

8th Knowledge Seekers Workshop – May 1st 2014

(:01) Talk about the interaction btw the reactors in the lab and the reactors were not turning on, but later when they turn on again surprisingly the power was higher then before. They are trying to figure out why this happened. (:09) In the other reactors nothing apparently happened. (:11) Marko talk about his reactors and that they put Gans inside the spheres, he says that the reactor would change the velocity by his own. (:26) Rick talk about the motors to be used on the reactors. (:44) **Keshe comes in.** Talk is about using nuclear materials. Keshe: The point is that when we use nuclear materials with a (??) we achieve Plasma in seconds, because we control everything. In the reactor like the Iraninan that is now on the floor we use about 400 radiations sources in the small reactor. But now we are using nano Layers. Keshe talk about Marko reactor. It took something like 28 hours to achieve Plasma condition. The reactor of Dr. Ivan stopped work one day and the next started to work again. They worked out to put the outer reactors in a specif velocity and then they could see the Plasma. But the interesting point has being that this is not coincidental, for example when Ivan reactor was in the saturation point the reactor B of Armen and Marek, we saw the changes in current from their power supplies to the motor of the reactor which reached the Plasma condition, this shows that it have a Plasma interaction btw all the cores, and this is instantaneous. When you say nuclear materials we see this instantaneously. There is an indication of the reactors that had created Plasma, we must find it's configuration. The melting of the motors are very common. Keshe talks about the interaction btw the reactors, the outer core and the inner core. (:52) The main reactor that is sitting in the center has the same volume as the Brain have, just a few millimeters aside. In the coming weeks we have being producing Nano CuO₂ which is being put in this Brain to make the first wireless computer control system. For the first time we will have gans in the center core. This will take another month to achieve because we have to produce from the same material. The original plan was to fill it in with H Gans but now we will try CuO₂. The original reactors which were used in the past they had a liquid Iron in them which used as a paint (??). The point with this development is: because with the Gans of CuO₂ in the table are made from the same wires and the same Gans materials in the center core in the energy systems we have the opportunity to control the central reactors by thought Emotion, more then the Physical connection, because the dynamism and the system are all both the same! There is a possibility that we can rotate the “Brain” dynamically but not at a high speed, but in the next months we will test the nano communication system from the teachings room into the lab (40/60 meters of distance). (:56) We most focus on the production of the protein in the top of the production of Gans. We can explain how the man was created in this planet. All the oil we are digging in South America and other places is not produced totally from the remains of animals that died, this do not make sense. Now we show that the oil has being produced naturally by the process of conversion of CO₂ and the production of O and the byproduct has been the oil. Where these oils could not link up to become plants or animals they have sunk into the inner core of the Earth and became the oil that we know. Even today these lakes and seas and oceans keep producing oils, and the oil production as we are used to is still carrying on, Nothing to do with the death of animals, this has been another hypocrisy. We informed to the oil companies that we do not need to dig holes to get the oil and then refine them,

with this new technology we can produce oil specifically with the characteristics which you like. **(1:00)** Keshe talks about Fukushima and says that there the oil started to be produced by the interaction of the water with the CO₂. It is like the plants this process; the oil that we get is very gentle, that is what we see the oil that we get from the plants. With the curly wires we get a different characteristic of oil in the top. It is like the human tissue ... It show we can dictate what kind of oil we produce. Know you understand how the human condition was created in this planet. **(1:05)** Keshe talk about the position of Keshe Foundation, his life and life of his family regarding the treats from authorities from Belgium. **(1:25)** Very important announcement to make. We had to delay a lot of things because of personal treats. I am proud to announce that the KF has an institute built with residential facilities. We have accommodations for 80 students. **(1:30)** Keshe explains how the train in the University of KF will work. **(1:37)** Questions: It is a non profit institute? Keshe: Yes, Keshe explains further about this and about the costs of the Foundation. **(1:41)** Somebody asked to Keshe that if he is the Messiah why he don't give everythin. Keshe answered that this person have not understood anything and have no idea of what is coming. The message is very clear, we are all Messiah for the level that we can understand and not beyond, it is my job to open your eyes to beyond and understand. The man on Earth is like the time when the man was in the village but knew that there were cities with cars and so on, but he never been there. When he goes to town he wants to go into the car, you can go, but you have to understand that the car have an ignition, a break, and so on, the guy of the village in the donkey did not had all that have in the car. In these systems there are rules as it have when you drive the car. I have to teach the conduct to behave in the city, other wise you get dead in the donkey. I have to teach you the conduct of the operation of these systems. You are not the only one in the space, and in the space there are rules, and now we teach you the rules. We are just teaching how to build systems mechanically in accord on your level of understanding, the purpose of this is to go to the city (the Universe). You don't know nothing and the wealth of this planet to not worth a cent in the Universe. **(1:48)** We saw the penetration of the Plasma in the reactors above the Institute, this penetration is beyond the build. The Institute became a test area. The government knows what we are doing but keeps us silent to give this knowledge in a correct way. Very soon we will teach about the rules of conduct. **(1:55)** Question about Plasma interacting in Kilometers, is that mean that we can not travel vertical, and need always to have an angle. Keshe: Partially yes. A man who goes with this system in vertical, is like the man who jumps from the Eiffel Tower without a parachute. There is a chance to survive, but very remote. Can be done vertical but there are risks. **(1:59)** Keshe talks about the interaction btw the reactors and how you can go in a very high speed in this interaction in different combinations, they are slowly understanding this process. They will test these things in the new Institute. **(2:03)** I try to prepare you for the next step, about your conduct, consciousness, etc. Why do we see so many lights in UFOs and also sub lights around the Earth. Physical appearance of the Messiah to appear so often, and when it happens it is like somebody comes and all the people in the village come to see. People in this part of this Universe are aware what is about to happen. They are here as a witness. Those who understood the message understand what is going on. This is an unique opportunity. We have to teach you to be ready for a reunion but ate the same time a lot of man will not understand, a lot of man who is attached to Physicality see this technology as a danger to there migger life. But we

carry the good and the bad, till the bad become good, and one day they will understand, time of punishment is finished and that is what I try to speak, a language that you understand at the time you can understand. **(2:06)** Question about mixing Gans in the Balls in the Reactor, can we get Plasma from that? Keshe: Of course. Is different MaGrav fields together, this is what I plan to do in the core in the next few months. <bad audio> This can be done, but you have to understand the consequences of what you are doing. If you play with Gans in the dynamic core understand that the structure of your body is made of the same, so be very careful. You have to understand the structure. Question about the light, the colors of the sky the ray is coming red and the sky blue is the field going out? Keshe: In so many ways yes, but you have to understand that what you call rays are MaGrav you see the balance btw the two frictions, now when you see the light you see different types, in time you will see different lights that your Brain will need to process, these are the Mag Plasma light which the men are not so used to. Our Brain will adjust to it. These things about light years to get into a star is non-sense, because we are made all of the same, is instantaneous, what we see is the residues of what is being left of the high speed and what our Brain can absorb as a matter level. **(2:12)** When we reach the Plasma conditions in the reactors we don't add anymore fuel (H), is like adding water in the fire. What you do is extract Plasma from your reactors; you give Plasma the space to open up. This is how you have rapid speed production, or rapid motion, you don't add more fields, this is the habit of the man to put more in to get more out, with the Plasma what you do is extract the Plasma out of your core in a very measure way, then you go to matter strength to transition strength, so what you get is higher speed, because the more close you go to the more stronger are the fields, this is how you control the direction of motion, you play with the Plasma dimension in MaGrav field. Keshe talks about an experiment that he did with the reactors, where he touched the reactor and he could exchange Plasma and the system lose weight. **(2:23)** Keshe explains how this research and work take years to develop. **(2:28)** Keshe talks about Fukushima and says that the Fukushima's papers are complete. **(2:34)** Question: Have you ever saw a spider web formation in your Gans? Keshe: Yes, is a MaGrav field hollowness. We have seen this. If you understood these spider webs and the fields, go and see a MRI of the Brain, if you have a medical background you will see a lot of similarities and will understand the controls of the systems within the body. If you have a box separation starts to see the different color and materials that you get in each box. If you observe you will see that you are producing not just protein in the surface but in the Gans as cells. You create fat on the top of your box and solid CO₂ on the bottom. If you allow the water to evaporate, when the fat mix with the solid, you understand how creation was done in this planet in another form. **(2:43)** A man show up a picture of production of gans of CO₂ and asks if the white thing (like a fungus) in the top is different type of fat, keshe says no, this is Ca but will convert in time in CO₂, it happens to be like this because of the way he put and touch the wires. This is how Ca became part of the system of the body of the man. Because Ca does not becomes Gans, stays as matter, you will find blocks of this in your box. **(2:51)** You find out that more you work with these reactors you get less hungry, not because you get involved with the work, but because Plasma releases part of the energy and connects with yours and then you get fat. Your reactor become your food station. Question: Does music affect the technology and what is gather from the Ether in the little trays? Keshe: Everything. You pray for the reactors and it get your traces, Keshe says

that the reactor is like Armen, is playful and just does the things of the way it likes, because Armen put a lot of his energy on that reactor. Music is a Mag field wave, of course that affects the reactors. **(2:58)** Keshe talk about producing atomic H in the reactors. Question: Is the central star of the Universe is a Gans of H? Keshe: Of course they are. Is the Gans of it. You see this formation in the edges of the Solar Systems.
