

## 63rd Knowledge Seekers Workshop May 28 2015

(:09). World Peace Treaty Road Map. Called to commit yourself to what you signed. Transfer diseases outside the body with CO2 Gans. Can bring Military Satellites out. Be humble, this will be the first time to get peace without war. Read out Road Map (:20).

(:40). Questions: Lasers and Plasmas. (lost Keshe for almost hour) (1:33). Keshe is back. Push for movement releases outer layers of Nano coat, need very low voltage. Your body continuously produces Nano materials at less than 1 micro-amp. It releases the atomic structure. Heating speeds up the process, but in cold conditions relay on salts MG fields. Heavier salts are faster. NaCl is faster because sodium heavier. Can also Nano coat from Star Formation which is easier and safer. When work in matter atoms are very close together and stick to each other, but nano material has big gaps between. Gans is even more loose, but they are connected by MG fields. There is a flow of MG fields become Superconductivity. If you touch nano they get squeezed and loose some property. Have to be careful when cutting Cu wires for nano coating. (1:51). How to create motion in the plasma without motors. Move away from Motors. This is how U works, when you have mixture of different Nano materials, it creates motion. Chinese showed this yesterday in online classroom. This is how you get movements of the continents. Inside center of earth fields create conditions of the motion in matter state. This is how conversion from plasma to matter state happens, by changing of the field strengths to conditions of matter state on the outer layers, and no other way, not by decrease in temperature. This is exactly same on the surface of the sun, even though you still see the plasma inside. (2:01). Marco describes the Chinese experiment to eliminate the motor. Can't understand Marco.

(2:40). Keshe comes back. Compares to adding vinegar to batch to make vinegar. Mike comes on. Cold nano processing, used 2 graphite pencil as electrodes and applied 2 amps and he got Graphite Gans. It goes from Graphite to Grapheme with a laser from a DVD player. He achieved Nano coated plastic. Mike has come back. Talks about love. Eliya favorite word is love. Nano coating is like a door to open. Glands produce an enzyme that is a nano material to open and close the membrane of cell. Calcium locks the door to nano coating. Want to open door and keep it open and get a draft, fields increase. Coat both sides to get a speed. (3:12). Keshe, "this is still schizophrenic state of matter, with gates, etc.. We want to look at Plasmatic state not with gates and matter. It has nothing to do with gates. Ones you free the Gans then they are free to flow, they find own balance which in itself causes flow and increase. There is no excitement in plasma state, not vibration. Why your CO2 boxes stop producing because they find a balance. The Foundation should not teach wrong way or back in same old condition. Looks like you are refusing to grow up, need kick in back side. You have already learned to make Gans, now go further. You get the same result regardless of the Gans you use. Need to get the Gans into the free plasma state. Keshe wants to close Chat Rooms, holding people back.

(3:24). Arman and dry Gans. Keshe comes on, how to make a dynamic plasma with one Gans. Use the 3 states of Gans, Dry Gans, wet Gans, and a Nano of Gans, then mix together and you get a separation of fields. This is exactly how the Stars are created. End speech of Keshe, have for first time tools for peace, the roadmap was at the beginning.
