

96th Knowledge Seekers Workshop January 14th

(:04). Have come into work totally with P. (:14). Shows a cube with red (M) and blue (G) rings, floating around. You can increase the G field, which is the Mass, going from Cu, to Zn, or whatever. Or reduce the M field which reduces the Mass. The "Mutation Box", creating different elements by changing the MG fields. This is how the Paraterid Glands work, the glands work by making the MG fields not of the elements, but of the Plasma of the element, which becomes the fingerprint for use at a point where the nerve is creating the condition. So for example, in the bone, it needs the MG field of Ca, but you don't take any milk, you have plenty of Phosphorus, the Parataerid glands (which is responsible for the conversion of elements), make a copy of the Ca from the Ph, that is stored in the Liver, and that information is transferred to where it is needed via the nerves, it doesn't make it and send it, it makes it at the point of need from the MG information. Everyday a half a billion cells are produced (:20). This is why all the glands are connected to the brain. Using the Blood as emotional part and Lymph as matter state part, with the neural system which comes in comparison with this, there is a current which is needed to replicate that cell. He draws the P Gland and a bone where Ca is needed, the gland sends the current needed to replicate that cell. Gives example of Eskimo that doesn't eat vegetation, how the glands transmute the cells via P and MG fields. The energy packets consist of CNO, NA, Fe, and other Elements, the glands looks at which energy packet or combination of packets, is easier to convert to the needed element. (:25). Back to the "Mutation Box", it works like this, changing the MG fields to transmute the elements. Whatever you produce is always in P state. You can use similar for transportation of mass. If the box comes into balance you won't see it. So beings from different planets would see the element in different states of matter depending on their field strengths. The AA strengths, building blocks, determines the field strength of what you can detect. (:31). Zero time transportation, you can MG fields on either side of element to be attracted or repelled. Whatever is inside the box stays in the state of matter in which it was put in there. Doesn't matter what happens outside the box, if you put a monkey inside it stays a monkey. It's like an envelop you open at destination. You can use this box to see the boundary of your craft. A spherical shape creates a huge resistance. (:36). He made an elongated with 3 boxes, behaves like an array (Book 2), this array travels without friction. The MG field in the coils adjusts the speed of travel. (:42). Do experiments with this, use smaller gauge Cu wires. You can send this packet to the planet and test the environment, when traveling in space. DHL will be very interested. We are talking about dreams that are coming true. Huge applications in space, we can only live in human body in only this environment on Earth. Like Tupperware boxes, keep materials fresh until time of use. (:50). We have to start logging where people are working so we can keep track, if they disappear, etc. If you even rotate these coils, you don't want to know what will occur. He draws a cup with Gans around it and orange on top. Say someone needs a bone marrow transplant, you can use same method to transfer or repair to healthy cells without operation. Death through destruction of AA in man is history. You transfer it with the "elongated box". Inherited gene defect can be repaired this way. New system to bring back coma patient. (:56). Do the transmutation materials come out of the body when we urinate, Yes. In space how do you go to toilet? Astronauts put it in a bag and threw it in space. The digestive

system as we use it the cause of 90% of the deaths. Or gradually change over to P food, remember that 80% of daily energy comes from environment and goes out again. (1:04). A number of user are posting their electric bills and how much saving. (1:09). One guy down \$100. Red Circle in Belgium paid to create fear in people from switching over. You see it working all over the world. (1:18). Someone withdrew from American election system, is the person who signed Keshe's capture in Canada? The Keshe F testimonials added to webpage. A man with Diabetes for 45 years, used pen and decrease in meds. Somebody wants to go public for something, they're not saying. Keshe Community Network was started by someone, testimonial (1:25), they should be brought under the banner of KF. Bret is working on KF Iran. Rick reads a diabetes testimonial with Health Pen, 45 years with disease, improved from 50% to 85%. Keshe developed a new technology for cancer, man with recurring Pancreas cancer got immediate relief. Systems for Alzheimer's and Parkinson's, 75 people in Philippines with 90% success. (1:32). Healing Pen testimonial, help with flu pain, Mother at 85 years shoulder pain, it disappeared. Will release system blueprint for treatment of Cancer, how to setup system and apply it, throughout the body. Announce, "Blueprint for Cancer", in first week in February. First hospital going to open. Reversal of Cancer, 5 to \$10,000, so money can go for poor and programs. (1:42). Please do not split off into splinter groups, keep under one roof. We have seen the reversal of Ebola but governments stopped the use. Renan of Philippines comes on, using N C tubes they can change the pH of water from lower to higher, acidity increases chance of cancer, alkalinity less chance. (1:49). Man just back from the Group in Germany is setup, teachings are spreading and dedicated to sharing knowledge. Moving to brand new factory in Italy. (1:54). Renan shows his fire N C cups, converts acidic water to alkaline. Doing an experiment with different water and measuring pH with millivolts. (2:03). Will start a research group for every aspect of Gans. (2:08). Ali update, finished making batteries, they are all on the bottom of Unit. He's switching over to all P Batteries. See lot of lights, white sparkles in air as soon as attached P B, when he drives home at 200 meters he sees the same effect surrounding the Apartment building, which means the field has expanded a lot. Like walking into liquid lights, other people also see it. Make it flexible so you can move the coils. (2:25). Puts his hand near the Reactors and looks weird, distorted. Tomorrow his friends will come to test while someone films, and will move to open on weekend. (2:31). Arman's 3-D printer making a stacker. Arman's spring connectors, you can't open them up and turn them 90 degrees, leave them as they are or they loose a lot of field flow. Nano Coat after connections made. (2:38). A new Logo with colored coils, but now SSI will separate as a separate entity and logo. (2:42). More constellations for logos. (2:45). Guys from Georgia Russia, made some Coils, Keshe says to make the rings in same direction. Mix crystal dust to make P Batteries strong, make the Gans of Al it has better storage capacity, showed a very nice drawing of SS. Need to find an open space to make homogenous fields. (2:52). Ukrainian share about P Batteries, and he has a reactor, when he sleeps near it he gets many insights. Nano C Al in the batteries. He checks the voltage on batteries. use a little thicker Al foil and Nano Coat with torch, but quickly so don't melt. (3:08). Soon a new way to make P B, new type of capacitor, won't need coils. Try to make the coil perfectly round. (3:11). German wants to build a Health Pen, wants to wrap a double coil around another double coil. Keshe says that's even more powerful, why so much power? Keshe advises him not to play with it. Superimposing is strong

enough. Not advisable to use Gans on the Pen. He made a Lead Gans. (3:17). He has a new way to do the Pens, remind him. The main topic of today was Transmutation and Transportation Units. Thank certain World Leaders for their support. Question about using flat "pancake" coils, no they have no G part to them, have to have both M and G.
