

## 79th Knowledge Seekers Workshop Sept 17 2015

At New facility. There are Tsunami on coast of Chile, and earthquakes. Goes over the number of earthquakes on West Coast, 2 in CA, 3 in Panama, and 1 in Chile. It will die down until next Autumn. (:05). The lava layer moving under the top layer. He expects losses of 10 to 20 million, the people in Central America hit worse. (:10). The first power units are on schedule, 17 cm and less than 1 kg. Teaching direction is going now straight into understanding the work of the Plasma. We started in Matter and went to Plasma. (:19). Now from Plasma we become the creators to create whatever Matter we need at the point of need, this is what is required to travel in deep space. Matter itself is in a state of Plasma at a given MG field strength. We become concerned only with how the plasmas interact with each other to get the products. (:23). We hope to work with the governments and start to use radioactive materials in the spring coils, like plutonium. Make the springs not so tight so the plasma can flow. (:28). Keshe is moving on with technology, some will stay behind. (:30). Problem with this Power unit it only produces continuous plasma out of the top, the KS have to learn how to filter the plasma into outputs. It's called power supply and not a generator, but it will supply household needs, not industrial. (:33). While you can still use matter level for your house, KF is developing filters to produce water, food, medicine, etc.. You have the totality of a plasma available, you decide. You make a filter that collects the MG of water (this form is used in space), (:40) and the if you want real drinking water it has to be reduced further. Goes over how CO2 kits works, how CO2 converts, in space we don't carry water. (:44). The filters interact with plasma. By estimating field strength of Cu and Zn in CO2 Kit we can calculate MG fields of Carbon. Alternative method is using a "base matter", converting a proton and electron to a neutron. This system can attract plasmas in Space. With base matter you add numbers of elements. (:52). interference on video... (:56). The U only works on Plasma and interactions of Plasma, matter is a by-product, Fundamental to Teaching... is man ready to make the step? (1:01). In space you work on memory of what watermelon is, poisoning in space very difficult because the body knows it doesn't fit, the environment will be peaceful, because all needs are met, it's a balanced environment. (1:06). In the cars the spark plugs crack why?, it's point of conflict between the two fields, motor and plasma, 30 to 70% decrease in fuel consumption. You start trusting the plasma. (1:12). Goes over the 2 coiled rings and placing reactors, placing of reactors creates the dome of UFO, John Searl has made some new arrangements of reactors, you will see structure in front of you, but you will feel the fields, by connecting the rings get potential differences and current flows, if you block the flows you can collect the fields as matter. (1:19). In matter state H is 1 proton and 1 electron, in Plasma state H is 1G and 1M, and the MG property of H; O 8 protons & 8 neutrons & 8 electrons, in Plasma fingerprint or field strength of MG of O, you don't count particles but total fields strength balance. Went over how to control SS with these rings. (1:25). The car units are only for the car, house for house. How you wind the coils is very important whether it works or not, direction, tightness, gaps, etc. In the Chinese Fat Boy they start to see materials being produces. Nano coated wires need a supply so you brush the Gans on the wires and gives it a continuous flow at a given strength, this is why the little system is so powerful. This is what Tesla Group was doing to generate 10 kwh, but they didn't understand about Gans. (1:35). You have to keep the PU running at the same demand or power from the Grid will come in to fill the gap and charge you. (The Plasma

flow has gone into the Grid, so if you lower the flow, the plasma part in the Grid will flow back to since your neighbors don't have a plasma. The car will get nano coated and may start to float. The body can't get sick from it because it only takes what it needs, and since it is both M and G it satisfies both psychological and physical, the Italians have become more calm. Accidents will be reduced because the MG fields will keep the cars apart. (1:42). Some of you will go in the Solar system, don't do it, John Searl has made the 3 ring controller, don't touch inner core because it can effect the psychology. In the Infinity Loop (IL), you use both the M and G. (1:45). Giving a cryptic warning that plasma technology has unknowns, fields without either G or M. (1:51). Question about counting electrons, he says you have a balance of fields. How to cope with Gans? Make a paste and apply to coils and then totally dried, Nano coating won't stick to anything, but Gans has the same fields. (1:55). (camera back), when you connect coils NEVER as matter state connection, ALL connections have to go through Nano coated tubing or coiled on top of each other, do not use junctions and screws because you create a different condition, have to continuously remain in Nano state or breaks the flow. We need you to fly UFO's in the coming weeks, always leave lot of end wire to connect. When connecting coils together, M to M and G to G, you'll see huge performance, you can do different connections, but understand what you are doing. (2:01). ALWAYS watch how you are winding the coils, if connected the right way it works good, the field is not in the wires, it's the fields in the center that flow and not in wires, every twist adds to the power. If you change the shape of the Nano coated cup to triangle, then you get full dimensions of the banana on top, you even feel like you have eaten a banana, in the bottom triangle you get packing of MG fields, so G is much stronger and G dictates M in physicality, G is the emotional part. in the square cups you only tasted the physical part. (2:08). Questions, what dictates whether the PU is M or G, is it the internal or external coil? Always the center is G, and G carries the denser fields (Mass), and that's why you have a mass, (read book 1 or 2). To connect to the Grid just twist bare copper wires around the Nano wires. (2:12). In PT you don't Nano coat anymore with Caustic or burning, but with another P, the P creates perfectly spaced Nano materials way better than any other method. Asks other KS to translate into their own language quickly so that their country doesn't fall behind. (2:19). When you coat the Cups outside you make a filter, when you coat also inside the cup carries the full spectrum. You can burn the herbs to create a Gans and make water of it and put on pain pad. Most of Cancers can be reversed by laying in the water of the Gans, if you have cancer in the muscles use CuO2 Gans water for a short time. Water of Gans of CO2 for cancers that are emotionally based, you can even dip your head in it. For stomach cancer use CO2 Gans. (2:29) A scientist coming in and testing with instruments what Gans can do. KF goes from teaching to research and testing and manufacture within 30 days, they are setting up whole manufacturing to developing countries for \$30K. (2:35). Different ways of making Nano coats serves different purposes, Fire methods gives more homogenous and good for PU, for coils the NaOH is not so good because uneven depending on tightness of coils, the electric system is best system to produce Gans, for medical application NaOH is best because it allows the layers to grow. The size of wire not important it's the gap between. Keep all coil winding in same direction, if one is CC make all CC, G comes from the top to the bottom and M bottom to top. (2:41). The rotation of the Plasma, in double coils one goes CC and the other Clockwise, what comes out of the coils is not

through the wires but what plasmatic strength you've collected in the center. Learn how to get the plasma flow out of its cage and go where you want it, it works like the stomach, you mix the plasma and deliver it to organs and muscles. You are always looking for the wires but don't get fooled, this is plasma, open it up by making a filter so it can come out, if we collect the reactors in parallel can we amplify it? Yes. Keshe told Chinese that all money will stay in China to help spread technology in China.
