

73rd Knowledge Seekers Workshop August 6 2015

(:22). keshe comes on. The new systems are even much better. Talked about Eliya breaking the ethos of the KF. (:41). When people don't get their money they attack us. (:47). Italian Military protecting Keshe. Many have not understood the Energy Beads.

(:49). Separate two important points, Plasma and matter plasma. Matter Plasma: Stronger fields become visible. When you have a stronger fields it forces conditions on the weaker, (i.e. The Earth's fields are enforced on the weaker they have to obey earth's fields). Matter of Gas, solid and liquid, Plasma is not a 4th state of matter. Plasma itself is the operation of the bigger environment. Matter state is conditioned on, solid, gas, liquid. Plasma is the one that conditions, it is free without boundary. Plasma is free, Gans (transition state) shows itself as a physicality in a way, and Nano which is matter state of the plasma. So we end up with 6 states or entities. Understand the interactions between. Why you see such a huge release of energy in Alex beads. The energy is from conversion to electrons. (1:03). Just putting Nano coated wire on the Battery, and it achieves motion. The battery itself carries a Nano coat from the chemical process, but we only drain the chemical reaction energy. By adding the nano wires to terminals they match up with plates and the plasma delivers its energy. You're tapping a plasma source that was already there. The Beads in cigarette lighter did the same. They are releasing Plasma Energy. (1:07). How plasma of sun converts through the atmosphere. Once the field forces enter the wire it shows it where to go. Electrical current is still a MG field, forward called magnetic and reverse gravity. (1:09). How the crankshaft turns, the fields coming from the battery, where one nano wire on each terminal, when the field forces of Gravity pulling into battery and magnetic going out come to a stand still, it switches over to plasma force which creates motion by turning over the crankshaft. They convert the plasma energy to dynamic matter energy. That's why no fuel consumption. The process takes days and the body of car becomes nano coated and will affect the paint and structure of the car you create your own spaceship. The engine runs easy and lighter on the road. You will achieve lift. They even took the engine out. They have a video of car in safe, the only thing needed was the battery. The Cu is weaker than nano and gets over taken all the wires get Nano coated. But the plasma flow of the New 3 coils is not in the structure but in-between the coils. The "environment" is the car. (1:19). What is about to happen? A number of you are breaking through. The deep teachings are taught privately with Keshe. Explains what happened with Eliya, and a new health teacher coming forward. The reason for teaching and correct conduct. (1:28). Every structure in body has 3 layers or fields coming together, the model is same with SF. Inner ring as gravity and outer as magnetic, (don't understand). This is essence of creation in U, don't need nuts and bolts. You need a minimal of 5 forces to create physicality. Flight is done by the interaction of the fields, not matter. Now we open another chapter in knowledge. How to understand the SSI Power systems. (1:36). You create the UFO through what we have been discussing since the Beads. It's an ILLUSION. (1:51). QUESTIONS: Bret asks the colors he sees in air, plasma? We all see it but some are sensitive. Only the Creator can see all spectrums of the Plasma. (1:58). Shielding from rays and waves. Keshe, why do you need shielding when there is no problem? It's coming, not just for one but all. The question of safety come up again, Plasma only delivers what you need according to your thoughts not your "wish". When you don't have insight into Reality everything is a joke,

so it shows your ignorance. (2:08). We need the Chinese because they can understand this technology, yin and yang. Try to imagine how the fields flow. No fear in Plasma technology. (2:20). Letter from villager thanking for knowledge. Someone shows nice picture of the MG flows, spirals and interaction. Like a filtering process. John explains his spirals, one clockwise and counter. (2:31). These get Nano coated and put on terminal of battery for car or motorcycle, Clockwise on Negative terminal (Magnetic), CC on positive (Gravitational). Cover them in plastic with silicon sealed and pin slides down into the battery clamp. If you wanted to fill with Gans it should be dry or the liquid Gans enclosed in container. Keshe, the battery itself is a source of Gans energy, but to guarantee then add. A way to make Gans more powerful coming. Visualize the Plasma flow, it would loop around the battery and extra flows would power car, Like the ocean water cycle coming back through the rivers. (2:39). Keshe explains the flow going through starter to crankshaft, goes through the motor that has no electrical structure, next point is spark plugs and distributor and back to battery. At the spark plug it transfers from magnetic to gravitation and creates rotation and physical motion. The magnetic in spark plug and gravitation in motor block, motion created, your intention counts. Need to visualize it. 243 If the camshaft not there then the fields have to find an absorption, it would go to lift if fields were just right. The tires create a separation with the trees and environment, the air in the car will be used to advantage, ?? finds a new position in terms of gravitational fields of the earth. Don't be in the car when testing the first flight, end up on the moon. (2:49). If you wind coil very tight and put dry Gans in center you create a faster transition form the Principle to the Matter state. How you merge the fields together, M to G etc. The wire is a passage of the field of the plasma. (2:54). The breathing is direct communication with emotions. The rate of breathing and energy transfer is individual dependent. Have to understand more about breath. Keshe developed cups are related to breathing. All man of same intelligence, but it is the physicality that decides what will reveal itself. The condition of the lung is related to what we show in the breast. Mother usually feeds child on left side first, heart. When man approach woman, right breast first, when problem with man woman trouble with right breast first. Look to which lung is taking more energy, (3:04). Emotions and attachment related to energy in lungs, if you are willing to expend more energy. The swallowing of the saliva when change energy to one side of lungs. Italians are most emotional people, watch how they breath. How we breath effects our emotions. Man and woman transferring energy. (3:10). Guy had a spontaneous collapse of lung, what did want to separate from, related to emotion. Water on the lung related to emotions, drown, want to be detached. Moved to another location start in September.
