

# 472nd Knowledge Seekers Workshop Feb 13 2023 - Plasma Blueprint Day

(Transcription Proofed >> Need to do Quick Index etc ; Key Phrases, Words) (Auto transcription from Elias)

## ENGLISH TRANSCRIPTION

Start proofing >>

(:02).

K- Yes, good morning to you. Good morning, good day to you as usual, wherever and whenever you ?? are with us. Through the knowledge seeking of the Keshe Foundation programs of the KFSSI. We welcome you back to present day, in introducing new technologies as we usually do in our Blueprint Days. (:04).

Today, the Blueprint is a very simple understanding of the change. The development of the technology has been to create a condition for the space where we do not need to depend on Earth for many things. Where we do not need to depend for food, for energy, for transportation, for transmutation. And this Blueprint Day is part of that development, we have done traditionally for past years. The very first Blueprint was about MaGravs, in energy reduction, energy production. We have developed the technology in a way now in a very rapid development technology, in achieving to produce Gans's, and then gases. And then through the production of the gases with the production of the new plasma Cosmic Rays (CR), which has brought us to a new dimension (D). Which means, we will produce energy and everything else, which we consider food as an energy, we consider medicine as energy, we consider eating as energy, we consider transportation as energy. Whenever we explain energy to be, magnetic fields in motion.

In that respect, we have reached a milestone in the production of the fields, magnetic (M) fields, which we can use for communication. Rather than what we are used to, (:06). in a form of magnetic fields, as mobile phones, radio communication, television communication. Where we always need an electric power behind it, and we need the line of communication of vision. If you have followed us for years, now, you know, we have moved into the step into the environment where we create plasma energy. This has been the dream of many scientists. This has been a dream of many works like in CERN, many works like many scientific centers around the world.

In a way, to be able to communicate, in a way to be able to have a "zero-time" communication, in a way to be able to deliver food and energy zero time communication as you need. But in the process of a need. Today, we have to ask for, I want an orange, I want a bread, where our body converts these matter states into energy state, that it gets absorbed by our body. As I always say, when you eat a banana, banana doesn't go to your heart or to your leg, the energy conversion of it, according to its balance converts in the energy, which the body needs.

Now, understanding the plasma technology, we have created a condition that we don't need to eat the banana. We have access now to a plasma technology, which creates all the energies which the body needs. So, you receive the energy from the environment we create as you need. (:08). They say, if you read, banana gives you calcium, phosphor, whatever. Which means when it broke down into energy we absorb as that in your body to be used.

Now with the plasma technology, we create that energy, you don't need to eat the banana, you don't need to kill an animal to reach that point. But it comes to one point. How does body know what it needs and where it needs? And what controls this? It actually comes to one point, our brain. The center of the operation decides what is needed to be stored, what is needed to be called upon, what is needed to be converted, in what position and what place.

So, the world of the science has moved forward in a huge frog leap. We don't need to take an object, or entity, or anything like an orange or a banana, to eat it, to get its energy on the level the brain says it needs, and reject the balance. Now, with the new development of the technology of the plasma, in being able to have access to the spectrum of all the energy fields, we can feed that energy directly to the brain. Then brain decides what it needs to be absorbed by the body, from it.

In a way, we ate food to feed the brain to its central control, what we call, in the name of the Soul of the Man (STM) or the central point which every brain has one. Where we said, you can't have a Solar System without the Sun in the center of it. (:10). You cannot have a body of the man with the Soul, with the center of operation of it outside it. So, the central operation of the brain of the Man is inside the brain, where now we know where it is, now we know how we can access it. And now we can feel it, that it feeds the body, not for the man to kill, to get that energy.

To that respect, to understanding this, to be able to create that kind of energy, we have moved forward in the science and technology of the plasma. Now, we are at a point where we think by thoughts, I want a banana, I feel like eating a banana. We satisfy that need through absorption of the energies, which gives us that satisfaction, energy and emotion. This has taken years of research and development. And today we have achieved it. Today we have that system in our hand, where we create a central plasma system. Even the technology we show today here compared to what we have achieved, and what we're achieving in the lab, these are obsolete. But we have to show you where we are going and maybe in a few months time you will see a total independent system. The way we are now achieved, the way we have now developed in our research centers.

What does this mean? This means you need a "trigger point" to start the system. And once you start the system, you can absorb energies from anywhere in the Universe, for your transportation, for your food, for your wellness, for your communication, for your transmutation. So, now we have access to a new knowledge, what we call, Universal Plasma System, where the Universe works on the plasma basis. (:12). We call the Sun a

plasma, we call an atom a plasma, we call electron a plasma. But different amount of, with a different strength of, manifest themselves in different environments. And in that direction, and in that purpose, we have moved forward a step towards independence of man in travel into space.

But what we have developed, what we show you today is not for you not to eat, it's not for you to have a reduction in electricity bills, it's the space technology which allows man to live in the space. Allows man to move to the next step in evolution of science and technology. We are not something out of a black box. I'm a nuclear physicist, 40 years of research and development plus. And it's in a step by step development in that process.

As I always said, for centuries, we saw metals we didn't know what they are, we melted them, we made things out of it, we mixed it, we made them alloys. We saw, then later on we understood about molecules, mixture of molecules, composite which creates life like, hydrogen, carbon, oxygen and nitrogen. We became knowledgeable in molecular structure, we understood that. As I always say, last century, we became to understand atomic structure, how these individuals make a metal, how many atoms of iron we need to make a sheet of iron, or whatever. How many molecules and cells are in our body we can count it. We became atomic scientists. In a leaping step, (:14). we became nuclear. We found out, this atom, what we see has a center, has other bits running around it. We call them neutron, electron, we call them protons and everything else. And then in early eighties, long before in the seventies, in development of technology as a nuclear physicist, we went inside the neutron. No more these up Quarks and Down Quarks, and everything else.

We looked at inside the structure of a neutron, inside the structure for an electron. And what we see, is nothing but dynamic magnetic fields in interaction with each other. We don't need to have Up Quarks and Down "blah," and all other names for it. We see the structure inside a neutron the same as the structure in the Solar System. He has a center, and fields dynamically move, and in interacting with each other in over time, create the Earth, create the Moon, create Mars, create Saturn and everything else. So, now we understand the structure of an electron, and the proton is the same, as central energy where he absorbs, it's a plasma.

Then electron is like our Solar System, a small one, and neutron is a bigger star system 500,000 million times bigger than our Solar System. So, now, we understand electrons, and protons and neutrons have such an understanding, such a ratio. Now, coming to that point, we looked at how life is created on this planet. And then we see from the interaction of the fields of the Earth, with its source, (:16). in reduction it creates different frictions of the magnetic fields and different amounts of fields are released. As I always say, like a knife you put it on a sharpening stone, and you see the sparks, different sparks, different lights. We understood, one is hydrogen, one is nitrogen, and one is copper, and one is zinc. But they're all in energy packs in upper atmosphere. When they come in touch with the Inertia, which is matter state magnetic field gravitational field of the Earth, they convert into copper, to zinc, hydrogen. Now, we understand this process.

Then, for us, it was easy, we always took the energy from outside in interaction with the energy what we had to create the hydrogen, oxygen. Now, with the new system, understanding the Sun, the life of the man is in the center of the brain of the Man. Now we radiate plasmatic fields towards it, it releases its energy inside, in different layers of the brain. As it needs it, it takes it. In a way, we start feeding the man from outside, in, than inside, out afterwards of the conversion.

To achieve this point, we can allow this Sun to expand beyond the physicality (P) of the Man, or allow the body of the Man of the different strength of the plasma to create different emotion in the brain of the Man. In a way, if you look at it, at certain point in the body of the Man, you have the what we call... ( Can I get a whiteboard please on this. We need access to the whiteboard. ) In this process, (:18). what we see is that the whole structure comes up to one point. What we fed from outside, now we feed from inside. We don't need to kill to benefit by it.

<< K have problems with whiteboard >>

So what we need to understand is converting, creating energies that, in interaction with the STM will allow the Man to create the what we call...

<< K have problems with whiteboard >>

So, we learn in how to create the position where we feed, we create, we make it available plasmas from outside to feed the inside. We have run tests for past months. Many of you came to this center to test, to see how, what you felt, what you tasted, what you digested as energy. You told us where you went, what you did, some of you took different conditions and position, (:20). and we all came to understand one thing. That is, we have the knowledge now to feed ourselves by thoughts. The body will take energy, we can make it available to it. But it's like as I always said, we eat 20% of the energy we use, 80% comes in from the environmental condition, from Cosmic Rays, from the fields in the room.

We know this to be correct, because, for decades, for a long time, from even when the man was in a primitive condition, we know when we touch, when we bring hands close to each other, we feel the other hand without touching. So, we have an Aura. In the new scientific era, they can show you the Aura, which is the interaction of the magnetic field of your body with its environment.

That's what an Aura is, you radiate out. It's exactly like the way the Earth creates light. Magnetic field of the Earth in interaction, rubbing against the magnetic gravitational field of the Sun creates the daylight. So, it's the same with us. Our Aura is the interaction of our magnetic field, what we give out and what comes in. And, in that process, we have start learning more.

Now we start using this knowledge, we start creating this position, (:22). where now we create a magnetic field that compresses into the body. And in interaction with the internal

magnetic field of the body, or what you want to call it, internal Aura that we don't see, creates fields, create lights. Which in conversion feeds with the body of the Man. So, we don't need to kill anyone. And in that process... ..

So, if you take this as the STM, or the center of the point of the body of the Man. .. Then we see this as the brain of the Man. Where we take this as the body of the Man in a shape of nervous system, more blood circulation. Up to now, we ate to give energy into this system that can feed the others, and provide energy as one way. That's a solid food. On the other hand, we learned to take air, which again came in, and it distributed and gave energy. You call it, with blood. And all this points was to sustain life, (:24). or existence, or give power supply energy to this center, that in his work it can run the system in a different way.

Now, what we have brought in, instead of you taking all this to convert to energies. In the development of the science and technology, now we give you this, an extra unit. Where we feed energies directly into the center. That this center does not need this, and does not need this. Which means you can live in the space even without air. Because the energy needed is supplied directly by plasmas from outside, what's what you called in past, the aura. Now, it creates a field, an emotion of happiness here in interaction, emotion of sadness, hunger, joy, and everything else.

Then when this is created, the way, when you're happy, the emotion gives you the direction of what we call, happiness, and you show it as a smile. Now you receive the energy at a level of the happiness, and you see a smile, you run, you cry. (:26). And we see physical interaction. So this allows us to feed the body without actually killing. Without actually destroying anything.

This has been the biggest problem, to find the source that can create this, that can ?? bring and feed the STM, the central energy, the star of the life of the Man. What we believed, as I said, the Solar System is in the center, and in the interaction of the fields creates Earth, Saturn, Jupiter and the Moon. We call it a joy, we call it sadness, we call it a banana, different magnetic fields, different strengths. And in that process.. ..

And then this allows us to create this new condition. Where we do not need to put the sheep in there, a banana in there or something else, or an orange there. With the plasmatic magnetic fields, which carries the totality of the energy fields of the Universe, we can feed this into the system, and the body interacts with it and creates that condition.

And the biggest, biggest point for us was to be able to understand and develop a technology which can be this. Where in the present time, (:28). we have managed to create these fields in these two units, we call it, like a headphone, and create the fields that we can feed the body of the Man, the emotion of the Man. We can allow even in that process... .. Then, what this allows us to do is that, up to now we came with the center of the body and we took the fields of it. We have a condition of another magnetic fields, which .. we have created. And the interaction of these we create different energies. One banana, one orange, one thirst, one love, one fear.

The biggest problem, the biggest development was to find a technology which now we can feed the body of the Man in the space. And once we get to this point we have reached the major breakthrough. (:30). And now we are at that point. Tests done here in Linz, and tests done in past two or three months with many of you, hundreds of you around the world, we have collected enough data. And we have developed the technology to create this, 2 centers around your Soul, or central energy, the "Sun," that we can create condition of the feed of emotion. Allowing, creating fields weaker than what we call, its environment, that this black spot, as you see it, can start growing and growing (draws expansion of STM).

Where up to this point... where the headphones were we feed you. And from this on, the fields created by these Head Units, allows your Soul to expand. Go to Mars, go to grandpa who died years ago, in touch with Soul. Now,

you understand that this process has created a new dimension (D) in the world of science and technology. (:32). The whole secret was to be able to create the plasma, that it matches the plasma of the STM, the central Sun of the Man, and to bring this point interaction. That in this part (inner core) to be the feeder, and to this part (farther outside center), to be the supporter. But as these units are plasmatic and they are in the center point of themselves, it's no problem for them to do so.

It's taken years of research, I spent nearly 40 years trying to make what it is (what we have here), to travel in space without systems, without flying system. And now, once we understand this, we understand we can fly. In a way we can go to, the flying is the job of the birds. Now we can go to any point in that direction. Locking into gravitational magnetic field of the position, the love of the mother who died years ago, Saturn, Planet Zeus or another Galaxy. Because the plasma is like two magnets, magnetic field of it interact. And this could be the Soul strength of the field of the mother, or the strength field of the position and time, or a vitamin we call it, or an element. And this is where your system, your Soul is. Now we understand this.

Now we have come to this point was to develop this system, (:34). to create this monster that it can do everything. And in the process of time to give us the chance to be able to go through this expansion of the STM.

For the first time today, for the first time today, we have the ability and the pleasure to give you, and to show you for the first time these units. Where in fact it is what it is. The STM within the center and the elevation of the STM within it. In a simple way you can communicate with anyone. You don't need to talk. You don't need to create emotion. You reach, the knowledge of the Man has reached that point. Where we need, we can connect.

We don't need to become Man of medicine. When the system is there, when the Soul says what it needs. It wants the emotion of love to be given to the lover. You don't need to talk anymore, because your lover will feel this. Because you again radiate this love to the

lover. And then you understand how much, in what level the technology has been developed.

I'm sure in the coming time, in the coming decades and years, these will be miniaturized, to very small system within under the skin of the Man, within around the ear, (:36). where it will create that condition. As I said many times, when you look at the first calculator, the first computer, which is in Manchester University nearby. It does simple addition, multiplication, it's a two story block system. This is that two story block. 50 years down the line, we have computers within our pockets, we call calculators, and we can do magic's with them. This (holding the black Head Units) is that "two story block, calculator," the first computers.

And very soon, Keshe Foundation and other scientists will develop this to a point that we can have whatever we like, from the space. We can go anywhere we like, zero-time, you feel it, you're there. Many of our people who've been here have told us.

There is many of the pictures of that background, is that a camera (The TV screen behind Mr. Keshe is replicating his image on screen). This is many of me, across the Universe in different time, and position and places.

And it will come to the point where you as scientists of the Keshe Foundation, and as scientists of the Space Technology, the new plasma technology, will reach. The system in the future will create its own power. In the future, it will be miniaturized enough. .. (I'm back again in hundred pictures. )

And you will see... At this moment of time, (:38). we have developed a technology which supports the energy and line of communication with this. And it will bring us to the point that we see how things are done. This is the new energy pack (pointing to "black Console (very small) goes with headphones), with the communication system. Built to work in conjunction with this system. Where it will power supply you. At the moment we connect this (black Console) to a mainline electricity power. In a short time, with what we have developed back in the stage, back in Keshe Foundation laboratories, these become independent generators. This is what we launched as gas electric power units. Those units are working in our laboratories, we have to miniaturize it and build it within this. Then this unit with the composite gravitation magnetic fields which produces, as it's doing now, will give you everything you need from transportation, transmutation, hunger, wellness and everything else.

In a way you use your Soul, you use the central energy of your body to be able to do this. The combination of the two today allows you to make that leap in the world of science and technology. The combination of the what we call, which you have never heard of. And in a way, goes back to what Tesla, the beautiful Tesla did. Tesla developed the technology, gave it to the Russians. (:40). Set the system in Moscow, and ran an electric car in New York. This is a small Tesla unit. Where the system through development of the technology receives its energy continuously from the source. In a way, you don't need

to charge it, as it's continuously receives what it needs as energy, the same as your body does, from this transmitter.

Today, we have released two new technologies. One is zero-time communication of the STM, with it what it needs. And for the first time you see the repeat of the work of Tesla, transmission of energy, and to be able to support life. This time, we don't drive a car down the road. This time, we give life to Man to walk on the planet, or travel across the Universe. It's what you call, remote energy transfer, what we call, remote transmutation transfer. This is a working unit, and these are commercialized units. Many of you have been to Keshe Foundation and you've seen on the store, we call it, the Compact Units. These are all getting developed further. Even what we see now, the one generation, one production it'll be different than the one done next week. Because we immediately implement the new development into the next cycle. (:42).

So, what you see here and we have shown in a very clear way. We have connected it to show you something very strange with what it goes, as a power generator, a small mini power generator. Where we have connected the heater, and the light into the system, where it shows it's in a working condition, and still saves you some energy. Then it goes back into showing, that even at this level we are saving around 50%. So, whatever you take, a two kilowatt heater, and 60 odd watts of energy, you will see the total amount. But on the (meter) reading side you will not see that you, will see if I can light it up, 1399 kwh. .. Where you have 1380. And you have a two kilowatt heater, you have...

<<< Problems with audio >>> (:44).

K- So what you will see is, even we are pulling over two kilowatts of energy from this system, plus it's MaGrav power point. It is and it has become...

What we see now is that the 1360 odd watts of energy. Where we're actually pulling over 2 kilowatts, plus the supply and demand of the energy by the system of the communication. So, what we have put in, you see it light, you see the interaction, you see the physical, what we call, work of the system. These are the new communication systems.

As many of you will develop and use these, you don't need to make a communication by the telephone. You'll start learning to trust your emotion, and what you feel. You call your brother on the mobile phone, and you use one of these headphones with him on the other side with the same, you don't need to talk, there is nothing hidden, (:46). there is nothing emotional, or whatever it will be hidden. You can feed yourself while you're talking, you'll never run out of energy. You never comes to the point that it is unheard of today, that you don't need to sleep. The sleeping time is the repair time. The sleeping time is for us to recuperate from the cells. Where when you use this, that's done automatically.

A lot of things with this new breakthrough technology will change. In a way we developed it for space. We cannot send food to our people, like the (Space) station today. We cannot send other things. But we can transfer the energies down the line, Cosmic

Rays, the way we produce in these systems. And this today is available. And the more and more of you using it, the more breakthrough. But in a way we play with you a carrot and a stick. The carrot is, you get some energy saving in the house. And the stick is, that you've got to start learning how to trust your emotion, your Soul and start traveling the span of the Universe. There's a lot of learning. We learn how to drive, now we have to learn what we always knew.

These units will change a lot of your lives. And in that process, you will come up with a new solutions, new knowledge. As this is not only connected to the dimension of the knowledge of the Man, you will gather knowledge from the Universe. You don't speak Chinese, but when you speak with a Chinese scientist, he understands everything about you, and you understand everything about him, what he is talking about. (:48). But the limitations not only with the Man. Man will have access to the knowledge of the Universe. Don't forget where we went back on the whiteboard. The circle expands, it's not just another Universe, it's another entity, it's another dimension of knowledge and technology.

So, today, we have brought in a new understanding, and a new way to communicate, new way to produce energies. Because this system produces Cosmic Rays and electric current together. Where this system uses Cosmic Rays only. We need one to feed the other. As I said, in the coming generations, you don't see any of these wires. The development of the production of Plasmatic, current Plasmatic energy in the laboratory, which is created for the huge Enhancement Unit, will be transferred, miniaturized to this for the next few months, maybe a year or two. But now we have that capability to produce and to use.

Many of you today use this technology through headphones which we give you. You joined 16<sup>th</sup>, you joined the 20<sup>th</sup> of January session, you are joining us on the 19<sup>th</sup> of February session for food. At the moment, we reach you through your electric mobile, electronic mobile phones and electricity. Those of you who purchase these and you receive them in the coming weeks, you will see the difference when you come to the next session. You'll feel all that in one go? Test it and see how you feel about your feeding. (:50). If your eating habit has changed, if your emotion has changed. Did you have a condition, which doctors told you there is no solution. And your body, your Soul finds a solution, because it created it, itself. Now, that emotion which created the cancer gets handled by the body itself. Why did I do, what I was short of? Was it an emotion which created it? Or was it another? You find your solution in one system.

And the more interesting point is, how would the humanity take this? To you it's like a headphone. But in the coming months and years it's a "game changer." Do we need the hospitals? Do we need the cafes and the restaurants where we eat the body of the other entities? Do we need to suffer from the emotion of the love of the lack of, what we have not received from the father and mother, because of the misunderstanding? Where through this, there is no misunderstanding and everything can be sorted, that does not lead to the Fibromyalgia's of tomorrow, cancers of today, and many other things.

This is not a simple headphone. This is a breakthrough in science and technology of the Creation. Where it's hidden in it, it's embedded in it, everything what Man needs. In a bigger version, if you can turn, we introduced you the bigger version of this some years ago, as the Enhancement Unit (EU), to create this condition. To create, to bring that position in science and technology. (:52).

In a way when you look at this, this is the science and technology of five years ago. Took us two or three years to build it, was shown two years ago. This is where you call it, the "Body Enhancement Unit." And now we have his brother here on this side, we called it, the "Material Enhancement Unit." Now, you see the combination of the two, and in development in knowledge, science and technology has brought us this, and much more. You see in the background, if you focus, huge reactors (inside the EU). If our people can reach inside you see it. These reactors to produce energy for food, for travel, for everything else, or in these places. Material Enhancement is the same knowledge. You have the STM, and now you see inside the Sun, the same structure. Now you have the Enhancement Body, where gives you what you need in your body.

Now you understand how much the technology has developed. And it's not just out of the box. It's development over the past few years in Knowledge Seekers and our scientists to understand. To miniaturize the material production, which now your body does inside it. And Enhancement Unit which does what you need in the body, emotion and everything else. And brings you to this point (the new Head Units). This is what we've been here for. And that's what has been created. And this is not something that we suddenly came to show. (:54). You've been with us over the past 10 years. And you've seen a step by step of its development.

So now, this is where we are. A major breakthrough in science and technology. In our energy pack system (black Console), which creates both Cosmic Rays, plasmatic magnetic fields. Where in a way is the table console. When you put your system together, if you look at it, it's not far from what you people call it, "the (video) gamers." You will have your head console. And you have your energy console. But in so many ways, as you "gamers" know, and we know many of you, you have your fridge next to you to keep your drink cool while you're playing your games. And you have the heater to keep you warm in the room in the winter, and the light and energy for your computers. And you're still saving energy in consumption ??.

Now you understand the change in science and technology. But for it to be accepted, we have to find a way that is accepted already. The Console Unit and the Head Unit. This time you play the game of Universe and not the war games on a computer game. I wonder if in the coming time, our Soul will allow us to play war games on a computer consoles, where you have these systems on the table. (:56).

Would we wash out the killing, and the fighting nature of the Man within his Soul with a structure of this development, of this technology? Would the Man become a peaceful Man? Would we see conflicts in the home, the houses between husband, and wives, and children, and parents and within the society disappear? As we all gradually understand,

certain emotions in our body has no room to grow. This is a fundamental change. And this is not, we're going to develop. It's developed and commercialized, and it's getting developed in a bigger way.

I hope, I hope many of you understand what is actually on the table of the knowledge, the science and the life of Man. I'm sure many of you Knowledge Seekers will come back to us and you say, I felt this, I thought of that and it happened. All these suddenly, accidentally, goes out of the way. Because now you learn to live, to understand you have a physical life, and you have a Soul life, which you always called it a dream when you expanded it. Now the dream becomes a reality. You have to learn to live in both dimensions, in where your Soul sees, and what your physicality does, and how they come together.

We'll see the next step in development of the science and technology. Now we'll go to another point. Many of you have been with us, and you came through the what I call, the original systems of the energy reduction, and you called them MaGravs, and you built them with no success. (:58). You built them with no what we call, hope of it, and some of you got it the right way, you saw the reduction. And some of you got it the wrong way, and you could not do. ...

In that process, we started to develop technologies for you to show what's the next. And the next thing which is affecting you directly today for every life, especially with the rise in prices of energy, electric energy and gases, is to deliver the technology, which can actually saves you a lot. These are not, saving that you're cheating.

These are the new hybrid energy units, where the box within it will absorb the energy from Cosmos, absorbs Cosmic Rays and converts it, makes it available for you to use it, what you can convert into power and electric. We have shown this and as you've seen, we always used to show you a Unit. Now you see a mass production. This is what now is getting delivered, this is what is now getting produced, and getting delivered on the mass production. So, what does this do? What do we have here? We have here a 400 .. watt refrigerator. We have here a 2 kilowatt full blast heater, and together is about 2.3, 2.4 kilowatts of energy. (1:00). ...

What we see, the system is using only 1100 kilowatt, which is 1.1 kilowatt. 1069 watts, 1.1 kw. So, in a way the two system use now, round about 2.4, and we only take 1.1. About 50% reduction direct (from grid). But this system has never been shown before, this system has another side to it, which is the lighting system. We see 110 watts of energy on the floodlight, and 66 plus is about 170 - 80 watts of energy. What we see on the screen is 113 watts. And the more you use it, the more it pulls from the environment. So, in fact, we are using round about 2.5 - 2.7 kilowatt of energy, and all we are tracking back (using from grid) is only 1236. 50% reduction.

And this is not something strange, this is the power of the plasma. Where we are used to hybrid cars, we have petrol and electric. Now, we have to get used to hybrid energy

systems through plasmas. Plasma creates half of it and the, (1:02). what you call, the power supply pays the other ?? half.

We have access to a technology to create a total energy generation (free standing) without depending on a power supply from outside. And integrating it with this system will allow us to use kilowatts, tens of kilowatts of energy, with a small power supply. That power supply which are call, gas electric unit, when it's added to the house in conjunction with this, will make you independent.

In a future time, in the very near future, these systems (white Compact power units) will be fitted with what we saw in the headphone units. Where through these systems, with a module, which you interact and we build in it, you can have the food supply, you can fix the emotion, you can fix everything else. And in conjunction with the transmutation transportation system, it becomes part of the energy unit for your flight system. (So the white Compact units are different then the smaller black Consoles. The White Compact units will have modules to add on to, to do everything else). Which this will bring the change.

This is what we call Plasma Enhancement Unit. Now they're available and you can see it, we deliberately brought it here, they're getting mass produced and getting delivered. What you order depends on the backup of the orders, we deliver. And it will be expanded to the others. We can deliver the whole technology in a very near future as part of the expansion of the two, communication and the energy. (1:04). Food, .. part of this energy today you see as light, food is energy. If you can dissipate that energy through this system in a balanced level as a body, you have your food, you have what you need and everything else.

This brings into play a new understanding, a new conversion. As you see here this, we have 50% reduction on the total. There we get 30% reduction. But this, the main purpose of this portable units (black Consoles) are the application in Space Science Technology, in understanding where we go. How we transmute and transfer, and how we develop the technology further.

As I say, we came from those huge units in the background, the UBESUS - Body Enhancement Unit, and the Material Unit over two years, to this. What would happen in next two years? And don't forget, at this moment of time, Keshe Foundation is the only developer of this technology and knowledge. What happened when the mass scientists get access and understand it, and take it to its next level? Maybe next four or five years, maybe next few years, we'll see massive changes. Do we see cars on the road, when you can transmute with this unit? Would we see hospitals, (1:06). when the energy needed for any correction of the health will be provided by the body through the Soul itself? Would we see prisons, where through the correction of the emotions, Man will do no wrong? Would we see judges and courts, as when we don't do wrong, there is nothing to judge, but except ourselves?

And then this is the new era. And the beauty of it is, as I said, we have seen ourselves, we played ourselves. We've seen our children playing it. We call it the game consoles, with the headphones. Now we see the life consoles, the creation of the fields of the Universe that can create life, can support life. And what else Man will do with it? Where would we end up? Would we have centers that gives us a specific field strength for a specific condition. As we buy Apps for certain games and certain applications on our mobile phone, they'll become suppliers to understand how to create fields for specific emotion, then you add to the console.

The change of game is massive with today's presentation, presentation knowledge. This is not what it might come on the 20<sup>th</sup> of December last year, 160 odd of you used the electronic version of it. On the 20<sup>th</sup> of January of this year, you met with your prophets, with the Soul of your prophets. On the 19<sup>th</sup> you will eat from the "chalice" of the energy of the Universe. (1:08). So, it's already, it's videoed, it's already part of you, it's already been tested by many of you who came here and went through the whole structure.

As you can see on your screen. The very last picture, the very last thing at the entrance is the beginning of the Nano technology. And then as you come down (the stairs), you will see the end up to today. From the beginning to the end. The beginning is literally virtually above you (on the top floor). The introduction of the Nano technology, introduction of Gans's. Then below (it on the bottom floor) you see the application of some 40 years later in development of the space technology and science.

In a level that no Man needs to kill, to eat to gain energy. No Man need to destroy another life. And no Man needs to kill himself from inside through his emotion. But this brings another point. What would be the extent of the life of the Man from now on? How many thousands of years would he be able to live? As you see the picture, the first Gans's. When we introduced it years ago, everybody jumped. If you go a bit more to the left, you see the first Nano plates, when we introduced the Nano technology with the Gans's. You'll see that the beginning. The way when you enter the Keshe Foundation Exhibition Center, the plates on the far left, and then the use of, creation of releasing of the three books. And then it comes literally when you go back to the Gans's to the next stand. And all you need to do, come down 90 degrees, or straight down to the floor below, (1:10). and you'll see the development of the same technology sitting on the table.

And nothing has changed. It's just the understanding of the technology, the knowledge of the Creation, which has changed us. The rest of it has been a journey, for many of Knowledge Seekers to learn and to understand. I hope those of you who receive these Consoles, and you're happy with a little bit of saving of energy, will come to understand the travels of the space and Universe. And those of you who come to us in the coming up time, will travel the span of Universe through a collective travel of what we call, STM together.

We're showing you a major breakthrough in science, major breakthrough in technology. And understanding how the collective essence of the knowledge will bring us to the next step. In couple of weeks, maybe next week, we'll introduce you to another new systems,

which is part of this system, but is the beginning of the structure of, even bringing the electronic and electrical world of today into the plasma. We need that a step of conversion. We need that step of understanding, where we use the present developments in electric, electronic into the plasma technology with one step. That bridging step, that transformer and transformation will be shown next week, and how one, you can do on a matter state as a tabletop Gans production, and one as a new what we call, transformer. (1:12). The new transformers will be introduced in the coming days, we hope to do it next week. That with it, we'll be able to show the next step, the bridge between plasma, electronics and electrical systems. We need that bridge, otherwise it become two separated things. And we allow gradually scientists, and engineers and commercialization of the technologist to come together.

In a way today, we have seen the what we call, a new console, a new game play. And it is there to be enjoyed. Hopefully, you'll enjoy these consoles more than we do, as we generated them, we created them. And hopefully you will tell us what happened to you. I haven't slept for three weeks. I haven't eaten for three months. I have no illness. Where me, myself, I've created that for myself. Independent, totally independence from anything else. This is a breakthrough in science and technology. It's not something else.

As I said, we were molecular, we became atomic, we became nuclear. And now we become plasma, as we have endeavored to understand the world of Creation of the Creator. As I always said, and it's on the back of the first book. It says, "the Creator is Creator of all, and Man converter of some." And this is part of that little some of the knowledge of the Creation that we have tapped into. (1:14). Maybe with this new generation of scientists will tap into a bigger dimension of knowledge of the Creation, which we have no knowledge up today. As we didn't know nothing about nuclear 200 years ago, and we knew nothing about plasma some 50 years ago.

Now we are becoming a master of playing the game and expanding the technology. As I said, as our camera can show, the knowledge in those huge containers, UBESUS, material production has been reduced, condensed due to knowledge and understanding to such a small system. Then what will be next? Where would we stand in a couple of years in such auditorium to show you another breakthrough. Creation of new lives. Creation of new dimensions. Space travels of the future where you don't even need to get into a spaceship. Where the way you do every night in bed, and you call it a dream, expanding of the Soul to another dimension, and then give it physicality in that dimension.

These are not outreach. You do it every night you call it a dream and you go and see the mom, and you come back in the morning you wake up, nobody knows where you've been. Because all has been energy of you. And now you can call mom, you don't have to wait one day your dream. You don't need to wait for one day, I might see my mom in my dream. You wish it, you arrive it. And you see why mom doesn't want to see you for seven years, when what happened that it created that condition.

Where now you have access to every knowledge. Not only Soul of another, you have access to the Soul of every planet, every star, whenever Universe man can dream of. But

Man has to train himself to get to that point. (1:16). And we have shown you the very first tools, and I'm sure these two items will become items of museum, when the Man for the first time understood how to expand his Soul, how to feed himself through his Soul, and how in the dimension of life managed to create systems, which allows man to become what it is.

I put this back to the Knowledge Seekers, if you have any questions as usual, we answer we take a few minute break as usual, and we come back to answer your calls. Thank you very much. If you take us to a break please.

<< **BREAK** >>> 472 KSW February 13, 2023 (1:23). BLUEPRINT

K- I think you'll see, there's always a live camera in the background you can switch to it. This is the Keshe Foundation Exhibition Center in Linz and where we show our technology in the best of its ability. And as I said, if you look in the center, you see the very first reactors in the space reactors, which were tested as a plasma reactor technology in Iran, (1:24). some nearly 15 years ago. And we have jumped from these reactors to move objects, not to do to move the man himself through his emotion and physicality. And it's a one camera if you slightly tilted to the right, you will see the original flight system, you'll see the UBESUS, you see the new flight system, the new energy developments and the Gans production all under one roof.

The technology from base to the top has been created by one is what we call, the structure of the Keshe Foundation. The beauty of it is, you all been taught, it's not something kept, that it will die when somebody goes. Everything is possible for all of you, that you can develop yourself. We taught you how to make the Gans's, we taught you how to make the Nano coating, how to make the MaGravs, how to make everything else. But we look at the technology in a applicable, in a universal condition, you look at the technology half stuck to man. And this is the problem.

The whole structure, the whole understanding of the technology comes to one's understanding of the Creation. You are the "last man standing" and not us. You are the one, the last man standing with need for food, need for energy, need for health, need for travel. It's you who will decide, sitting in your living room, I want to go to the supermarket and you'll be there, not for us to take you there. This is what is to come.

(1:26). This is the evolution in science and technology. And we are all part of it, it's not exclusivity. We have thought it enough to not to become exclusivity.

Any questions?

Q: .. We are from Serbia in a small city of ?? Smederevo. I was looking at your 50% Compact Plasma Enhancement Unit, the unit on the right, the white one which you just demonstrated. I was wondering what's the limit or the maximum number of kilowatts of power, which can be pulled from it. What's the kilowatts of the appliances you can attach to that?

K- There is no limitations. What your electricity board allows (what the fuse of your outlet allows) you to pull. We had this experience here this morning. The setup you see was set up, tested since Friday night. And this morning, we added two kilowatts again, our system holds. But the building system fuse blew up, because it could not hold. So it depends what operations you put. These are three and a half kilowatts plugs. We have literally plugged this into one plug. (1:28). All the systems you see in the background is on one circuit, and this is the problem with all this. That you get reduction according to the need, what your system (electric lines) can support. Not what this (our) system can support. You can go up to usual connecting... You see, something which is very beautiful with this system is, you have not noticed this system, or I should explain it in a different way.

For the first time you have one input system. Can you put the camera on this, please? ... You have one point which you connect to the main here, we connected to the building's circuit. If you look here at the bottom. ... If you look, I go in the back which is easier to show. In the system you have two exits. You have right and you have a left exit, the blue and red.

The blue in these systems, (1:30). you connect to the load, the heating, the cooker of the building. The one on the right (the red side) you connect to the lighting system. This is what you never had access to, this allows you a totally different usage. Some of you when you plug your MaGravs in into the fridge, and you said there is no much saving, or was it spreading (it was not spreading through house). Because you're not picking up what was on the heating side (all the electric heaters in house), all of it was on the cooker side (electric stove), and what was on the lighting side.

For the first time you have... These cannot be used, placed, by normal people. You get an electrician to come in to connect you to after the meter. And then he connects one phase to the blue side and one to the red side. Then he connects one into your heavy load, which is your cooker or heaters. Then you run up to 70 - 80% reduction over time. This is how it works.

This is what we said that these are new systems. This is not the old, it's not the system you had before. You cannot plug to one side of it. You plug your lighting system to one side (red side), and you plug your load with the (electric stove) cooker, the plugs and

everything else to the other side (blue side). (1:32). This gives you the maximum capacity, and then it depends what your (fuses of the line) system has been set at, 16 amps, to take (or whatever).

So, this new system is truly creates not only a saving, but because it runs both on your plugs, usually on the ground floor, and then it runs on your light system and above. This is how we explain to you these systems will be brought in to create change of environment (you have fields circulating at the top with the lights and then at the bottom with the heaters).

In Compact systems of the future, you will see, this is how you create energy. Even for heating inside the room without actually heating it. (Heating comes from the fields not the heaters). This is the change. ..

It's the same process with this unit (small black Console). You see plug on two sides. You can't plug these two into one plug, into the house, you blow everything up. You can put an extension (cord) and take lighting, ---, and (then connect your) heating or whatever on the other side. You cannot plug and play into the same plug. You take one from the main, and you plug these back into main. You plug these into loads, into the fridges, into the what we call, lighting system. Then you see the benefit across the house. (Note: to get the field circulation you might have to setup a separate lighting system with extensions cords, because lights are sometimes wired in with outlets).

You cannot plug this into one plug, (1:34). in the one side of the house, and the other one to the other side. This is a new technology. That's what we said, it's a new breakthrough in science and technology. It's not two outlets and then you put two fridges on it, or plug it back somewhere else. This, the red goes to the light system. The blue goes to the load systems, heaters, cookers. (Note: the goal is to create a field environment not save electricity).

It's the same with the new power generator. This is how when we tell you, you create a dynamic magnetic fields in the house. And these, when you put it on the table top, don't plug it back into anything. Just put a plug on it. The fridge, a lighting and it'll do its work. For the first time we covered the two. (One option is to plug the frig into the heater side and then with extension cords connect to a light on the ceiling, so you create a field environment in the room).

When you bought, or (made) the MaGravs, and you plugged it into the plug, you only had a benefit of what was used on the plugs whenever it's used. (With the old MaGravs you only had the benefit of plasma, is when electricity was running through it).

But these systems have to be connected to the light, and the plug in a separate way. On the table top, you can use it the way we showed. But this saving is what is sitting here. Here you see a fridge, gamers always have a fridge, that's why we call it, a "game tabletop unit." Then you get the benefit of what's in the plugs, you don't get the benefits of what's in your heating of the immersion heater, and the heating in the what you call it,

the other side of it. (Meaning you can't plug it into the heaters hard wired into the house, unless you get an electrician to wire it in). (1:36). We put it down, and that's what it does.

In a way, if you look at it, it has a left or right. If you look at it, your Head (Units) ones have a left or right. The two unbalanced energies within the brain of the man creates that dynamic field of the operation of the man. We follow the same science, the same technology, not just use what it fits. That's why I said, there is a lot of background technology in these, that you cannot see.

If you buy something like this, and it's not bought from the Keshe Foundation direct, just throw it (in the bin). It's your problem. As I said, when we deliver technology, nobody can copy it. Open it up, split up, you don't understand what's inside it, because there's so much plasma knowledge of Universe has been used in it, that you cannot even dream about it.

The time is gone, the Italians stole the Keshe Foundation selling some Gans's, and everything else. (They had to) sell the peanuts, we came here to do a different job. That's where we are now.

Here, these are the Gans's to do with, what we recently promoted, for the trial with the knee. No one can copy this, impossibilities. The same is with the new Pads, which are promoted now by the Keshe Foundation for the enhancement is different than before. (1:38). The people who still produce the Gans's, and plates, and play all sorts of games with it.

We are in one track mind, to take man to space as a peaceful man. And understand how, which section of the brain of the man who works for peace. And that's what we developed.

When you don't have to worry about the huge bills, you don't have to work 10 times more just to pay the (Oil) Sheikhs of (Arab) Emirates. You spend the money on your children. When you don't have to spend tens of thousands, whatever in the future on something else, which the technology gives. Why should you? Why should you spend 18 hours on a flight from one point of this planet to another, when you can do it in 18 seconds? Why should you pay thousands to sit in the first class, and then cram up in the back in the economy. By the time you land after 18 hours, some of you end up with all sorts of problems, end up with a heart attack, everything else. And how many of you take your trip to see someone, and when you get there it's not there. This time, you know the Soul it there, physicality is there, and you can enjoy it.

These are the realities of the new science and technology, it's not philosophy anymore. It's not something what we call, theology. The system delivers, does. You came here, you wanted to see the mom, you went through the system, you saw the mom. Now the system is here to do the same, maybe in much more effective way.

You are not entering a fairytale science. You're entering a science of Creation. (1:40). A science where you have been part of it. It hasn't come developed by somebody in the back stores of a laboratory, and then ?? attacks you on CERN and then you all get diseases with it.

You have created the knowledge, you have created the science. This is why we taught this way, to carry you with us, millions of you. That when technology comes, it's not like the time of Egyptian, only Egyptians knew and (the knowledge) died with them, why they made the pyramids and the rest of it, and the rest of us are philosophically trying to explain it.

A game console, a game of life. You have your MaGrav system at home, and you thought you understand it, and you played with it. You understood about some fields and things you played with. Now, you have a plasma system, which literally can... if you understand how, and we develop it in further steps, to use it the appropriate way.

If you look at this unit, and understand when it connects to the lighting circuit in the house, and to the heating and what we call, load side of the house. What have you created? If you look at it, in a way, you are in self made UBESU (Enhancement Unit), that's it, in the background picture. Now, you create it (the environment) in your house. This is what I said, the structure of the science, and knowledge and technology has changed.

How many kilowatts can you use? (1:42). Do you want to hit the next door neighbors with the floodlight from outside? If you tell us what you want to do with it, how many kilowatts and your cables can carry it, we can do.

We now commercializes for commercial, for factories. Different scale of production, different materials, we are ready to fit commercial units. At the moment a lot of factories are going part time, because of the heavy fuel costs. A lot of companies closing down, because they cannot afford three four times electricity charges. We put those in, reduce it, costs back to what it was last year. So, the game changes. But the beauty of it is, how would the workers in the factories using this technology will feel? Would their emotion change? Would they all (take off) -- less -- sick (days)? This is what we tested, this is what we seen. When we try things, we look at the totality.

I was talking to people who were with us, and I know they are in the background. Because they came public in one of the teachings, about the farming unit test which we are doing. And what happened in this farming unit. They painted Gans's the way we instructed, a pen with the pigs on it. The piglets when they are born, and they left one without painting it, last year. And the figures are out. Now we were told, we were waiting for the final figures ?? (results of the trial). Their losses with the infection on the side which was not painted has been heavy. They're counting how heavy has been, how many have been damaged. How many, out of 400 - 500. This farm produces about two and a half thousand pigs a year. It's part of the what we call, trials of the Keshe Foundation. (1:44). We were there, we set up a lot of things in there.

The (pig pens that) were painted with the Gans's, they had 400 Pigs last year in it, going through. Losses, only six. Technology, we advise how to be done. It was set up the way it was done, and it's less than, around about 1% (losses), which is unheard of in the pig industry. We know, we'll get the data most probably around about 20 - 30% on the other side (where no Gans's were used). Where it was Gans's. It's in the same farm, the same parents, the same mother pig, the same thing, the same food. Now we're getting data out.

Have we changed the Soul of the pig in that system? Have we changed the environment of the place. Have we created a condition that the pigs are not getting infected. The energy level is higher, the energy level handles the viruses, where 20 meters, 50 meters away in the same farm, 20 - 30% mortality. It's a break and life for a farmer. Now this data is done in Europe, it's not outside. It's a few 100 kilometers away from us here. So, we see it, we have a permanent person in the farm, as one of our Knowledge Seekers, which is supporting and helping with the farmer. Now, with this system, we painted, and we did things with the water and everything else with the pigs.

With this technology, (1:46). would we change the life of the man from 40 years of misery, to 200 years of pleasure? Would the 65 year become pension goes through the window? Insurance companies cannot take a pension for 40 years from you, and pay 400 years back to you. Would your needs be the same? Would your governments be able to support these kind of expenses?

When you don't get ill, do we need to keep so many nurses and doctors? Would being a doctor become a rarity, because we don't get ill anymore that way? Becoming a farmer would it become a rarity? Would it be a shortage of people in space for us, because too many people want to go?

Now this is on the table, this is literally on the table, it's here. It's not going to come. So, how many kilowatts, do you measure it by electric, you're saving? Or do you measure it by health? As the wife of the same farmer suffering from a disease for years, has said, even if it didn't work for the pigs, the what we call, recovery, which the wife has received from just consuming and being in the environment after years of suffering, was worth investing it. We are not looking at how the corn grow, how many pigs saved. We are looking at what effected the environment, what people changed, did the animals changed. We got the answer very, very softly back, that it was worth investing, just for what it brought in change (to the wife's disease).

We didn't make systems for the human consumption, but being in an environment of it, (1:48). using the pigs which they fed themselves with the technology, has brought changes in the house to them. This is what we are looking at. This is not that, how many kilowatts can I (save)? Can I now have what you call it, plasma power generation of the Enhancement Units, and go to megawatts getting all the electricity in the house and give to the neighbors. It will meet, but would your electricity panel (house wiring) hold on to it? If you can go on the whiteboard, please. Then I explain to you exactly what does this mean with this new plasma. You will save hundreds, you will save thousands. Because

we see it here, it's live systems are here. It's not something that we're going to show, it's going to come. These system you see on the stand behind, these are getting delivered to you Knowledge Seekers in next few days. You are becoming the users of this technology. And you have to understand how this works. How many kilowatts?

This is your unit, this is your unit. You have a cable to go out, and you have a cable to come in. You connect this to the lighting system of the house. So, you come from the above. You connect this into the plug system of the house. You're running low. You have your immersion heaters, and whatever else, (1:50). which have to be connected on the phase right. Now you have created this environment. (Fields are being created on the top and bottom of the room).

When we release the next generation of technology, hopefully next week or in couple of weeks, depends how much our people can go to sleep, if I'm correct. You will see the first wireless lighting system. Where these systems you created now generates plasma (in the whole room). Now you live in an environment where you might not need, you don't feel hungry. How much does electricity cost? Or you have happened to have a cancer and you walk in this house 24 hours a day. And then you go to a doctor, he says, sorry, there is no cancer. How much do you value this? This is the game changer. Not how much electricity, what wattage, or what kilowatt I can put into it.

The knowledge, technology, the way it's going, soon this will be in the hands without this (the wires). Where we produce, generate the gas and electric within this system. We're already doing it in our lab. And that's what is to come. (1:52). You can hold what we saw, an LED light in the hand, and see it to light up. Where you need so many milliamps, and it's not there electrically. But it is magnetically, plasmatically.

The leap in the science and technology is very rapid from now on. If you understand this, and you place it in a Tesla car, you never need to charge. This technology for sure will go to China. One of our Knowledge Seekers who is very close and always been with us, now works for one of these companies. And they will go to China. I'm traveling to China in next few weeks, and transfer the technology of the what we call, transportation to the Chinese motor industry. He's a Knowledge Seeker we love so much. This is the response to his request. It's part of now automotive, electronic, electrical cars, and it will be done soon.

Now that China is opening up, we establish a relationship back to China very rapidly, where we've seen freedom of technology development. Now you understand. You connect to different parts and it will come different ways. Keshe Foundation now has a very clear structure in how we can transform the plasma technology into knowledge, science and application. Iran develops, delivers the technology. Austria develops research and development tests the technology, (1:54). and China will come as part of the major users of the technology.

This way we protect knowledge not to be leaked out. We can, in a very short time. As you have seen you traveled... We can supply into China, people who have these systems

in their head, directly from Austria. There'll be no transfer technology stealing. The way we do now. We are doing this in the background .. with a lot of our work. So, we develop it this way.

In a way, Tesla transferred electric current. Keshe transfers a plasma current. Where the two in some places cover (overlap). But the knowledge is the same. In the systems which we develop now, in reality, we have embedded and embraced inside with Tesla. Which the new systems will have both transmissions (electrical & plasma) at the same time. This is something which we have already developed. So, there is a lot to come.

One of the biggest problems was to enhance the plasma in its transferring and transformers. And now we have achieved, (1:56). our team understands and develop the technology. So, that becomes the Earth and you, its citizens anywhere in this planet we can reach. Beginning of One Nation, One Planet, One Race, where everybody. It doesn't matter if you're in the jungles of Amazon with no education, or you're the top scientists, or a president in the White House. We all receive the same knowledge, the same energy simultaneously at the same time.

The way the Brazilians have done, where in jungles of Amazon , thanks to work of people like Rafael and the rest of the Brazilian community. Small villages, groups in Amazon are using the Gans's to overcome all sorts of problems. The same as you lot do through Keshe Foundation, and everywhere else.

Now, the technology is exactly where I wanted to be, at the reach of everyone, with the knowledge to be available to everyone. Now, how many kilowatts do you want to take from the system? It's not any more kilowatts, it's what's my life worth? How do I feel, and how I am? And it's not going to be something to be in the future, it's on the table right in front of you, you've seen the what we call, you bought the consoles to play games. Now this is the "game of life" for all of you. It's not, would not be coincidental, I had a diabetic last month, now I don't have. I was hungry all the time, I don't eat, I don't need to sleep anymore, because I receive enough energy, sleep is not needed. (1:58).

The technology is in hand of people, it cannot be hidden. And now it's back to you. How many kilowatts of energy can I use? Megawatts for your food, for your drink, for your breathing, for your travel, and the rest of it.

Any other questions?

Q: .. If I may add an additional question. And thank you for all the answers. I understand that this is more than just kilowatts, it's the whole life, and everything, and the health. But, let's say, additionally to having one unit for the house, as you recommend, I get to purchase a secondary unit for the purpose of a vehicle. And for example, I have ten kilowatt generator and a five kilowatt alternator connected to each other. And the output of the unit powers, the motor. Then the input of the unit can be taken from the generator, which is connected directly to the motor. Would this give me theoretically, five kilowatts

of additional, or even more, they're just extra? And can I turn this into an "off grid" unit in that certain manner?

K- You can do. But the thing is, you have to understand. You always have a battle with we had with other people. Where do you switch? The biggest problem for you is, where and how you run a motor on the battery, and then a backup to run a generator. You understand? You have to put a unit somewhere, that you can run in that transition. Now we do it in electric cars, we do that, that's easy to be done. (2:00). So, yes, you can.

But what is the purpose of creating so much energy? You become self-sufficient, but if five kilowatts or ten kilowatts is what you need, you can use the new plasma enhancement and sort it out, plan it that way, it can be done. Yes. But the technology development, which we have is done as a gas and electric power unit, has already solved that problem. You don't need to invest into another generator, and then a motor and the rest of it.

Q: Yeah, I was saying this because 3,000 euros for that power unit is more affordable and maybe a 1,000 euros for the motors and generators, for me personally, than the 15,000 for the gas unit, that was my example.

K- If you can run it that way, yes. But you have to understand how you do it. If you can do it, if it can be done. But you have to understand the gas power generator is for multiple applications. Our houses, our economy is based on gas, then electric.

Any other question?

Q: .. With the original MaGrav, (2:02). that I bought from Keshe Foundation, does that work with the headphones?

K- What do you mean? No, no, no, no. Because this is not a MaGrav system, this is a Plasma Compact Unit, inside is a lot of equipment set in as a receiver, transmitter of plasma, and energy and that kind of thing. It's not a MaGrav system.

Q: So the standalone Power Generation Unit, that doesn't work with the headphones either, you have to get the Compact Unit separate.

K- Yes, yes, yes. If you get the Compact Head Unit and connect it as a tabletop, then you'll create a different condition. Connected to the light system (on top) separate, and to the plug system separate (on bottom), you create the (plasma) environment. You get a better result.

It's very much, if look, if you've been to Linz, if you've been to the flight system. You go in the flight system, you sit in the head system, yeah. But you're not in the room, you're in a, what you call it, in a shell, which is mounted with a lot of reactors. .. It's not just creating, it's creating the environment, which is the key to it, than actually just one place.

Q: With being a farmer, the diesel tractors. How would we use this technology, (2:04). when it comes to diesel tractors?

K- The conversion unit of this will be marketed very soon. .. The hybrid, where you come ??, I call it, if you have the electric car, to reduce. Or if you have a hybrid car, you can add this to the hybrid again, to extend the mileage on the electric side. The same as our colleague just spoke about. We can use the electrical generation in a much, much easier. But the hybrids are going to go out of the market in by 2030 by 35, by the law in Europe. So, we go directly for the energy transfer to electric cars.

I'm sure the tractors will become electric very soon as well. You can connect into the battery, the same as before the new units, which gives you electric power, what you call it, increase. But even in understanding the power production, even the ones with a car. If you go back to the testimonials, a lot of people spoke about, the driving of the car is easier, we get more mileage out of the fuel.

But they never understood that, in a way... In a way, if we look at what actually happened with the people. I explained this a few times, but maybe now we understand it different. It's that, (2:06). what happened with the cars, which you added... You added into your cars a MaGrav unit. And you said, I get a better drive. This is my car with its wheels. And I get more mileage. ... So, you put a battery in the car, you have your electric motor, whatever goes with it.

What happened when you made these connections? You connected one side of the battery to the one point of the body and the other one to the body of the body. That's what mainly done. But it's the same story, now you understand, as I explained a few minutes ago. You create it as plasmatic field. In a way, you're seeing reduction in the consumption of the fuel. I used to drive 200 kilometers per tank, now I do 400 km. They laugh at you. But, why? Because here (without plasma) I weighed one ton. And here (with plasma) I weighed (only) 500. (2:08). Because this M field, which I created.

It's the same principle as we just shown you in the house. When you plug into the plugs, or plug into the light at the same time. But because this is a confined environment, your steering became much easier. How many of you reported, the steering was easy? It became much smoother, even my car is 20 years old. I'm using ---, less fuel and then everything else you report it. You created a gravitational magnetic field flying machine, but limited flight capability.

How many of you reported in your testimonials, if the car was rusty, the rust disappeared, the car this and that happened to it. Because now you're in the MaGrav, the same as you had the cancer, and you don't have a cancer anymore. Now, you understand.

Put this in your tractor, what happens? You create environments, you can carry 10 ton. Now you carry weight of 5 ton. That's all it does. That's all it'll be.

Q: Mr. Keshe, may I give a recommendation about a diesel tractor?

K- Yeah.

Q: You could possibly just get a gas unit. And the gas that is produced by the gas unit can be just put into the air intake of the tractor. Instead of using that throttle to push more diesel, and go up in revolutions on the motor, you just have a valve which you use as a torque throttle to put more or less gas into the air intake. (2:10). You could possibly just drive the tractor off of the gas unit.

K- Yeah, but it's the same boat, you need something in to burn.

Q: Because your gas unit makes combustible gas, from my understanding.

K- Yes, we understand that. But the gas unit, you have to buy gas unit or produce gas somehow.

Q: Yeah, maybe if he buys a gas unit, maybe he can run his diesel tractor off the gas unit.

K- Yep.

Any other questions?

Now we understand the science of what the plasma is and what it does.

Any other questions?

Q: .. What can we do to accelerate the growth of world consciousness and peace?

K- It's been done in different ways, by spreading the Gans's, by development of these technologies. But you've got to understand, when we start putting so many of these units together in the, what you call... The reality is very simple. You spread the Gans's around everywhere. Now you get houses in one area or different area, (2:12). all using these MaGravs system, the same as the other one. And then you go to the other one. (He draws concentric circles of the MaGravs interacting with each other). Then you understand you interact not only with the residents of the property, but the citizens crossing this environment. By increasing the numbers of the use, we change that environment. And it's the same.

I was explaining this to somebody sometimes ago, .. if you understand the logic behind it. Somebody is planning to come and rob your house here. Enters the zone where now your system understands, to work. And he (suddenly in that environment he) doesn't know why he's here, because he came to rob. Now, because it works through the what we call, energy of the man emotion, he will go back (home), because he can't remember he came to steal.

This goes back to years ago, I said, when we bring these flight right units, which at those times we couldn't tell you what it is, the world leaders will not travel. Because they plan wars, they plan murders. They plan all sorts of abuses. When it comes to these systems, they just forget what they're here for. That's how you change the world leaders. Go back in the recording and teachings. I always said. Now you understand the reason, because we create plasmatic magnetic fields of the emotion of peace, of emotion of not needing

anything. What's the purpose of me to create war? Because I can't even remember why I came here for. (2:14).

Q: Dean .. So Mr. Keshe, after what you've just said there. So, the envelope, starts off with these systems in an environment, is the home community, and then expands out to a larger area. And obviously, ultimately, this will become the envelope of the planet?

K- More or less. It depends how many people use.

If you remember, I'm sure he's on the line, will be listening. If you remember, when we did the trial with Ali in Canada, some six, seven years ago, people could see a dome around his house. He put so much MaGravs and things in there, but in the plasma level. We couldn't explain to him, but he couldn't understand why. But it's not something we say, it's going to happen. We already seen it in Canada. People who were there and went to his house they always said (what they felt). Even he said, I think the police came or something came up to his house.

So now instead of one unit, you just connect the units together. This is now is on the table, you can't change it.

Q: So this is where what you've just spoken about with the world leaders. You just said about them walking into this, they won't walk into this environment. But then obviously, they won't have a choice. So what are we fighting for?

K- It's very near, 21st of March, is the beginning of a new cycle. And sometime around 21st onwards, we'll have the March meeting. Then that's where as I said, March meeting is the world leaders change of position. That was our target, and what we are there. and we see.

Whatever we say, you exercised it, you practiced it yourself in past years. (2:16). Now, we go into a very powerful, to the source of the knowledge and the technology. If I give you a system here (put it in your car), which is the new plasma units, the way you see it as a Compact Unit, the strength of this unit increases (draws a circle around the car - you created a field around it). You can do 50 kilo. Your (fuel capacity goes to) more than 5,000 kilometers.

You have to realize one thing, which I keep on explaining. I come from a nuclear industry. But in my business life, I come from the oil industry as well. My education, and my business life tells me something very, very serious. You go and make this to zero (energy consumption), you're not a hero, you'll be zero, they'll eliminate you. Oil industry, oil cartel is very heavy, and I'm very much aware of this problem.

How many scientists have come up with a solution that you don't need oil, and how many of them are alive today? Zero. You have to understand, I spent 20 years in a big industrial oil structure. And I know what it means, and I know the danger of it. This way, we give a breathing time. You break this law, you're done with. Introducing a technology in a slow

pace, you will see it. 85 million barrels of oil a day, at 100 dollars. (2:18). I have to put six more zeros, that's the capital is created every day without evolution in fuel and other products. This cartel is too strong to fight with. But this cartel is the Soul of the guy who ?? these out. It's much more powerful. But it has to be done the subtle way.

The way we go for past 20 years is the only way to handle. King of Belgium went for our throat to kill Fabio. They tried to kill me in six assassinations. So what? Because the money in it is too big, and implications of it is too big. It has to be done the way we done, slow pace, everybody gets involved.

The kings die of illness, so the presidents, so the lay man on the street, so the farmer. And they all are prepared to give their kingdom, and their crown, and their life to live one day longer. One day without pain of cancer and everything else. And this technology gives them all, and they have to accept it as totality. Knowledge Seekers have been with me when we sit with the princesses, and crown princes and the world leaders. The first thing they ask you is, can I have a solution for my such and such illness? So, when the solution comes through this, we all accept. And that's the path we took 40 years ago. (2:20).

Any other question?

Q: Alfred says he got an inspiration for a name for the Console, ELEVA or elevar.

K- It's Compact Plasma console.

R: It already has a name.

K- It already has a name. It's compact, creates plasma, and as a console gives you all the pleasures of life. You don't buy a console to play game to hurt yourself. You buy to enjoy yourself, and this is the pleasure of this new technology.

R: Alfred can call his eleva, seems like a good name for a personal setup.

K- In America they call the cars different names, you can call your name, your system on the table eleva.

Q: .. What happens after the Console is connected to our home's power supply and the power supply fails due to storms or whatever. Do we lose the use of the Console and Head Unit?

K- Theoretically yes, but the next generations no. The present situation generations, yes. But you have to understand something which happens. Once you start these systems with the lighting (on top) and the plugs (outlets on bottom), (2:22). you will create a dynamic plasma. Your emotional side, your hunger side will be satisfied. Maybe you won't have the light in the house, but the next generation which comes in, yes.

Once you start the plasma technology in the house it never stops. So, maybe you will not receive food for a few days, because down the road is blocked with the snow. And you wish a banana, and you put the head Units on, you wish a banana, and see if you get the

taste, the smell, and the energy of it. This is the separation from matter state from the plasma state.

R: Okay, to be clear for people. In order for the Head Units to work does the Cosmic Rays Generator also have to be purchased?

K- Yes. It's a Compact Unit together, yes. The built and they connect to each other that way. Yes.

Q: Mr. Keshe, after what you've just said there... So if you switch the plasma on... in the home. <<< Audio Unclear >>> and you switch to another position (location) where does the energy go.

K- What do you mean, taking another position?

Q: Your presence in ?? house

R: We lost his microphone, we can't hear Dean very well.

K- He said, in simple words, (2:24). what happens when you die? Does the Cosmic Rays of the unit connect to you ... He's investing for his future. The system, it is on, this is here. This is what we say, each Headset has to belong to one person, it has to be that way. The energy pack unit you can (share), but the Head Unit is (only for one) individual, because it connects to the strength of the system of the body of the man.

R: So you could have one Cosmic Ray Generator and several Head Units that work off of that system?

K- Yeah. Because don't forget, the way we're designing it, and it's designed, these Compact Units are connected to the Linz compact structure we built up. In a way, you connect to another structure behind it, in a way, you connect to a memory bank, you connect to a server, in a way. This is how it's built, because it's the science behind it, that it keeps it that way.

Q: .. Can you connect one side to the under floor heating on the first floor, and the other side to the light on the first floor?

K- Yes, you have created the same condition. You see, the best .. system is variable. Underground heating system, what do you do in the summer when it's hot? This is why this got to be installed in a way connects all three phases, there is instruction for connection if you connect to the main part of the house. (2:26). Get it done by an electrician, it takes 10 minutes to do it. (The electric floor heating won't be used in the summer time, and you need electricity flowing through the system to get the plasma. Need something for the summer time).

It's just knowing what to connect, where. It goes between your what you call it, from your meter to your fuse box. That's where this position is. The electrician connects the box to the your meter, and connects the other two entries into your fuse box, that goes

directly to the two sides. That's all it is. (The best connection is to wire the main power line from the meter into the Unit, and then the red and blue sides to the fuse box. But you have to sort out the usage for the upper part of the room, from the usage on the bottom part so you can create a plasma environment for the whole rooms and house).

This if you look at it with today's energy costs, it'll pay for itself within the first two years. But there is a contract with these, there is a payment of 150 Euro per a year for maintenance. That way if anything happens in the system, we maintain it, we support it and allows the Keshe Foundation to support its other works on research.

And with the industrial units, where we submit, we take a share of the reduction. If industrial work saves 1 million a year, we take a percentage of that for 20 years. Because that's the understanding. It benefits them, as much as many parts of future research.

We did the same with the Head Compact Units. You have two units, which way you ?? 20 year what you call, maintenance a year. Or what we call, you pay us for being able to use the system. That goes, it's a contractual payments. You will receive a contract to sign. It's not just selling (and goodbye). We keep in touch. Because that way, the next development, the next generation of things, the next knowledge which comes in, you get involved in, and you're part of it, and you're put into it. (2:28).

Q: .. Thank you for helping us in expansion of our Soul and knowledge. Does the production and sale of gas and energy systems in one continue, or are they replaced by this new system?

K- No, they are two different things. These are creating different condition, and that... The gas generator and electric generator are needed to power these systems. You need energy power (you need electricity to generate the plasma).

If you... I was explaining this very recently. There is a technique, I can make you zero use, paying bills, your electricity will come to zero. We know this when I designed it. (Remember you need to have electricity to generate the plasma, it's a hybrid). But you tell me, which electricity company will come and give you the electricity connection for you to have a free energy? They disconnect you. If it happens, they come and take everything away.

So, you need a power supply to be able to run these systems. In the future this system will be integrated into the power supply, that's for sure. But the lifestyle of the man today needs both, the gas and electric in the Western world. So, the unit gas and electric we produce the Gans gas for the production of the energy free flow, and we give you the gas surplus on the side if you need it. But production of the Cosmic Ray gases is needed. (2:30). to produce to get energy off of them for electric power supply. So, these units when you get the electric power generator, you just connect this to it. And does the same.

(The gas runs the generator, so you have electricity to make the plasma - that's why you need the Electric Power Company - if they don't get enough they cut you off. With the gas unit you make your own electricity).

The beauty of it is that, they're trying to stop any gas emission in the coming years, especially like with electric cars and the rest of it. This technology the gases produced uses for itself, unless you want to tap into it. And these units are already built. We're hoping to commercialize, maybe selling it, but hopefully to deliver it in the second, third quarter in mass production. What we produce 100% in Iran, and it will be shipped out as part of the development.

The beauty with the technology is that Keshe Foundation as an international organization, is become self-sufficient internally within its own structure. We develop, the ideas are ours. We research, we develop, we manufacture and we sell. We control it A to Z of it, and if anybody can copy the new technologies on the table, I raise my hat. Copy, does this, copy, does that, but you cannot copy the new transmutation system, impossibilities. If you want to get half of your body there and have other problems with somewhere else, you're quite welcome to it. As I said to one of our Knowledge Seekers, I don't want half of your leg stuck on in Atlantic on the way you're coming across.

Q: .. I have a question. (2:32). On the Headset you said you need the Cosmic Unit, but in on the store. There are two kinds of headset, one is for the 800 euro, one is for 2000 euro. The one for 2000 euro...

K- The 800 euro is an old one, it has been taken off. You see you cannot order it.

Q: It's for the 800 euro, it's not 800. One is for the 800...

K- The 4,800 is a combination of the Head Unit and Energy Unit together.

Q: But you said the headset by itself is not going to work, but the other one is by itself.

K- No, no, no, no, you're mixing things together. Some people buy one power unit, Compact Power Unit, and they buy several Head Units. Or you buy a Compact Unit and the Head Unit to start, and then you buy separate Head Units. You understand?

Q: Okay, so if I buy the 2,000 Euro is good enough.

K- If you get the 2,000 you just get the Headset, you don't get the supply. You need...

Q: So, what is the headset for, that you sell?

K- The headset goes with the console. You can't buy a headset on its own if you haven't bought the Console.

R: You can have several headsets to one console.

Q: Okay, I got it. Thank you.

K- Yeah, you have to buy the headset with the console, but once you buy the console. It's like you know, multi-players, you play on your consoles at home.

Any other question?

Q: .. Can we use a headset with the white console that's mainly for energy? Or does have to be with the one that's for Headsets.

K- The white (Compact Unit), (2:34). -- for the energy doesn't carry the equipment inside it (for communication), not at the moment. In the future, there is a plan to implant it in it. But not at the moment. At the moment is only the what you call it, the Headset.

The beauty of it is, you can take this Headset, you can go from America to Japan with you. You go somewhere else for travel, it's connected to you as long as the power is in there. You're connected to your system.

It doesn't have a bandwidth range. You know, you go out of the room you cannot reach it anymore. You're working with Cosmic Rays, it's a different knowledge, it's a different technology and science. You don't go hungry when you leave New York if you've got that system with your set for food, you have food when you go to Amazon, and you have food when you go to North Pole.

Remember, two magnets never miss or never lose the connection once it's created. It's the same with your love for your mother, never disappears as the mother dies, because you're still connected through the direction of the Soul. It's understanding the world of Creation.

Q: .. What is the maximum distance between the Compact Unit and the Head Unit? Is it possible to drive with the Head Unit in the car and leave the Compact Unit at home? (2:36).

K- Yes, you can. But understand that these systems, the new systems, carry Cosmic Ray level, and they carry current, electric current as well. Then you have to understand what you want to do with what. (So you still have to have a power supply to use it).

In the near future, I can see adapters will be provided by Keshe Foundation, where you actually can charge your mobile phones using your Compact Unit. As I told you, now we know how Tesla has done it, but in a Cosmic Ray level. So, it's not something you will not need. You don't drive your electric car, if they come to it, and you have to charge it somewhere. You connect it to your Compact Unit, it's got a generator in the background, and you drive your car in New York or in New Zealand, it's the same. The technology has opened up and now it's, how we as users bring new applications to it.

Q: .. So, this is all for man, this is the intellect of man. So, where does the vertical friends and horizontal friends come into this "game play" at the moment?

K- We have already seen it, we have already felt it, how they come in. We in our monitoring the system, especially in the tests we are doing and the flights we've done. A

lot of you seen a lot of images, but knowledge is not there. (2:38). But our Knowledge Seekers and scientists understand this. The system within it we can, and we have created to reach the Soul of plants. And we see it physically. It takes us one second to show you the picture of it, and then you understand.

But this is a knowledge we are not sharing it, it cannot be shared at this moment. Man will not... We can share knowledge, emotion, even with a stone. You've seen these pictures, but people don't understand it. The way we see how we interact with the STM, we've shown in past last week teaching, we have created, we have developed, we have understood the knowledge, we can interact with the Soul of any plants, any tree, any stone, any object.

It's just like, when you don't have the knowledge you don't see it, it's not there. How can a blind man see the beauty of the daylight? So, it's been in front of you. Maybe in the near coming future, next year or two, when I bring the same pictures back and I explain, you say, now we understand. We are not going theoretically.

We are using it in a way, in our technology to feed you. We cannot give you the taste of a banana, which is a vertical, out of nowhere. We have to create the Soul to be there to give, for you to receive. So we have already got the knowledge, it's embedded in our technology.

Many of you who came in the teaching, or in the last 16<sup>th</sup> and the 20<sup>th</sup>, (2:40). have already been touched by that. So, it's a knowledge we already have. It's the technology we already possess in our arsenal of knowledge.

Any other questions?

Q: .. Can the battery be a source for some hours for the Compact Unit?

K- Yes, I presume so. If you can do. You can connect it to a generator, it's all the same.

R: So you can connect it to a DC battery source rather than an AC?

K- It works on both, AC - DC, but the majority primarily works on an AC.

It'll be very interesting in a near future, because the subject came up. You said, you buy a Compact Unit and then you have a Headphones, you sit at the table with your wife or your children with a headphone on, and say okay, shall we all have fish and chips? Or we sit on the dinner table with no food on the table, but would you like what we call, let's say, jelly? Or would you like a Christmas lunch? Or would like a turkey? Or would you like whatever? And we all enjoy it. This is what is to come what is..

It's here, it's not to come. It's just for you to test, to give us the dimension of the technology. Foodless table without animals, and "Vertical People" on it, (2:42). will

become a natural process of upcoming time. This is not theory. The Console is sitting here, it's for you to test it and tell us the limitation.

A few years ago, just before I leave for Korea, my mother was in the deathbed. I made the system and it was taken to her. The recovery on the bed in the hospital was so fast, that somebody didn't want her to stay alive, if she was recovering so fast. They took the machine and they threw it out of the hospital. She changed within a few hours.

This technology has no limitation. I use the same technology, what you have in this Headset, on two occasions. And it still works. You've got to understand the knowledge, not the equipment. How it interacts, how it connects, how it is to be there. (2:44).

And it needs a knowledgeable man to be able to use it.

Any other question?

Q: .. If someone has any implants, like for example a medical shunt pumping the brain water into the stomach area. The pump is placed behind the ear...

K- Do not use it. We recommend you, do not even purchase the unit.

R: If you have any kind of...

K- Any kind of electronic, implant, do not (use). We cannot make exclusivity, because we don't know who you buy it for. But it's an exclusion on all the systems. The systems cannot be used by people who have implants, or you had a hip transplant. Do not use it, it's not for you, it cannot be used, sorry. In a way, it gives you a life sentence. But that's all we have, it's the technology of the old coming into new.

These are creating plasmatic magnetic fields. You will understand this when we'll show the demonstration in next week or in next couple of weeks with the new technology which come. Where you see you can light up a LED, which is not any more fluorescent tube, (2:46). with a current, which the manufacturers says it's impossible for it to be lit. So, the plasma creates that kind of current, and if you have this kind of system, it's interfering with it.

As you can see, our people in the background are going around the Exhibition upstairs picking up item by item, which is in the Store of the Keshe Foundation. This is not just something in the background, they're going literally with remote cameras upstairs on the top floor and picking up product by product. Downstairs is a space development technology of plasma. Upstairs is man needs in the matter state. It's a very clear separation, but it's the same knowledge.

Q: .. You always pointed out in the trainings that all the technical devices are only there as aids for us. And that we don't need that in the future, because we can do it with our Soul. For example, will we be able to build a house, and with our consciousness we will

be able to produce the temperature of the house as well, as all the energy without devices? Thank you very much for your answer.

K- What is the old English saying, it says, "where I lay my head is my home." .. So it depends what you call a home, and where you put that Soul. (2:48).

You can... We have spoken about this in the past, with the knowledge we have, if you interact different plasmas of different strengths, you can create walls, you can create water. It just how the knowledge of the Knowledge Seekers will come to it in the future to do so. This is what matter states are created out of. You can create condition, plasmatic condition, as you're creating vitamin C, or the flavor of banana. You can create in placing, what you call it, magnetic fields in an appropriate way, to create walls and to create colors for them. Because they're all built of the magnetic fields, there's no difference. It's just understanding it and developing it.

And I told you, there'll be more jobs in the new space technology, than man could ever imagine. It's a conscious wall, it's a conscious house. With this in this environment, I build this house with the fields. What would do with the surrounding, with the trees, with the plants? What will do with my neighbor who's has this condition and that condition? So, it'll become a generic and humane structure. It will come. It's just how fast this technology goes to its next level, and the mass production of it, of application and different things.

The major breakthrough we'll see within next few short time will be these Plasma MaGrav Systems, which will touch the industry in Europe. (2:50). We have started inviting people who use these kinds of things. And once we go with it publicly, they see it, then we will see the opening to energy applications.

The beauty of it is, and it's the amazing part of it is, this what you see in the background in this hall, is combination of the work of the Keshe Foundation of China. Combination of work of the Keshe Foundation Austria, combination of the work in Iran. It's the amalgamation of one structure in different nationalities. We see the production of Gans's in different parts of the world, and all has come together. But it's the same with the knowledge. We have no borders. And with that allows us to be very much flexible to see where we can expand it as fast as possible.

Q: .. You've introduced this into Europe, as you say, and across the planet, many people can tap into this. It's been commercialized and given out to the communities, to the nations and beyond. At different levels of connection to the matter state of the planet, does it change its field strength, the further you go away from the physicality of the planet? It's all the same... Is the plasma the same in the matter state condition? (2:52). Or if you were elevated in a physical elevation...

K- It's a different strength of it. That's all it is. It's a different color of it. It depends if you, what happens when you mix green with blue? The combination gives you a different dimension, different colors, but it's all the same.

Q: So, the universal family work in this?

K- We are all part of it. We are all part of it. We thought we were separate, now we see we are all part of it.

Any more Rick, or shall we come to a conclusion?

Q: How many headsets can we use with one Compact Unit?

K- As many as you like.

But don't give your Headphone to somebody else. You will understand the reasons. It's like, they say, don't give your heart to somebody else. ...

Q: .. First, we have the Head Unit and we have the Energy Unit. If I go to the Energy Unit, I have a red exit and blue exit. (2:54). If the consumption in the red section, does it effect the blue one? If it is less or more?

K- No, no, no, no. You can load it as much as your (wiring) system can take. What we recommend about is six to ten kilowatts should be the maximum.

Q: And do it Effect the headset?

K- No. The Compact Unit does not work with what you take from it. The headset works on a different structure.

Q: Can I add to the to the other, if I take from one?

K- What you mean?

Q: Let's say I am working with the headset. The emotion side. How much I take from it how much I use it? Do that add or effect ?

K- The matter state of it, no. No.

Q: By the way, you give me a lot of indication here how to work.

K- Is that your secret society still at work?

Q: I don't know, everyone is in one planet now.

K- The secret society nobody's supposed to know, but they're actually very successful.

Q: Maybe it is secret for me. Thank you very much.

K- Thank you very much indeed.

Q: .. Are stints included in the medical exemptions that can't be used with the system? (2:56).

K- No, no. If you have any kind of implants do not touch. Because it's magnetic field, and stints usually are metals, or whatever. And they get, they absorb magnetic fields, electric

currents in it. Do not use. It's one of the things which goes on these exemptions. Do not use this systems with, what you call it, where there's implants.

Q: If someone already buy a system, but he didn't get it, can he change for this system?

K- Which system you're talking about?

Q: I mean, anyone buy any system from the Foundation...

K- A lot of Knowledge Seekers are shifting a lot of things around. We can consider cases ??, because we see the applications of it, we see the orders on it. We only opened one channel for the Knowledge Seekers who bought the original MaGravs Power Unit. If they want to change it to the new Compact Plasma Unit or the new Plasma Units, which actually does perform and it can be seen with it, we are prepared to take it in and make a deduction. If Knowledge Seekers say, they bought the MaGrav Unit and it doesn't work, when it was the Italian side, we still consider as adding replacement. It means, you paid 500 euro, this is 3,500 whatever. We deducted off, yes, it can be done.

But with the Plasma Units, we guarantee the reduction. Because this is the technology we set up this time. I had full hands on it, where the other MaGrav Unit was a lot of things at the beginning of it. We originally could have changed the MaGrav Units to the Zero MaGrav Energy. But that would have created a massive problem for the Foundation. (2:58). These systems, yes, you can come in, we can discuss, we can see what is needed. And those who bought the Plasma MaGrav Units in the past, they can change to the gas energy unit and deduct it from it. Or change it to this and we replace it. Value deduction, yes.

Q: So you always accommodate.

K- We have to. We are part of you. You're part of us. You brought us here, with your support has given the Foundation what it is, and where it is. We are not a profit making company, to do.

Thank you very much for today, I hope. What we've seen here today as the Compact Units, as it says, the Head Units, has brought you a new knowledge, a new understanding of what is to come. I'm sure we will not be pioneers in every breakthrough in this technology. We just opened the door. And I'm sure electronic companies and many new companies, and even new structures and scientists which understand this, will bring the what we call, more applications of this technology. But somebody had to be a breakthrough. Now for the first time you've seen it.

In a way, if you organize this system, the Console, to feed you, to give you the health condition, to allow you to transmute from one place to another, to allow you to have as much energy as you need, can be done. And it has been shown, it's been done. In a way, many of you who came to Linz, and many of you who partake in the sessions of past two,

(3:00). or three months, you already have used this technology. It's not something to come.

Now it's in the manageable that every man can have one, have access to it. The same is with the other part with the, what we call, the mass energy production. The next phase for it is, we are now too dependent on what we call, electricity from suppliers by burning fuel, and all sorts. The next step to this technology, which is already commercialized, it will come into the market in second and third quarter, which is the gas electric power unit, will become part of this. Where the Gans gas becomes part of the Cosmic Ray production of the technology, which brings a new dimension in the total use of the technology.

I cannot explain to you what this new Gans, what we call, gas electric generator will bring into play. It will be a game changer again, in a different dimension, and different applications. It is more or less an industrial revolution, in a plasma, in the world of the Creation. We come to it when it comes to its Blueprint.

Thank you very much for today. One thing which I've been told in the background, we deliver these units according to the orders they come in. So, what comes into production, you go back into the line in three months, six months, as the orders come in. And we have decided, we prioritize commercial units for application. Because that brings the technology into public much faster. Industrial groups, the property groups which have multiple thousands of properties, they want to put these units in. Because of the contractual basis, (3:02). it brings us an international reputation for us, we'll meet those. But we try to look into the commercial side as well, on the public side. So the orders as they come will be met by the production time. Thank you very much for today.

Q: .. We saw a few weeks ago the Iranian trial with the power unit. The systems of today are different? Because you must plug them in. Is the technology the same?

K- No, no. That technology which we saw live in Tehran, then we saw here in this auditorium, that is the part of the gas electric production unit. It's a backbone to this. It's a different ballgame. But in the future, it will become part of this unit because it's built to come into it. Because we already use... Let me explain to you something very simple before we go.

You have a Head Unit, which connects this Unit. This Unit through the way it's been built, and geared up, connects up with the Mother Unit in Austria. From there... It's like you lot come in for the meetings on the 16<sup>th</sup> and 20<sup>th</sup>, we control, we disperse, what we want to disperse, and plus on what you receive. So, we might tell you as Knowledge Seekers one day, did any of you have a taste of banana as such and such a time? And see how many of you who had the headphones you say, yes, we tasted the banana, but we didn't want the banana, because it was made available for test. (3:04).

The same will come when we bring that essence of the peace as a strength emotion length. We feed it all of you, and all the places will feel peaceful. So, this is connected to

this, and this is connected to the parents, in the headquarters of the Keshe Foundation Linz, Plasma Structure Unit which is built.

Even the Plasma Enhancement Units which you came here and you went inside, now is connected to the that system (mother systems in Linz - it's connected by Soul), totally through, the same technology as what you see with the Head Units and the Console. When we took the 20<sup>th</sup> session last month, we had no telephone connection. We used this technology for the first time to check. Some of the flight units we used this technology to check, it's not something we're going to use. We already are using this technology.

In a way, our system which is getting tested, developed in Austria is become literally the center focal point of the technology in connecting to all these systems. When you go into the laboratory, a bunch of peaceful people. They just inherently are, and they are developing this. So it's become the nature of the system. When you walk into the lab, it's so peaceful, so calm, it's so collected. And this created, they carry that emotion in these systems. It's a different ballgame.

So, what you see here is not going to be done, it's already been used. (3:06). On the 19<sup>th</sup>, you go through the system to get your food, your energy. The Feb. 19<sup>th</sup> teaching Sunday with the Creator, lunch with the Creator, it's done not from Linz Center, it's done through a totally new system, from laboratories of the Keshe Foundation. The emotion, the strength of it is different. We have tested it, and we know what knowledge seekers who went through it, have felt.

Thank you very much for today. And we have seen the beginning of industrial revolution in the plasma technology. Hopefully the more of you use it, the more prevalent it becomes. And they bring the change which we all wanted. Not to kill, not to destroy, become peaceful people through our own changes, not the others.

Thank you very much for today, and we meet you on Thursday teaching. And if we succeed, we'll have another Blueprint Day, next week or the week after, with two new technologies. One you already know, one revolutionary again, in the knowledge of the expansion of the plasma, will be introduced. Thank you very much, Rick.

R: Okay, thank you, Mr. Keshe, once again for a lovely workshop here and exciting new products and much look forward to in the future as well. Okay, that wraps it up for our Plasma Blueprint Day. Today, Monday, February 13, 2023.

K- One question, can you put this as part of the teaching series. You know, you have 470, for this as 472 or whatever is going to be. That stays in the main channel of the Keshe Foundation YouTube, and not separate.

**472 KSW February 13, 2023 Blueprint Day**

**END**
