

## 93rd Knowledge Seekers Workshop Dec 24 2015

We have come a long way in establishing the New Science. Another brick in the wall. (:04). Goes over basics of P, draws a spiral, you have a balancing of M and G forces, Mass occurs when the G is +1 or greater than M. In the beginning we used a dome shaped core, and separated the fields inside dome into an inner core (Caroline Core) and outer core. The material state is irrelevant, it's the field interaction that count. (:09). In the sun there are no inner cores, the boundary is made by interaction of the field strength. Same with the earth, it's the MG fields in respect to each other that make the boundaries. In Galaxies we don't see wall separating, what we were taught is meaningless. The Inner Core (G) and Outer Core (M), so are we in the G field or M of our Solar System? We made these early reactors to see field interactions. (:18). What if PU were the inner core, and say a house formed as the outer core? Going over the ping pong reactors, the SF, the Coils see return on power supply. Up to here we always contained the P. Create a field force that contains the P within itself. Last week introduced the radial rotation of P, this is the Gravitational, and the N South flow is the Magnetic. (:23). The equator line is always the most heated area of any P, because this is the point where the fields most interact. The assumption that it is because of the closeness of sun and earth. When working with P you can't ignore this area. (:27). Look at Coils and sun, is there a way to create boundary-less P that you can have control over? He shows a dual N Gans coated coil, by turning the G coil 90 degrees sideways, it becomes a copy of the sun, then you have P control. The Cu inside becomes irrelevant, it can be of any material. It's the fields which you control the Free Plasma. (:35). The SF you created the FP but with this formation you control the FP. This is the way U makes FP. Is the center of every P hollow, non-physical, non-matter. You saw this when you rotated the ball reactors. This can lead to flight control. He draws a SF with the new formation coils, they each have a hollow FP in center and form their own P fields. Now you can change the MG field of each reactor giving you full control (how??). You need no rotation or physical structure, each reactor in fixed position, so it's the fields that interact. Different field strengths are created for what you need to create. In Chemistry they call it a chemical bond. (:41). If you connect all the reactors to a box then you can decide which reactors change for your needs. If you put them in the right place you can lift, and you can allow other materials to lift without putting them into the structure. (:47). All the reactors have the very power void in center, the higher G fields in middle and lower M fields in outer, and rotation of P. IT ALL CHANGES with these new coil formations, understand equatorial heating and you can make P Heaters, or high MG communication lines. (:55). Questions. the structures of H or He are 3 stackers. Alex's Beads are strong enough to start a PU. Bret is trying different metal wires, plastic coils, N coated plastic pipes you get H, huge energy. (1:04). We never die, we just change the state. N Coat plastic with Caustic, there are different kinds of plastic, he determined that the neck of Coke bottles contain lot of H. (1:16). This way of teaching coming to an end, we discuss to inspire. Douglas achieved lift of an object, he works with Renan on innovations. (1:24). Video, he made a mixture of yeast, sugars, and Nano Plate and Zn, Keshe says he's producing ZnO<sub>2</sub> and Ca (40). He dropped a piece of metal that become magnetic. (1:39). The difference between ZnO<sub>2</sub> Gans is slightly white, the orange color is CH<sub>3</sub>. ZnO<sub>2</sub> (60 + 16+16 =92), Ca<sub>2</sub> (40+40=80), conversion of Zn to Ca. Oysters absorb Zn and convert it to Ca, that's how

they make the white shell, that is how he got white cube in Gans container, this how bones created. When you put  $\text{CuO}_2$  and Zn plates and connect, you get  $\text{ZnO}_2$ , if you put an LED light between the plates (it doesn't have to light up), you get  $\text{CO}_2$ . (1:46). The new  $\text{CO}_2$  kits contain an LED light to produce  $\text{CO}_2$ , whenever you see solid pieces at bottom you produce Ca just like oyster. Zn connected to emotional part and creates bone structure. Ali shows his SF made from stackers, sees fields that shimmers, Keshe says, you have created the first lift system (done by Iranian), structure of UFO. Adjust the field flow and you'll see a SS. Try to power it through P batteries or Capacitors. Used the dust of Quartz Crystal in the Gans. This is the FIRST spaceship, but need to strengthen the center Core, fix the plates so they don't move, glue it to a board so you can move it. Can use different metal Nano Coils to create a gradient. His whole body "buzzing" and feeling very good, add in parallel 4 P batteries. (2:03). Keshe advises how to improve, stackers not touch, have a feedback, make sure wires don't touch the floor, it will go invisible and you'll see a shimmer. (2:06). If your system disappears you need 4 Capacitors in parallel, and 8 in series and it will drain it to become visible. Ali saw the shimmer as explained. (2:09). Tells Alex what to do to get that shimmer. He connects Plasma wire to body of wash machine, lots of power. (2:19). Back to Ali, you should see a bubble in the center, and a flash of light, then you'll see your SS. (2:27). Place an a transparent platform and you'll see a light. Keep it off the ground, leave two radio near FM and AM, if radio goes silent move out of the room, SS will manifest. (2:35). Presentation, he built his own version of PU, actually he's having to pay the power Company for feeding them electricity as it's a 2 phase system and feeding back. (2:46). Information about hackers they get through Skype. (2:54). The pain Pad has full medical certification as a medical device in its own right. KF Germany has been registered legally, those who tried to stop it, sorry. Manufacturing will be in 67 countries by February. SSI has become a separate organization for Space Ship Institute with the Blue space logo. Announce a city for a base for SSI launches, like Cape Canaveral. (3:09). A nice comment about Keshe's leadership, and mention of Vimana's in Vedas. Keshe is pulling out of most of the teachings, he will head the Space Program. Italian Government has given a state of the art TV station for teaching, and a KF Bank, all money run through this bank and even credit cards. New medical systems coming, now that the first two have been accepted. Regeneration of cells instead of operation. Thanking Vince and his wife, Rick and all who sacrificed so much for the Foundation.
