

531st Knowledge Seekers Workshop March 28, 2024

(Transcription, Editing and Proofing done by KF Brazil)

(Auto transcription by Elias)

KF knowledge beyond UFO; Problem of missing knowledge - all races; Aliens still have to eat energy; Plasma is Universal Fields - CR; Iran Conference change Space T to Energy state - end matter state; Live without killing need CR; Knowledge never knew existed; Talk through Soul; No containment in U - suns; Isfahan flying systems no computers; Transfer energy of STM; If don't feel - not mature - not connected; Your responsibility to learn - don't hold others back; All 'roads' fields lead to Creator; Also teaching UFO races about CR; Light of stars see now - instantly; Matter state M fields - 8 minutes get to Earth - CR instant inside you; Scientists only accept matter state; Mr. Keshe secret of living millions years - gathered knowledge of emotion; Cry upon transmutation; Preparing for Iran - Military & Government - show UFO T - Fall 2024; Selling old KF stock around world - government will produce 50K new products 2 years; Magnetic - M fields different than plasma fields - defined; No patents - ask for percentage GDP; Markray; Takeover Tesla cars - new Plasma Cars - no engines - batteries; KF defrauded millions - best thing - saved 20 years time advanced T - now work with Governments; CO2 Buildings stopped - use AA absorption feed directly humans - animals - plants; AA for farming; Protectors of T; Make Gans with CR - never settle; Gans settle from gravity of planet; Only 5% knowledge in public; Special way to make Gans; Humans violent - how T change - concept of Choice; Washed AA out of Gans - no connection; Always connected to M fields of Sun - mother; Man not mature to control Non-dimensional Plasma; CRPm Customs

ENGLISH TRANSCRIPTION

(:16)

K- Yes, thank you very much. Good morning, good day to you, as usual, wherever and whenever you listen to this series of Knowledge Seekers programs, from Keshe Foundation Spaceship Institute. And as usual, we welcome you back, we're back again to share some knowledge and to understand more and add to the knowledge.

As we said in the teaching of the past and the course we have taken in the past few weeks and months, has brought us and is bringing us more and more to understand the, what we call, methods of functioning of our Universe (U). All the teachings we do, it's not just about the Soul and Cosmic Rays (CR) and everything else. Is in fact a book and knowledge of how you Knowledge Seekers (KS) and humanity and the rest of the Creation, (:18) in the future will use the knowledge of the fields of the Universe, for its benefit, for its, what we call, elevation, and many other things. As I said before, in somewhere down the line, come to be comprehended, and extended, and understood. Is that, we thought and we think at a moment in the realms of the science and technology of the man, if we master the knowledge of those who we see as light in the sky, as UFOs

and the rest, we'll be highly educated, we'll achieve a lot of things. But you've got to understand, as I said, there is no difference between a man on a donkey, and man on the rocket space technology of today, and what you call, the UFO passengers, people who manage to travel the span of galaxies and universes, if you travel in dimension of physicality (P).

So as you all understand, and more or less start to understand, the knowledge given to man, what we understand today, what is discussed on the table of the knowledge of the Keshe Foundation, so simply and so maturely, is a knowledge even beyond the, what you call, UFOs. When you carry a craft, you're still tangled in the dimension (D) of physicality, Where once you learn the 'Art of Transmutation,' there is no dimension of physicality. (:20) The Creator transmutes His love. He does not send it with a craft. There it is, a 'ship of love.' Here it is, a 'ship of caring.' And this is what man has been gifted. You have had a magnets, and we knew about some material being magnetic for decades, centuries, till somebody moved it, and then it rotated it within some materials, and the energy split of it, became electric current, and now we found a new energy. But magnet was there, and a copper was there, and in some mines are next to each other. Nobody realized the energy.

Now we have come to understand what is inside that magnet. That we make it, we put energy into to make it. We put energy into the copper to make a wire of it. And somehow when we move one in respect to the other or whatever, energy field cutting creates energy that we use as electric current. But in fact, it has always been there. I'm sure many of our ancestors found magnets, found the property of the magnets, and they must have had something, cutleries, pots and pans, next to each other, and never realized the energy. Because the science of man was not reached to that point. (:22)

Now it's the same thing. As now we open the mystery of the matter state of entity to its energy. So, it's not that we have found something new. No, we have just understood what we missed up to now about the Creation. And this missing of the knowledge is common in the Universe. You got to understand, if somebody on 'planet Zeus' had the knowledge to come to Earth through transmutation, and spend few seconds on the way, would it (they) have made all these crafts traveling? How many of them lost on the way? How many tests were done till they got it right? And most probably, these ships somewhere, they call UFOs, who, we make a mistake, and then all passengers gone. So you understand the difference between UFO and rocket space technology of NASA or 'Mr. whoever' who's getting into the competition or nation's space technologies like Chinese and the Russians and the Iranians is nothing but another dimension of physicality. Nothing has changed. Man has not moved into the dimension of energy. And it's for the first time this knowledge, this way of sharing knowledge has started.

We are setting the cornerstones for man to be able to have an option between both dimensions of the energy of the matter and the matter state of matter. (:24) You burn the candle to create light, to create heat. You burn that fuel to create heat, to burn it, to run a generator, to create electricity from it. Now you can make the Gans of that fuel and get more energy out of it to his fields, than actually burning it. You don't need few millions

of gallons of it to create megawatts of energy. You need grams of it to create megawatts of energy. This is the change. This is what we're talking about. This is where most of you Knowledge Seekers are getting lost. "Mr. Keshe speaks about Cosmic Rays," now it's a new fashion. It's not a new fashion, it is understanding. You have matured that now we can talk about the 'birds and the bees.' Up to now was 'boys and girls be good.' This is about the 'marriage' of the man, amalgamating the life of the man into the Universe. Not, not just boys get on the UFO, we take you somewhere else. We haven't changed your donkey with a UFO. Where both needs energy to be fed, to be taken, to be positioned. Even the UFO uses magnetic field positioning of being attracted and going somewhere and all the games in it.

So, now we have to understand this, because this Cosmic Ray, which is the magnetic field of the matter state, has become a dilemma for many of our Knowledge Seekers. (:26) Because us, in Keshe Foundation, before used the plasma and confused the scientists. Now we use Cosmic Rays and we literally 'stirred it up.' So, you've got to understand what is, and what separates the two methods. Even in dimension of UFOs, in the dimension of rocket technology, you're still relying on matter state of magnetic fields. Where in what we call, Cosmic Ray, in the plasma technology (T), you work, you operate on the length and the strength of the Universal magnetic field, and not its matter state. Because all the matters are connected to each other through Universal magnetic fields, or what we call, Cosmic Rays.

We start explaining this in a much more detail, as we enter and we're preparing everything to be able to show the whole extension of the knowledge of the man from UFO travel, from lift and motion to Cosmic Rays transmutation in the event to take place in Iran in hopefully this year. Where we finish with the dimension of the matter state and we bring in the dimension of energy state. And this is what is on the way. This is why we bring the dimension of what we call, magnetic field patterns. (:28) What we call the line of the connection of Cosmos together. Where up to now we used the matter state magnetic field pull of the Earth respect to the Moon, we haven't even got there. At the moment we still find what we call, 'Mr. Tesla, and we look for another guy who's made a car in his name,' trying to save you are advanced.

Does it matter if we see a UFO on the back of the Moon? We define another colony of creatures on the dark side of other planets? Or we find something else in Space? Which is all matter state confirmation of existence. And, or would we live in the dimension of energies of the Universe, and magnetic field connection of the Cosmos? Either way, it's a way of transmutation. It's a way of getting from A to B. It's a way of living a peaceful life. Because when you are in the UFO, you still need to be fed. Unless you learn how to use the energy field that does not need to eat. I'm sure those of you who had the pleasure of, or are part of the structure of what we call, Universal Community, (:30) you eat too, in different shape or form. Otherwise, you don't exist. You cannot continuously take energy or give energy without replacing it or sustaining it.

So, does not matter how we ?? find (define) ourselves, they must be of a higher strength knowledge, or they know more than we do. Then they come and stand on top of us. We

call them UFOs, and we salute them. We wish our knowledge would be like them. But at the end, did it matter if you traveled on a donkey or a jumbo jet? In the end you had to be fed. You had to rely on the matter resources. Or do you consider to move into condition of the energy resources, which has no matter condition of it, is the plasmatic field dimension.

In that process, in that structure, now you find out. Now you understand, there is a vast amount of knowledge which we have no clue of. Once we open the dimension of transmutation in the field strength of the Carbon 14 (C14) or Carbon whatever, we have just opened up the first step towards what we call, hyper-light system, that we travel in the speed of light beyond imagination. To what extent would our Soul be able to stand the transmutation line? Our physical body, with the high speed, suffers in the dimension of what we know as G's. (:32) 11 G's brings you 'bip.' 50 G's brings you 'bop,' and you're gone. Is there a G limitation for the Soul of the Man (STM)? Is there limitation in how fast we can travel this speed or what the content of the STM from A to B?

Now you understand that the knowledge of what we talk about, Cosmic Ray, is traveling on the line of energy. And when we talk about the UFOs, what we call, 'MaGrav positioning,' we're talking about matter state. Would the future of mankind change so rapidly that we put aside anything to do with transfer of matter state, be it our physical body, be it the means of transportation, be it the means of communication? Do we need any more sounds to make that makes us intelligent because we can put the sounds together and we call ourselves the 'king of animals'? Or are we still animals in the dimension of the Universe? We still need to animate it.

Now it comes to a point that we have to understand, now that we understood we can transmute our energy field, as we call it, the Soul, we need to understand the rule of the game. (:34) How the rules, how the game is played in the Universe, in the dimension of energy. There is no more matter state, it is understanding the essence of the Creation ???. You have to feel the other energy, you cannot see it, there's no tangibility.

In the flight systems which we'll show in Iran, on the matter side of the energy, you will see there is no containment, there are no reactors. Once you create a reactor, you come down to the limitation of the matter state. But, once you create the plasma fields, you are in the dimension of Universal fields. As I said in the talks before, we don't see a containment around the Sun. We don't see a container around the Moon, we don't see a container around the Earth, or any other planetary system, any tangible system in the Universe. We don't see the Sun in a container. So, till man gets his knowledge to the point, that he can make energy sources like Sun, without a container, then man has achieved for the first time to understand the process of Creation.

Now we're still fighting how much gases or whatever we can blow from the back of a rocket to get us further up. (:36) In what we call, the Plasma Energy System, there is no containment. There is no containing except fixing the field in respect to its environment. And for the first time, we will show such a technology in Iran. Space reactors without containment. Because the fields does not allow such a condition. Then, in a way, in the

palm of your hand, if you can hold it, you carry the Sun. You carry the essence of the fields of Creation. In reality, in Iran, we show technologies that the man could not even dream in past thousands of years. We always talked about the rocket. We never spoke about the fuel the same as the Sun. But the beauty with it, it has no heat. It has no limitation of the matter state within it.

In the flying system, transportation, transmutation will show in Isfahan in the coming time. We bring in a new technology, ??, with forcing man to abandon all the behaviors of the past. The systems are in process of development, for our scientists to understand that they can go to the next step. Don't rely on containment, but rely on maintaining, in bringing and supporting. (:38) The systems which will be shown in Iran, it'll be so advanced that world of science will be baffled. How simple the technology is. The technologies are advanced that there's no computer to control it. We don't have such a connection, such an advanced knowledge to be able to control these things. The same as we made the computers, we made them with so much memories and connections, but we haven't got them to working even in a fraction of the dimension of one single brain of us.

Now you understand why we are introducing the Cosmic Rays, why we are bringing in a dimension of connection of the Cosmos, not the dimension of connection of the matter. The fields of the universe are connected to each other through magnetic (M) fields and up to now we have managed to do. 'Hello, I'm here, would you like to come for a lunch'? Because we can just manage to transfer energy of the sound of the man across. Now in the coming time, we transfer the energy of the STM, which is in a different dimension, which physics and knowledge of the day has not even come to understand or comprehend the existence of it. So you Knowledge Seekers are jumping, separating from the dimension.

When we give you systems, (and you say,) 'I don't feel anything,' which means you haven't matured yet. Those of you who get into the Universal system, UBESUS (Universal Body Enhancement Spaceship Units), (:40) you get into systems with a headphone with us and tell us, "I don't feel anything", it means you have not matured. You have not come, you have not reached to the level, to be able to connect, to understand, the field interaction of the Universal lines of communication, what we call, Cosmic Rays.

As I said, a new game, a new way to work, to reach, to achieve it. And, as is the habit of man, those who cannot achieve it, there is something wrong with you, not with me. But not this time. You cannot reach to understand transmutation, you cannot reach to expand the expansion of the Soul. It's your problem. Our system works. Your physical dimension has not matured to the level. Has not reached the point of understanding the expansion of the fields of the Universe. It's not anymore the British way, you have to prove it to me, that then is correct. From now on is your job to understand it, because it's your own lack of knowledge and not mine.

As I said before, I said to the Chinese military, in a very simple way, I said to the guy, you know the French cooking, then how can you be put as somebody to give an opinion

about the French cooking when you have none? (:42) How can the matter scientists of today try to give verdict to approval of the knowledge of the energy, which they have no clue of it. You bring a piece of metal in front of a leading scientist of today, and you say, give me energy from it. Is it coal? Is it uranium? Is it oil? Is it candle wax? I said, no, it's a metal. This cannot be done. Because we put energy in the metal to melt it. We put energy in the metal to form it. But no one in the world of science of today has considered that metal has so much energy in it that it's holding itself to itself as a metal. If you can open this energy, just using the energy of them holding to each other, can feed the whole mankind.

And then, an illiterate scientist tells me to explain to me, then I can approve it. Because you don't even understand it. This is the problem, as I said before, with you Knowledge Seekers. You're at the verge of that point. A lot of you feel it, know it, now you can find a way to do it. But you don't have the means of doing it. You don't have the means of transferring this energy. You don't have the means of using this energy. And, in a simple word, because up to now, you never understood the Cosmic Rays. You never understood how to connect. (:44) It's very much like me, you, in two different cities, and you buy a car on the Internet. They send it home. You have to assemble it. And once you assemble it, you can't get to me unless there is a road. If you live in Rome and I live in London, doesn't matter what kind of car you have or what kind of car you bought, unless, first of all, you don't know how to drive it. Secondly, you don't know how to put it together. And thirdly, if there is no road or a way, direction to get to me, how do you want to get to me? You have a car, you bought a car, you put it together, you bought a brand new car, but you don't know how to drive it. Stays in the garage, stays in front of the house. And even if you went to classes, you learn how to drive it, if there is no road, you cannot get to me. On Earth, to get from A to B, we use roads, air flight, shipping lines. To travel the span of the Universe, you need Cosmic Rays. That's your road map. This is the paved road for you to every point in the Universe. And if you are clever enough, as the Italians say, and I have said it many times before, 'all the roads end up in Rome.' If you understand how to use the Cosmic Rays, all the roads ends up with the Creator.

So, on Earth you need the road. In the Universe you need the Cosmic Ray, that's your road, that's the way to go, and every direction these roads go, it's you who have to decide. (:46) Even those who are the, what we call, advanced technology of the UFOs in Space, now that they understand this, they have been using the same as you. The same condition of the matter state fields, not the plasmatic fields, not the Cosmic Rays. This is why from the beginning I said, when we teach, we teach .. for not only the man. You thought as humans now you have to learn new things. Those guys above with the UFOs, they're banging their heads, why we didn't see it, why we couldn't do it that we're still using this system.

Now it's coming to the point that the creation, the created things in all dimensions of the Universe, will have one common way to travel, through the direction of Cosmic Rays. They will think one way, they will understand one way, and they'll behave one way. Because when you become a Passenger of the Universe, when you travel in the dimension of transition in the STM, the energy fields of the banana is no use to you. The

energy fields of the meat is no use to you. That was good to feed the matter energy state of your body. In the Space, you have to learn how to tap into Universal fields to feed that hungry STM with all the dimensions of the knowledge of the Creation. (:48) Now you understand. The extension of the knowledge is beyond man understanding. And unfortunately, you have a few months.

As I said in the conference in Sanya, on the 19th, or what we call, on the 17th of January, March of 2024, we finished with the past. And we started with the new. The beauty was in what we did on the 16th. The reality came that whatever we achieved on the 16th was nothing to what is on the table on the 17th. It was promised that the March of 2024 will be what we call, the watershed in the life of humanity. And it was delivered in China.

Now, you have to understand, to you is Cosmic Ray, to me is fuel tank, to the other it's the UFO. All has to find its place and understanding. Once man understands the use of the energy, he will think 10 times using the matter, unless you want to hold it, to touch it, and you love it in a dimension of tangibility. (:50) We come to Earth, we take the dimension of physicality to enjoy what a physical life gives, because on the dimension of the Soul is just fields, there is no tangibility.

Now you understand, why the whole structure, the whole confirmation and completion comes to the point of what we call, the Knowledge of the Creation in the dimension of energy, which energy is translated as "magnetic fields in motion." And if one day all the created things put their energy together and bundle it together within it, and as collective energy of it, they'll find what we call, the origin, the original field, the origin of the Creation.

This is one of the biggest problems for humanity. Now, to separate these two points, separate and understand the difference between these two points, come to the point that man become wise to everything. Now you understand, how the game is played. The game is simple. Is man, lack of knowledge, (:52) has kept the man to the dimension of matter state. Now, gaining the knowledge gives man the accessibility to everything created within the Universe. And everything is within the reach, and everything is reachable. You don't need thousands and millions years, light years, to get to somewhere. Excuse me. 'God does not have Earth light years in His horizon.' So He should not exist. If this is the principle of what we call, the religions of today. That's not just a religion by faith. That's a religion by science.

Now, we have to understand why we are introducing the Cosmic Rays, why we are introducing the fields of the Cosmos, and why we talk about how faster you can go, because there is no limitation on it, is no restriction on it, as the physicality has a restriction. Then you understand what I always say. What you see in the sky, the light, the Sun, the stars, what you see is exactly what is happening that second now, that moment, and not millions of years (ago).

You've got to understand that a plasma has a spectrum of fields. (:54) As I explained last week, with the eye. Those which are in the matter state field strength, takes them 8

minutes to get to us from the Sun. Those which are in the Cosmic Ray fields, are instantaneously within us. Because, within ourselves, which is in a plasma condition, we have that connection and characteristics. So, what we see as a day, light or the light or the field, which takes 8 minutes to get from the Sun to us, is what it takes in the matter state energy fields. Not in a Cosmic Ray energy fields, which is instantaneous. If you decide to travel with the donkey, that's your problem. The rocket technology and the jumbo jet is sitting next door. And if you don't like it, Cosmic Rays are next to them. So we measure with our present technology and knowledge the donkey way. Anyway, not even a donkey, the 'stone age' time measurement. But the light has been there, the donkeys are there, the rocket technology is there, the cars are there, everything is there. If you want to still live a 'cave life,' it's your decision. But now that we have the understanding of the fields of the energy, then why are we measuring it in a matter state? (:56) Why have we been convinced to accept that, this is what it is and all of it? Where in fact, yes this is what it is, all of it for your understanding to the matter state. Not to understanding and work of a Universe in a plasmatic magnetic field state.

In a way, I always compare it to when the cars came, they said if you do over 25 kilometers an hour, your eyes pops out, you bleed and you die. So the car manufacturers had to produce cars that doesn't go faster. Even if they could, because nobody would accept it. But one thing which I said once to a scientist, I said, you know what's the strange thing? Man going on the back of a car 25 kilometers or whatever, would have popped his eyes out. But man used to travel on the back of some horses and donkeys much faster. His eyes never popped out. This is how they fooled us with the knowledge. But we have to come to understand, if man wants to travel in the dimension of the speed of the Universe, man has to convert his matter state to energy state, that he can transmute. (:58) And this will be a big dilemma for many, many Knowledge Seekers and many scientists and humanity to come up with. Till we transmute the first man. Then we see how the whole world of the man will change overnight.

I hope I resolved this matter of Cosmic Rays last week and this week, emphasize them again for everybody to catch up. That, when we go into the next phase of the travel, there is no tomatoes left, and everybody has ketchup. It's for you to understand the truth about the Knowledge of Creation, and not for us to be wrong, because you don't understand. This British way of explaining to me, otherwise you are wrong, has changed, you're a stupid, catch up. You don't understand, catch up. It changed that you have to slow me down till you find out. It's your job to speed up to catch up to what is coming up and what is available. And if you don't understand, 'tough luck,' live in the body of the man and go through all his sufferings.

And this is not just for you, the teaching of today. It is very simple. And it's as 'simple as ABC.' (1:00) You have to understand. You choose the matter state, or you choose what we call, magnetic fields dimension. I wrote a paragraph to one of Knowledge Seekers this morning. And this will answer a lot of you in a lot of dimensions. As part of the communication, it says, this is secret of living for millions of years in all dimensions of Creation, as I have, and gathered so much knowledge of my own emotion. God's knowledge is free. And he says, "Gold has no value, as you understand the secret of gold

of Creation and Creator." And it's the secret we are trying to teach you. Then you understand that you can even use that gold in the dimension of matter state to add to the Soul of yourself, to elevate, to understand the position of transmutation from one to another.

Then you understand, when you transfer from Cosmic Rays states from the field of the Universe to the dimension of matter state transmutation, (1:02) to be visible, tangible, you shall cry. And you cry the same as when the child is born out of the womb of the mother, to accept the life in the dimension of physicality of Earth. There shall be no difference. But in different ways of crying, in different ways of loving what we call, the Creator.

We go for a break and try to answer you back. At least resolve some of the mysteries of the Creator in dimension of the Creation, not in dimension of matter state. Would you like to take us for a break, Rick? And we'll come back.

>> **BREAK** >> 531 KSW March 28, 2024 (1:08).

K- Thank you very much. As we finished and completed the Sanya Conference, and we are preparing gradually for the Conference in Iran. We're working on, in a way, to keep you aware of what's going on and how this conference in Isfahan will be organized. Because we have full cooperation between the Keshe Foundation, International Keshe Foundation, Iran Keshe Foundation, and the Iran military forces, Iran Space Development Forces, and the office of the leadership and the Iranian government. The Iran conference is not as simple as it was done in Manchester, or London, or Beijing. The Iran conference, it will be so comprehensive and so extensive, that will bring forth a new dimension in aspects of the life and technology.

Those of you who planning to come to Iran, you have to understand, the conference in Iran is not a game changer, is a change of the Space Technology as a whole. We, as I said, created the room for you to experience the environment in Sanya. In Manchester

was a system on the table. In Iran is a game changer of the development, showing of the technology, and delivering technologies which makes the present space technology obsolete. (1:10)

Those of you planning to be in Iran, we have set a very high fee for Iran and Washington as a twin conferences. The reason we have a lot, but be prepared. We are looking around about 25,000 Euro for entry for 2 conferences. And your admission is with us. As happened in all the 3 conferences, we try to facilitate your accommodation, but you pay for it. Your transportation, you're getting there, and your accommodation, both in Iran and the US, is your responsibility. We try to be as clear as possible in next few months, how the conference in Iran will take shape, that you understand. And it'll be present (attended) by Iran military, by Iran Space Officers and Government Officials, as is a show of change and development of the new technology. If you are planning to come to Iran, getting the visa for you and everything else, will be arranged internally through by us, that you don't have the mayhems of what we saw happening for those who came to China. But be prepared for presentation of technology which will baffle the what we call, not only the world of science, but the governments. (1:12)

We will not accept any restriction on what we show by no governments and no military forces. We will show pure raw technologies, they use their advantage, and what is to change. And Iran conference will be the beginning of the change from matter state to transmutation and show of the technology in what we call, you like to call it, the UFO technology. Those of you who are interested, as normal, as usual, register with the Keshe Foundation. We have not put it on the website. We will not do till very late, but you can put your, what we call, booking or what you call, your registration, with the Foundation as of now, through the connections you have. This is only for the Knowledge Seekers, because once we open up, we close the Knowledge Seekers' door. Even in Sanya, we tried to accommodate everybody till last minute. Still, our agenda is around October, November. We have to see how the development goes, and we have to see how we can facilitate and arrange the Iranian government, everything else.

Those of you who attend the Monthly Sessions tomorrow. The Monthly Session tomorrow is another part of the Space and transmutation. (1:14) And it'll be a unique way that we split the session into two. If you do not accumulate for the first part of the session, you'll find out you'll have a problem with the second session, or you'll not understand, or can't catch up with. Because in the first part, we prepare your physicality in different dimension. And then, in the second part, we'll let you to use our system for your physicality. You will know what I'm talking about, when we go through the session. Tomorrow's session will finish at 5 o'clock, 4, 5 o'clock, promptly. It is not like before, we leave it open. So, please join in at 9 o'clock, and please stay in for a whole session. You cannot leave part way, you will know what I'm talking about, those of you who want to leave half way. Don't forget, you are paying us to test the new technology, and it's our job to tell you, what you can do, what you cannot do, during the test time. This time there is no half way passengers, you sleep, you eat, on board. There is no extension, there is no doing any other ways.

Other point which will come up, as we are signing and we're closing a lot of our productions to go into international way with governments and military. Keshe Foundation next few days announces we are clearing all our stocks, in all facilities and we will try to provide the list. Those of you in China who want to buy the stock, you're quite welcome. Those of you in Europe, you want to buy the stock, you're quite welcome. We have a stock in Arizona which we want to, more or less, sell out. (1:16) There is some stock left in Iran, there is some stock left in what we call Mexico. I don't know how much is left in Mexico, we can ship that. And, those of you who are in electronics and understand system control, Keshe Foundation has about 600,000 US dollar in electronic system control, which sits in Canadian section. These are automatic section systems. If any of you have any knowledge about it, or you can use it, they have for sale. It cannot go to countries like Iran.

Just one second please, I have to answer it.

?? always say, The postman brings the wrong thing. You have, we have these materials for sale in Canada. We paid for it, is a...

<< Mr. Keshe have problems with his audio >> (1:18)

K- ... So, what I'm saying is that we have about 600,000 dollars of electronic systems for control, which are sitting in our stock in Canada. We would like to sell these, if any of you have or know anywhere it can be used, all the data can be provided. At the same time, we have a lot of coils, a lot of (Pain) Pens, a lot of other materials, which are again, part of the stock of the Keshe Foundation, which is coming to an end. So, if any of you like to look at the stocks, which is on the websites and make an offer for a whole lot or part of it. We are prepared to look at and we put in more material which is not, is part of our stock we want to get rid of. (1:20) We have hundreds of kilos of dry Gans's which we would like to sell, can be shipped anywhere. We have a lot of manufacturing material systems, machinery which we would like to sell, any of you would like winders, automatic winders and all sorts of things. Gans manufacturing systems, all sorts. Any of you would like to, or would like to buy those for a training or teaching, we have those all available to clear out, and we try to make a list of it, for those of you who are interested. As Keshe Foundation, as a manufacturer of what we used to do, has finished and we're literally moving to the next steps of the Keshe Foundation development worldwide. That's all I can tell you today, up to now, unless there are some other questions we try to answer. Are you there?

R: Yes, I think I'm probably in shock a little bit there. That's interesting.

K- No, this is part of what we said. Keshe Foundation is moving into a different operation altogether. And we are in that path, we have to. And we are clearing literally the stocks of the all our productions and the stocks of factories, the manufacturing which we set up. (We are) moving, working with governments and military, has literally changed the course, as I said, hopefully next 2 or 3 years, you will see different dimensions on the Keshe Foundation. (1:22)

Q: ... What is the difference between magnetic fields and plasma energy fields?

<< Mr. Keshe have problems with his audio >>

K- ... Magnetic fields are part of the structure of the work of the Universe, it's the same as the others, even the plasma fields. It's just that, what we use it, magnetic fields, is for matter state, and plasma fields is for when we're using, we use the dimension of fields of the Universe. So...

<< Mr. Keshe have problems with his audio >>

K- ... Yes, now we're sorted, I moved into the sound, soundproof area. This is a problem, when we are traveling, we don't have the freedom of our choice. (1:24) We are in the hand of the ?? situations.

And, this is what the Cosmic or whatever is, when we use the term magnetic field, it's when is matter state. And I think, overall in the future, this will be, this will be used to categorize what we are talking. At the moment we say, Earth magnetic fields, and we call, the magnets ?? of magnet. To understand it on the, what we call, ?? cosmetic way, in a bigger expansion of the Universal work. It's a ?? separation we have to make, we know what we are talking about. In this, there is no choice that, to make this clear, that which side we are talking about. When we're talking about plasmatic fields, we're talking about Cosmic Rays, we talk about Universal fields by entities. When we talk about the Earth, the magnet in our hand, we talk, because it's a matter state of, we talk about magnetic fields. But, the magnetic field of the Earth has a Cosmic direct dimension to it as well, which how it position itself, in respect to other matters, in the Solar System, or our Solar System positions itself in its Galaxy. And we're trying to make it very easy to be understood.

Any other question?

Q: ... Can you speak more about the first Gravitational Energy System and how it works? (1:26)

K- Gravitational System is when it's a matter connected to it. In a way, when you have fields which can end up in the manifestation of matter state, we talk about magnetic fields. In the dimension of existing, in a, what we call, Universal condition, we talk about the plasma field. You have Gans's in your hand and you have a magnet on the other hand. When you put a magnet to another magnet, you use, you feel the physical 'pull and push.' Your Gans's are all collected in the glass, you don't feel any push, pull and push, but they all move to position themselves. If the Gans you have is made of Iron, you get the same position, but that's the plasmatic condition field, than the Iron which is magnet in solid matter. In the point of magnets, we talk about magnetic field. In the point of the Gans's, we speak about the plasma fields, or Universal fields, or Cosmic Ray fields. And it's as simple as that. Both have gravitation (G) in respect to, and both have repulsion (M)

in respect to. And in some cases, (1:28) they interconnect because they have a common denominator in magnetic field spectrum.

Any other question?

R: We have a request in the chat here from Dolores, but I don't know if you, maybe you should read it and see if you want to... see if you want me to read it or how we want to deal with it. It's a, a health issue and she needs some support with that.

K- Where? ... Yeah, yeah, I see it. We don't answer such a thing, .. no way. No way. Ask her to go through the Wellness Center in Germany to Dr. Kern. This has to be answered through them, not through us here.

R: That's at the health@spaceshipinstitute.org, I believe. That she can write to.

K- If she goes to info@keshe.foundation. And, I think they will forward it to Dr. Kern. or it goes to the German center, either way. (1:30) Send it to info@keshe.foundation and then we send it to one of the doctors to look at it. They respond to it.

Q: ... What about the products that have not yet been delivered?

K- We're completing those. Whatever is ordered, is on order, like the power generators, whatever. They will be delivered, because they're already in the process. These are the products which we made last year, or the years before. Surplus product, we made in thousands, and we are cleaning out. There is a few pieces left, there's some like pillows people ordered. The pillows were stocked in China, we have 1,400 of them. So, in shipment of the goods back from conference, we ship. So, those of you who ordered pillows, now you'll get them in a whack in next few days. And those other bits which were small pieces, all been getting done and completed. The big products, like the energy production, those will be completed as well. But we don't produce anymore these little items, like, you know, the butterflies and that kind of thing. We do not get involved in it, and we fulfill that part, till the governmental side of the work completes itself.

There's evolution in the science, in that we kept a lot of things delayed and delayed. As I shown before, if you look at the size of the UBESUS, we showed two years ago, three years ago, in 2020, (1:32) now we are in 2024, has reduced to a Headset and a Head Unit. And it's the same with the development of other systems, which were now, as we showed, the... we showed in January, what you call it, last, in 2022, 2023, we showed the gas production unit, those big boxes you saw at Linz Exhibition Center, where I showed you with the heavy jacket in the winter. That huge box now fits into a small, small hand carried suitcase. It's a technological development. And, it's taken two years delay, but now we are at that point. The gas production units is now literally fits into a suitcase. As we showed it in Sanya. And this is a big change with the gas energy power generation ?? rates. We'll reduce the same to that kind of sizes in the next few weeks. Then we can put in the market in a very rapid way. Building those big units which we demonstrated is

colossal. You see, you would have received, God knows, a big box of. Now, it's just a suitcase, it's a gas production unit.

But, at the same time we have to watch a lot of things from security bits and other things, now that we put these things in the market. You got to understand Keshe Foundation doesn't patent anything. So, we have to structure a lot of national securities around our work from now on, and you'll see that what we're talking about. (1:34) This is ... in a way, accepting, and a lot of work is getting done in the background, I spent a lot of time sorting this thing out. That, the new technology cannot be patented. By the time we patent, get the patent application, which we don't believe in, it's a waste of time. We have to make agreements with the governments, that our technology is kept and is funded back to the Foundation. This is what I'm doing in the background at the moment, in past few months.

And the same goes with the operation in, what we call it, Markray. Which we said how we operate in past few months, and you will see how we reflect back in, what you call, in the company in the coming time. As I said in the Sanya conference, we can explain to you as Knowledge Seekers, the situation about the Markray, because Keshe Foundation is the owner of the stock, I'm the trustee. So, we work as a collectively together and we do that collectively. So, when we discuss something, it's not to affect the market, it's for you as people who support it to come to where it is, we inform you. Because you are the company, you are the Foundation. And so, in the coming time you will see how we, we channel things through in different ways.

Q: ... Will the Gans related products disappear? And what KF tools we Knowledge Seekers will have left to work with? (1:36)

K- What do you mean tools?

R: He's worried that the tools such as Gans products, or Pain Pens, and so on, all the, all the various tools that are offered through the Keshe Foundation store. What will Knowledge Seekers be left with, if all the tools are gone?

K- ... You have to realize, there'll be around 30, 50,000 new products. In next 2, 3, 4 years, will come out on the back of the Keshe Foundation. Keshe Foundation operation will... it changes in a different way, as we are a shareholder, because we are not the owners, it makes different position for us.

R: Yes, and we understand that some things can't be discussed until they're actually revealed, so...

K- No, the problem is that these are the products which were made by the Keshe Foundation in different ways, but now the Corporation will be involved. I cannot give you much information at this moment, because there are a lot of things entangled in this, (1:38) once we move into cooperation, collaboration. We kept the Keshe Foundation research independent, it will stay independent, we will not share with no government, no

shareholding. But, we allow governments to develop, to expand, what is in conjunction with them. We still keep the, what we call, the independence and integrity of the Keshe Foundation as an independent research development company. But, we bring in connection with civilian, military, space, in 3 or 4 nations together. And then there is a bigger structure behind.

And, you will see, we learn by experience. I was just talking to one of our, what I call, one of our closest people to me in Keshe Foundation this morning about this. That we bring in... we relied a lot on Knowledge Seekers and Knowledge Seekers we trusted, they did a lot of good things, they brought some good things, but overall Knowledge Seekers are not business people. Knowledge Seekers are not production people, they are enthusiasts, they understand. But, them in their understanding, it's not complete. So, the structure will be run by experts. Not necessarily, we make Knowledge Seekers out of expert, not bringing Knowledge Seekers to do what they cannot do. We have few Knowledge Seekers who are expert in certain fields, certain things. But, they don't have the expertise of, what you call it, running the structure of the manufacturing and the rest of it. (1:40) We tried to do it, we tried to bring the Knowledge Seekers in Ghana. We saw what happened, same in Italy.

Now we bring in international management. We bring in people, who their target is delivering a new technology worldwide. And have the support of the government, scientific structure. So, as I said, very soon, in next few months, we make an offer to take over the Tesla cars. The Keshe Foundation will reach that point, all Tesla cars will shut down. We are in that position of the structure. Keshe Foundation, as it's International organization, will get an option to Tesla cars in a very, very soon, very, very much sooner than you can think. Because, nobody needs electric cars anymore. The time of electric cars, these huge batteries, to a country like United Kingdom, needs at least 5 factories, to produce batteries, to support only the cars in United Kingdom. Each factory costs about 9 Billion dollars to build. They found the first sites, but they couldn't complete it, because they couldn't raise 9 billion finance for it. Electric cars are not a reality in the world of, what we call, automotive.

And Keshe Foundation has already developed and is developing further, that in next few months we replace battery cars. That's the evolution in science. So is Keshe Foundation going to sell cars? (1:42) Or we bring in one line by line, international cooperation by change of science and technology. This is not something new which we are going to do. We went to take over General Motors car in Antwerp in 2010, 2011, to bring this car out. Then we couldn't understand how it got... I mean, we understood the King of Belgium went against it, because we didn't give the thing, and we know the whole story. And then we found out, actually, the mole of the Belgian government (ex-wife) was sleeping in the same bed as us. They knew before us, how they going to assassinate us.

So, this time we are not going that way. We give International Governments time to adjust. All these battery factories which are getting lined up, all these charging stations which are getting lined up, for electric cars, are obsolete. And for us not to be in danger, we have set it up in a way it goes to governments. And different governments. So, those

of you who talk about what's going to happen to products of the Keshe Foundation, this is where we're going. This is where the situation will go. Very soon, gas business for gas production, cooking in the house and everything, will change. Maybe 2 to 5 years. Then, what happens to all the other bits which are involved in it? To gas, whatever, production nations like Iran and Qatar and the rest of it? (1:44) How fast the government go to it?

So, yes we are finishing with, yes we are opening a new dimension. One of the first organization which will be hit by this new development in technology, is Tesla cars, is electric cars, not just Tesla. But, it keeps the old tradition going, car, automotive cars stays. No engine, no batteries, and nothing else. So, yes we are finishing with bits with it. Any of you have any products from Keshe Foundation, keep it, it's historical. We go into transportation, we go into what we call, whatever you call today, transportation, aircraft and the rest of it.

So, new products, is not what is going to come, just keep your ear open, into what Keshe Foundation will announce in next few weeks and months. We are not sitting back, but we are not releasing anything out till we sort ourselves inside, completely. So, where does Keshe Foundation goes? There will not be, maybe in 10 years from now, that you don't go shopping on the Internet, in the supermarket, on the high street, that somehow, somewhere, (1:46) your life, your what you buy, is not touched by what this technology will come.

The game has changed in past few weeks. And we're not talking out of arrogance, we're talking out of hard work, delivering, and we showed what is to come. And in Iran we'll show more of. And you Knowledge Seekers, you've been with us, the sessions of tomorrow is part of that. We are perfecting the art, we are perfecting the technology. And this time, we bring professionals, we bring experts, we bring governments in partnership, and (if) they don't want to, we'll find there is so many others who are at the moment in the market, in the pot.

But, what am I... to bring, to show the technology has to be there to change. And, we show, we will show the end of the automotive with batteries, fuel and the rest. Europe has accepted, by 2030, 2035, there cannot be no cars produced in Europe, which has a fuel engine. So, we are going through that transition, with fuel engine cars in about 10, 20 years, the rest of the world will be obsolete. The transition is to the battery cars. But, battery cars have more problem than the fuel cars. So, to go through the pain of the completion to battery car, we introduce a new technology for cars, which has no need for battery, has no need for engines, and literally, is what the future is. (1:48)

I don't give electric cars more than two years life. You buy the luxury of a car, but you all have the same process. All you need to do, take out your shock absorbers out of your car, place the new reactors, a new control system, take your cam shaft out, take your transmission shaft out, take your fuel tank out, take your, whatever you call, gearbox out. Because it's not needed anymore. And, most probably, third world nations will benefit by this, faster than Europeans and Americans. The cost should not be maximum 500 dollars.

You can fit it in a cardboard box and make a transport system out of it. Technology is there. Two years.

So are we going to new products with us? No, we just go for a different dimensions. This is one of our plans. We'll go for Tesla car, because it's a symbol of. It's already there to strip it. This car was in a structure shown to be shown on 26th of December of 2011 in what you call it, in Holland. Which, what we call, the Belgians thought they are very clever. (1:50) They thought they stopped it, but there was ?? they stopped it. Some 12, 13 years later, this car will come out. But, and you will see it, and you understand why. Tesla cars and electric cars are obsolete. This is gone. This you see, fuel tank, all down the knees, transmission, is in the boot of the car, is in the back of the car. The center point here is where you receive the new control system, you put it on the ceiling of it. This as you see, is just where your car mechanics, your understand, where still sit your shock absorbers. This is where the new reactors will drop in, to replace the shock absorbers. And, this is underneath of the car, this is where the transmission pipe is. It's not there anymore, because it's not needed. And, this is where the engine was. You've all seen these pictures before.

It's how much more of this room, which you put an engine, you bring forward. more space in the cars or we make smaller cars, very compact system. So car prices will drop drastically, by at least 80%. When, you paid 50,000 with all the luxury things in it. You should buy it for less than 5 or 10,000 dollars now. (1:52) Brand new from the factory. This is what we set up in 2011. When we were given the factory in Antwerp by General Motors. And we received the support from the German government to the tune of 500 million to set up the factory complete. That time we had two big enemies inside the Foundation, one is dead (Red Circle) and one is gone. So, it's inevitable, the new technologies will come in.

What you felt in the room, some of you, some people say, "Oh, I went in the room, nothing happened." We had people in the room that they went through all changes and shakes. We had to bring them out and the rest of it, nothing happened. Of course, you go in there, soon nothing happened, because then you say, "I was there, nothing happened." Because you set up for nothing to happen. Because the sooner we ?? adapt, then everything happens to everyone.

Those of you who have ordered and bought the new material, you'll start receiving in next week, two weeks gradually, as the production has started. And then we, you know what to do with it, how to handle it. Then you understand the change is coming. It's the same as those of you who bought Communication Unit, and you bought UBESUS Units. Communications are nothing to do with it, because they are not connected to the system. They are communication systems, and they are connected to each other. (1:54) You have to learn how to work it, and how to connect it. It's not a satellite, it doesn't need frequency changes. These things don't exist, those are matter state. You have to learn how to connect, and we're trying to teach you how to connect to your, what you call it, Cosmic Ray Bundle Communication Systems. In a very short time, we start... Now, once the number increases, we start teaching how to use it. They cannot be used for UBESUS,

UBESUS Units are totally different structure of work. This is communication, UBESUS are for different purpose. They are for Wellness Centers. It is a different structure.

When we go like into this motor industry, the effect will be huge. We're in the game to change and we started the game to change.

Any other question?

R: It's nice being reminded of those pictures Mr. Keshe, I haven't seen them for quite a while.

K- Now they're back, now it's a reality. We are working on it. It's the same with the Power Units, the new Power Units is on the development, it's just that the more research we are putting in, the more advanced we are getting, the more easier knowledge technologies become. And we don't show it in public, we don't need to show it in public. (1:56) We had one of the best thing, as I said in past few months, one of the best thing happened to Keshe Foundation, was the loss of millions. We were planning to raise funds to open factories and do this and that, and the expansion plan was on. And with this fraud on us, with this fraud on us, we went back in, ?? so expanding, we went into development. And we just went up, massive. And all the changes, ?? that were going to take 10 or 20 years, now it's here. Why should we wait? And it changed the course for us. Nothing. I mean, we suffered a lot. Some of you Knowledge Seekers supported us a lot to get out of it and... or get in it, but it wasn't meant to be. But now the result of it is what is on the table and we showed, what is coming up.

It brought us back to the root of what we are, research development in Space Technology in... But now we become supply of technology in a way, (in) the old licensing way, but we are licensing to governments. And we give it to all the governments, not one or two. We'll ask for a percentage of GDP in the long term. Because we will affect the GDP of the nations. It's a long plan, but maybe in 10 years, 20 years, Keshe Foundation receives funds through its work. No licensing, no patent, but collective agreement through support development of new technologies across the world.

You'll understand how it takes shape in time to come. We have put in our coins in position, on the banking side. We have put the Universal Banking side with the new materials. We told you, don't sell and don't open these, keep it, it has a huge value. (1:58) It'll gain new values, and it's like a Bitcoins. These will have huge values for those of you who understand. And at the same time, goes back to the next steps of what we call, Universal Health, Universal Feeding. And part of these trials are with you tomorrow. You'll understand what is set for tomorrow. And then the following month is another extension again to our research and development.

So we are not going to run out of products. We are just changing. Instead of being a producer, we'll leave the production to the others. We let market decide on how much they would like to pay for the knowledge. And that money will be spent back on you lot to create more knowledge of Universe.

Any other question?

Q: ... (2:00) And yeah, wow, that's quite a monologue to follow, Mr. Keshe. That was something and I'd certainly love to put my hands up for any of the CO2 sequestration technology that's available, because for me that seems like something that is immediate and needed in society with the new Arctic methane leaks. And I just sort of wanted, you know, I've got a million questions, but I just want to ask, it seems like the most scientifically proven aspect of the Keshe Technology, but why haven't we been able to gain any traction on that from an international perspective during this point in time?

K- We have, but the way we set out to do the CO2 and open up CO2 absorption and the rest of it has become obsolete. A year ago even, two years ago, we set out to build these, what you call it, parking lots in the cities, to absorb, to extract CO2. In places like Tehran, the Keshe Foundation Iran received orders from the government, 5 ministers, or vice ministers, cabinet ministers, turned up at the factory of the Keshe Foundation in Iran, last year, to push this through. (2:02)

And we have moved in technology in a way that, we got two choices. Extract the CO2, and then use it as a Gans. Or with the new technology, convert the CO2 in air, directly into food. Directly into protein. We don't need to make these huge Gans plants absorbing CO2 anymore. And we have shown that in, what you call it, before, in a very simple way, which making Gans's, extracting Gans's and Gans production to the work we do, with the knowledge we have today, is obsolete. It's too much hard work.

And so, this is the reason, as I said, government don't take it up because those who understood it, they want money for it, to do it, and those who tried to push it forward, never understood. We set up a huge factory in China, ?? 17,000 square meter. And because of all the things which happened around us, it was closed down. But it was a beautiful thing, because now we have moved the technology not into converting to CO2, with converting it directly to food and energy, is much cheaper, much affordable. And you can feed the whole nation with it instantaneously. And this is one of the things which we will advocate in our work with the government. (2:04) It is the creation of CO2 and what we've done, we've shown, is obsolete. Why do we, why should we do it?

Don't forget the creation of CO2 in Earth's atmosphere was backbone of creation of life. We've made so much of it, why do we need to bring it down to Earth and then change it back into food or whatever. So as I said, this gap of Corona and what happened to the Keshe Foundation with the massive fraud on us was a blessing. Now we can convert the CO2 over a city in a very simple way. A fraction of the cost of before, the citizens of the city get fed, the plants of the city get fed, the animals of the city get fed. I reckon feeding... but at the same time, you have to understand, if we go too much into it, we deplete so much of it rapidly, we create new diseases. But cities like Tehran, which has huge populations, is like New York, which have a lot of people on the streets, children going to sleep hungry. Now the knowledge is there that we can directly convert in air,

into protein. We've shown it, it's not a theory. And it costs a few hundred thousand. And you feed on the run. (2:06) You produce the protein on the run.

You want to produce high quality rice, you do it on the top of the farm. You feed the protein directly into the plant. So why wasn't it taken? We went that way. We went to build our factories. And what happened was a blessing. When I look at the Keshe Foundation sitting here, after all the pain I aged 10 to 20 years in past two years with all the mayhem which was created by this fraud around us, and we thought, oh, it's a trick or whatever. It allowed us to concentrate, to centralize our research, to get rid of all the, what we call, 'bits hanging around,' and bring a new dimension, and work with the Keshe Foundation, which you and your generation will benefit by it.

When you see these pictures, if you understand what it means, that's a conversion of CO₂ in the room into protein. That's protein. That's the food. We showed this for the first time in the grains in inner Mongolia, 5 years ago, how the environment was changed and the protein in the wheat reached 20%, which is the highest ever. Now we can show how we've done it. How, where the protein came from.

So, is this the end of? Or is it the next step of development in this as well? (2:08) Which I think it is. I can see a lot of developments from production of protein. But again, creation of CO₂, appearing of the appearance of the CO₂ was the backbone of creation of life on this planet. Now we create life with that, that protein is life, is living. So, don't worry about what happened, where it's going. It's going exactly where it should go. Every time we went wrong, while trying to become manufacturers, and those who are protecting the technology above us, they put the track right and created a new dimension for it.

Q: Sounds good.

K- This test was done in... It's not 'sounds good.' It is good, because we have shown what we can do. And now it's cheaper to produce protein than actually produce Gans's.

Q: Oh! Really?

K- Yeah.

Q: So it's \$5 to produce Gans's and you're saying proteins are even cheaper?

K- 5 cents.

Q: Wow, okay. Well I love seeing all these pictures you pull out and put on screen, but I hope, you know, as we move into what seems like a quantum leap in the technology, we can see more video and the interaction of the fields in play on screen. And I just wonder, Mr. Keshe, whether I could take you through a little thing that takes five seconds, but can last for 10 minutes. And I wonder if anyone who has a bottle of Gans next to them or nearby could go and pick it up, (2:10) and hold it in their palm and the second hand on the neck of the bottle and twist it anti-clockwise. And I reckon we need to have a

competition on Gans tweaking. How long can you tweak the Gans and see it turn around in the bottle? You made a statement earlier in the session that we can, you know, you only need a few milligrams of Gans to create incredible amounts of energy. Well, watching some Gans float in a bottle as the Sun sets looking out on a beautiful horizon, I must say, is incredible. And when I twisted it tonight, it's one of my daily practices, I noticed that I finally put a stopwatch on. I noticed that I could spin the Gans for about three or four minutes and the larger particles would start to settle down. And then after that, I sort of, with my poor eyesight, I squinted and saw that there were actually Nano particles in the water that were still spinning for up to 10 minutes later. And this is from a 5 second twist, like, you know, a 180 degree twist of the bottle. And I just wonder, how long have you been able to keep Gans particles floating in the water for?

K- It depends on the Gans. CH₃ most probably take about a day. CO₂ pretty rapidly, Copper will go down much rapid, (2:12) but CH₃ will last a long time. Hydrogen and, what you call it, Deuterium, Deuterium sits fast, but I think CH₃ and all the CH combination, or Carbon combination, will last a long, long time. Maybe CH₃, that's maybe an hour or two.

Q: Wow, that's amazing. And then you talked about magnets before and putting them next to each other and putting two Gans bottles right next to each other. They get a little shaky when you get about five millimeters apart from each bottle. And I have always wondered what's, how could, you know, I took an amazing photo of some CH₃ from above and it looked like a snowflake and I just wonder what Gans's react really well next to each other and show the fields reacting in time. And you know, I'm perhaps from today's sort of adventure I was thinking maybe I need to be looking at the smaller Nano particles for those reactions rather than the big, biggest sort of Gans flakes?

K- It all depends, it all depends. I produce, like all of you, Gans's which never settle down. I have produced Gans's for health application for myself, which I carry around the world with me. They never settle down, because they're tuned to my energy. I produce Gans's totally different than you lot. (2:14) There's technique to it. And which has effect on me. I can give the same Gans to you with the same problem and you say, "it does nothing to you." But to me, that's exactly what it's supposed to. It's built that way. And I carry wallets with me of Gans for different applications. Months and months they never settle, at all. Because they are made by Cosmic condition. You can suspend the material.

There's something you better understand. If you look at the structure of the Universe, if you look at the structure of the galaxies, if you look at the structure of the Solar Systems. You never see any of them falling to the bottom of the galaxy, do you? You never see any of the galaxies falling to the bottom of the Earth, or Universe, you understand? So, there is a dynamic flow, and they're all flowing. If you look at a bigger scale, you see it, what's happening, that jar of Gans's, you hold. You see clusters which react together, you see clusters which move together. And you see, in one Gans bottle, if you mix a few Gans's, which doesn't take over everything, but you can separately see it. I've shown it in the book number 3, you see layers of Gans's, you see this. When you have Gans's settled

to the bottom, it means they have a field, common denominator with the gravity of the Earth.

When you make Gans's which never settle, I can take a picture of one now and show you. (2:16) This means you work with the Cosmic Rays, they are like Galaxies. I carry two, three bottles like this with me.

Q: I bet.

K- I can show you exactly, it's about few meters away from me. These Gans's never settle, but they carry specific dimensions and properties that I built it for me. I told, we put 5% of the knowledge, even not that, into public domain. People are not ready to understand what this technology can do. Scientists, world leaders don't understand, but in time will come and you'll get them ?? . We haven't come here to open shop for a few days and close it and go. We come here to do a change for life of this planet.

So, you can make Gans's that will use what we call, Universal field forces, what we call, Cosmic Rays, which gives you what you need from them. And I produce them when I need them for myself and I carry them because I'm not always in one place to do what I'm making, to do whatever, when I need it, it is there. And they never settle. Never ever, and it's full of Gans's, not just a bit of Gans's, but full, they're stack on top of each other.

K- So do you want me to test it, how long it takes for us to settle?

Q: Yeah, well God, that would be a great...

K- If I do not ?? with your bottle, I'll be there the whole lifetime, watching it settling, it won't settle.

Q: Wow, I'll have to keep working towards that, but I...

K- Cosmic Rays Gans's... (2:18) If you make Gans's, understanding the work of Cosmic Rays, Cosmic Fields, and how they lead to creation, you can make Gans's, which they do things the world of science today say is impossible. Carry on.

Q: Just quickly, as the Gans settles, as I hold it in my palm after twisting it, I find that, you know, often you give people some Gans and they can't connect with it. and it takes that quantum connection to believe in it, to give to it, for it to work.

K- No, no, no, you're wrong. I have to come in here.

You give Gans's to some people, they connect. We put people in system, they don't connect. Yeah? Because it is two reasons. Firstly, emotionally, they don't accept. Secondly, the field strength in that material, is not (at) the strength of theirs.

Q: Yeah, that's right.

K- We're doing a test now, we're doing a test today. Ongoing, since Beijing, what you call it, Sanya Conference. This was deliberate testing, and I'm testing it because I had to confirm certain things on the design point of view. And the people involved, they don't feel anything with it. The people who have used it, has changed their life.

We monitored people who, in, what you call it, in Sanya Conference, using the system. (2:20) What happened to who when they came in the room, if anything was, what they tell you later on, what they felt, there were systems on the other room, they did. And there is a reason. In a way, we're testing something now, tomorrow will be part of, another part of the same understanding is, that, you are, by nature, violent. And your violence can lead to a lot of harm to the other people, or to yourself. How, with the new technology, I handle this? Because of your violence, you have set a different standard in your energy field. How do I get to you? Does not matter what condition of emotion you create. You set yourself to have a cancer. How can I overwrite or how can I bring it in to, for you to think about, if you want a cancer you can have it, you can even die of it. There is no difference between a cancer death and MS, or others. You watch what happened to them. ?? .. ??, no energy, paralyzed, always the same characteristics of the cancer and the other people who died with MS and the rest.

So, we have to find in a new technology, a concept of choice. (2:22) I choose not to. I choose to be violent, but to myself, but as long as I don't damage myself physically, and I don't damage other people. How can we through this technology, change violence? How do we change those who are getting together and hungry for control? These are the tests which are going on and you can do.

And those of you who say, "The Gans's doesn't make anything to me." You have to find out how you made that Gans. I hold the Gans in my hand, I can taste it in my mouth. When I hold CH₃ in my mouth, I get that sweetness taste. When I carry CO₂, it's the same. When you carry Zn, I carry Zn in my hand, I feel the calmness in the body. I love it, "Oh, it's nothing, it's just there." If you don't connect, always go in the back room where you made it, add a few drops of Amino Acid into your Gans's. You washed it too well, it has no human connection, it's just the fields. You need to give it a direction.

You Knowledge Seekers, wash your Gans's so good, that in a way you take all the meat off the bone, and you just put the bone on the table to eat. You need to give it direction of connection, even with yourself. (2:24) Always, when you make anything that is connected to life, animal, plants, yourself, any being, you need to create a line of connection which is to them, to their Amino Acid. Now you know why some people don't feel it, and you feel it. Because you touch the Amino Acid when you clean it. You already have the connection, it stays. Now you understand why?

Q: Beautiful, thank you Mr. Keshe.

K- Thank you very much. Try to understand the logic of the connection. Understand how an Amino Acid works, and why it's created. And repeat the structure in everything you

do. You still, or you always, get what you want. Doesn't matter if you feed it to a plant, doesn't matter if you feed it to an animal, doesn't matter, you feed it to yourself. Otherwise, it's what they say, it's a box of complex, which the Copper has more vitamins and energy than the complex inside it. Thank you very much.

Thank you indeed. Any other point?

Q: ... Mr. Keshe, thank you again for your teaching of today. (2:26) My question is, does the Soul of the Sun's energy step down into Earth's Soul, and then into man's Soul, and down into animal, vegetable and mineral Souls? Is this the way it works?

K- You call it a Soul, I call it a common denominator. And that Soul of the Sun is connected to the Soul of the Galaxy, which is connected to the Soul of the Universe, which is all connected to the Soul of the Unicose, which is connected to the Soul of the Creator. So, you know that old children's song? It says, knee bones connected to the... what you call it?

R: Hip bones?

K- No, thigh bone is (connected to the hip) bone, and it goes up. It's all connected to each other.

R: I think he's alluding to like a step down transformer. The Sun's energy steps down into the Earth's Soul.

K- No, it doesn't step down. It doesn't step down. It doesn't step down. You always have to remember the law of plasma. Always smaller amount, the smaller amount carries lesser energy, and so the bigger tries to give to the smaller to grow, as to be. But there is a factor of gravity included in it. That in giving it, it gives a connection not to lose it. In feeding it, it ?? put it back itself. It's a 'phoenix' effect. (2:28) So, birth is created out of the fields of the Sun, so it's connected to this itself, it's the mother. And the umbilical cord never breaks. The Sun never lets us go out of Solar System into Space. It keeps it without the umbilical cord, or magnetic field of it, connected. And it feeds us through it. But in a way, it's a weakened state, less of. So the same, the less of, the same, the lesser. But it all has one common denominator.

Any other question?

Q: ... Hello Mr. Keshe and to all Knowledge Seekers. Since the Christmas meeting I've been able to walk through the doors to my Soul. However, I have only ever seen bright white light. That has changed since Sanya. Today I see a beautiful bluish light in one corner. Can you explain to us what the colors are all about?

K- Can you repeat that again, please?

R: He says, "Since the Christmas meeting I've been able to walk through the doors to my Soul. However, I have only ever seen bright white light. That has changed since Sanya. Today I see a beautiful bluish light in one corner. Can you explain to us what the colors are all about?" (2:30)

K- Colors, I'll go back to the teaching of years and years ago. That when we meet in Space with other plasmas, the color, the field, as we look at it in the vision of the man color, it'll give us the indication of what is our position. Is it love, is it separation, if it's distancing, is it... or whatsoever it is. You call it the aura. And you have to understand the aura of the plasma, which is partially in the body of the man, in the physical dimension, the skin creates that separation.

Any other question?

Q: ... How much time it should take to deliver the Cosmic Ray materials?

K- It's in production, this... it goes by the queuing, our people keep a queue. ... It depends, we're still getting orders for it, because there are people who have, want to use, understand different use of it. Maybe maximum, 4, 5, 6 weeks, depends as the orders come. These we're trying, one of our problem with this Cosmic material is now, we asked our team in China to find us small crystal bottles, that it can be sealed in, that stays and you can use it as a three dimensional, (2:32) otherwise we have to ship it to you as a, what you call it, as a sealed, like tubes, and all these have a number, serial number. They have a value, hold on to it, don't just get there and just get into it, and see what you can do with it, it gains value. Is a, what I call, currency you need to become Passenger of Universe, you'll understand in the coming time what it means. It is not there for play, to open it or whatever. Don't ever touch this, we seal it. If you open it and break the seal, has no value to it. Because there's other things we can tell you what to do with.

Q: ... How do we position in our Space a non-dimensional free plasma? And he also mentions, "What happens when you mark a Ray?"

R: ... So, I guess he's asking about the non-dimensional free plasma. You've talked about the idea of reactors being a container, and now the new concept is to not have a container. How do we contain that free plasma? Or how do we work with it on a non-dimensional free plasma in Space?

K- What do they call it? (2:34) What do they call it in the modern economical language? This is a trade secret. We will not release it. You know what I'm saying?

R: Trade secret.

K- We will not show this. You're too immature. Man is too immature to get his hands on such a technology. Too immature.

R: Yes, if you look at all the headlines in the world news these days, it seems pretty obvious that we've got a ways to go.

K- Any other question?

Q: ... What will happen if, at a customs, because many countries, they want to know what's coming in a vial or whatever. If they open that and they start sniffing it and touching it, because they want to know what it is. Because they think it's drugs or whatever.

K- Oh, we cross that when we come to it, don't worry.

Q: Because that'll create havoc.

K- We'll come into it. Secondly, we use different methods of transportation. We have to find a number for it. We'll find a way. KF always find a way. (2:36) We shipped hundreds of kilos of Gans's dry. If you open it, it looks like cocaine. They tested everything. They don't understand what it is.

Q: Yeah, I had an experience with some small bottles of aromatherapy. And it took me three weeks to get the product out of the customs.

K- I get stopped sometimes. I sometimes get the stopped in the... You know, I carry sometimes liters of these things with me in suitcases, packages, and they do the test on radiation, and everything, it is clear. But what is it? I said, this is a plasma. What is it used for? It's a Space Technology. Who are you? I say, I'm a nuclear physicist. Oh, it's, pack it in, and you go. Every time, it happens to me, every one out of the three, if they get down, they want to know what it is. And there is no...

Q: They wanted a bite of it?

K- No. They can eat it, I open it, and usually put it on my hands ...

Q: Bite is ... don't they want some dough (money)?

K- No, it's just the way things are, we don't get into these things. I've learned this from years of working in the stones (jewels). I used to carry stones in my pocket, in, you know, the traditional way we used to carry, and many time in customs, (2:38) they stop you, "What are you carrying?" You tell them, you open the wallet, if one goes missing, you pay for it, 20,000, 30,000, just tell us what it is. You know what it is. Do you have documents for it? Of course, we own it. And it's what it is, all you can go through. There's a rule in the world of customs. If it doesn't show what we know, it cannot be any harm. And this is the way they work. They tested it on nuclear, they tested it on drugs. So it's a natural water. So they let it go through.

Shall we call it the day?

R: Ok, sure.

K- ... Think about if any of you want to sell any of these products of Keshe Foundation, or you want a package of it, make us an offer, or ?? we're not giving it away, because it always has value somewhere. And we are clearing all our factories and resources around the world. Or if you know what you want from it, you get in touch with us at Keshe Foundation, or directly to the factories and see what we can help with. (2:40) Thank you very much indeed, and see you next week.
