

## 7<sup>th</sup> Knowledge Seekers Workshop – April 17 2014

(:01) Marek says that the Knowledge Seekers accomplished to build the reactor, explain about the reactor and how they prayed for the reactor (The Plasma). (:07) Marek says that the reactor don't use any form of radioactive energy, just Nano layers. We must be patience with this Technology and create the right conditions for this new technology start to work. (:35) We need to go deep in this knowledge, it is not about build things but really understand what this new technology is about. (:45) Nano materials are more like open spaces, is more close to Plasma then in matter state. They balance immediately with the energy that is around. (1:02) Ivan talks about his perception about how the technology of this century was built based on fire, that is an entity and have it's awareness, and now this new technology is based on Plasma that is an entity as the fire but have a different tipe of awareness (higher awareness), and it will only allow it to be open for peaceful proposes. (1:05) Rick talks about the knowledge of ancient medicine, the fire of the body in the Stomach (Solar Plexus) and how the enzymes of the stomach are connected with this fire. (1:14) **Keshe comes in.** If you add Gans nothing happens into the solution (caustic), we tried, we put caustic in the Gans liquid and nothing happened. Gans can only be changed in one way, back to the Gas. There is only one process where you can convert Gans into a matter and you can convert Gans into Gases. Burn the Gans is exactly what happens to your body when your are cremated, that is why nothing is left when you are cremated, except the ashes of the bones and some of the salts. Trough a certain process you release the elements of the body back to the gas state. Now we understand more what cremation does, and this is one of the only ways you can do it. When you are producing Gans out of the nano layers out of the materials in the salt, you can run this for months and months till the last atom of Cu in your electrode you will find that you will be producing Gans, what happened is that this is the skin of the man. The immediate layers near the matter components of the Cu create a specific MaGrav field which is associated atomically the Cu from it's molecular structure. Then as they go trough the gap of the layers they are changing to a gans, you find that you continuously collect CuO<sub>2</sub>. Once you start the process, even though you don't see the black layers that was there originally, you see and can collect CuO<sub>2</sub>. This is a major understandings in the world of science, trough a very simple process, we repeat in these containers the work of nature, we are changing matters into its natural condition of element (entity) as single atoms, but in the spherical composition of MaGrav field. In the matter condition (molecular) you find the bindings which pushes and literally brings the elements into a matter strength MaGrav fields. By opening it up back to a Gans you transfer the same element (entity) back to its original condition, so you look to the gans in the box you will see little individual balls. Every single ball you see with your eye is one atom; man has never being able to see a structure of a single atom. The gans are single atoms or molecules which themselves creates their own atmosphere, so in reality you're a looking to a single star formation. Yes that what it is! You see individual balls, so in reality in one ball you have millions and millions of atom or molecules. There is a major breakthrough in the world of Physics. We have seen it, it has being explained to the scientist and KS. The gravity of what is to be announced in respect in development of Nano layers will change the course of Physics in the next 24 hours. Keshe says that they are trying to put in a language that ordinary science understands, and with this breakthrough all the Physics books must be rewritten. (1:23) One of the things that was not understood is that, as

Yukako was doing in Fukushima waters, in these contaminated waters we produced pure gold. We have showed what the process is in Fukushima. Production of the gold has becomes easier then drinking water. Back to reactors. You look the plastic reactors made by Iran, the structure of this big reactor and of the small reactor has a purpose. The smaller reactor is electron, the bigger is a proton. The bigger reactor Half Moon is dynamic inside, this is how a protons behaves, it releases its energy internally, the smaller reactor is electron which is dynamic outside, but inside receives fro the proton fields, neutralizes it to create a new MaGrav field for the electron to find its position in respect to the proton which is the bigger one, that is why lighter entities with a lower mass always there position is dictated by the parents by the Mother. This is fundamental understanding in Physics. Proton is in the center, releases its energy continuously because it's a bigger mass, the smaller one (the electron) absorbs the energy released by the proton, it absorbs internally, and it changed the internal core. What it absorbs internally dictate the speed of the internal rotation of the reactor, and that speed change the MaGrav of the electron, so the electron finds its position in respect to the proton which is the bigger one. This little reactor have its cruise and when it find its cruise is very dynamic. You understand why they are in that position. The Mother reactor in the center core has internally rotating and in the center there is a nano Coated material which has the spectrum of all the MaGrav fields embedded on it when it was made. That is why is black. It centralizes the whole Plasma internally. It behaves like the Central of the Universe. Because there fields emanate from them, dictates again the central core becomes The Mother the proton, and the outer became like the electron. **(1:29)** The other three reactors put outside behaves like the electron, at the same time they enforce the fields in the central core, that is why the central core dictates the positioning of the flight system. But there is something else, we go back to the spiritual side. The Iranian half reactor is the body of the man, his behavior what it decide it does, it is reflected and captured by the Soul of the man which is the smaller reactor, and then the Soul receive the misconduct of the body, it adjust and dictate its position in fact dictates the behavior of the proton itself, or the body of the man. This is the way the Universe works. This is when you make the cups on the system I made we see two or three time the structure of the body of the man. Two which is the N and the C, one that is the O in the middle which is clear, we see a H then we see another N, body of a man separation the E part of the man and the Soul of the man. Even in the U we see how its protected and how its done. **(1:31)** If you understand the combination, every single orange color in the box in respect to the totality of its environment is 2-1-1-1-2-1-1 which means the men are connected internally trough their Souls and trough their E, which comes trough the Soul, this shows the essence of the Creation. I am here to learn, to observe, if you can observe what is happening you have the possibility to further the knowledge, if you are just to make Gans and tool you came back to the same position that the man was in years. We come to one thing which is, you see a lot of half spheres in our tests, the reasons is that when you have hal sphere you have stable reactor, you don't have polarity change, the polarity change trough the current flow of Plasma (as MaGrav field not as electron!), when it reaches a point the whole system in the top of each other they will have to find its position, it becomes like a traffic jam. **(1:35)** Question: The production of Gold has to do with the Plutonium? Keshe: Yes, I explained last time. We see traces and increases of Cesium, this process can only happens if there is a Plutonium in the process, what happens is that

the Plutonium conversion of plutonium and the conversion of Cesium (in the presence of Gans of CuO<sub>2</sub>), the energy released from matter to gans, because of the huge numbers of neutrons within the cesium releases Plasma energy in the level of a neutron itself. If there is Hg in the soil the energy released is immediately absorbed by Hg changes into He and Gold. **(1:44)** Keshe talks about the attempt to execute him and his wife from King of Belgium. **(1:46)** Look at the structure we sat on the floor yesterday, we will start the Space Program with a Pure Heart and with Peaceful purposes. Our mission is complete. Keshe Foundation is officially in the Space Program not by words, but by action. **(1:50)** <audio break>. **(1:55) Keshe is back.** These systems enter now beyond burning fuel. These reactors will not do wrong, because it's a Plasma the Center core emits, and the outer core can only respond back to It in what is receiving accordingly with what is correct, so it moves, that's how the electron does, that is why the electron never hits the proton, because it can not hit its own creation. **(2:01)** Question: What I must do know that we have CO<sub>2</sub>, or CH<sub>3</sub>, etc? Keshe: Target what you want to produce. If you create a salt condition that can create and hold on to the C and release 4 H you get your CH<sub>4</sub>, see the size of the bubbles, you will see what is N or H. We will have the tool to measure this. Go back and look at the picture in the labs, I have used the left over of the Cu wires, if you look the same wires has not produced a single CuO<sub>2</sub>, but what is doing is producing fat, CO<sub>2</sub> and CH<sub>3</sub>, and it's the same elements, how come some don't change with the same materials? The way they load the Cu wired they created the environment to create specific elements. **(2:09)** Rick asks: if you have a reactor that is rotating, the H will not be able to get into the Nano layers, perhaps, but if it was not rotating would be able to convert the Oxide to the base matter? Keshe: No, you are dealing with the Plasma, once they have their layers they have their own Plasma repulsion. **(2:12)** A man from Belgium show the layers of his Nano Coat, and says that he applied the orange oil as Keshe said in the last workshop, and he go further explaining what and how he did it. **(2:15)** Keshe goes out. **(2:23)** Keshe comes back and says that that reason he asked him to do it was because of the properties of the orange oil, this oil is very much near nano thickness, what you have done with the oil you have created these gaps, they feel like a sponge. This oil can penetrate the gaps of the Nano layers. **(2:28)** Go back and look at the structures of the fruits, like pineapple. In nuclear reactors we see (???). When we eat these fruits the the structure you see in your CuO<sub>2</sub> (in the Box), in your plate happens to the cover of your Neural S. If it is not eat in conjunctions with something else it can't interact with it. Read about the fruits with bromelain and you will see the same decomposition in the reactor. **(2:30)** The position of the salt within the body orients the C from conductor to resistor, or resistor to a C, and this is one of the path of Keshe's research about fruits that we eat and how it reacts in the body. In some places they forgot why they eat things. **(2:36)** Keshe explains why you can have more energy at night time. It is because at night time you absorb all the energy which is coming from the Earth, so with this technique that you have done (with the orange oil) if you can make 30 thousands strips like this you can produce 3 or 4 Kilowatts every night, more at night when you need it and at the day time when you don't need it you put in front of the Sun, does the same thing. This is the backbone of the Keshe day and night power cell. Know something, our body is made of Gans, when we lay on the ground we feel very good because we still got these space gaps and we still are in the Plasma condition as a Gans, we get what we need from the ground. When you slip btw the sheets you don't receive

nothing, that is why you wake up tired. If you can make a bed of charcoals and different minerals, and you could sleep in a different every night you would see that you would have a totally different behavior. What we absorb is what we need. If you are depressed take of your shoes and go walk in the garden, just a few minutes in a day for a few weeks, then you will see what happens. You absorb walk at night time not day time, day time there is not much field because the MaGrav field of the Sun is very strong, it pushes the minerals and the fields on the ground. That is why some of us became root eaters, the root eating is duo to the fact that in North atmosphere there is light so most of the energy stays in the ground and get very much absorbed by the roots that we eat. **(2:40)** Question: About walk in different sands and try to absorb different fields. Keshe: when you walk in the sand you massage different organs in your body (Reflexology) that is a different process. When you walk in the grass or near the sea specially at night you absorb the fields. Don't mix the two together. Question about living the body. Keshe prefers to not comment on this. Keshe said that one scientist that he talked with said that he could jump like a frog he said that he was levitating, I said that he is not levitating what he was doing was a jump frog, I explained to him that when you sit in meditation you can hold charges in the P pat of the body and when it goes to a saturation point there is a spot on the back of your neck which controls the release of information or energy to your muscles, and you find out that these guys can jump only with folded legs, so much energy is released into the leg that it can not go anywhere and they get pushed and you create a jump. Leaving the body is the same state, you have to find out with which part of the body they are doing it. If you concentrate your energy in your E part you can get that feeling of leaving the body. Question about people who can disappear, Keshe asks him to show him one person who can do this. The guy says that he will try to talk with his friend. Keshe says that this can be understood if you understand the works of the Creation of the information within the P and E part. There are people who are in front of you who can disappear, but for real they do not disappear, they create a MaGrav field in two layers of the Brain which the fields within the cells of the body go neutral in respect to the environment that they are in. We do the same thing in the Space Reactors. If you can create a MaGrav field within the structure that is equal to the environment, you don't need to move, you become part of it, so there is no friction, the only way we appear they way we are is because of the Plasmatic Grav Gans state of our body. **(2:46)** Keshe talks about his notes on bacteria and virus. The difference btw micro organism and virus, one of the reasons that the medicals never found a solution for virus, just have to wait them to go, because virus are single atomic Gans of the Matter in a different state, that is why they need time to make their job. By introducing a different salt condition in the body they can convert the virus, they are like radioactive materials, release a lot of energy, and that is why they are very dangerous. They can convert these Gans to a matter state, not Gans state to radiate, then the virus can be brought under control in a matter of seconds. Question about how Keshe tech can be used for Pharmaceuticals and to food transportation. Keshe: You have to go back, we use microwaves nowadays to keep away from microbes, if you understand the process you can make this in another way, you have to go back to the essence of Creation: Salt, Radiation and a Conversion. Life on this planet would not be possible if there was no Salt and N and O. Virus are totally Gans based, remember when we say molecular  $CuO_2$  in Gans state is not 1 Cu and 2 O, so what you have is one sphere which contains the MaGrav of the two, so that is why you

see the green. When we speak of a molecule Gans we don't d as a matter state with bonds and the rest, is the totality of the field weight mass that decide the matter. So the Virus are the Gans of the Materials! **(2:51)** Question about how they can help Keshe in this trip to Belgium. Keshe says that he can be killed in this trip. And say that the King of Belgium is threatening everybody. **(2:55)** We are going to do our job in our way not in their ways. The way we are conducting the teachings in a correct way has a reason, those who are wise have understood. Technology like this does not go in the hand of a pedophile. **(3:00)** Question about molecular bonds and Gans. Molecular bond is a MaGrav package, when it comes to a specific position it comes to matter and comes to Cu and O. Go on the internet and see the structure of the upper atmosphere of Saturn you will see the shape. These layers which are absorbed of the Solar System come as Energy pack, because of the MaGrav fields of Saturn be so big they change to the Gans of that matter that is He and exactly the structure we have on the floor with the three reactor here, and if you go to the roof of the lab you will see an hexagonal formation. We made the lower base reactors we put one in the center, if we put three more around what we will see above is the hexagonal shapes. The interaction of the MaGrav field of the He in interaction with the MaGrav field of the Saturn in such a far distant allows the manifestation of the Gans of the He, and as He get attracted further to the center of Saturn they still are Gans, and the interaction of minimum 3 make the exact shape of the cloud (??). As they go further duo to process that are within the Saturn can be mainly Gravitational, partially on Earth atmosphere is duo to the N in upper layer the energy released, converts Gans into matter, that is why you get the rain and the N, N changes the Gans into a Gas. We have N Gans which is the essence of life in this planet. **(3:07)** Question about dump the Gans. Keshe: This virus entities can be produced in space as is on Earth, what this means, we are producing Gans and we have to be careful with this. CuO<sub>2</sub> in Gans state is not toxic. These Gans are like Solar Systems, full of balanced energy. Do you throw the Sun in the garbage? **(3:10)** Keshe talks about the experiments in the lab, that they are producing a lot of fat and say that we don't need the animals anymore to have the proteins. **(3:13)** It's the salt content that decide the protein.
