will move to the outer part. In the process of producing this material, I think you have seen some pictures in the past, there are channels created and the hollow Magnetic field center is created, when these materials were being processed in the past few weeks, so you have seen the M fields on, what you call the black hole or Principal Hole in the center of the material. Now this principal hole will move into the center of this sphere, so in a way what you look at in this picture is the first wireless computer control system, this has being in Microsoft and other companies, now this is a reality. It is a Zero time communication, because the body create M fields in the same length and strength, so from now on what you think will be automatically transferred to the motion within the structure of your reactors if you wish of direction of motion. (:50) This 3D non wireless computer, or control system now is a reality. Part of this operation was showed in

Fukushima, in the test of Yukako in Japan. People did not understand because people do not understand the whole totality. This test is a change in the whole concept of nuclear technology and contamination. You will see the graphics, Marek is working on it very professionally. This is the first time that KF is putting scientifically this out, thanks for the knowledge seekers. You will understand a lot of things, understand the figures. In one of the tests we see reduction, and when we put CO₂ we see increasing some numbers. You can reduce the radioactive material to become of a lower order. Keshe talks about the reduction of Uranium and Plutonium. We asked the question for the government: Why such a high level of Plutonium in the water in the fire station? This brings a lot of political situation, but brings something good, means that any nation that is building nuclear power station they are all involved in the production of Plutonium. Not crucify one nation. (:54) This brings one thing. How can you produce CO₂ in a gaseous state that makes all the radioactive materials non-radioactive? You can not have radioactive material even having Plutonium, now we see no Gamma radioactive in this container. We know that Cesium has a lifetime of 30 years, so how can in a matter of seconds change radioactive (high) into a non-radioactive source. This goes to Gaseous materials. You have to realize the way you see the pictures in the lab. When you convert the Gas CO₂ in Gaseous CO₂ you release energy, that is why the light is running in the lab. Because the material becomes MaGrav balanced, at the same time the energy in the water released, in conjunction with the H and O in the water, plus the N that is crossing, is producing fat (protein). This protein went to the lab. If we measure in the container of the water will be transferred into gases or energy that we can use, the same happens to Gaseous CO₂. In these waters we have Gaseous of Radioactive materials which are in balance. We have not change the material to radioactive to non-radioactive but the same as CO₂ we changed the material to Gaseous, now Gaseous of Cesium in balance in his energy has become non-radioactive. Now we can carry materials with us that can be used in the space in a non-radioactive position, and then later on changed them if you wish to radioactive material. But this brings one thing to the world of science, No Materials can be dangerous to Human Beings. (:57) Radioactive is not a problem anymore! They do not want to work with us because they have different agenda. (:59) In Fukushima we want to know how much of the material became Gamma ray safe and Alpha-Beta ray safe. Keshe says that they are open the doors for the cancer patients from Fukushima. (1:03) With Cancer we do the same as we do in the radioactive material, the cancer can be there but not as a malignant cancer. We can use the CO₂ to eliminate most part of the cancer in respect to the radiation that generate it. (1:07) We made the decision to open the International Knowledge seekers to the world. Keshe explains how to be a student of Keshe Foundation. (1:20) We offer our technology for the prince of Belgium if the situation get critical (he is in coma). (1:23) The 3D system is a zero time communication line, what you transfer to it, you transfer to another system. With this system you communicate with zero time throughout the world. You can be in another planet and you can have zero time communication in space. These are the teachings that we are going to give very soon. This System, this sphere does not need anything, is a living entity. It absorbs from the environment what it needs and feeds the environment what it needs. So, is pure, is clean. **The people who interact with this system, if they are coming with a pure heart and they are in the same MaGrav which is pure THEY WILL SEE THE LIGHT!** Very much the way I had always explained, the MaGrav field of the Earth in interaction with the MaGrav of the Sun

creates the day light, when you reach the purity of the ball you will interact, and you will see the light. That is the reason that I put the light behind it as you can see in the picture, because your life will be much stronger than this light, when you reach the maturity. The condition of this ball is, because it doesn't need anything it doesn't fight for anything. Peace will become part of the people when they interact with these systems. This is what I call the ball of the Truth! You can not lie. When all the knowledge seekers sit around it with sincerity and one goal they will see the light, because each one knows what each other thinks, because they know the color each one in respect to each other. Is like the light of the Sun that we can see in this planet, the light is slightly different in another planet. **(1:30)** The fat in the surface of your cup (of Gans), if you just touch it you will have energy from the whole day. There is no need for no man to go hungry. **(1:33)** Thousands of people building the reactors. Keshe talks about the plan to try to murder him and his wife. **(1:38)** Rick talk about Nano Coating other materials as sand. **(1:40)** Question: Are the Gans indestructible? Keshe answer: No, let me explain this. It is about to be able to change the Gans to the structure of the environment where you want it to be. You DON'T destroy anything. The question was about environment protection and about dumping the Gans of CO₂ in the environment. Keshe says: Why are you dumping them, you do not need to dump them. There are so much applications for the Gans of CO₂. If we extract too much Gans of CO₂ there will be more disaster than global warming. These materials can be used as a fertilizer. You just produce CO₂ when you need it! What happened to the planet when there was so much CO₂ with the salt water of the seas, the gases converted into protein and into O, the O of this planet came from the conversion of CO₂. Like the cows when they eat the grass and convert them into protein, and now we want to cut off the cows. We don't need to dump anything. When you convert CO₂ put a cap on it, on the top of your system and measure the amount of O you are producing. This is the test we are going to do on the Fukushima material that are coming. **(1:46)** The question continues... The CO₂ in the soil will decompose with the time? Keshe answer: No, it remains as CO₂. The only way we have seen Gans changing to Gas, all it does is go back to CO₂ again when you burn it. It will stay forever in the land. So the way to safely discharge the CO₂ is burning? When you burn it you put the CO₂ to it's original state, gas. We took the energy and we showed as a light, in our body we take the energy of matter to gans and it became the heat to our body. So when we put the energy in its specifically place by burning will go back to gas again. The guy talks about FDA put people in jail if a person get treatment of cancer without FDA approve. Keshe talks about FDA corruption system. **(1:57)** The question continues: The CO₂ Gans will be absorbed by the plant as a nutrient? Keshe answer: No, it becomes the tool to attract the M field of the H and N, which the water needs for energy. The reason you water the plant is to allow the N to become active. To active to create energy to release the H. CO₂ is the medium to do the job, it does not become the food. This is why wheat and other things have such high levels of protein. CO₂ is part of the combination of AA, C, N, H, O. This is the reason we have meat as protein, because that conversion has done. You have understand the totality. If you look how different soil create different roots and fruits, because the condition which is created allows the absorption. If use the CuO₂ gans your plant absorbs something else. **(1:59)** Questioner: So the presence of Gans will facilitate for the plant the absorption of all the nutrients? Keshe answer: Yes. Bravo! Now we understand the intermediates in this planet. So the more Gans we have in the soil

better is for the plantation? Keshe answer: He talk about a report about the amount of Gans for seeds and plants, because what happens is that the plant receives a lot of N and the O and water from the moisture of the environment it goes "fat". You get bigger harvest. We will answer this in the coming times. We understand this because the MaGrav of the O and C, N sits in btw it is enough to attracts N, the N who becomes attached with the CO₂ which becomes the food for the plant. Find a way to create a fertilizer. 59% of the air we breath is N and CO₂ C is 12 and O 16, and in the MaGrav bonds of the Gans they attract 14 which is btw the two, because the N becomes close to it and get attracted to it, the way we've done in Fukushima, it gets pulled by the plant. You can not over feed the plant with N in the fertilizes, it will take what it needs. This is what I say in nature you take the much as you need when we need it. At the same time when you have the N as we seen in the bubbles, you create a special protein, that protein releases the H with his presence becomes the water, the moisture in the air for the plant. So the plant not only feed itself trough N process to release the H for the energy it absorbs it's own water from the moisture of the air. We don't do any magic, now we understand the process. **(2:04)** Question: Ask about the containers that did not capture Gans. And the second question is about if you want CH₄ Gans, how you change conditions to get this? Keshe: depends of the material you use and what is available to you. This goes back to our nuclear physicist trying to make a formula for you. But it is not a chemical reaction, you have to understand what creates the MaGrav field of the material which you want. Keshe talks about creating gold from fresh air. You understand the condition before you create it. The problem is that we want to find something to do something, but if we know what we want we create the condition for that. The difference btw CO₂ and CH₄, is simple, they have different numbers of electrons and different atomic structure. I don't see the atomic structure, but I see what MaGrav accommodate each other. Keshe talks about an experiment that he did with high pressure, that he expected to create protein, and he created a lot of fat. Keshe says he will show the reactor in public. **(2:13)** Keshe talks to Brad share his experiments to teach us. Question about sleep walking. Keshe says that sleep walking is very easy, you don't sleep walk, it is a different state of mind. You have to understand the structure of the Brain, btw the E and P. in this case the P is active and the E is disabled. One of Keshe sons did this, he went to the fridge to go to the toilet and he had to understand the process. **(2:18)** Rick asks about the Brain being the control mechanism on the craft, being more emotion and sense apparatus then thinking... Keshe says yes, and that he will explain this in the future. Keshe gives the example of sense somebody when enter in the room, it is a zero time communication. Rick asks if Nano Coating is super sensitive to human fields. Keshe says that it is not sensitive is beyond matter. In these workshop we speak very generally, the general talk is over we are going to be very specific, to detail teaching. **(2:27)** Keshe talks about people who wants to go there to the Foundation and learn there.
