

## **67th Knowledge Seekers Workshop June 25 2015**

(:10). John Searl group from California visiting, Searl Magnetics Corporation, for collaborating with Keshe. NASA is watching this collaboration. Keshe will also bring in Iranian scientists. Problem with Teko, they used to bring pollution down to zero. Teko's complaint that they were to remain secret in background. Will release all documents, and show how the Technology was used and go public. Canadian spin-off with Health technology. (:35). Red algae Bloom not from Fukushima. Keshe freely gave out a solution to US Military triangle craft, Nano coat inside of craft. (:43). Searl; group describes their systems. John Searl had precise dreams and got Technology. The SEG converts ambient to energy. The generator flew up to the ceiling. Draws the plan for flying saucer. Controlled by hand radio operators. (1:28). Searl flying saucer, keshe trying to find common ground with Searl. Keshe is willing to finance this project, but first need to understand the structure. Searl's craft is limited to the matter state because of the solid magnets. Keshe would use Gans in the 3 rings around the craft. (CH3 Keshe use 17 because always on magnetic flow). (1:48). Questions. The magnets are not normal, but are programmed with special frequencies wave forms. You never want to stop it, and it protects itself from corrosion, which is a loss of electron. You can simulate electromagnetic interactions with Software. Mike's hero was John Searl. Twinity occurs if you cut through the magnetic, which is a stable form of H. Mike says if you used the atomic structure of Neodymium, as in Gans, it would be a trillion times more powerful. (2:13). Keshe says you could replace the neodymium with a Gans. (2:31). This is how we share the knowledge openly. You can use a pulse DC to heat. Science with no borders. (3:00). Chinese have manufactured small reactors for 399 euro. You fill with Gans and glue together. They're going to release the most simple power supply for life time for \$1 as much power as want. (3:14). Release documents about Fukushima. We have the technology to clean up has to be made available to Russia and USA. By law Skype has to keep all communication for 2 years.
