

9th Knowledge Seekers Workshop – May 8th 2014

- **Main topics of this Workshop**

- **Production of Fat/Oil and in this workshop**
- **Keshe talks why you get a pure Nano Coating in Plastic containers.**

(:01) Marek talk about the discoveries on the reactors that they are working. They changed the motors. (:06) The reactors are steadily. Marek says that Mr. Keshe said that at night the light above the reactors outside the Institute were visible. (:13) Marek speaks about the importance to keep the correctness within them, the people that are working with the reactors, to create the right conditions for the Plasma open up slowly. (:33) Marko talk about his reactor. (:38) Marko's reactor is changing the velocity, so something is happening there. (:49) Marko talk about the leakage in the reactor. (:50) **Keshe comes in.** Rick reads a question about what kind of pressure would be advisable. Keshe: You just blow with you mouth. Check the bubbles then you see if there is any leak. The minute you have a leakage don't come to a conclusion that there is something wrong with your reactor. 78% of your problems sits with your connections. Don't dismantle the whole reactor. Go section by section till you get to the core, if you do not find a problem you blow air into the core to check if you have the leakage, and fix it. 100% of the leakage can be resolved without the need to open the reactor. Keshe talk about how to deal with leakage in the reactors. (:54) When you do a vacuum test in your systems and it is ok, then put in the rotation and check it for vacuum. Then run the motors for an hour or two, then if your have a vacuum then your system is sealed. You can have a lift with one reactor, but you have to have a lot of knowledge of what to do. (:55) If you have a lift with one reactor you have to understand where you wanna go. Test more then one time the system to check if it is running fine. The problem is that most of you use transparent sealing to close your pipes, these materials decompose very fast, and that is the reason for the leakage. (:58) Keshe says that the expensive silicone are the best ones to close the pipes. (1:03) Today for the first time we have the opportunity to build a SF with 4 spherical reactors. We have the original Moon Iranian reactor, Armen and Marko reactors, so we are having this opportunity to build this Star Formation. Last night I went to check everything was ok with the reactor, and the speed was up and the radio was not playing, it seems that multi layer in the central core concentration with the electron that we put in the middle are very effective. It seemed that the Energy of the Plasma is more powerful then the motors that we were using, so it came to the same position. As we did with Armen reactor weeks ago, the motor has taken the power but it is not rotating, we to wait and analyze what is happening. The Creation of the extreme Ultra Violet is done purely in three reactors. Ivan's reactor we put nano material in every place in the reactor, we have multi layers in the reactor and we saw that we achieved Plasma saturation in some hours. Marko's reactor the core is not coated, but central is nano coated material, that is why we see high speed, because the reactor goes to a high speed with the release of the Plasma. (1:07) It cost a lot to make these reactors, this is not the kind of investment that individuals can do. What we are planning to do is to allow not just our reactors, but your reactors to come in operation. The situation at the moment if something happens we asked Rick to show. The fields are going on outside the lab. Keshe saw the marks of

these fields, that is why this area became a flight zone. Not because it is dangerous, but because we do not know how these fields can affect around. Keshe talks about the new Center. Now we pass the responsibility of the running of the Foundation to people like you. We need volunteers who can organize things. **(1:12)** Keshe explains about the reasons of why the Fukushima papers were not open yet. We will collaborate with you your materials and share with the world. **(1:13)** The fat (proteins that we are producing what are they made of? Are they eatable? We have to start collectively the materials that we are producing and share this immediately. You all been waiting for what the technology can do for you or for the world population. We know that the protein on the top of these containers are digestible proteins with high energy. Open the battery of your mobile, make the caustic layers, then put in the salt in the sea of the place that you live, in a small container and connect to anything that can pull energy (LED light) and another plate. Then the material will produce an amount of fat in the top, in hours. If you can specify what energy it does, all you need to do is touch the fat on the top and that will give food for you and your family for the day. This is what we are trying to establish. Mr. Keshe talks about the paper that he wrote and will be released, this paper he talks about the production of oil on Earth against all the assumption of the past that the oil came from animal residuals. I had explained that the oils are a natural process. These oils, when did not connect to the right material as K, Zn, etc. they have sunk into the center of the Earth and became the oil as we see it. One: In the process of conversion of the CO₂ from the atmosphere to a Gans as the way it is done with the Nano Layers, not just is converted to CO₂ in releasing H and O in the atmosphere, we have produced the oil that we run our cars today. The natural process of conversion of CO₂ in its natural condition gives us the production of oil. The problem of the oil that we have today is that we have to refine it to have a specific condition that we need, soap, etc. Now with this technology instead of making the oil and then go to the refinery to put on the condition that you wanted, now we can take the oil that we need from the point of atmospherically condition, so you don't need to refine. **(1:19)** Some bubbles of gases that get out from the water with salt condition are released and some get trapped on the fat on the top of the water, this shows how life got support and got connected to the use of O converted to H, these boxes will show how life actually started, but at the same time when we use different compositions of the materials we see these bubbles converted to Methane (CH₄), to CH₃. That is will we see a lot of gases where we find oil, this is a natural process. So, the Earth in converting the high levels of CO₂ of the atmosphere, into O, has been producing three types of proteins which we know. One protein linked with the right materials has lead to life, what we called animal life. Another protein lead to the vegetation protein, and the protein which is in the conversion has not manage to link too much on the time of its inception, these has lead to the oil, and partially in this process the H link has been lead to the production of Methane gas and other gases which we use. This is the next step to open the technology from a energy point of view. This CO₂ thing about global warming is being the most wonderful thing that happened to man if man knows how to use it. You claim that there is so much CO₂ and you plant tress, now make little boxes, you make food and convert the CO₂ into O. **(1:22)** With one battery from your cell phone you can feed your family. **(1:29)** We are doing these reactors not just for lifting, we are observing the productions that are happening in these reactors too. We have enough knowledge to locate the reactors in a way to produce different materials, we will start to show this in

public. We never had multi composite systems, so it takes time to understand the changes. We have a ceramic reactor, a fully plastic reactor, etc. The motor is directly connected to the reactors, so we control the speed of the rotation, in the case of the reactor of Jorge and Yukako, there is no physical connection to control the speed of the reactor. This give facility if the increase of the Plasma is too much and we can not control. **(1:34)** They will start to do test with seeds, and Mr. Keshe asks the help of scientists to evaluate the seeds. It is not about how the plant behave, what we want to know if the product in the end is better and if the DNA is not changed. **(1:37)** Next week hopefully the papers will be released (Fukushima, Oils and Bacteria/Virus). **(1:40)** Question: The man had some oil production in the top of the water without electrodes, why did I obtain that oil? Keshe: did you vacuum the system? No. Keshe: You still have gases in there, in any atmospheric condition you have 65% N. So you still have the N to convert. You just need C or O to produce the protein. In the process you do not create just Nano material, your layers create a MaGrav field which can lead to a conversion of O to N, or C to N. The process can lead to the production of fat, because the N is in the atmosphere. You don't create matter, you create spherical Mag fields bubbles which contains in the outer surface the MaGrav fields of N. If you have looked at the Gans underneath the water, look at the structure, it looks like a ball, each ball is literally a molecule and an atom individually. In your container there was enough N, specially in the plastic to extract and add to it. The Nano materials that you see in the top of your electrodes in the Coke bottle does not come from the top it's the Cu which is extracted and it layers itself up and it pushes its upper layers up, so in the layer (dark), it is a tunnel of the MaGrav fields of Nano Layers which are connected and interact, so the reason its black, is that the full spectrum of the MaGrav fields is absorbed by the material, that is why all the Nano materials are black. The layers their own MaGrav fields among themselves! Which goes beyond the upper layer of the Nano coated as you see, the field interaction of these nano layers it goes meters. Because you create a dynamic nano layer, when you use the Coke bottle with caustic and create the right condition the gaps in the nano layers absorbs the C from the neck of the Coke Bottle, and the coke bottle as a pet (plastic) which is a C-H bond releases a high quantity of atomic H. So atomic H partially will be found on the structures, but most part will be used to feed your reactors. And you can convert the atomic H into Gans of H and use as food in the center of the reactor core. So the production of the protein is because you already started the process in the Gans structure of the protein itself. **(1:51)** Second question is about why he is having the little spheres with very low quantity of Sodium Hydroxide and K Hydroxide. Keshe: We keep extracting and it never stops. In your little cub where you got the fat you have created the conditions of the environment of this planet, so it will carry on producing whatever you need. **(1:54)** Questioner continues asking why he got the protein on the top. Keshe: You are still on Schizophrenic condition, you have been brought to matter and know you are seeing the other part of you which are Gans and Nano Layers, and in btw somehow you get lost in some body or the other, this is why I call you that your are Schizophrenic at the moment. The MaGrav fields of Nano layers go meters beyond of top layers, it does not need to be in the environment of the water to do the same thing, being near to and the fields expanse beyond, still the fields interact in the water. The coated layers will absorb and extract what is in the environment, your system being close of the moisture of the Earth makes this happens. Look at the material, look if you see red spot in the Iron

material. If the moisture come btw your electrons and your steel you will see the red spots, this is how the first blood cells were produced in conjunction with Iron. The reason of why the liquid produced protein on the top is because the surface of the water is evaporating liquid (moisture) and that moisture still interacts with the steel, and with the N that is right above the water. Keshe says that he have to try things, the limitations is your thoughts. **(2:00)** Keshe talks about an interview that he made to Italian tv, and the interviewer talk about reading of auras and that they did this in a lot of politicians, and they were all black around their auras, he asked to Keshe if he could explain why. Keshe said that is because that they are exactly as the nano materials, they are black because the colors we see are the materials which we do not need, so reflects back. They are used to absorb everything, everything is mine, and the mentality of the Brain should reflects at the aura of the man. So the environment you create around your nano materials is exactly like the auras of the politicians, it goes beyond the body. **(2:02)** Question about entering air in the container and how long the system will operate. Keshe: There will be a saturation, is the same thing the thickness of your fat will not increase beyond the limits, because the field reach the point of balance, as long as you remove the fat will produce more, but not more thick. **(2:05)** Keshe talk about the researches that will work for investigations of the Foundation. **(2:08)** Question: What are the “rings” of energy that goes out from the Sun? Keshe: I did not have seen one. Maybe is your blood pulse. **(2:10)** Keshe talks about the lectures and that he will put available. **(2:15)** Keshe talk about different ways of doing Nano coating of the Cu. If you want a pure Coating always wrap with something made of plastic. Rick asks about coating under the vacuum conditions. Keshe: Yes it works but you need to be very careful, because if the liquid go into your system you lose your pump. Keshe talk about the test with the plates to absorb energy at day and more at night (he explained this in the last workshop). **(2:26)** Question: The MaGrav field lines that we saw in the containers are like the highways of the Universe? Keshe: This is like the motor ways in the space, these are the fastest ways to go, but you have to understand it. We will start to teach these things in the times to come. **(2:31)** There are more prophets for the buried people then to kill. A bullet is cheap, a ceremony for the death is more then a thousand dollars. They just say a prayer and collect the money; I wonder why the church people do not stop the wars. Who is earning more money are the churches. **(2:38)** Message for political leaders.
